Whatever the cause of peaking, a logical question would be: Why don't the airlines readjust schedules anyway, so as to adjust periods of sustained high level peaking, wherever they occur?

It is here that public service and economic factors come into play. It would be economic suicide for an airline, for example, to force a plane arriving at 4 p.m. to sit unproductively during the period of greatest passenger demand until 9 or 10 p.m. in order to deliberately avoid the peak period. And since passengers do have their travel preferences, such action would not only cause serious inconvenience to many travelers, it would also force enormous penalties on the airlines in loss of dollars and good will.

For example, take a 5:45 p.m. flight out of congested New York to Dallas and Mexico City. In these three cities, Flight 25 receives connecting traffic from, or delivers connecting traffic to, a total of 100 other flights. This, significantly, adds up to 15,000 passengers yearly and $1.2 million in New York-Dallas revenue for the carrier.

Any schedule change would result in a disastrous chain reaction, disrupting service for 15,000 passengers, a million dollar-plus loss to the airline and the fouling of service on subsequent legs not even involved in the New York congestion problem.

Why? Well, the 5:45 p.m. flight out of New York becomes, at Dallas, the 8:45 p.m. departure for Mexico City with an arrival at 10 p.m. If the plane were held idle in New York for a 9 or 10 p.m. departure, the shift would mean a 1 or 2 a.m. arrival in Mexico—so unattractive to the public that the carrier would probably be forced to cancel outright the Dallas-Mexico City portion of the flight.

BUT THE CHAIN GOES ON

But the chain reaction still isn't over. When the original flight arrives in Mexico City, its equipment overnights there and goes out the next morning as Flight 58 to San Antonio, Dallas and Washington. *IF* it were cancelled because of the 1 or 2 a.m. arrival, there would be no plane available the next morning for Flight 58, so that would have to be cancelled too. And the chain reaction, including the frayed tempers of disgruntled customers, rumbles on.

By way of further illustration, a combined 1,800 schedules a day serve Chicago's O'Hare International and Midway Airports. They serve more than 85,000 people a day and link Chicago with 203 points, including 17 foreign countries. Schedule changes would obviously have an adverse chain reaction impact all over the nation and overseas.

When an airline establishes a schedule it commits the capital investment of a jet costing up to $7 million—equivalent to the cost of a large industrial factory—and the associated operating expense of at least $1,200 an hour or more. Consider the Dallas-Chicago route where the demand for a 5:30 p.m. flight is nearly twice as great as the trip that leaves three hours later at 8:35 p.m. (Figure 4) In a year, the revenue earned by the peak-hour 5:30 p.m. flight is $700,000 greater than the one departing three hours later.

DALLAS-CHICAGO FLIGHT LOADS AND REVENUE VALUES

Departure time	Average passengers June 1968	Daily passenger revenue	Annual revenue
7:00 a.m.	40	$1,540	$523,000
8:30 a.m.	61	2,340	797,000
10:20 a.m.	72	2,770	942,000
12:00 noon	78	3,000	1,200,000
1:20 p.m.	78	3,000	1,200,000
3:00 p.m.	116	4,460	1,517,000
5:30 p.m.	121	4,650	1,582,000
8:30 p.m.	65	2,500	850,000
10:30 p.m.	25	960	327,000

An airline cannot ignore this enormous economic leverage. It cannot lightly absorb the impact of deferring flights to avoid congestion, the chain reaction spill-over affecting other routes and, equally important, the sometimes permanent loss of regular customers to another carrier.

Economics and customer demand aside, there are a multitude of factors that must be taken into account every time any single schedule is changed:

The departure time out of one airport determines when an aircraft will be available for another flight out of the next airport.

Aircraft schedules are the basis for flight crew schedules which, in turn, must conform to rigid federal requirements for rest periods and layover times.

A schedule operating into a maintenance base must conform to the ground time requirement for safety inspection, cabin cleaning and other ground maintenance functions.

One schedule must integrate with other schedules in occupancy of available gate space and in the flow of connecting traffic from one to the other.

Schedules are not developed on whim, caprice or just for a few days' operation. Considering the minimum $1,200 per hour operating expense, airlines expect to operate a schedule for at least six months and usually well beyond that.

PEAKING AND CONGESTION: FACT OR MYTH

In the ten years since the introduction of jets, the air travel market has expanded at a phenomenal pace for good reason—the public's steadily increasing demand for service. During this decade, the nation's population has expanded by 14 per cent and the Gross National Product by 50 per cent. But air travel has surged ahead by 170 per cent.

The airlines have invested heavily—$3 billion for 600 planes in the past three years alone—to meet this growing demand. They have also cut fares for wives, children, military and youth passengers; *spent* additional millions to improve meals, develop speedier reservations systems, attractive departure lounges, baggage systems and other improvements.

Significantly, however, the carriers have not increased schedule frequency as rapidly as the market has grown. Since the advent of large jets, New York area passenger volume has increased by nearly 150 per cent; but schedule frequency has increased only one-third as fast.

The larger jets of the 70s will further accommodate rapid travel growth, with less-than-proportionate increases in schedules.

Yet, the impression widely exists that the airlines deliberately bunch flights at a few peak hours and that airport congestion could be materially eased if schedules were spread out. This misconception is understandable. Anybody going to an airport around 4 or 5 p.m. would see large numbers of passengers together with their baggage, taxis, friends and relatives. This horde would logically create the impression that there must surely be a corresponding peaking of flights.

Why don't the airlines step up the tempo during peak periods? Quite simply, for economic reasons. To intensify schedule activity for a few hours each day, they would need extra planes, gates, flight and ground crews over and above the levels needed for the rest of the day. They could not afford the luxury of having $7 million planes sitting around idle for most of the day awaiting a few hours of peak assignment.

Figure 5 (not printed in the CONGRESSIONAL RECORD) shows a typical routing of an airliner throughout the day. In the peak period, this plane flies a 5 p.m. trip from New York to Buffalo. But it does not sit idle all day. It previously performed a 7:15 a.m. mission from New York to Syracuse, a 9 a.m. flight back from Syracuse to New York, a 10:30 a.m. trip from New York to Washington and so on. This aircraft started its day's work close to 7 a.m., and didn't finish until 10 p.m. Day-long utilization is an economic necessity in the airline industry, and necessarily prevents any airline from holding planes idle awaiting the peak periods when passenger demand is heaviest.

THE TIME-ZONE PROBLEM

However, there are situations in which an involuntary peaking occurs because of geography or other factors beyond airline control. This is principally a function of long-haul service, involving destinations separated by several time zones. When we looked at the routing of a plane on short-haul service, we observed that these short hops brought the plane in and out of New York airports all day long.

Now, let's see what happens when an airline operates planes on a long-haul, transcontinental route. The flights are started as early as the public will travel on this kind of route—8 or 8:30 a.m. out of California. The five-hour time-zone loss, from west to east, means a late afternoon arrival in New York—usually about 4:30 p.m. After normal servicing, loading and unloading, the plane takes off again at 6 p.m. for the return to California.

This again, is consistent with the doctrine of getting full, day-long utilization of the plane. It just doesn't get into the New York area until late afternoon—which happens to be the congested period.

And at Kennedy International, the carriers must not only consider the effect of domestic transcontinental time zones, but also the time zone effect of transatlantic services. With the five hours lost going from New York to London, many departure times are impractical because of inconvenient arrival times in Europe.

For example, a mid-afternoon departure from New York—say 2 p.m.—would mean a 1:40 a.m. arrival in London. This is scarcely the hour at which a traveler would like to cope with customs, immigration, currency exchange, hotel check-in and so forth. So international departures peak in the evening—the busiest part of the day at most airports—so that they will arrive first thing the next morning.

Thus, an airline's total schedule represents a tightly woven, highly interrelated pattern governed not only by public demand, but by economics, time zones, maintenance and crew requirements. Moreover, almost every schedule is tied in with other schedules because of connecting flights, equipment routing or other factors.

WHAT MUST BE DONE

These comments do not suggest that the airlines are totally powerless to make any scheduling adjustments to help alleviate congestion. Indeed, some steps have already been taken, particularly in shifting flights to less congested airports. Other adjustments are possible, and some are in progress.

The Federal Aviation Administration late in 1968 announced a rule imposing specific limits on the number of flights per hour at airports in New York, Washington and Chicago. A scheduling committee, composed of all domestic, foreign and supplemental airlines serving these airports met for almost two months during early 1969 to arrange their schedules in such a way as to accommodate these artificial restraints while minimizing the effect on air travelers.

Some flights were discontinued and many others reshuffled at the five airports involved in order to keep total flight operations within allocations established by the government. The effect is a reduction in planned air carrier service this summer at the five airports.

With aircraft movements rationed, the convenience of jet travel could begin to evaporate. The businessman who once enjoyed the convenience of hourly flights between cities may now find them scheduled less frequently. Vacation travelers will also feel the pinch.

Relief of congestion through schedule adjustment and government-imposed flight restrictions is not the answer. Undue reliance on this source of relief can have drastic consequences on the service rendered the public, and on the future growth of the air transport industry in this country.

MORE AIRPORTS—BETTER AIRWAYS

The real answer lies in improving our national airport and airways system. Airport facilities and air traffic control systems—radar, control centers and air traffic controllers—simply are not keeping pace with the rapid expansion of air transportation. The recent delays experienced at some airports due to traffic congestion will seem minute to what the industry and travelers face in the future if massive corrective measures are not taken.

Congress must appropriate more funds for the Federal Aviation Administration, approximately an additional $150 million a year, to fully automate air navigational and control systems and to train more controllers. An estimated $6 billion capital improvement program is needed to expand and modernize the nation's airports, especially runways and passenger facilities, between now and 1975.

All of these things must be done, coinciding with the massive investment already programmed by the nation's airlines, to make air travel safe and efficient in the supersonic seventies.

OUR NATION'S PASSENGER TRAINS: WAITING FOR THE FUNERAL?

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. PELLY. Mr. Speaker, the Interstate Commerce Commission has urged Congress to launch a study aimed at formulating a national policy on rail passenger service and whether the Federal Government should subsidize such service.

But there is much more that needs to be done, as well appointed out in a recent Washington Star editorial entitled, "Waiting for the Funeral?"

It is being clearly demonstrated in the use of passenger train service between Washington and New York City that the traveling public wants and will use good clean, dependable train service, and it is our responsibility to see to it that such service is provided.

For the information of my colleagues, I include the editorial at this point in the RECORD:

WAITING FOR THE FUNERAL?

The Interstate Commerce Commission recently completed a nine-month investigation into the costs of operating passenger trains. The well-documented report clearly shows that while the railroads, using the ICC's own accounting methods, have for years been vastly over-stating losses incurred from operating passenger trains, the fact is that these trains do run at a big deficit. The eight railroads studied could have saved perhaps $118 million in 1968 had they not run any passenger trains.

At the same time the ICC has urged Congress—now that the costs of running passenger trains are known—to launch a study aimed at formulating a national policy on rail passenger service. It would determine what type of service is necessary, and whether the federal government should help subsidize it.

Having said that, the ICC goes back to its usual slumber—handling the tricky-track of minuscule trucking operating rights cases—content that it has done its job by telling Congress what to do.

But the ICC hasn't done its job. The commission has for more than a year been sitting on top of the most important railroad passenger case ever before it—a case in which one of its examiners has urged the ICC to assert that it does indeed have the power to protect the traveling public, and require at least a bare minimum civilized services aboard trains—such as sleeping and eating facilities.

The examiner, John S. Messer, issued his historic report in April 1968 in a case that has been at the ICC since 1966. The commission heard arguments on it last September—and for 10 months since has dawdled over the matter while train after train has been discontinued, and while services aboard those remaining have dwindled.

There is no doubt Congress must set forth some national policy on rail passenger service. But Congress also is busy with such pressing matters as inflation, taxes and the war. Congressional action on rail passengers could take years. And while Congress deliberates, and the ICC waits, more trains make their final trips, and those still running are downgraded. Eventually, as things are going, the railroads will kill all of their remaining service.

Then, of course, there will be no need to rule in the Messer case because there will be no more trains. But the ICC could always say, "well, we tried—we told Congress it ought to act."

FEDERAL BUDGET RESULTS, FISCAL YEAR 1969

HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. MAHON. Mr. Speaker, on yesterday the Secretary of the Treasury and the Director of the Budget released a preliminary statement of Federal budget results for the fiscal year 1969 which ended on June 30 last. For the information of Members and others, I am inserting the full text of their joint statement summarizing the results.

Budget receipts were $1.8 billion higher than had been projected in the budget last January by President Johnson and in the April 15 budget revision of President Nixon.

Budget receipts in fiscal 1969 were some $34.2 billion above those for fiscal 1968.

Budget outlays—expenditures and net lending—were $1.1 billion higher than had been projected in the budget last January by President Johnson. They were $132 million below the April 15 revised budget projection of President Nixon.

The budget surplus for 1969 is reported at $3.1 billion, or some $700 million higher than the $2.4 billion surplus projected in the January budget by President Johnson. The $700 million improvement over the January budget derives from the increased receipts of $1.8 billion offset in part by the $1.1 billion of higher expenditures.

In comparison to the preceding fiscal year 1968 budget results, receipts in fiscal 1969 were $34.2 billion higher. Budget outlays were $5.9 billion higher. Thus there was a turnabout of $28.3 billion from a budget deficit of $25.2 billion in 1968 to a budget surplus of $3.1 billion. Increased revenues flowing from continued high economic activity of a growing economy and enactment of the 10-percent surtax last year made the difference.

Mr. Speaker, the joint statement also includes a report on the expenditure cutback provision in last year's tax bill, directing a cut of at least $6 billion in nonexempted areas of the 1969 budget. There was $8.2 billion cut from the nonexempt areas, but this was partially offset by overruns of $6.9 billion in exempted areas, with the result of a net cut of $1.3 billion from the original budget expenditure projection for fiscal 1969.

The joint statement follows:

JULY 28, 1969.

JOINT STATEMENT OF DAVID M. KENNEDY, SECRETARY OF THE TREASURY, AND ROBERT P. MAYO, DIRECTOR OF THE BUREAU OF THE BUDGET, ON BUDGET RESULTS FOR FISCAL YEAR 1969

SUMMARY

The June Monthly Statement of Receipts and Expenditures of the United States Government released today provides preliminary budget totals for fiscal year 1969. It shows receipts of $187.8 billion and outlays of $184.8 billion for the fiscal year 1969, which ended on June 30. The budget surplus was $3.1 billion.

Receipts were $1.8 billion above the estimate made by the President on April 15, reflecting higher than expected levels of individual income tax receipts.

Outlays were $.1 billion below the April 15 estimate.

The *budget surplus* was $1.9 billion higher than estimated in April, primarily because of the increase in tax receipts.

FEDERAL FINANCES, FISCAL YEAR 1969

[Billions of dollars]

Description	Apr. 15 estimate	Actual	Change from Apr. 15 estimate
Budget receipts, expenditures, and lending:			
Expenditure account:			
Receipts	186.1	187.8	+1.8
Expenditures	183.5	183.3	−.2
Expenditure surplus	2.6	4.6	+2.0
Loan account: Net lending	1.4	1.5	+.1
Total budget:			
Receipts	186.1	187.8	+1.8
Outlays	184.9	184.8	−.1
Budget surplus	1.2	3.1	+1.9
Means of financing:			
Borrowing from the public	(1)	−11.1	(1)
Reduction of cash and monetary assets, increase (−)	(1)	−1.8	(1)
Other means	(1)	9.8	(1)
Total budget financing	−1.2	−3.1	−1.9

[1] Means not available because the data were not compiled on Apr. 15.

Note: Detail will not necessarily add to totals because of rounding.

RECEIPTS

Budget receipts in the fiscal year 1969 were $1,751 million greater than the April 15 estimate (which was the same as the January budget estimate). Revised estimates showing receipts to be about $400 million above the April figures were issued on May 20, after the tax returns filed in April had been analyzed.

Income tax receipts provided most of the excess of actual receipts over the April estimate, but individual and corporate income tax receipts showed contrasting results. Receipts from individual income taxes were $2,826 million above the estimate, while corporation receipts were $1,404 million below.

Approximately $600 million of the higher individual income taxes resulted from bookkeeping adjustments between the income tax account and employment tax trust funds, and do not affect overall receipts totals. Another $300 million reflected lower refunds than were anticipated. The remaining $1,900 million excess represented payments of final taxes on calendar year 1968 liabilities and declaration payments on 1969 incomes substantially above the amounts estimated.

About $400 million of the $1.4 billion decline from the April estimate of corporation taxes was due to larger-than-expected refunds. The remaining $1.0 billion reflected shortfalls in final payments of 1968 liabilities and declaration payments of 1969 liabilities that were below the amounts estimated earlier.

Employment taxes were almost $600 million less than estimated because of the reallocation to the individual income tax account, mentioned above. Excise taxes exceeded estimates by $413 million, reflecting high levels of economic activity. Estate and gift tax receipts contributed $278 million and

miscellaneous receipts $207 million to the overall receipts excess.

OUTLAYS

Total outlays in fiscal year 1969 were $184.8 billion, $0.1 billion lower than was estimated April 15, 1969. This change was the net result of a number of increases and decreases.

The principal increases:

Department of Health, Education, and Welfare outlays were $333 million above the April 15 estimate, due principally to unanticipated increases in the cost of the Medicare program.

Payments of *interest on the public debt* were $313 million above the April budget estimate, accounting for most of the $358 million increase in *Treasury Department* outlays.

Net outlays of the *Department of Agriculture, excluding* the *Commodity Credit Corporation,* were $295 million higher than estimated, primarily because tight money conditions prevented the planned sale of some insured loans of the Farmers Home Administration.

Outlays for the *Military functions of the Department of Defense and Military Assistance* exceeded the April estimate by $276 million. Approximately two-thirds of this increase was in the military assistance program.

Net outlays of the *Export-Import Bank* were $81 million above the April estimate, resulting from lower-than-anticipated sales of loans from the Bank's portfolio.

The principal decreases:

Department of Housing and Urban Development outlays were $480 million under the April estimate as conversion of urban renewal projects to annual programs resulted in deferrals of progress payments, as lower foreclosures of Federal Housing Administration insured mortgages resulted in fewer insurance claim payments, and as fewer than anticipated project completions resulted in reduced disbursements in such programs as college housing loans and Government National Mortgage Association special assistance mortgage purchasers.

Department of Agriculture Commodity Credit Corporation net outlays were $273 million below the April estimate, reflecting in part lower international food shipments under P.L. 480.

Net outlays of the *Department of Transportation* were $242 million under the April 15 estimate, mainly because of reduced spending for the Supersonic Transport program and the stretchout of several major equipment acquisitions within the Federal Aviation Agency and the Coast Guard.

Foreign economic assistance outlays were $130 million below the April 15 estimate, reflecting a lower rate of spending for Vietnam, Alliance for Progress loans, and development loans.

IMPACT OF REVENUE AND EXPENDITURE CONTROL ACT IN FISCAL YEAR 1969

Section 202 of the Revenue and Expenditure Control Act of 1968 (P.L. 90-364) established a ceiling on 1969 outlays which limited outlays to $6 billion below the amounts recommended in the 1969 budget document (which was sent to the Congress in January 1968). However, in setting this limitation, the Congress excepted certain programs from the required reductions and subsequently added other exceptions. These exceptions, which are shown in the following table, amount to over one-half of total 1969 outlays.

The preliminary 1969 year-end results show that total outlays were $184.8 billion, $1.3 billion below the original January 1968 estimate. This decrease is the net result of:

An increase of $6.9 billion in programs excepted from the P.L. 90-364 limitation, and

A decrease of $8.2 billion in programs covered by the P.L. 90-364 limitation—$2.2 billion more than the reduction required by the law.

BUDGET OUTLAYS IN FISCAL YEAR 1969—RELATIONSHIP TO PUBLIC LAW 90-364

[In billions]

Description	January 1968 estimate	Actual	Change
Programs excepted from Public Law 90-364 limitation:			
Special support of Vietnam operations	$26.3	$29.1	+$2.9
Interest	14.4	15.9	+1.5
Veterans benefits and services	7.3	7.7	+.4
Social Security Act trust funds	36.0	36.7	+.6
Old-age and survivors insurance	(24.6)	(24.7)	(+.1)
Disability insurance	(2.6)	(2.6)	(—)
Health insurance	(5.8)	(6.6)	(+.8)
Unemployment insurance	(3.1)	(2.8)	(−.3)
Tennessee Valley Authority (portion financed from power proceeds and borrowing)	.1	.1	(+)
Commodity Credit Corporation (price support and related programs)	2.8	3.7	+.9
Public assistance grants to States (including medicaid)	5.7	6.2	+.6
Aid to schools in federally impacted areas (special 1968 supplemental payments made in 1969)		.1	+.1
Subtotal, excepted programs	92.6	99.5	+6.9
Remainder covered by Public Law 90-364 limitation	93.5	85.3	−8.2
Total	186.1	184.8	−1.3

[1] Less than $500,000,000.

Note: Detail will not necessarily add to totals because of rounding.

BUDGET RECEIPTS AND OUTLAYS

[Fiscal years—In millions of dollars]

Description	1968 actual [1]	1969 January budget	1969 Apr. 15 estimate	1969 Actual	Change from Apr. 15 estimate

U.S. Information Agency	186	191	190	183	−7
Other independent agencies	1,032	387	342	244	−98
Allowances, undistributed		100			
Undistributed adjustments:					
Federal employer contributions to retirement funds	−1,896	−2,105	−2,105	−2,091	14
Interest credited to certain Government accounts	−2,674	−3,000	−3,000	−3,099	−99
Total outlays	178,834	183,701	184,901	184,769	−132
Budget surplus (+) or deficit (−)	−25,162	+2,391	+1,191	+3,074	+1,883

[1] Amounts for 1968 differ slightly from those shown in the 1970 budget document released Jan. 15, 1969. The additional time since January has permitted greater precision in making the accounting changes recommended by the President's Commission on Budget Concepts.

Note: Detail will not necessarily add to totals because of rounding.

NEW JERSEY'S DEAD IN VIETNAM

HON. HENRY HELSTOSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. HELSTOSKI. Mr. Speaker, with your permission, sir, I would like to insert into the CONGRESSIONAL RECORD the names of 141 young men who gave their lives in the conflict in Vietnam. These names show the grim results of war, a war that we should not have been in at all.

These young men who died on the field of battle between the dates of January 1, 1969, and May 31, 1969, are American boys who left their homes, jobs, schools to fight in an area far remote from our shores.

They are irreplaceable, to their families, their communities, and their Nation. They have had their life cut short in a war that I feel has no intelligent purpose and without any long-term accomplishment.

The individual potential of each of these men is not known to us, but collectively they could have contributed much to the spiritual, economic, and intellectual well-being of this Nation. But these 141 men will never be able to do so, for they are far beyond our reach to recruit them into our endeavors to make our Nation a better place to live in. They have made their greatest sacrifice in a job that is not yet finished and no one knows when it will be. I hope that the day will soon come when we do not have to release these casualty lists.

Even if this immoral war should end today, the results of it will be with us forever—in the hospitals, in seeing men without arms, without legs, and with other reminders of the Vietnam conflict. What can we say to them who shall suffer throughout the remaining years of their lives? Just how far will this Nation go to repay them for their sacrifices? We must plan now for what we desire to do for them later. This Nation has always been the first to aid other nations, but when it comes to taking care of our own, we minimize our efforts to go forward toward a better American for all of our citizens.

Mr. Speaker, following is the list of New Jersey casualties of the conflict in Vietnam:

NEW JERSEY—LIST OF CASUALTIES INCURRED BY U.S. MILITARY PERSONNEL IN CONNECTION WITH THE CONFLICT IN VIETNAM, JAN. 1–MAY 31, 1969

Name and grade	Date of casualty	Home of record
DEATHS RESULTING FROM HOSTILE ACTION		
ARMY		
Baker, George Arthur, Sp4	Jan. 29, 1969	Little Ferry.
Bastian, Michael Francis, Sgt	Jan. 2, 1969	Sewell.
Bell, William Brent, 1Lt	Mar. 27, 1969	Essex Fells.
Biddle, Joseph Lenord, Sgt	Mar. 2, 1969	Berlin.

FIFTY CONGRESSMEN SIGN BIPARTISAN STATEMENT CRITICAL OF GREEK JUNTA

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. EDWARDS of California. Mr. Speaker, 50 Members of the U.S. Congress have joined in writing Secretary of State William Rogers a bipartisan letter expressing their deep concern over the situation in Greece.

These Members of Congress, including three U.S. Senators and 47 Members of the House of Representatives, have joined in calling for "clearer signs of U.S. moral and political disapproval of the dictatorship—in Greece—be given and sustained."

Mr. Speaker, I will include the letter in the RECORD.

In addition the situation in Greece has been detailed in a series of newspaper articles published in recent days. These articles describe the concern of my fellow Members of Congress and I, including the rape of the Greek judiciary and the destruction of the educational system. I will also include them in the RECORD.

The material follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., July 30, 1969.

The Honorable WILLIAM P. ROGERS,
Secretary of State,
Department of State,
Washington, D.C.

DEAR MR. SECRETARY: We are writing to you because of our deep concern over the situation in Greece, the only European nation in the Western Alliance in the post World War II period to fall to a military coup.

Authoritative reports indicate that in junta-led Greece the economy is in decline, fundamental civil liberties are suppressed, and people continue to be arrested and jailed without charge. What's more, anti-Americanism is reportedly on the increase because our long-time friends believe the United States is the principal support of a military dictatorship which has no popular base.

Our policy of occasional, tepid expressions of "hope" that the junta will return to democracy stands in rather hollow contrast to the repeated instances of high-ranking American military figures being pictured and quoted in the controlled Athens press lavishing generous comments on the junta.

Thus we find ourselves in a situation where at a time of moral and political crisis in Greece, our traditional friends of liberal, centrist, and conservative persuasion believe with bitterness that the United States supports the dictatorship and the dictatorship, on the other hand, boasts about it. In the short term, and in the long term, we are in danger of reaping the whirlwind of anti-Americanism, especially when the junta falls, as it inevitably must.

America's attitude is critical to the survivability of the junta. The sooner the junta falls, the greater the prospect that a responsible, democratic, western-oriented successor government will emerge to bind the economic and political wounds. The longer the junta lasts, the grimmer the prospect of political polarization, turmoil, bloodshed, and unpredictable consequences to Greece and our own political, moral, and military interests.

Accordingly, we respectfully urge your consideration of the following action:

1. Since the post of U.S. Ambassador to Greece, presently vacant, has taken on a growing symbolic and practical value, that it be filled by an experienced, civilian-oriented diplomat of superior credentials and not be treated as a political reward or routine promotion.

2. That a clearer sign of U.S. moral and political disapproval of the dictatorship be given and sustained.

3. That U.S. military aid to Greece should not be increased, and indeed, should be curtailed.

Sincerely,

Hon. Joseph P. Addabbo, Hon Glenn M. Anderson, Hon. Jonathan B. Bingham, Hon. John Brademas, Hon. George E. Brown, Jr., Hon. Phillip Burton, Hon. Daniel E. Button, Hon. Shirley Chisholm, Hon. Jeffery Cohelan, Hon. John Conyers, Jr., Hon. James C. Corman, Hon. R. Lawrence Coughlin, Hon. Charles C. Diggs, Jr., Hon. Don Edwards, Hon. Joshua Eilberg, Hon. Donald M. Fraser, Hon. Jacob H. Gilbert, Hon. Seymour Halpern, Hon. Augustus F. Hawkins, Hon. Henry Helstoski, Hon. Floyd V. Hicks, Hon. Daniel K. Inouye, Hon. Charles S. Joelson, Hon. Robert W. Kastenmeier, Hon. Edward I. Koch, Hon. Robert L. Leggett, Hon. Allard K. Lowenstein, Hon. Abner J. Mikva, Hon. Patsy T. Mink, Hon. William S. Moorhead, Hon. John E. Moss, Hon. Lucien N. Nedzi, Hon. Gaylord Nelson, Hon. Robert N. C. Nix, Hon. Richard L. Ottinger, Hon. Bertram L. Podell, Hon. Adam C. Powell, Hon. Thomas M. Rees, Hon. Ogden R. Reid, Hon. Henry S. Reuss, Hon. Peter W. Rodino, Jr., Hon. Benjamin S. Rosenthal, Hon. Edward R. Roybal, Hon. William F. Ryan, Hon. William L. St. Onge, Hon. James H. Scheuer, Hon. Louis Stokes, Hon. Frank Thompson, Jr., Hon. Jerome R. Waldie, and Hon. Stephen M. Young.

WHY CLING TO THE ATHENS JUNTA?

(By Clayton Fritchey)

The Council of Europe, which includes most of the NATO countries, has warned the Greek military dictatorship to restore basic human rights by December or face expulsion from the 18-nation body. But the junta is not impressed.

There is only one nation (the U.S.) which has decisive influence with the colonels; and as long as the U.S. does not show any signs of reacting like the Europeans, the junta can afford to snub the council's threat.

Instead of organizing or even going along with outside pressure on the colonels to reinstate democratic government in Greece, the U.S. has resumed much of the military aid it has been pouring into Greece for over 20 years. Our tanks were supposed to be used by the Greek army to contain communism, but mostly they have been used to contain the Greek people.

Many European military observers have doubts as to how much help the Greek army would be in a showdown between the NATO and Warsaw pact forces, for the junta has been purging the armed forces of some of its best officers, many trained at enormous U.S. expense. The test of an officer is no longer ability, but political reliability.

As a putative ally, Greece has also been weakened by the obvious incompetence of the colonels in managing the economy. Since the military coup two years ago, the gross national product has been slipping steadily. Theoretically, Greece is NATO's southern anchor, but in practice it is more like a soft underbelly.

If the free democratic countries of Europe can afford to cast off the junta, why does the U.S. need to cling to this tyrannical government? The old anti-Communist justification no longer has any validity. After all, the junta overthrew not a leftist, but a conservative government.

It is a tragic conclusion of the brave effort launched in 1947 by President Truman to save democratic government in the cradle of democracy. After being a virtual satellite of the U.S. for two decades, the country succumbed to military dictatorship without a struggle. It was hardly a tribute to the spirit of democracy that the U.S. was supposedly fostering in Greece all those years.

Even the situation in nearby Czechoslovakia is better than that. About the time the U.S. moved into Greece, the Russians moved into Czechoslovakia, but after 20 years of Soviet domination the passion for freedom was still so ardent that the Czechs openly defied their masters. Not even the return of Russian troops has altogether quelled it.

Leaders of the Greek resistance feel their cause is hopeless as long as the U.S. cooperates with the junta. Washington's response is confined to vacuous assertions of interest in the "full restoration of civil liberties" and the "achievement of representative government in Greece."

These pious statements do not trouble the leaders of the junta. The Deputy Premier, Stylianos Patakos, recently met with President Nixon while on a visit to Washington. Upon returning to Athens he said no American officials had raised with him any questions about Greece's internal affairs.

More importantly, Patakos, since his Washington trip has openly dashed any hopes for

a return to constitutional government. The junta had been encouraging hopes that the dictatorship would be lifted in the near future, but now Patakos says he and his fellow officers are going to stay in power indefinitely.

"There are serious grounds for being disturbed by U.S. policy toward Greece," says Elias Demetracopolous, the exiled editor of a conservative Athens newspaper now closed down. He thinks the grounds require "a basic and urgent review of the U.S. position by the Nixon administration, which is in the advantageous position of having no responsibility for the events and policies of the last few years."

TIMID GREEK JUDGE SUFFERS FOR UPHOLDING PRINCIPLES

(By Alfred Friendly)

ATHENS, July 24.—Harassment of Greece's highest judge, who recently ruled against the government and refused its demands to resign, has reached the point where his physician was apparently pressured to declare him able to face an inquisition when, in fact, he had just suffered a heart attack.

The judge is Michael Stasinopoulos, president of the Greek Council of State. His illness is thought to be the result of the ordeal he was subjected to after he ordered the reinstatement of 11 Supreme Court judges fired by the junta. His physician is dependent on the government's favor for keeping his job in the state medical care system.

The 67-year-old jurist, subjected to attempted intimidation by a police officer who accused him of faking illness, has, so far avoided the command to appear before the junta's No. 2 personage, the deputy prime minister. Another doctor, engaged only in private practice and accordingly not subject to official intimidation, was called in by Stasinopoulos and has declared that he is indeed seriously ill.

The history of the continuing ordeal of the judge was disclosed in circumstantial detail by a thoroughly informed source. The story that emerges is of a timid, conservative, ultra-cautious man forced to become a hero in spite of himself, when there was no escape from putting his legal principles on the line.

The chronicle begins more than a year ago when the government purged some 60 judges, getting around the provision that they had permanent status by suspending the constitution, by official decree, for three days.

MORAL CALIBER

Among those ousted were 11 judges of the Supreme Court, the highest appeals tribunal for all cases in which the state itself is not a party. The principal grounds were that the incumbent either had been identified with a political party in a way that rendered him unfit to serve, or was not of the requisite "moral caliber." Those purged were also disbarred.

The jurists appealed to the Council of State, the highest appeals court for matters in which the state is directly involved. They won their case on rescinding the disbarment, only to have the government overrule it by decree the next day. Thus they remain forbidden to practice.

In a different case, based on provisions of the new constitution that the junta itself prepared and had confirmed in a national referendum last September, the judges appealed their ouster on grounds that the constitution provided them lifetime tenure.

Stasinopoulos realized the dilemma the case would present him and his 22-judge court. A small, fragile man, chosen for the presidency of the council by the colonels themselves, he had no stomach for a fight. A deep-dyed conservative, he is distinguished, if at all, as the author of rather mediocre poetry and as someone who has tried throughout his tenure to keep his court from coming into conflict with the regime.

His thesis has been that the Council of State, an institution created in 1930, does not have the Marbury v. Madison tradition ernment acts and will only get into trouble—especially with the present dictatorship—if it tries.

CASE STALLED

For a year, Stasinopoulos tried to duck the case, stalling it, urging the appellants to withdraw, arguing that whatever the outcome, both they and the court would lose. He did not heed the warnings, which he got anyway, from his first cousin, Gen. Hadjipetros, head of the Greek equivalent of the FBI, to "be careful."

But in the end, the case was not to be avoided. In June Stasinopoulos summoned a public session of the full court. The case had been thoroughly debated and the president may or may not have known how the vote would go. He made a short speech, bidding his colleagues to take into account the position of the state but also to reflect on the requirements of their honor as judges.

Under the usual procedure, an open vote was taken, with each member, beginning with the most junior, announcing his vote and the reasons for it. By the time the tally reached the president, it was 10 to 10 (there was one absentee). Stasinopoulos voted to sustain the appeal.

He chose the narrowest possible of the six grounds on which the appeal was based, due process. He ruled that the judges could not be dismissed without first having been formally presented with reasons and charges, and having the opportunity to answer them, and being given a proper legal finding.

For the first time since it took power more than two years ago, the hitherto cool regime publicly lost its composure. It has been proceeding ever since from one flagrant action to another.

JUDGE SUMMONED

Premier Georges Papadopoulos immediately summoned Stasinopoulos to his office and, in a rage, demanded his resignation.

At 9 the next morning, the judge presented a letter to the Ministry of Interior refusing, on grounds of the self-respect of the judiciary, to resign merely because the Premier told him to. An hour later, the official gazette published a governmental decree "accepting the resignation of the President of the Council of State" and naming his successor.

Whereupon, the 10 members of the council who had voted with Stasinopoulos submitted their resignations, also as a matter of self-respect. The chief judge's successor, meanwhile, showed himself to be a good lawyer too. He pointed out that he was not the legal President of the council until the incumbent had formally resigned, and that until then a litigant could impeach any decision on grounds that the court was illegally constituted.

The pressure on Stasinopoulos to submit a predated resignation was now immense. He was chivvied and argued with. His phone was cut off and police were placed in front of his dwelling to challenge all visitors and examine their papers.

The heart attack ensued. Shortly thereafter, about three weeks ago, Stylianos Patakos, the deputy prime minister phoned the judge—it turned out that the phone could be put back into operation when it suited the regime's convenience—and ordered him to present himself at Patakos's office. He replied that he was in no condition to leave his bed.

Next day, Stasinopoulos' physician made his morning call and without examining his patient told him he looked fine. The sick man protested that he felt terrible. At this point, the commandant of the regional police station pushed his way into the sick room and engaged in muttered conversation with the doctor. It was clear that some collusion was afoot. In a few moments, the doctor turned back to the judge and declared loudly: "You are now in good health."

FAKE ILLNESS

"So," said the police officer to the judge, "you've been faking illness. The doctor says you are well and therefore at 9 next Monday morning"—two days hence—"you will be in Gen. Patakos' office."

The judge's wife called in a physician in private practice. He has succeeded so far in forestalling Patakos's demand for Stasinopoulos' appearance.

Frustrated and all thumbs, the regime went Andrew Jackson one better, declaring that the court's ruling was not only unenforceable but unfounded because the subject matter was "excluded from its jurisdiction."

Also, it immediately disbarred and ordered one year banishment to a small island and to two remote hamlets for the three lawyers who had argued the Supreme Court justices' case.

George Christopoulos, Greece's ambassador to Paris, a former undersecretary of state and the Junta's nominee, reported the nature of European reaction. According to those who have seen it, the gist of his message was that Greece could not expect to remain in the Council of Europe, which is considering ousting it, unless it chooses to abide by the conventional legal and moral standards of other member governments, otherwise, it should resign from the council before it is kicked out.

The regime's response was to fire Christopoulos and replace him in Paris with a general.

GREEK COLONELS NURTURE UNREST BY CRUSHING SCHOOL FREEDOM

(By Alfred Friendly)

ATHENS.—The young professor at the University of Athens teaching penal law was a runaway favorite. After all, he wasn't 70 years old and he spoke to the students on their own terms, lecturing as if he cared about his subject and his listeners.

But he was the cousin of, and had the same name as, the Athens lawyer George Mangakis, who had defended many targets of the regime and who is now disbarred and banished for his pains. The young professor also doubtless indulged in some extracurricular political activity himself.

So in due course it was last March he was dismissed. He chose to make something a little special of his last class and spoke, therefore, on his own conception of the role of justice and the role of law in today's world. And he disclosed, of course, that he had been sacked by a process and for reasons that mocked those principles.

When he finished, a student leaped to his feet and called for getting up a petition urging the government to rescind the dismissal. Another student—a boy from the island of Crete, whose inhabitants, the novelists tell us, wear their passions on their sleeves—upped the ante, proposing that the students take to the streets in a demonstration.

At that moment, three members of the class got to their feet simultaneously, lunged at the speaker, pinioned him, and, after a scuffle, dragged him off to arrest, along with the first student, the petition-urger. They obviously had authority for their act.

"That's what bothers most of the students: not knowing who is sitting next to you, a student like yourself or a government informer," said the young man, himself a fourth-year law student, who told me the story. "It's that, probably more than the other interventions the government has made into the—how shall I say—intellectual life of the university."

Those other "interventions" have been, principally:

The wholesale sacking of professors who were known to look without favor on the dictatorship that took power in Greece in April, 1967.

"It's worst in the political science and economics faculties," the young student explained. "You begin a semester thinking you'll have three good professors in the course, and you find only one left."

The recent installation in every institution of higher learning of a military officer, a governor or commissionar—commisar would be the right word—from the regime. He sits in on faculty meetings, reviews every act, and presumably has veto power over the officials of each school. He determines what lectures shall be given, what courses shall be taught and what the contents should be.

But the class stoolies—the knowledge of their existence but not of their identity (except, as in the story above, when they blow their covers)—makes the sour taste in the students' mouths, a taste that grows steadily more rancid. (In Greek Universities, it should be explained, middle-aged bona fide students are commonplace, so that the appearance of an older person in a class is not an automatic revelation of an interloper.)

There is an ironic aspect to the regime's corrosion of its own educational institutions. One of the colonel's announced aims was "to create a new generation of Greeks"—by implication a generation that would be properly contemptuous of degenerate institutions like democracy, free choice and open criticism.

But what the commissar in the classroom seems to be doing is injecting a political fire into the students and awareness and loathing of Big Brother at a considerably earlier age than in the past.

Most students in Greek universities and other institutions of higher education are from the villages, from middle-class or even peasant families. (The upper crust, with money and a background of educational and especially linguistic attainments, send their children to Europe for their education.) To these young people of relatively humble origins, the university degree is the passport for escape from the primitiveness and poverty that was their parents' lot. In Greece, one's whole future depends on the university degree. Accordingly, not since Byron's day have the students been the young firebrands by whom revolutions are made, and they still are not.

Nevertheless, Greek undergraduates are not born devoid of a sense of outrage, and a recognition of it when they see it. They are not utterly quarantined from the viruses—and the vitamins—affecting students elsewhere. The guess here is that in a year or two the Greek students will begin to organize in earnest for political action. The embryos of future groupings are beginning to be seen and, as might be expected, the most developed is one with heavy Communist influence.

At the moment, the Communist Party is so badly battered, with a thousand or two of its activists in the junta's prison camps, that it lies low. But extremes breed extremes. If the Greek students are, like their parents, denied democratic organizations in which to operate openly and effectively, and if they remain subjected to the academic repression the junta has now decreed, it is not hard to visualize what kind of a "new generation of Greeks" will be created.

INDIANA DUNES

HON. EARL F. LANDGREBE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. LANDGREBE. Mr. Speaker, I wish to direct my remarks toward the statements in the RECORD of July 22, by the gentleman from Indiana (Mr. BRADEMAS) on the subject of the Indiana Dunes National Lakeshore, and the amendment I introduced to H.R. 12781, the 1970 appropriations for the Department of the Interior and related agencies. I make these comments in order to clarify a number of false statements and implications which have been raised regarding my intention in introducing such an amendment.

The amendment I introduced would have prohibited funds to be "used to enter into contracts to extend boundaries of the Indiana Dunes National Lakeshore beyond the boundaries set forth in H.R. 11084 of the 91st Congress." This bill which I introduced on May 8, 1969 (H.R. 11084) specifically defines, in legal terms, the boundaries of this national park in northwest Indiana. The boundaries of this park, a park created by an act of Congress in 1966, were only vaguely outlined on a map drawn by the National Park Service. The act creating the park never defined the specific boundaries. It only gave the Secretary of the Interior the authority to buy land within a general outlined area. This area included more than 6,000 acres of land. Within its borders lie more than 500 private homes and businesses, bus and railroad lines, highways, and public utility lines and services.

The Park Service has been engaged in buying land since 1966. As of this date they have spent $12½ million and bought 1,038 acres of land, in addition to 383 acres presently under condemnation. Because the boundaries of this park are indefinite, and more importantly, because so many private homes and businesses will be destroyed and residents forced to move to other areas, I introduced this bill to specifically define the boundaries of this Federal park and to exclude the highly developed areas of the region from acquisition by the Park Service. The effect of my bill is to reduce the size of the approximate acreage which the Park Service has been authorized to purchase. However, the areas encompassed in my bill approximate 3 square miles, including almost 2 miles of Lake Michigan shoreline.

In this regard, the comments of my colleague from Indiana, Mr. BRADEMAS, bear some revision and correction in a number of instances. He states on page 20330 that—

> The bill would have affected, some persons advised me, up to 90% of the land authorized for this park.

On the next page he states—

> This legislation would not define the boundaries of this national park, but would properly reduce the size of the lakeshore by over three-fourths (or 75%) of its presently authorized size.

As anyone can see, his own statements are in conflict and neither is factual. The bill I have introduced, if the gentleman would care to read it, does, in fact, define in legal terms the boundaries of the national lakeshore. Its effect is, as I have said, to reduce the size of the original authorization by a little more than 60 percent. As I have explained, I have taken this action in response to urgent requests of the residents of this area and I believe it to be necessary and imperative in order to protect the many homes and businesses from destruction and confiscation. In this action I have been supported by hundreds of residents in this area, by resolutions from the town boards of Ogden Dunes and Dune Acres and by the full support of all the county commissioners of Porter County, in which the national lakeshore lies.

Second, there are a number of acres of land which have already been purchased by the Park Service which lie outside the boundaries defined in my bill. Mr. BRADEMAS says rightly that—

> Never in the history of the National Park Service have lands authorized for a national park and purchased under such authorization been subsequently removed from any park.

But I do not believe that we need to be intimidated by such past policy. I believe the situation is important enough to warrant the action I have taken and, therefore, if the Congress approves the bill I have proposed, then we will provide the National Park Service with the appropriate authorization to resell the land at the purchase price. Mr. BRADEMAS asserts in his statement that under the present law the land would have to be sold by the General Services Administration. This, in fact, is not the case, as the Federal Property and Administrative Services Act does not permit the disposal of park land by the GSA. I, therefore, intend to make provision for the disposal of this land by an amendment to my original bill.

Mr. Speaker, I would like to conclude by saying that I completely support the idea of the Indiana Dunes National Lakeshore and of the need and value of conservation as well as providing areas of recreation and esthetic enjoyment. But I believe that the present plans of the Park Service to condemn and purchase land which is highly developed and in one of the fastest growing communities in our Nation is an unwarranted and excessive intrusion of the Federal Government into the private lives of the residents of this area, particularly when many homes and businesses will be destroyed for the sake of recreation. I can only support conservation and recreation when it does not involve the destruction and disruption of vast areas and people.

I realize full well, as I am sure my colleague does, the need for a recreational area in this section of our Nation, a rapidly growing area of people and economic activity. I need not remind my colleague of the existing 2,100-acre Dunes State Park in this area. My proposal for the Indiana Dunes National Lakeshore doubles the present area available for recreation; but I cannot support the plans of the Federal Government to destroy homes and businesses in order to replace them with a Federal park. The idea is outrageous and unreasonable and the costs are excessive.

This is the explanation of my position and the reasons that prompted my action, not only in introducing the amendment to the appropriation bill, but also in introducing the original bill, H.R. 11084, defining the boundaries. I urge my colleague from Indiana and all Members of the House to give this matter their closest attention and support.

KENTUCKY'S LONG-LOST COMPOSER OF A WORLD-FAMOUS MELODY

HON. TIM LEE CARTER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. CARTER. Mr. Speaker, the mysteries concerning the life of a noteworthy native son of Kentucky have been the subject of the research of a distinguished Ohio jurist, who has written a very fascinating account of his findings.

Judge Earl R. Hoover, former judge of the court of common pleas in Cleveland, Ohio, and an authority on early American music, went to great lengths to unfold the unknown details of the life of the author of some of our best loved native music.

Jonathan E. Spilman, born in Maysville, Ky., and the composed of the melody we know so well in association with the words to "Flow Gently Sweet Afton" and "Away in a Manger," was the subject of this interesting study by Judge Hoover.

As a contribution to the history of American music, and as an attribute to this talented son of Kentucky, I will place in the RECORD this article by Judge Hoover which appeared in the Register, a leading historical quarterly in my State:

J. E. SPILMAN, KENTUCKY'S LONG-LOST COMPOSER OF A WORLD-FAMOUS MELODY REDISCOVERED

(By Earl R. Hoover)

Accidentally I found a lost world celebrity—a native Kentucky song writer—J. E. Spilman. I did not set out to find him. I did not even know he was lost. When suddenly I awakened to that fact, it took me years to prove that the Spilman I discovered was the real Spilman for whom the authorities were searching. The life I turned up turned out unbelievably fantastic.

I first bumped into Spilman about a half century after he was dead. It was around 1943 in an antique shop in Harrodsburg, Kentucky. Ohio's Civil War song writer Benjamin R. Hanby, who wrote the history-making song, "Darling Nelly Gray" (about "the old Kentucky shore"), and the child's Christmas song, "Up On the House Top," had long enslaved me as a hobby, and I really was trying to find something pertaining to him—old song books containing his songs. I had never heard of Spilman.

The antique shop's proprietor was James P. Spilman. When he learned that I was interested in song writer Hanby, he had to drag out his own song writer. He did not realize he was handing me double trouble (a hobby is just that) by volunteering that his great-uncle had been a song writer, too— Rev. J. E. Spilman—who had composed the music to the old favorite, "Flow Gently Sweet Afton."

That fact alone would not have aroused me. It was the story he told me that did. He said that Spilman had married a niece of President Zachary Taylor; that he was a Presbyterian minister at Maysville, Kentucky; that his parsonage overlooked the Ohio River; that his wife was drowned when she was a passenger on an Ohio River steamer, the *Magnolia*, and its boiler blew up and it was destroyed as it sailed past parsonage right in front of her family's eyes; and that shortly thereafter, in grief, the Reverend composed the music to "Flow Gently Sweet Afton."

The great-nephew was not able to cite anything ever written about his great-uncle. He did not know any dates. As research later proved, he knew very little about the song writer, and much of it was inaccurate. Nevertheless it bore the earmarks of a story so exciting that there was incentive to give it chase.

Back home in our great Cleveland Public Library, I thought I could immediately verify the whole story that I heard in Harrodsburg, but for years stone walls stopped me—encyclopedias, musical and biographical dictionaries, treatises, histories, magazines. If the Empire State Building were to disappear it would be no less baffling.

The great-nephew's erroneous designation of the steamer as the *Magnolia* helped to deflect me from the scent because I did find a steamer *Magnolia* whose boilers exploded near Cincinnati on March 18, 1868, killing about eighty people, but no Mrs. Spilman was listed among the dead.

I was to learn that the identity of J. E. Spilman had been puzzling, even fooling leading music historians. Putting a few facts together this seemed impossible. In song books I did find the name "J. E. Spilman" printed over the music to "Flow Gently Sweet Afton." This tied Spilman up with a world immortal because the words to that song were written by Scotland's Robert Burns. Too, it is obvious that this same melody of Spilman's is also one of the most popular ones set to another famous song, "Away In A Manger." The authorship of the words to the Christmas carol, though disputed, has been frequently attributed to another world immortal, Martin Luther, and has often been called "Luther's Cradle Hymn." How can you lose a man tied up with Robert Burns and Martin Luther!

J. E. Spilman married President Zachary Taylor's niece, Eliza Taylor, daughter of Hancock Taylor. That means that Spilman's wife was a cousin to Zachary Taylor's daughter, Sarah, who married Jefferson Davis. That made Spilman's lost identity even more baffling. How could a man just drop out of sight who was tied up with four such famous people—a great poet—a great theologian—a president of the United States—and the president of the Confederacy? A man who, more than a century before, had written a melody still known the world over, even to children? A man who created something immortal—a tune sung to two world famous lyrics? A man whose name appeared over his melody in millions of old favorite song books, a copy of which was in almost every home? A man, as shall later be revealed, who was tied up with other well known figures?

On checking, I found that the late John Tasker Howard, then head of the American Music Division of the New York Public Library, said nothing about Spilman in his monumental, 841-page *Our American Music*. Other treatise writers were also helpless in penetrating the mystery.

In his equally monumental, 729-page *A History of Popular Music in America*, the late Sigmund Spaeth lavished just two sentences on Spilman, and used up two words to call him "a Philadelphian" which later proved to be entirely erroneous. I wrote the authoritative Mr. Spaeth asking for his authority for this. He replied, "I am not sure that I can give you the exact source of my information . . . but I know that this has been printed several times in the past and is generally accepted as the truth."

I wrote to the late Elliott Shapiro, of the music publishing firm, Shapiro, Bernstein & Co., Inc., of New York City, who was co-author of the book *Early American Sheet Music*. He suggested that I write to Richard S. Hill, Music Division, Library of Congress, saying "Spilman seems to be a fairly unknown proposition."

I wrote the late Richard Hill, thinking that surely in his great library, of thirty-six acres of floor space and hundreds of miles of book shelves, he had an instant, conclusive Spilman clue. He replied, "I am delighted that you have chosen J. E. Spilman as your next hobby. He is so complete an enigma that I would not be surprised if you could make him into your life work." "Besides," he added, "were I to hand you all the answers on a silver salver, it would completely ruin your fun."

Hill had already been on the Spilman hunt; and that "Philadelphia" red herring had harassed him too, for he wrote me, "I had a brief fling at trying to find a few answers to questions about him (Spilman). . . . The only intriguing lead is that family of Spilman's in Philadelphia. The name is spelled so many different ways in the different entries that you can almost hear the accent—I would guess that the name is really Spielman—that the family arrived in this country from Germany not long before their first appearance in the Philadelphia directories in 1837, and that some of the children were born abroad. This must have been true of 'J. E.' if my guesses are correct, since "Flow Gently" was first published in 1838. A good deal of hard digging, however, is going to be needed to establish even this much about the family—particularly since I am by no means certain that 'J. E.' was one of the barber's sons or relatives."

In my hunt, two irksome things were those initials "J. E." For what did they stand? In the original sheet music and in most song books they were just "J. E." To add to the annoyance, I found one song book giving it "James E." and another giving it "Jonathan E." The forces that lost Spilman seemed purposely to be throwing up confusion to keep him lost. I met another "err-itation"—Spillman spelled with two l's. In my bewilderment I had good company. Richard Hill wrote me, "I have a hunch that you will find that 'Jonathan' and 'James' are nothing better than surmises. I would be hard put to say why, but it would not surprise me in the least if it turned out that J. E. stood for Jane Eliza. At any rate, I am quite certain that it would be thoroughly unwise to shut out one's mind to the possibility that J. E. was a lady."

When I wrote Hill that I believed Spilman was a preacher, he cautioned me, "If you look over these titles (meaning Spilman's seven songs in the Library of Congress) . . . you will agree that the editor who added 'Rev.' to his name was making a . . . wild guess. . . . None of the songs refer to him as a 'Reverend'."

With such noted music historians stumped, I may have been up a tree if the Harrodsburg antique dealer had not placed in my hands some leads that the historians apparently did not have. He had said that the song writer was a Presbyterian minister at Maysville, Kentucky. Surely the Commonwealth of Kentucky and Presbyterianism had the answer.

I wrote to the Kentucky Historical Society with headquarters in the Old State House at Frankfort. It replied, "We find very little information about Spilman," but it did identify him as "a Philadelphian." I wrote back and asked for its authority for this statement. It replied, *"A History of Popular Music in America* by Sigmund Spaeth." Apparently it had borrowed the mistake that Sigmund Spaeth had borrowed from Richard Hill.

This was the most baffling of all. One can imagine some states that might lose such a son, but not history-conscious Kentucky, because as we shall see, Spilman was born in Kentucky and lived there about fifty years. Yet I found no leading Kentucky history that credited him with his world-resounding achievement. At Bardstown, the Commonwealth of Kentucky has gone all out to honor a native Pennsylvania song writer, Stephen Foster, but it has done little, if anything, to

honor its own son. Significantly, in a letter to me, Richard Hill rated Spilman favorably with Foster in one respect. Referring to the above list of Spilman's seven songs, he commented, "It would be surprising indeed had he managed to turn out more than one song in seven that would live for a century. Stephen Foster's average was no better."

To make it more astounding I was to find that Spilman wrote his immortal song in Kentucky—in the part steeped in tradition—in the Blue Grass Country—right at the core of that country—Lexington; yet today the Blue Grass is not conscious of Spilman or of the fact that while living there he did something immortal that was destined to become known to more people than any single piece of horseflesh ever bred in the Blue Grass.

In fact, another lead was to prove that Spilman attended historic Transylvania College at Lexington, oldest college west of the Allegheny Mountains. It is said to have had the first library, first football team, first medical school and first law school in the West. Spilman graduated from that law school. Among its famous sons, Transylvania boasts of George Rogers Clark, Stephen F. Austin, Jefferson Davis and John C. Breckinridge. Perhaps no one of them created any one thing that has been known and loved over so long a period by so many men, women and children here and beyond the seas, as has Spilman. He even wrote his world-famous melody on the campus while a student, but Transylvania is not aware of his achievement today.

Pursuing the Presbyterian lead, I did find a book entitled *Ministerial Directory of the Presbyterian Church, U.S. 1861–1941*, compiled by Rev. E. C. Scott and published in Austin, Texas, in 1942. Though listing a "Jonathan E. Spilman," it did not mention that he was a song writer or wrote an indelible melody. It did, however, raise some hope. It indicated that Spilman had held a pastorate at Maysville, Kentucky. I wrote to the directory's compiler, but he advised me that he wasn't able to find anything about this Spilman being the composer of the melody to "Flow Gently Sweet Afton." So did The Presbyterian Historical Society.

I mention these things in no critical sense, but only to show how completely the song writer had been lost. We no longer have to guess Spilman's name or sex. I corralled conclusive authority—his own statement, contemporary publications, his granddaughter, his obituary and his tombstone. He is a he, and he is Jonathan. By his middle name you can determine for yourself after whom he was named. In full, he is Jonathan Edwards Spilman. There is a reason why "Reverend" does not appear on the original sheet music. He was not a preacher—yet.

Space does not permit detailing the many letters written and received. The mystery was cracked and a dramatic life story obtained mainly through three sources: The First Presbyterian Church, of Maysville, Kentucky; Illinois College, at Jacksonville, Illinois; and the song writer's granddaughter, Mrs. O. C. (Jeanne) Anderson, of Xenia, Illinois. I shall not attempt to spell out the particular information supplied by each of these, but shall tell how I made these contacts, then relate the colorful Spilman life story and buttress it with the citations of authority gathered.

I wrote to the late Rev. Robert Von Thurn, pastor of the Maysville church, and was somewhat taken back by this reply:

"Some people have endless nerve in what they ask others to do for them. To collect all the data you have asked for would require several full days of work. I have no time for that. Your letter has been turned over to Miss Mary Wilson, 8 West 4th Street, Maysville. Miss Wilson is capable of doing this work for you, and a very reasonable charge, for all that, would be $10.00. And when you write to Miss Wilson, won't you enclose an addressed and stamped envelope? Down in this country, gentlemen do that."

I never spent $10.00 more productively or had more helpful assistance from a more delightful person than the late Miss Mary Wilson. Later, at Maysville, I met her and Mr. Von Thurn.

Another equally helpful contact came from an article I stumbled onto, written in 1909, which, though having some blatant errors, indicated that Spilman graduated from Illinois College, at Jacksonville, Illinois. I wrote to the college president, H. Gary Hudson, who supplied a wealth of material.

Much later, almost by accident, personally I was to meet Spilman's granddaughter, Jeanne Anderson, in Xenia, Illinois, who supplied valuable pictures and family records. Somehow Spilman's thrilling life has missed the main stream of history, and had to be rediscovered and recovered on the back streams of local history.

The story begins with pirates and, as suspected by Richard Hill, a change of name. The song writer's first paternal ancestor to step on America was his great grandfather, Henry Spilman. He came from England and he really wasn't a Spilman, but a Spelman. At sea, pirates murdered his father, also a Henry. Young Henry settled safely in Westmoreland County, Virginia. Due probably to his extreme youth, he started mispelling the name with an "i". Henry's son, James, lived in Culpeper County, Virginia. Among James' eight children was Benjamin Spilman, the song writer's father, who in 1790 married Nancy Rice. Immediately they plunged to Kentucky. Benjamin was just twenty-three. The song writer was born on April 15, 1812, at Greenville, seat of Muhlenberg County, Kentucky, the twelfth of their thirteen children. James Madison was president. The War of 1812 was about to start. Lincoln was three years old.

The hardships of pioneer travel from Virginia to Kentucky did not quell the restless Benjamin Spilman. About 1818, the year young Jonathan became six and Illinois was admitted to the Union, the Spilmans plunged Westward again, settling in White County on the plains of Illinois. There Jonathan grew up.

In 1831 Jonathan entered Illinois College at Jacksonville, whose president was Rev. Edward Beecher, the brother of Henry Ward Beecher and Harriet Beecher Stowe. Their father, Lyman Beecher, later an eminent Cincinnati preacher and president of Cincinnati's Lane Theological Seminary, has been called the "father of more brains than any other man in America."

In time, Illinois College would count among its sons, orator William Jennings Bryan and Lincoln's law partner, William H. Herndon, but now it was so shiny new that Spilman was a member of its first graduating class (1835). He had the honor, too, of being valedictorian. Of course, the class had only two graduates, but do not underestimate the competition. Today just a handfull of statues stand on the grounds of the Illinois State Capitol. One is that of Kentucky-born Abraham Lincoln. Another is that of Richard Yates, the Kentucky-born, Civil War governor of Illinois, United States senator and Spilman's classmate.

There could be only one valedictorian, but generous Jonathan Spilman eased the disappointed Yates by allowing Yates to become the first person to receive an Illinois College diploma.

Referring to the commencement, Yates later humorously said, "I am referred to as the first graduate of Illinois College. Now, for the honor of being the first graduate, I have always contended; but candor compels me to say, that it is a question which admits of some controversy. At the time I graduated I was not the only graduate and most certainly, I did not receive the first honors of the institution. The valedictory was very properly awarded to a generous and noble classmate, now an eminent barrister in the State of Kentucky. But I was not so far behind as you might suppose, for I received next to the highest honors of the institution. I was second best. I confess, I was somewhat in the condition of the boy at school, who boasted to his mother that he was 'next to head' which was all very well till the hopeful youth was interrogated as to the number of his classmates and he had to reply 'there was only two of us.' In this way I received too the highest honors of Alma Mater, 'for there were only two of us.' "

"Well, my classmate being a liberal fellow, in consideration that he walked off with the valedictory, out of the plenteousness of his compassion and generosity, agreed that I should receive the first diploma. Having received the first diploma—a beautiful sheepskin with blue ribbons and big Latin, I made my bow to the President and Faculty, and walked off the stand the 'First Graduate.' And if I ever entertained any feeling of envy toward my friend Spilman on account of his valedictory, it has always had ample revenge in the fact that I was the 'first graduate.' "

Spilman now reversed his life plan. Twenty years later he would reverse his reversal and resume his original plan. If he had not shelved his original purpose he might never have written his immortal melody because the stray circumstance that inspired it might never have discovered him elsewhere. Spilman had entered Illinois College to prepare for the ministry. As graduation neared he wavered, doubted his call and tabled it for later consideration.

In the fall of 1836 Spilman and his classmate, Richard Yates, entered Transylvania's law school. There the warm friendship that had grown between them at Illinois College became more firmly cemented. Spilman graduated in 1837, but returned the next year for an extra course of lectures as a resident graduate. After Transylvania the paths of the two classmates separated forever except for one brief moment. Yates, though a native of Kentucky, returned to Illinois for the big role that destiny was saving for him. Spilman remained in Kentucky. They met but once again, for an hour's conversation in Springfield when Yates was Governor.

There in his native Kentucky, destiny singled out Jonathan Spilman to be one of the fortunate few who create something that will live. As the hour approached for him to write a deathless song he was young—only about twenty-five. It was a beautiful 1837 summer day. The young law student was taking advantage of it, too, as he sat in the shade of a tree on the Transylvania campus enjoying a book of Robert Burns' poems.

Musically inclined, he turned over in his mind, one by one, the tunes he knew to which various poems of Burns had been set. He came to those lines to Mary and a river. To his surprise he could think of no music to them. He must be mistaken. That just cannot be. So he read the lines over, then over, then over again. Somewhere there must be music for such words. And suddenly there was! Under the spell of immortal poetry, from some unknown somewhere, there came to Jonathan Spilman the strains of an immortal melody—strains that neither he nor anyone had ever heard—strains that fit into the company and do honor to the lines of a Robert Burns. And Jonathan Spilman, student of law who had tabled a call to the ministry, jotted them down there that day under a black locust, Transylvania campus tree.

At the house, piano in hand, he worked out the accompaniment. He did not realize what he had created. How could he? He took a copy to his sweetheart. She sang it to friends. They suggested publication. He laughed. They continued urging him. He mailed it to an Eastern publisher frankly admitting that such a thing was out of his line, but saying that if the published thought the song worthy he could publish it. Spilman emphasized that he took no responsibility. To

his elation he received a laudatory reply and twenty-five printed copies.

This is how it happened that, in 1838, one of the 19th Century's leading publishers, George Willig, of Philadelphia, issued a new song in sheet music by Kentucky's J. E. Spilman entitled "Flow Gently Sweet Afton":

"Flow gently sweet Afton, among thy green braes,
Flow gently I'll sing thee a song in thy praise;
My Mary's asleep by thy murmuring stream,
Flow gently, sweet Afton, disturb not her dream."

It sold many editions.

You recognize immediately that Spilman's tune is also sung to the words of another old favorite—one of the most loved Christmas songs—sometimes called "Away In a Manger" and sometimes called "Luther's Cradle Hymn";

"Away in a manger, no crib for his bed,
The little Lord Jesus lay down his sweet head.
The stars in the heavens look down where he lay,
The little Lord Jesus asleep on the hay."

After Transylvania Law School, Spilman practiced law for eighteen grueling years in Kentucky—at Nicholasville from 1838 to 1849, then at Covington until 1856. He was a law partner of Judge Samuel M. Moore, later of Chicago, and of Judge John W. Menzies, later a Congressman.

Grueling years turned into crushing years when Spilman's partner entered politics saddling him with extra heavy legal loads. He broke down. Fearing permanent injury, he sold at great sacrifice. A little place in the country restored him. There he had time to reconsider the matter he had tabled more than twenty years. In 1858, he returned to work and to his original life plan—a Christian minister. He was forty-six years old. For thirty-eight years he preached—mostly in small towns—Covington, Nicholasville and Maysville in Kentucky; Canton in Mississippi; Carmi and Flora in Illinois.

There was romance and heartbreak along the way. In 1840, when almost twenty-eight, at Nicholasville he married Mary B. J. Menefee, daughter of Major John Menefee, of Jessamine County. She died three years later, three days after the birth of their only child. The baby died just nine months later. In 1845, now thirty-three, he married Eliza Sarah Taylor, daughter of Hancock Taylor, of Jefferson County, Kentucky—brother of Zachary Taylor. They had ten children.

The great heartbreak in the Rev. J. E. Spilman's life, I discovered, came when he held the pastorate at Maysville, Kentucky—an almost unbelievable story. On the night of Tuesday, August 7, 1866, tragedy stalked the Presbyterian manse as the clergyman and his wife, Eliza Taylor Spilman, retired for the last time.

The manse perched on a picturesque panorama. The Spilmans had lived there about two years. And what a scene on which to live! Nostalgic steamboating days were plowing their deepest wakes on the Ohio River. The Spilman house was a loge. The Ohio River was a stage. The hills of Ohio were a backdrop. Below, the giant actors puffed and paddle-wheeled their cues.

Tonight Eliza Spilman was particularly excited because tomorrow she would leave her spectator's seat to become an actress in the river's thrilling drama. If she could scan the script tonight she would turn back her part, for in this very theater the curtain would roll up on tragedy and she was cast as tragedienne.

Yes, taking a steamer on this shimmering O-hio-way, tomorrow she will visit down river in Covington and Louisville after first meeting her son, Charles Spilman, in Cincinnati.

The boat will be the Cincinnati-Portsmouth packet, the elegant, new *Bostona No. 3*, built at Jeffersonville, Indiana, and owned by David Gibson (½), Preston Lodwick (¼), both of Cincinnati, and W. E. Z. Moore (¼), of Portsmouth. The boat's master was Cincinnatian, Preston Lodwick.

This last night the family planned a unique, gala "bon voyage" for Eliza Spilman. The manse was downstream from the town wharf. They will put her on the *Bostona No. 3*, rush home, take their stations, and, as the steamer passes the manse, all will wave handkerchiefs in farewell.

The next day, Wednesday, August 8th, these plans are faithfully executed. It was twilight as the great ship pulled away from the Maysville pier and pointed toward Cincinnati. It was weighted down with passengers and freight including a few hundred gentle creatures from which ordinarily one could expect no harm—sheep. A violent storm was gathering.

As the majestic *Bostona No. 3* approached the Spilman home, the family saw Eliza at the ship's rail and she saw them. From ship to shore and from shore to ship happy handkerchiefs shouted "goodby," but now something injected itself that wasn't planned. As they waved suddenly the family became aware of a danger of which Eliza was not aware.

Something horrid had happened during the short interval between the boat's leaving dock and its arrival near the Spilman home. The night watchman had gone back to the locker underneath the ladies' cabin to fill his lamp with coal oil, and startled sheep had knocked the lamp out of his hand. Immediately the rear of the boat was wrapped in flames.

Terrified, the family suddenly realized that there, in front of her home, a mother and wife was sailing on a blazing inferno unaware of her peril.

A moment later the fire alarm shrieked. Word flashed throughout the boat. Passengers were exhorted to save themselves. Panic gripped the ship, but a steel-nerved pilot stayed at his wheel. Fortunately, not too far away, there was a sand bar near the Ohio shore, and he rammed the bow into the bar. Passengers rushed to the bow and scrambled down to the bar. Most were saved.

Attempting to escape, Eliza Spilman ran into a broken steam pipe and was severely scalded. She reached the hurricane deck and there sank, exhausted and unable to move. People came to her aid, either carrying her from the burning vessel or throwing her into the river. In a drenching rain they rowed her across the Ohio on a skiff. She hobbled up the steep hill to her home. In excruciating pain, she died two days later, Friday morning, August 10, 1866, and was buried in the Maysville Cemetery. The splendid *Bostona No. 3* was totally destroyed—loss $160,000.

Spilman was fifty-four; Eliza, forty-four. They had been married twenty-one years. About half of their ten children were living including Charles, the oldest, who was nineteen, and Lewis Hopkins, the youngest, who was only six. One daughter, Mrs. Julia Byrd Dewey, of Palm Beach, Florida, a writer, was recognized in *Who's Who In America*. The son, Lewis Hopkins Spilman, a lawyer of Knoxville, Tennessee, was also a writer who made *Who's Who*. Spilman lived thirty more years but never remarried. What irony that he should gain fame imploring a river to be gentle! His is the drama of a man in whose life two rivers play—two that flow thousands of miles apart in different hemispheres. One that he never saw, brought immortality; the other, flowing beneath his home, death.

Up the Ohio River about 170 miles from Louisville and 65 from Cincinnati—Maysville is still one of the nation's picturesque river towns. Rising from the shore into scrouging hills that help hem it between land and water and decorated with enough colonial homes to make New England green-eyed, it is a delight. It was the home of Stanley Reed, Justice of the United States Supreme Court; and it is the birthplace both of singer Rosemary Clooney and of the late John R. Marsh, the husband of the late Margaret Mitchell who wrote the best-seller, Civil War novel *Gone With The Wind*.

Though J. E. Spilman is forgotten in Maysville today, downtown there still stands the stately First Presbyterian Church where he preached in the 1860's. Forgotten too, though once the focus of a tragedy that rocked the whole valley, there still stands on the west side of town not far from the river, the house where the Spilmans lived.

In my quest there were years of correspondence to New York, Pennsylvania, District of Columbia, Kentucky, Georgia, Mississippi, Texas, Illinois and California. I made field trips to Kentucky and Illinois. At Maysville, I beheld the manse from which helpless loved ones once saw Eliza Spilman in distress. The story unfolded in dramatic detail, and I had authority for everything—well, except for one thing.

I was hunting that last link on July 6, 1951, when Mrs. Hoover and I entered the little town of Flora in Southeastern Illinois—population 5250. Knocking on the door of the Presbyterian parsonage, I asked hospitable Rev. F. D. McMartin if he could give me some information about a Rev. J. E. Spilman who wrote "Flow Gently Sweet Afton" and who, I understood, was once the pastor of his church.

He had never heard of Spilman, but he kindly telephoned Arthur Holt, a church official who had the church's old records. Holt had never heard of Spilman either, but he invited me to go to his home where his wife would show me the records. Gracious Mrs. Holt was waiting for me. Neither had she heard, but soon we were scouring the old "Minutes of the Session of the Presbyterian Church of Flora, Clay County, Illinois." And sure enough, there in these more than a half-century old, handwritten minutes for April 2, 1893, we discovered that "Rev. Jonathan E. Spillman, D.D., was engaged to supply the Pulpit on the Sabbath days when Rev. J. F. Flint would be absent at Odin or elsewhere, which was extended after Mr. Flint's departure."

But was this "Spillman" the "Spilman" who wrote "Flow Gently Sweet Afton?" The minutes did not say. At this anxious moment we found preserved in the old minute book, a printed program of the 85th anniversary celebration of this church. I perused it and beamed. Eureka! There, in a list of the church's pastors was "J. E. Spillman"; and after mentioning that he preached there until 1895 when physical infirmities compelled him to resign, it continued: "It is with pride that we can inform you that Rev. Spillman was the composer of the music to the beloved ballad, 'Flow Gently Sweet Afton.'" Yes, this was the right man, and I was near the end of the trail in the search for that last link.

I asked Mrs. Holt if there were any residents old enough to have known Spilman. Yes, there was—a Miss Grace Hundley. Mrs. Holt telephoned her. Miss Hundley had not only known Spilman, they had been near neighbors. That called for the big question—and Mrs. Holt asked it over the telephone—was this last link located in Flora? Yes, it was; and Miss Hundley told her where it was.

By now Mrs. Holt sensed that we were in search of something of historical significance. I did not have to ask her; she volunteered to guide me to it. We drove across town, entered a beautifully landscaped terrain, started hunting—and we found it!

There, in the heart of these United States, in Elmwood Cemetery, on the edge of this little community that did not know he was there, not only lost to Flora but lost to the world, we looked upon he grave of the man

who among the world's countless billions had done something immortal—the man whose name is associated with Robert Burns and Martin Luther.

The humble shaft gave no inkling of what he had done, or that here lay buried a world figure. It simply said, "Jonathan E. Spilman, April 15, 1812. May 23, 1896. That they may rest from their labours, And their works do follow them."

Yes, the man of two rivers and two professions who attained fame with his hobby even before starting to work, died in Flora at the age of 84.

We drove to the home of Miss Hundley on the west side of Flora. She still lived in the same house at #333 W. North Ave., where she lived in the 1890's when Jonathan Spilman lived diagonally across the street and to the left at #418. There the song writer spent his last years. In 1892, at the age of eighty and while preaching at Carmi, Illinois, he was, at his request, retired from active work because of his advancing years and because he wanted to be near relatives. He moved to Flora to be close to his daughter, Clara Lee Spilman Andrews (Mrs. George W.), the mother of Jeanne Andrews Anderson.

He built the little cottage that still stood across from Miss Hundley, and became supply pastor of the Flora church. There he lived with his maiden daughter, Anna Louise, just four feet eleven inches tall, and affectionately known as "Aunt Tantie." The Andrews also lived diagonally across the street from Miss Hundley but a little to the right. So Miss Hundley's eagle eye guarded the short highway path from Jonathan Spilman's to the Andrews'.

Fifty-five years had gone since Miss Hundley had seen Jonathan Spilman on that path. It had grown from a village street to a bustling transcontinental highway. Pointing to the Spilman cottage, she said, "Just as if it were yesterday, I can see him walking up the road from his house to the Andrews'. He was tall, handsome, kindly and slightly stooped, with long white hair and beard, but he looked like an aristocrat. He died at the Andrews' house. When he became sick, the Andrews brought him to their home so they could take care of him." Fire swallowed up the Andrews' home in 1948. On its historic site the Moose had built a building.

Mrs. Holt was perplexed that Miss Hundley knew all this, and Flora did not.

Then Mrs. Holt and Miss Hundley took me to the old church building in which Jonathan Spilman had held his last pastorate. To make way for a new church building, it had been moved from its original site at the corner of Second and Locust Streets; and then stood on East Second Street. Neither sermon nor hymn had echoed therein for many years, for it had been devoted to something else—something colorful but definitely a part of the vanishing scene. Through its weather-beaten emaciation still beamed the attractive lines of an old, frame, New England meeting house. Inside all was chaos and clutter. Miss Hundley pointed out the places where once the choir sat and the pulpit stood. Here, where long ago Miss Hundley had heard the voice of Jonathan Spilman, now we heard the voices of the anvil and forge of Ray Winter's blacksmith shop.

I left Flora happy that I had found Jonathan Spilman, but puzzled that a world could lose such a man. Perhaps Illinois will make amends. Flora is on Route 50 connecting Washington, D.C., and San Francisco. Spilman's cottage is too. Just as it did for another adopted Kentucky son, Abraham Lincoln, perhaps Illinois will enshrine Jonathan Spilman's grave and home so that a neglectful world may come and pay its overdue homage.

CONGRESSMAN JAMES A. BURKE: RECIPIENT OF THE NEWEL PERRY AWARD FOR HIS EFFORTS ON BEHALF OF THE BLIND

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. BOLAND. Mr. Speaker, Congressman JAMES A. BURKE of Massachusetts was the guest of honor of Mr. Kenneth Jernigan, the president of the National Federation of the Blind on July 3, 1969, in Columbia, S.C. At that time Congressman BURKE received the Newel Perry Award. The nature of this award can best be revealed by reading Mr. Jernigan's remarks as he presented the award to Congressman BURKE.

The remarks follow:

NEWEL PERRY AWARD

Like the Nobel Peace Prize, the Newell Perry Award is granted only as often as distinguished accomplishment merits it. It is given to those who have made outstanding contributions toward the progress and independence of the blind. It is, therefore, a great honor and pleasure to present this award, last bestowed in 1966, to the Honorable—James A. Burke, renowned statesman and Congressman from Massachusetts.

Nationally recognized as a leader in the Democratic Party, Congressman Burke has been acclaimed by Democrats and Republicans alike as one of the ablest members of the House of Representatives. He has been elected and reelected from the Eleventh District of Massachusetts since 1958. He is a legislator of the highest caliber, guided always by principle rather than expediency, with the courage, the independence and the determination to fight for his beliefs.

We of the National Federation of the Blind have much cause to know and appreciate Congressman Burke's qualities. All Federationists have become familiar with his name as he has labored in the 91st Congress to secure enactment of our long-time supported bill to liberalize Federal disability insurance for the blind. Congressman Burke is a staunch supporter of Federation's corner stone concept: he shares with us the belief that the blind have the same right as others to band together for the purpose of striving toward economic independence and social equality. He supports our conviction that the blind themselves should chiefly determine the direction of programs designed to assist them. His support is evidenced by his vigorous efforts to transform disability insurance under the Social Security system into an insurance against the economic disadvantages of blindness inherent in a predominantly sighted society.

Tonight we of the National Federation of the Blind honor Congressman Burke for his legislative labors on our behalf, and though this labor has been great, we honor him for much more: we honor Congressman Burke for his attitude toward us and our aspirations, for his understanding of our goals and our objectives.

Congressman Burke is not like so many who wish us well, promise us much, and then promptly forget us; who profess deep sympathy for our problems, and then act with cavalier indifference toward them. He is much more than a willing but remote friend he is a member of our crusade, a coworker who joins with us in our struggle to gain independence and dignity. He joins with us to change dreams into reality, and he asserts with us that all men, whether blind or sighted, have the right and the need to function to their fullest capacities.

Congressman Burke, this is why we honor you tonight. We want you to know—we want all to know—that we thank you for joining with us in our cause. We thank you for the strength you have added to our movement. Above all, we thank and honor you for your understanding and recognition of our goal: the complete integration of the blind into society on equal terms with others.

Mr. BURKE joined a most distinguished list of recipients, which include:

Governor Edward Johnson of Colorado;

Donald Overbeay, superintendent of Overlook School for the Blind in Philadephia;

Senator VANCE HARTKE of Indiana;

Kenneth Jernigan, distinguished president of the National Federation for the Blind;

Perry Sunquist, former director of works in California;

John Mungovan, director, Commission of the Blind, from my own State of Massachusetts;

Former Vice President Humphrey; and

Congressman THOMAS CURTIS of Missouri.

Mr. BURKE received this award for introducing H.R. 3782, a bill to amend title II of the Social Security Act in order to liberalize the conditions governing eligibility of blind persons to receive disability insurance payments. That night, Mr. BURKE said:

I would do all I could to secure the enactment of H.R. 3782 in the 91st Congress. My purpose has not changed. I am as zealous as ever and will prove to be unalterable in my course. Even though, H.R. 3782 has a greater number of congressmen committed to it than any other bill now pending before the House, it will need even a greater show of support if the members of the Ways and Means committee are to be convinced that they should approve H.R. 3782.

The increased amount of insurance a blind citizen would be entitled to would not be just coins tossed in a tin cup. It would extend the benefits a blind citizen could receive thus enabling him to be, in many cases, completely self-sufficient. This is an important feeling to have whether you are young or old, black or white, blind or with sight.

To be an indiivdual, and what is more important, to feel that you are an individual, is a right inherent in every democracy. Since blind people are citizens, unfortunately afflicted with a physical defect, they deserve our assistance towards realizing their full rights. This is not a plea for pity, because they do not want pity, only recognition and help towards reaching their full potential.

The formation of the National Federation of the Blind proves the unwillingness of a great number of blind citzens to be useless people. I commend them for forming this organization. I commend them for not sitting back, but rather exerting their right of self-expression, for it is not enough to just have rights but it is the duty of every citizen to actually exert them. The members of the National Federation of the Blind have done just this.

The attitudes of the National Federation of the Blind can best be described by reading the following portion from Mr. Jernigan's article entitled "Blindness: New Insights on Old Outlooks."

BLINDNESS: NEW INSIGHTS ON OLD OUTLOOKS

(By Kenneth Jernigan)

We are accustomed, in our day, to talk and hear about revolutions: revolutions past and revolutions present; revolutions violent and revolutions nonviolent; revolutions political, economic, technological, racial, social, cultural, and generational. They are of many varieties, these revolutions; but they have at least one thing in common—namely, their historical reality. Either they happened in the past, or they have happened in our own time.

I wish to speak to you, however, about a revolution that has just begun to happen—a revolution of the future as well as of the present. This revolution is one that should have run its course already; and it is one that will, irresistibly, come to fruition and make good its promise in the years ahead. Moreover, it is a revolution which I intend to stir, foment, and agitate; and I hope to solicit your active support in fanning the flames. In fact, if we can get enough people to join us on the barricades, we will not only have set the revolution on its course, but we will have won it.

For the revolution that has just begun to happen is a revolution in the public mind—in the minds of us all—a revolution in our attitudes and assumptions, our deepest premises and prejudices, concerning blindness. It is a revolution to replace old outlooks with new insights.

In a world of many revolutions—of constant novelty and change, of experiment and originality, of new thoughts and fresh ideas—in such a world it is astonishing that we can still be ruled, in any sphere, by superstitions that date to the caveman and images more appropriate to the ice age than the space age. Yet that is still in simple fact the state of our thinking (and, therefore, of our teaching, planning, and programming) about the blind.

This is not to say that there has been no progress. On the contrary, the revolution is well begun; it is on the right track; and it is steadily gathering force and gaining ground. Ever since the National Federation of the Blind came on the scene a generation ago, bringing with it the nerve of independence and the shock of recognition, there has been a shaking of the foundations throughout the field of work with the blind—and in the world beyond. But in view of the immensity of the task before us—even in its preliminary phase of ground-breaking, mind-clearing, and institutional renewal—it is clear that the revolution has barely been launched. To paraphrase Winston Churchill, it is not yet the beginning of the end; it is not even the end of the beginning; but it is the beginning of the beginning. Our revolution is under way. It cannot now be stopped or pacified until it has achieved its goal of overthrowing the graven image which looms as a stumbling block in the path of the blind—that image of their nature and limitations which is graven in stone upon the public mind, stamped upon the yellowing pages of the statute books, and nestled in the dusty corners of custodial institutions.

What then are the outlines and features of this graven image? First, it is an image of *helplessness*—not just of visual disability but of total inability. Second, it is an image of *abnormality*—not just loss of sight but loss of mental and emotional stability. (The blind man, in short, is thought to be not just affected in the eyes but touched in the head.) Third, it is a *"broken image"*—an image of impairment, of imbalance, and disharmony rather than of wholeness and symmetry—an image that calls attention to what is missing rather than what is present, to lacks and losses rather than strengths and talents. Helplessness, abnormality, incompleteness: these are the essential ingredients of a bitter and explosive brew—thoroughly aged and definitely sour—which flows like bile through the veins and capillaries of the body politic.

And what does all of this mean? What is the significance of these acts and attitudes on the part of government officials and workers with the blind? It is not merely that these several isolated incidents occurred. It is not even that they are symptomatic of a broader pattern of thought and deed, and therefore not isolated at all. It is rather that they bespeak the dominant theme of public and official opinion which everywhere characterizes the image of blindness.

That is the dark and threatening significance of the events which I have laid before you. But such events as these, however common, however destructive, no longer stand alone. Of still greater significance is the positive fact that we have come to recognize these sordid myths and misconceptions for the lies which they are; that we have organized; that we have *mobilized* ourselves into a powerful movement to change the total landscape of the country of the blind; that we have not only won friends and influenced people in our cause but have won battles and influenced the course of public policy.

It is significant, too, that more and more professionals in the field of work with the blind—in the private agencies, in government, in the foundations and universities—are receiving our message and rallying to our cause. It is significant that more and more blind persons are employed, in better and better careers. It is significant, most of all, that despite the heritage of old outlooks, despite the deep hold of the graven image upon their minds, the general public is beginning to show itself ready to listen to learn, and to understand.

The challenge is ours, and the time is now. Our revolution will not wait, and it will succeed—but only if we take the lead and take the risks. It is for us to persuade, to participate, to perserve—and to prevail—and prevail we will!

The words of Abraham Lincoln, spoken a hundred years ago, are no less applicable to us today: "We cannot escape history. No personal significance or insignificance will spare one or another of us. This fiery trial through which we pass will light us down in honor or dishonor to the last generation. We, even we here, hold the power and bear the responsibility."

The time is now, and the challenge is real. I ask you, with all that the question implies: will you join me on the barricades?

Mr. Speaker, their revolution started on a national level in 1940 when Jacobus Tenbroek, with the help of Dr. Newel Perry and Perry Sunquist, formed the National Federation of the Blind. The prototype of this organization was the California Council of the Blind, which Perry and Sunquist started in 1934. Here is a section from a letter written by Newel Perry on May 29, 1946, explaining why a national organization for the blind should be formed:

NEWEL PERRY LETTER

A conviction almost universally entertained by the blind to the effect that they are frequently unjustly treated by the Social Workers is allowed to go unexpressed, due to fear. Membership in an organization of the blind, for the blind, and by the blind, will help to remove this fear, and frank and bold criticism would reach the ears of legislators and would help greatly by enabling your Congressman and the members of your legislature to understand your needs. Be assured these men do not now understand your problem. However, much of your dissatisfaction now vented on your social workers—is misdirected. For example, your bitterness over the fact that your meager earnings are taken away from you through reductions in your aid, is not to be blamed on your social worker. On the contrary, the fault rests with your Congressmen. Congress has forbidden the State authorities to permit you to retain any of your earnings. To whom, then, shall we address our complaints? The answer is clear. We must complain to our Congressmen in Washington. Through what vehicle, then, shall I communicate my wants and my criticism to the Congressmen in Washington? The answer is not a State organization, of the blind. Remember, Congress legislates—not for a particular State—but for all the States. If, therefore, we wish to petition Congress, we must look to Washington for relief, it follows that we must communicate with these Federal legislators through a nationwide organization which speaks, not for the blind of a particular State only—but for the combined blind of the whole country.

We have every reason to be very proud of the achievements of the N.F. of B. Practically every Congressman has already become aware of our national organization and regards it with respect. We must not return to our follies of former years. We must not make the mistake of sending forty-eight separate groups to explain our needs to Congress. Such a procedure would inevitably result only in giving Congress the impression that the blind do not know what they want, and as a natural consequence it would decline to take any immediate action.

To impress Congress, we must send to Washington our most able and best trained representatives. Fortunately, under the energetic administration of our President, we have done just that. Our campaign in Washington has been intensive and carried on by men who possess ability, industry, zeal, and understanding of the present needs of the blind. Let us continue to present a united front in Washington.

Kindly convey my greetings to your State Convention, particularly to the pleasant persons I met at Des Moines and other gatherings. I hope it will be my good luck to meet both you and them in St. Louis.

Cordially yours,

DR. NEWEL PERRY,
President, California Council for the Blind.

In conclusion, Mr. Speaker, we must never become so involved with the many that we forget the few. We represent all the people which infers that we are responsible for all their needs. Let us not forget these few who need our help.

POLISH-AMERICAN ADDRESS

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. PUCINSKI. Mr. Speaker, last weekend the Polish-American Congress held its 25th anniversary banquet here in Washington. The energetic and highly respected president of the Polish National Alliance, who also serves as president of the PAC, delivered the following address which I place in the RECORD today. Mr. Mazewski today speaks for more than 15 million Americans of Polish descent. His inspiring address follows:

AN ADDRESS OF ALOYSIUS A. MAZEWSKI, PRESIDENT OF THE POLISH-AMERICAN CONGRESS, DELIVERED AT THE ORGANIZATION'S 25TH ANNIVERSARY BANQUET AT THE SHOREHAM HOTEL, WASHINGTON, D.C., ON SATURDAY EVENING, JULY 26, 1969

Twenty five years ago, Americans of Polish origin were deeply disturbed by the events

that were unfolding in the diplomatic area of history.

World War Two was drawing to a close. They had a vitally important stake in its outcome both as American patriots and as an ethnic entity, conscious of spiritual, cultural and historic ties with its ancestral home—Poland.

They were concerned with saving Eastern Europe for Europeans—for Poles, Czechs, Slovaks, Hungarians, Rumanians, the Baltic peoples, and with restoring to them their right to full freedom and independence.

They rightfully appraised Poland as the keystone to East and Central European peace and stability, and, consequently, a vital factor in American security.

Because these historically proven concepts were endangered, and the fruits of victory gained with considerable contributions of these peoples were being dissipated, the Polish American Congress came into being on June 1, 1944 in Buffalo.

Among its founders were religious dignitaries of such stature as the late Bishop Stanislaus Bona, the late Bishop Leon Grochowski, a host of Monsignores and priests. Lay leadership of Polonia was represented by Charles Rozmarek, Honorata Wolowska, John Olejniczak, Ignatius Nurkiewicz, Valentine Poranski, Zygmunt Stefanowicz and 2,000 delegates representing Polonia from 32 states.

Although the question of a free and independent Poland had been the rallying cry for this Convocation in Buffalo, the founders of the Polish American Congress fully realized that the time had arrived for redefinition and renovation of the sociological, cultural, economic and political structure of ten million Americans of Polish ancestry.

They were giving the full measure of devotion and sacrifices to America's war effort. Approximately one million of their sons and daughters served in the United States Armed Forces, according to statistics published in 1941 in Washington. And they claimed their right to express their opinion, advice and criticism in the crucial area of post-war settlements.

Thus, at the very inception of the Polish American Congress, two objectives were merged:—that of true Americanism as it is demonstrated in our pluralist society; and that of an ethnic group whose more intimate knowledge of East European history moved it to the forefront in the struggle against communist conspiracy and Soviet imperialism.

War-time and post-war exigencies took a turn different from that advocated by the Polish American Congress, and the problems that were not resolved with foresight and boldness in 1945, are still with us today.

The sudden and foreboding glare of the Atomic Age, and the awe-inspiring attainments of the Space Age which we had witnessed last Sunday, did not and will not alleviate the fundamental needs and longings of people subjugated against their will, to Soviet imperialism and communist tyranny. The struggle for their freedom and independence—in justice, security and economic well-being goes on, not on battlefields, but in the area of ideology.

Thus, at this solemn occasion, when we pay tribute to founders and first leaders and activists of the Polish American Congress, we re-dedicate to these principles which we hold to be of primary importance:

We shall continue in our efforts to help the Polish people regain their freedom and independence, in a state secured within the boundary of the Odra Nysa Rivers in the West and the Riga Treaty line in the East;

We shall continue to support economic assistance from the United States to the Polish nation, based principally on the most favored status in trade, and meaningful extension of cultural exchanges between the American and the Polish people;

We shall support the psychological resistance of the Polish nation against communism and Soviet aggrandizement by all means available within the context of America's enlightened self-interest.

For ten million Americans of Polish ancestry, we pledge concerted, carefully planned activities to help them attain well deserved positions of responsibility and influence in education, in cultural activities, in economics and politics:

We pledge to our younger generations more opportunities for higher education;

We pledge continued researching of Polish American history in order to correct the faults of omission in the past and to present to our young generations a true picture of the contribution of our forebears to the growth, development and defense of the United States;

And we pledge to implement the wide spectrum of proposals, purposes and objectives presented recently to the Polish American Congress by a convocation of American intellectuals of Polish origin, held at Alliance College in Cambridge Springs, Pa., firmly believing that the appraisals and projections for Polonia's future, submitted by men of bold vision and high academic stature, offers splendid opportunities for our ethnic group in the mainstream of American life.

I would be lacking in candor, however, if, at this moment, I did not touch upon the current political realities and their abrasive effect on a considerable number of Americans of Polish origin.

We have men and women eminently successful in all walks of American life; people experienced in serving the public; people occupying positions of trust and responsibility.

However, we have not yet received proper recognition in politics on all levels—municipal, state, and especially federal.

This lack of recognition is glaringly apparent nowadays.

I do not wish to put blame for this state of affairs on any one. Certainly not on President Nixon.

I feel, though, that the time has come to remind the young and often brash White House functionaries, that ours is a pluralist society, deriving its strength and unity from the rich and diversified mosaic of ethnic backgrounds that contributed so much to richness, stamina and beauty of the American Way of Life.

Neglecting them or slighting them through political inexperience or whimsy, could in time, result in the corrosion of the political cohesiveness of our land.

In this area of Polonia's perspectives, we feel hurt, slighted and angered. These emotions could have far reaching consequences in many sectors of our national politics.

In conclusion I wish to state, that with this anniversary banquet we close one era of Polish American history.

The torch of idealism, of the love of freedom, of national and international justice, peace and security has been passed into the hands of another generation.

We revere the past, its attainments and its leaders.

And from this vantage point of history, we scan horizons searching for the promise and fulfillment of a better future of American Polonia.

We know the measure of efforts and sacrifices that are required of us. We are ready for them, inspired by the past achievements and goals of the Polish American Congress.

Indeed, it has been rightly stated in ancient Greece—that the Past is a Prologue.

FOREIGN AID

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. CONTE. Mr. Speaker, I have worked closely with the subject of foreign aid during my 11 years on the Foreign Operations Subcommittee of the House Appropriations Committee. During that time, foreign aid has come under attack from all sides.

I have on numerous occasions expressed my support for the basic concept of foreign aid. However, I have never maintained, nor do I intend to now, that the foreign aid program is perfect. The fact of the matter is that it is not perfect, and this has resulted in a lot of constructive criticism. Unfortunately, it has also given fuel to those who oppose the entire concept of foreign aid.

I was very interested to read an article in the Washington Post on July 27, 1969, to the effect that foreign aid has strong support throughout the country. The most surprising finding in the poll, referred to in the Post article and conducted by the University of Michigan, is that there is support for aid even though a majority of those interviewed had a highly exaggerated idea of its cost.

Because of the importance of the subject and the effect that this poll may have upon it, I include the article in the RECORD at this time:

FOREIGN AID SCORES IN NEW POLL

(By Carroll Kilpatrick)

With foreign aid programs extremely unpopular in Congress, a new opinion poll shows wide public support for this country's foreign assistance efforts.

A study by the Institute for Social Research of the University of Michigan shows not only strong support for aid but an overwhelming opposition to a go-it-alone foreign policy.

Perhaps the most surprising finding is that there is support for aid even though a majority of those interviewed had a highly exaggerated idea of its cost.

About half of those interviewed guessed that foreign aid spending amounted to between 15 and 40 per cent of the Federal budget. Some thought it cost even more.

Only 3 per cent said that it was about 2 per cent of the Federal budget, which it is, exclusive of Vietnam military aid costs.

Even with this exaggerated notion of the cost (and interviewees were not told what the correct figure was), 46 per cent said they supported the aid programs, 32 per cent said no and 22 per cent expressed varying degrees of support and opposition.

The strongest support was found in the Northeast (49 per cent) and the weakest support was found in the West (40 per cent). College-educated persons favored aid by 58 per cent to 18 per cent, with 24 per cent expressing reservations.

Democrats generally support aid programs more vigorously than Republicans. Among those interviewed who considered themselves strong Democrats, 52 per cent said the United States should continue to give aid to other countries. Among those who considered themselves strong Republicans, 42 per cent favored the aid programs.

On the question of whether the United States would be better off to stay at home and not concern itself with the problems of other parts of the world, 76 per cent said no. Only 24 per cent approved the proposition that we should not concern ourselves with the rest of the world.

Among those with a college education, the opposition to an isolationist role was 88 per cent. Of those with a grade-school education, the opposition was 60 per cent.

These figures would indicate stronger support for President Nixon's controversial speech last month at the Air Force Academy in which he attacked the new isolationists than the outcry from some members of Congress would suggest.

The figures also would indicate much stronger support for aid than the critics in Congress would have anyone believe.

NOISOME NOISES

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. EDWARDS of California. Mr. Speaker, I wonder if any other Members of Congress woke up today with a headache, at least with a headache not caused by the pleasures of the night before.

I may have picked the most inappropriate place in the universe to make my complaint, but and briefly, I would like to suggest that we need a program to abate noise, to eliminate noise pollution. And for those who are annoyed by the noises that sometimes rise from this floor, tone, content, or lack of content, let me remind the Members, and the public, that there are many more noisome noises than the voice of Congress. At least I hope so.

On my way to work this morning I heard one. It practically lifted me out of the seat of my car as one of those jets headed for National Airport. But I cannot claim that my experience was unique. I would have faced the same noise, only worse, if I had been driving down Highway 17 in San Jose across from the Municipal Airport. Those jets fly so low California highway patrolmen have threatened to cite them for speeding and failure to obey the muffler laws.

We also are graced by the sound of concrete mixers, autos, trucks, motorcycles, jackhammers, telephone, people, machines, televisions, rock music, transistor radios, and political candidates of the opposition party. For a change I would like to hear a bird sing, quietly, without interruption and to completion. It does not seem possible that such simple sounds will be heard by any of us much longer. We are building new jets to make more noise, including such happy bangs as sonic booms. As a result we will, I fear, soon have new business, akin to the hearing aid business, but providing the opposite in services.

The public is not altogether pleased by this kind of noisy progress. Again to be parochial, some of the residents of my district in California have sounded off—excuse the phrase, please—against a proposed new airport backing up to their homes. I sympathize. I do not even like National Airport from my sounding board on Capitol Hill.

In the interest of noise abatement I will end my remarks here and merely ask that an article by Donald F. Anthrop, "Environmental Noise Pollution: A New Threat to Sanity," published in Science and Public Affairs in May of 1969 be reprinted in the RECORD. I recommend it to my fellow Members of Congress for a few moments of quiet reading, hopefully followed by silent contemplation and action.

The article follows:

ENVIRONMENTAL NOISE POLLUTION: A NEW THREAT TO SANITY

(By Donald F. Anthrop)

(NOTE.—Standards developed by the U.S. Air Force (the largest employer in the country with a very noisy environment) have led to a recommendation that ear "defenders" be worn if the noise levels exceed 85 decibels. What is not generally recognized is that the level of "ordinary" noise in a community frequently exceeds the 85 decibel level—which has been found injurious in industry. And the end is not even in sight. Just over aviation's horizon is the supersonic transport airplane and its sonic boom. Dr. Anthrop is a research chemist at Lawrence Radiation Laboratory, Berkeley, California. He is a conservationist, and is doing research in noise abatement.)

The sources of noise today seem almost limitless. From the kitchen in the modern home comes a cacophony that would require ear defenders in industry to prevent hearing loss. In a series of measurements made in one kitchen, a dishwasher raised the noise level in the center of the kitchen from 56 to 85 decibels, while the garbage disposal raised it to more than 90 decibels. A food blender produces about 93 decibels. Power lawn mowers and leaf rakers, outside air conditioners, and power tools such as saws contribute to the noise in the home. But for most Americans, construction and transportation sources, particularly trucks, motorcycles, sports cars, private airplanes and helicopters as well as commercial jets and military aircraft, are the most serious offenders.

CONSTRUCTION NOISE

Particularly in large cities, construction noise is a very substantial and seemingly continuous nuisance. This noise can be substantially reduced with existing technology and without great cost. In December 1967, Citizens for a Quieter City in New York demonstrated a muffled air compressor developed in Great Britain and used there for the past five years which reduced the noise level from 86 to 79 decibels at a distance of 25 feet. The compressor is enclosed in a plastic housing lined with foam plastic. This organization also demonstrated a muffled jack hammer which produced significantly fewer decibels. Tests at the British Building Research Station have shown that jack hammer noise can be muffled considerably without any great impairment of performance. Many European cities are already using muffled jack hammers and air compressors equipped with sound attenuating devices. Some of the techniques that can be employed were illustrated by the Diesel Construction Company in the construction of a 52-story office building in lower Manhattan. Foundation blasting was muffled with special steel wire mesh blankets, demolition was done during late hours and weekends when few people were in the area, and steel beams were welded rather than riveted together.

MOTOR VEHICLE NOISE

Transportation constitutes the principal source of noise in most American cities. There are now 81 million privately-owned passenger cars in the United States compared with 25.5 million at the end of World War II. Each year seven million of these wear out or are junked, but in the past few years an average of 10 million new ones have been produced or imported each year. Thus, the number of automobiles is increasing at the rate of nearly four per cent a year. As if 81 million automobiles didn't create enough congestion and noise, there are also 2.4 million motorcycles and 16.6 million trucks.

Motor vehicle noise has been primarily an urban problem. In a recent study of noise in Boston schools, a mean reading of 78 decibels was recorded in a school playground in downtown Boston. In Wellesley, a suburb of Boston, the noise level in the school playground was only 58. Thus, children in the city school were exposed to a noise intensity 100 times greater than the suburban Wellesley children. But the rapid increase in the number of motor vehicles, the production of larger and noisier trucks, the construction of the interstate highway system, and the exodus of people from city to suburb has increasingly brought noise pollution to suburban areas and the countryside.

One of the most comprehensive noise surveys ever made was the London survey in 1961. Noise measurements were made at 540 locations in central London, and 1,400 residents at those locations were interviewed. At 84 per cent of the points traffic noise predominated. About one-third of the people specifically mentioned motor vehicle noise as a major irritant. Furthermore, traffic noise appeared to be as important an annoyance as all other noises together.

A number of surveys have estabilshed beyond doubt that the noise problem near high-speed highways arises principally from trucks, motorcycles, and sport cars. In 1964 the California Highway Patrol conducted a series of tests along California highways in which noise levels of 25,351 passenger cars, 4,656 gasoline trucks, and 5,838 diesel trucks were measured. Noise levels of the passenger cars, measured 50 feet from the road, varied between 65 and 86 decibels with the average falling at about 76. On the other hand, noise levels for diesel trucks ranged from 68 to 99 decibels with the average at about 87.

ANTI-NOISE LAWS

The results of these various surveys demonstrate quite clearly that in order to achieve quieter living conditions, cities must reduce motor vehicle noise. Yet governments at all levels have thus far failed to achieve any meaningful reductions. In 1965 the State of New York enacted a law limiting the noise a motor vehicle can produce at a distance of 50 feet to 88 decibels while traveling 35 miles per hour. In 1967 California enacted legislation which sets a limit of 92 decibels for motorcycles and trucks of three tons gross or more, traveling at speeds above 35 miles per hour. All other motor vehicles are limited to 86 decibels. That these limits are much too high is suggested by the fact that in 1961 California hired an acoustical consulting firm to make a survey of motor vehicle noise and to recommend limits consistent with existing technology and currently available noise measuring techniques. The firm recommended maximum limits of 87 decibels for trucks and motorcycles and 77 for other motor vehicles.

Even these lower limits were deemed to be easily attainable with existing technology. Furthermore, no valid argument has been advanced to justify higher noise limits for motorcycles than for passenger cars. There is no reason why a 50-horsepower motorcycle should be allowed to make as much noise as four 300-horsepower Cadillacs. Yet the new California noise law permits precisely this situation. Worse yet, the law is not being enforced, particularly with respect to motorcycles, which have become a real threat to sanity in city and back-country alike.

A substantial fraction of the motorcycles being operated in California today have altered mufflers or no mufflers at all, and many bear no registration plates. All such motorcycles are being operated in violation of the state motor vehicle code irrespective of any noise laws. The unwillingness of some local governments to use the tools already at their disposal to achieve quieter communities is a hindrance to the enactment of more effective noise control legislation.

The future of our cities depends in no small measure on how successful we are in reducing traffic noise and congestion. Three approaches are open to us: (1) reduce the noise of the source; (2) eliminate the source through the use of quiet, underground mass transit systems; (3) reduce the noise near freeways by depressing the roadway or constructing a sound barrier along the right-of-way.

While highway design features can greatly reduce the noise nuisance in communities near freeways, motor vehicle noise in our existing cities can only be reduced by quieting or eliminating the source. The origins of noise in motor vehicles are primarily direct radiation from the exhaust, inlet, engine, transmission and tires, and complex vibrations of the outer surfaces of the vehicle. The exhaust is the predominant source of noise in an unsilenced internal combustion engine. It has been demonstrated that complete silencing of the exhaust of a 10-ton diesel truck by means of a series of large mufflers reduces the noise 10 to 15 decibels in the low frequency range. Silencing of the engine inlet produces a smaller noise reduction but over a wider frequency range.

Control of noise produced by the engine structure is somewhat more difficult. One approach has been to build an acoustically-lined enclosure around the engine. In any case, the noise level of nearly all motor vehicles could be reduced by 10 to 15 decibels in the near future at small cost.

Finally, substitution of electrically or steam-powered vehicles for the internal combustion engine would not only result in a major reduction of urban air pollution, but would enormously reduce traffic noise. The brightest hope for the future clearly lies in such vehicles coupled with underground systems for the movement of goods.

AIRCRAFT NOISE

Since there are now nearly 1,200 jet airliners, about an equal number of piston aircraft, and more than 100,000 private airplanes in service in the United States, the aircraft noise problem has become very widespread. Today millions of Americans are affected by this aural assault: Congressmen Benjamin Rosenthal and Herbert Tenzer whose Long Island communities lie under the flight paths for La Guardia and Kennedy have warned that the mood of their constituents has become one of desperation, not just unhappiness.

The courts have held that insofar as the operation of aircraft is concerned, the federal government has preempted the field. A 1963 ordinance of Hempstead, Long Island which regulated the altitude and flight path of aircraft while over the city was ruled invalid in a 1967 court suit. Ordinances such as the recent one passed by the city of Santa Barbara banning supersonic flights over the city also would probably be declared invalid in a court test.

Noise levels in some communities near our major airports have become so intolerable that many residents cannot continue to live in those communities. Lawsuits totalling $200 million are pending in the courts. A few people have been awarded damages where it was shown that property values had declined or where some directly measurable economic penalty had been incurred. But generally, the private citizen has been able to get little compensation for the abuse he has suffered. Recently the airport operators, who consider the reduction of aircraft noise to be primarily the responsibility of the manufacturers, charged the airlines and manufacturers with smokescreen tactics on the noise abatement problem and withdrew from the industry-wide National Aircraft Noise Abatement Council.

One does not have to be directly under the flight path of a large jet on take-off in order to receive an ear-splitting roar. When a 707-320B jet is four miles from the point of brake release at the end of the runway it has attained an altitude of about 800 feet and the noise level on the ground one-half mile on either side of the flight path is approximately 85 decibels.

FEDERAL EFFORTS

Federal officials should not be surprised by the magnitude of the present problem. In 1952 President Truman received a report, "The Airport and Its Neighbors," from his Airport Commission. The Commission said greater consideration should have been given residents living in an area when airports were first built and that civil and military officials should make much greater efforts to reduce take-off noise over residential areas.

But federal officials are just now beginning to do something about the problem. In August 1968, President Johnson signed into law a measure requiring the Federal Aviation Administration to undertake control and abatement of aircraft noise. The FAA was not particularly eager to have this responsibility, for the law appears to make the FAA liable for damage suits arising from aircraft noise.

The FAA has initiated noise control procedures at some airports, but until quieter engines are built, there is not a great deal it can do with regard to jet transport noise. The noise control procedures that have been implemented are directed almost solely at reducing the noise level in communities lying directly under the flight path while the plane is at low altitude. While reductions have been achieved in such communities, the result has often been to spread the noise around to other communities. This is precisely what has occurred at the Washington, D.C. National Airport where the FAA requires departing aircraft to climb as quickly as possible to 1,500 feet and then cut back the power and follow the Potomac River northward. Flights over the White House, the Capitol, the Washington Monument, and the U.S. Naval Observatory are prohibited. But since Washington National Airport is just across the Potomac River from the Lincoln Memorial, central Washington is still bombarded by the constant roar of jets, and communities such as Georgetown are now directly under the flight path. Why should residents of Georgetown be subjected to the noise while congressmen on Capitol Hill are protected from the din? If the congressional office buildings rather than residential communities were under the flight path, Congress would long ago have taken steps to end the nuisance.

The solution to the aircraft noise problem in the District of Columbia is to close Washington National Airport. Few people presently use Dulles because it is so far from the city, but it would be much more attractive if a rapid transit system connected the airport with downtown Washington. Furthermore, a substantial percentage of the traffic at Washington National Airport consists of Washington-New York and Washington-Boston commuter service. If high-speed rail service were available between these points this traffic could be almost eliminated.

GETTING AT THE SOURCE

While flight procedures can bring relief to some communities, the only solution to the aircraft noise problem lies in quieting or eliminating the source. NASA is financing research and development to develop a new "quiet engine." Preliminary tests indicate the new quiet engine will reduce take-off noise by 15 decibels. In static test with a Pratt and Whitney J-57 engine, Boeing claims to have obtained a noise reduction of nearly 40 decibels by use of acoustical linings in the engine. There are reports that the proposed European airbus will use advanced engines which will produce a 75 decibel noise level on take-off. For comparison, the Boeing 707-320B in normal operation (that is, in the absence of FAA noise control procedures) produces about 107 decibels on take-off. Clearly, then, the manufacturers can build quieter aircraft if they are forced to do so. When can we expect some relief? Manufacturers say the giant Boeing 747, scheduled for late 1969, is already in production and cannot be fitted with new engines even if they were available. The 747 is expected to produce a 100 decibel noise level on take-off. The airlines argue that to retro-fit existing turbojets with the new quiet engine would cost $6 million per plane and that they cannot afford it. Thus, if the present trend continues, we cannot expect any relief before the late 1970s. But by that time any noise reduction will be partly offset by the doubling of air traffic expected between now and 1975. The fact is that the present exasperating noise problem exists because the aircraft manufacturers and the airlines have operated on the basis of their own short-range economic interests and have failed to devote the efforts and resources needed to solve it.

If the already grave situation is not to become worse, some bold steps will have to be taken:

1. The federal government should provide a greatly increased funding level for quiet engine research so that take-off noise will be reduced by 40, not 20 decibels.

2. Whenever a substantially quieter engine is developed, the FAA should require existing aircraft to be retro-fitted with the new engine. If the airlines cannot afford the cost without increasing fares, then fares should be increased. The small percentage of the population that uses the airlines should be required to assume part of the burden for providing a livable environment for the millions of people who suffer from the noise but derive no economic benefit from it.

3. Particularly in densely populated areas such as the Northeast Corridor, the Chicago-Pittsburgh region, and the San Diego-San Francisco corridor, high-speed rail transportation could substantially reduce air traffic.

4. Future airports should be planned according to the principles used at Dulles International Airport and the new one now being planned for Dallas where 18,000 acres are being purchased to prevent encroachment of residential dwellings.

5. New airports should be located 20 or 30 miles from the metropolitan area, as Dulles International Airport is, and serviced by high-speed surface transportation.

FAA AUTHORITY

When Congress passed the Aircraft Noise Abatement Act, the FAA was clearly given authority to regulate noise from private planes. Yet the FAA has so far done nothing about this growing menace and has indicated little interest in doing anything. The light planes of today are more powerful and far noisier than they were a decade ago. Worse, there are a lot more of them. One can reasonably ask why a single businessman in an executive plane should be allowed to create a noise nuisance that irritates literally thousands of people in the communities along his flight path? Furthermore, noise from private planes is becoming a frequent intruder into the solitude of national parks and wilderness areas.

The present noise levels produced by light aircraft are quite unnecessary. The FAA should prohibit private planes from flying below 8,000 feet over populated areas and should require that all private planes be

equipped with mufflers and acoustical materials to reduce engine noise.

While a feeble first step has been taken to reduce the noise produced by civilian aircraft, the deafening roar of military planes continues unabated, for the FAA does not have jurisdiction over military planes or flight operations. The Department of Defense has made no effort to develop quieter jet aircraft, claiming that it cannot afford the weight penalty that quieter engines would impose. Instead of making a serious effort to reduce noise levels in communities near military installations, Defense has embarked upon a public relations campaign to convince the American public that they should not only tolerate but welcome this assault on their eardrums because the military establishment is defending them. This country's military brass seems quite willing to destroy our environment in the name of defending it.

A case in point is the Alameda Naval Air Station which lies adjacent to the city of Oakland, California in the very heart of a metropolitan area. Over 1.75 million people live within 12 miles of the runway. Berkeley and Oakland residents frequently find themselves rudely awakened early Sunday morning by jets streaking over the East Bay hills with afterburners blazing. If an aroused public demands the closure of some of these poorly situated installations, perhaps the Defense Department will be motivated to develop quieter aircraft.

SONIC BOOM AND THE SST

The worst is yet to come when—and if—Boeing's supersonic transport (SST), built with federal financing, goes into service in the 1970's. Whenever a plane flies faster than the speed of sound (about 344 meters per second) it generates shock waves which trail out behind the plane on both sides of its path. When these shock waves intercept the earth, they produce the thunderclap we call "sonic boom." Typically the boom is felt along a belt that extends 40 miles on each side of the plane's flight path. The severity of the boom depends on the plane's size and altitude, but there is no known way to eliminate the boom itself. There exists a common misconception that this sonic boom is produced only once when the plane first exceeds the speed of sound. In fact, it is produced continuously along the plane's path while it is in supersonic flight.

The whole SST program places in serious question the commitment of the FAA, the Department of Transportation and Congress to noise reduction. Thus far, Congress has appropriated $653 million for SST. Worse yet, on July 11, 1968 the Senate defeated an amendment to the Aircraft Noise Abatement Act which would have prohibited the SST from flying at supersonic speeds across continental America. The proponents of SST in Congress argued that prohibition of overland flights was unnecessary because the FAA probably would not permit such flights anyway. But the very fact that Congress was unwilling to legislate against sonic boom indicates overland flights by the SST are anticipated. And since the FAA is the agency responsible for the direction and funding of the entire SST development program, asking it to regulate sonic boom is like putting the fox in the chicken coop. The attitude of the Department of Transportation on the sonic boom issue is illustrated in a statement made by Major General Jewell C. Maxwell, the chief of the SST program: "We believe that people in time will come to accept the sonic boom as they have the rather unpleasant side effects which have accompanied other advances in transportation."

This is a myth which so far has survived scientific evidence to the contrary. Aircraft noise studies have shown that people become more intolerant of jet aircraft as the number of fly-overs or the duration of each fly-over is increased.

In order to assess public acceptance of sonic boom, the FAA conducted tests in Oklahoma City in 1964. During a six month period, 1,253 supersonic flights were made over the city. Oklahoma City was one of the most favorable locations the FAA could have chosen to get public acceptance of sonic boom since nearly one-third of the city's residents depend on the aviation industry for their living. Furthermore, no sonic booms were made at night—the really critical test. Yet 27 per cent of the people said they could never learn to live with the sonic boom and over 4,900 residents filed damage claims against the FAA. Most people found the booms more irritating at the end of the tests than at the beginning.

Operation of the SST over continental United States would not only shatter the solitude of nearly every park and wilderness area in the country, but could do extensive damage to some of these places as well. Between August 11 and December 22, 1966 some 83 sonic booms, several of which caused extensive damage, were recorded in Canyon de Chelly National Monument, Arizona. One of these booms loosened an estimated 80 tons of rock which fell on ancient Indian cliff dwellings and caused irreparable damage. Damage has also been reported in Bryce Canyon National Park, Utah.

Canada has already banned the operation of supersonic aircraft over its provinces. Both Switzerland and West Germany have indicated they will prohibit supersonic flights within their borders if their citizens complain.

BOONDOGGLE PROGRAM

The whole SST program is an economic boondoggle, the prime beneficiary of which is the aircraft manufacturing industry. The FAA has committed $1.3 billion or about 83 per cent of the estimated development cost and Congress has already appropriated half this amount. But low cost estimates and delays in the program now indicate the cost to the federal government will be at least $3.5 billion before the first plane is sold. The FAA talks glowingly of estimated sales between $20 and $48 billion, but not long ago the Institute of Defense Analysis issued a report which indicated that if supersonic travel were restricted to overwater flights, there would be a market for only 279 planes and the whole project would become an economic disaster.

Even if the SST is initially operated at supersonic speeds only on overwater flights, mounting economic pressures to expand the market for the plane will almost certainly result in overland routes across the United States. Former Transportation Secretary Alan Boyd has said: "I think it will be entirely possible to operate a route over the Plains area and possibly across the Canadian border without discomfort or inconvenience to people on the ground."

The operation of such a route would reduce the flying time between Chicago and San Francisco only about 30 minutes. If supersonic flight on overland routes is not restricted, 150 SST's may be in domestic operation by 1990. Must 50 million people be subjected to perhaps 30 booms a day so that a few can reduce their travel time by 30 minutes?

While the abatement of much of the noise that presently plagues our society is in part a technical problem, both the impetus and the money for solving it must come from the political arena, and the sonic boom problem is entirely political. A quieter society will only be achieved when a concerned public demands a new system of priorities from the politicians.

NEEDLING UNEMPLOYMENT

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. WOLFF. Mr. Speaker, the issues of our times can frequently be compared to the maxim about the weather: Everyone always talks about it, but no one ever does anything about it.

I am pleased to say, however, that I have had the opportunity of knowing certain persons who believe the armchair approach to domestic issues. One fine example is Mr. Richard Cerbone of Port Jefferson, N.Y., whom I have known for a number of years and who has never ceased to amaze me with his capacity to put ideas into action in the most facile way.

Moreover, I am certain that I am not the only one who will vouch for his talents. Both the International Ladies Garment Workers Union and a group of Long Island underprivileged high school students would certainly add their chorus of praise for Mr. Cerbone. For without his help they might never have developed the mutually beneficial program that they now have, one which virtually needles unemployment.

Recently the Long Island Press ran a story telling how Mr. Cerbone brought these two groups together. I would, therefore, like to extend my remarks to include this worthwhile and interesting article in the RECORD:

ILGWU AIDE SOLVES LABOR LOGISTICS POSER

(By Austin H. Perlow)

Putting two and two together isn't nearly as simple as it sounds. But Richard Cerbone of Port Jefferson did when he was confronted with poverty and a critical shortage of skills in the needle trades.

Cerbone, the business manager of Locals 57–77, International Ladies Garment Workers Union, AFL–CIO, in Jamaica, went to the underprivileged high school students of Long Island to find the operators needed for the sewing machines of the needle trades.

It wasn't easy, because with the exception of Queens Dist. Atty. Thomas J. Mackell and Nassau County Executive Eugene H. Nickerson, the community wouldn't listen to Cerbone. With their help, he has started a training program for high school girls leading to well-paid jobs in the needle trades.

The Queens program has already produced its first graduates and the projected Nassau program is about to get under way.

"The idea behind it," Cerbone said, "is to allow the girls to complete their high school educations. But they get time off every day from their classes to learn the trade in the shop."

The program covers the senior year in high school, plus three additional months of training in the shop following graduation. Through the intercession of Mackell, Jamaica Vocational High School has joined the program with the enthusiastic cooperation of Samuel Stein, placement counsellor.

Two graduates are already at work at Howard Uniforms, Woodside, where they are sewing nurses' uniforms. Following the current "slow" season, there'll be six graduates working there.

In Nassau, where employers are desperate for help, the program appears to be headed for even bigger things. Glen Cove Manufac-

turing had indicated it was willing to set up a school in its plant. Cerbone and Nassau Labor Commissioner Robert W. MacGregor have been conferring with Out Islander Sportswear in East Rockaway, Grove Dress in Freeport, Ben Mark Dress, Westbury, D.V.S. Dress, Elmont, and Preferred Foundations, Freeport, on taking apprentices into their shops.

"It all started," Cerbone said, "when the ILGWU mapped out a program to alleviate the hardship of the poor.

"There are many girls who leave high school unable to go to college or even to find a job. At the same time, our needle trade shops in Queens and Nassau are desperate for help. All we did was put two and two together."

The first "graduates" are Margot Johnson and Laverne Lantt, both of South Ozone Park, Theresa Stanziola of New Hyde Park and Leezella Lawrence of Brooklyn.

Graduates can earn from $75 to $150 a week operating sewing machines on a 35-hour-a-week schedule under a union contract. There's only a nominal charge being made for an ILGWU card.

THE ABM ISSUE

HON. JAMES A. McCLURE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. McCLURE. Mr. Speaker, as the ABM issue becomes more clearly focused it is healthy to see the ground swell of public opinion in favor of the proposal.

Radio station KFXD is an outstanding broadcasting organization located in my district, the First of Idaho. General Manager Wayne Cornils recently aired a series of four editorials on the subject of ABM. These were clear, concise, and remarkable in impact. Here, I would like to insert the third of these statements which was aired on Friday, July 11, 1969 from the station in Nampa, Idaho:

We believe that a strong America is a safe America. One of the three major objections offered to the ABM System is the cost. Current estimates are from six to ten billion dollars over a period of six years or approximately $5.00 per person per year. The argument is that the defensive Anti Missile System costs too much and that those billions of dollars should be spent on urban problems. In our opinion, common sense tells us, that if we build the ABM System and never use it, we have gambled and lost six to ten billion dollars. Conversely if we do not build ABM and are attacked we have gambled and lost 200,000,000 Americans lives and won't have to worry about urban problems. The question must be asked—Is your life worth $5.00 per year?

The U.S. Senate will decide the fate of the ABM sometime in the next three weeks. The House has already voted its approval. One Idaho Senator has publicly stated he will vote against ABM. The second is thus far uncommitted. The KFXD All Americans urge you to write, wire or phone your two Idaho Senators today and urge them to vote in favor of the President's ABM Defensive System.

Someone must work to enlighten our people with regard to the critical issues of the day. This should be the function of media in order to prevent hasty and unwise decisions. This is the excellent role which has been played by station KFXD in regard to ABM.

I would also like to point out that the orientation of Mr. Cornils and his staff toward public affairs and the reflection of this idea in programing has caused their ratings to climb. This is difficult in the highly competitive Boise Valley radio market.

I hope that all of our media will become conscious of the strong necessity for spirited public discussion and look to the example of KFXD in Nampa, Idaho.

ISRAEL AND THE MIDDLE EAST

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. OTTINGER. Mr. Speaker, earlier this month a fine article, written by Mr. Ben Wattenburg, on the increasingly important role Israel has assumed in the Middle East appeared in the Washington Sunday Star.

I believe our colleagues may find this article to be of interest and I am pleased to insert it herewith for inclusion in the RECORD:

[From the Washington (D.C.) Star, July 6, 1969]

MID-EAST'S AGE-OLD CLICHES RESENTED BY MODERN ISRAELI

(By Ben J. Wattenberg)

TEL AVIV.—My grandfather was S. Ben-Zion, a Hebrew poet and teacher who, in 1910, moved his family to a plot of vacant sand dunes in the Palestinian desert just north of the city of Jaffa. Today on that same site rises the 34-story Shalom Tower—the tallest building between Milan and Toyko—and around it sprawls Greater Tel Aviv, now a city of 700,000.

If one says—as some do—that modern Israel can be dated from the founding of its major metropolis, then Israel will be 60 years old next year.

But David Ben-Gurion, a little man with a voice like thunder, still spry, visionary and opinionated in his 83rd year, will have none of that. For Ben-Gurion, a nation starts with land and farmers, not cities and writers.

His blue eyes flashing, his brow curled in reminiscence, Ben-Gurion insists that modern Israel dates back to 1870—a hundred years ago. That was when Mikveh Israel, the first agricultural school in Palestine, was established. Ben-Gurion came to Palestine from Russia in 1906 and he says that what his generation did as farmers on the desert land and on the swamp land was not a beginning but a continuation of what began at the Mikveh Israel agricultural school.

But to many others, modern Israel is regarded neither as 100 years old nor 60 years old. The standard cliche now afloat around the world goes something like this: "Israel is a tiny, 20-year old state established by the United Nations and the conscience of the world because of what Hitler did to the Jews in Europe." To which the Arabs add that the Jews in Israel are an artificial, Westernized, neocolonial foreign body surrounded by a sea of 100 million Arabs. The Arab position has its allies. At a cocktail party recently one middle-level American diplomat who had spent most of his career in the Arab states described Israel as a "monster state."

Artificial. Tiny. New. Surrounded. These are the words that send Israelis up the walls and they are the words that confound most of the attempts to see the Middle Eastern situation for what it is.

MANY NATIVES

There is first the matter of "artificiality." It is perhaps a bit too easy to note that Ben-Gurion has lived in Israel far longer than Nasser has lived in Egypt. But there is a seed of an important truth there. For when one looks at the Israeli demography one does *not* see a group of European newcomers set down in the Middle Eastern desert. Of the Jews in Israel today:

42 percent were born in Israel.

29 percent were born elsewhere in the Middle East (mostly Algeria, Morocco, Egypt, Iraq and Yemen).

10 percent were born in Western countries but immigrated to Israel before World War II.

Only 19 percent are "non-Middle Eastern, relatively recent immigrants" (within the last 30 years).

The official Arab position is that they hold no grudge against the 29 percent of the Jews born in Arab lands—not, conceivably, even their children, who comprise a good portion of the 42 percent "born in Israel."

There is no reciprocity to this kindly view. While many Israelis of European origin display a love-hate fascination with Arabs, the Jews from Arab lands feel little but contempt for the Arabs. They have lived under Arab rule for centuries and their attitude is simple: "They have their countries, we have our country. Let the Arabs stay in their own countries and we'll stay in ours."

So, the Israelis don't feel artificial. More than half are from the Middle East; eight in 10 are native-born, Middle Eastern or residents of Israel since before most of the Arab guerrillas were born.

Israel is habitually described as "tiny." Today, there are 2.5 million Jews in Israel, compared to the 80,000 when my grandfather built his house on the first street of Tel Aviv. Since the Six-Day War the birth rate has risen slightly and the immigration rate has risen substantially.

EXPANDING MARKET

Each year, between birth and immigration, about 60,000 new Jews are added to the net population. Two and a half million is a small population by the standards of India or the United States but is more than that of Jordan or Lebanon or Libya. There are more Israelis in Israel than there are Irish in Ireland or Uruguayans in Uruguay. There are, in fact, enough Israelis so that Israeli economists now begin to talk of "a domestic economy of scale," which suggests that there are now enough people to provide a domestic market large enough to profitably produce certain goods that require large set-up costs.

Chaim Sharrett is the son of the late Israeli Prime Minister Moshe Sharrett, and his parents grew up in early Tel Aviv on the same street as my grandfather, childhood friends of my mother. Chaim Sharrett lives now on a kibbutz near the Jordanian border (where his children sleep in underground bomb shelters). Each morning he commutes to a small factory in Haifa where he directs a small new enterprise that manufacturers fiberglass sailboats of a new design. The basic market for the boats will be Israel—the 2½ million Jews, none of whom live very far from the Mediterranean Sea. In the last 10 years, Israel's population has grown by more than 35 percent and per capita income went from $740 to $1,350. Before that economic and demographic surge, a fullscale domestic market for products like sailboats did not really exist. Most new industry had to be predicated on an always risky export market. Now Chaim Sharrett still has his eye on exports to be sure, but he sees that his business can survive on a domestic market.

What is small? As measured by dollars of gross national product, Israel produces more

than Portugal, more than Taiwan, more than Guinea, Ghana, Senegal and the Ivory Coast combined, more than Peru or Algeria or Iraq or Saudi Arabia and not very much less than Egypt with her 32 million population.

What is small? With the current boundaries, Israel is roughly the same size as Hungary or Austria. It is 350 miles from the Northern tip of the Golan Heights to Sharm el Sheik at the Southern tip of the Sinai. Even with the old boundaries and adding in Jerusalem and Golan the area of Israel is not much different from that of Holland or Belgium.

"SEA OF ARABS"

"Surrounded by a sea of Arabs" is also misleading. If one puts the point of a compass on Tel Aviv and inscribes a 2,000-mile arc around the nations of the Middle East the resultant population breakdown works out something like this: 88 million Arabs (all the Arab nations except Morocco and Algeria, each more than 2,000 miles away) and 92 million non-Arabs (Israel, Turkey, Iran and Ethiopia). Israel has friendly and productive relations with the non-Arab nations and these non-Arab states are quite anxious to see to it that Nasser's dreams of Pan-Arabism for the entire Middle East do not reach fruition, particularly not Pan-Arabism sponsored by Moscow. In short, Israel, like most of the nations of the world, has neighbors of different kinds—some friendly, some not. Like many other nations of the world the Israelis live in an "undefused" situation; not dissimilar to the U.S. and Russia, or Russia and China, or North and South Korea, or India and Pakistan. Have you ever spoken to a Hungarian about what he thinks of Romania? Such "un-defused" situations have been known to last for generations, even centuries.

The point is a simple one. Israel is not a freak state. Not artificial, not tiny, not new, not really surrounded, Israel has come of age. The time for clucking over the precocious infant is past—and the Israelis realize this today better than anyone else.

As a successful non-freak national entity, Israel and her leaders and people can be expected to behave in normal national ways. As a state confronted by enemies, that means, firstly, that Israel will do what it must do to remain secure. And that means that international pressure is not going to push the Israelis to do what they feel is detrimental to their own national interests. They are prepared to do it all themselves if they have to. Some of the military ramifications are fascinating.

THE GENERAL

Gen. Ezer Weizman, tall, dashing and candid, is 45, and was born in Tel Aviv. He was formerly the Commander of the Israeli Air Force and is now deputy chief of Staff of the Israeli armed forces. He has fought in four wars, starting as a Spitfire pilot with the R.A.F. in World War II.

Before the Six-Day War, when he was still Commander of the Air Force, he told a skeptical Israeli columnist that if war came, his fliers would destroy the Arab air forces in three hours. On June 5th 1967, an aide of Weizman's called the columnist and said: "Ezer said to tell you he miscalculated. It only took two hours and 55 minutes."

Today, Weizman believes that the Egyptians may try war again in the future and knows that the Israelis will win again if they do. Flying over Sinai with Weizman and several other Israeli officers, one is inclined to accept their word. At an air-base in the Sinai one sees the sleek jet fighters on quick-alert leaning forward in their hangars as if on a short leash, only about 10 minutes flying time from Cairo. At one such base in Sinai stands a former Egyptian Officers Club, where in May of 1967, Gamel Nasser toasted his pilots: "If Rabin wants a war, we'll give it to him." That remark is remembered by Israeli military men when the rhetoric of Egyptian power floats across the Nile.

To Ezer Weizman, native-born Israeli and professional military man, Israel today is in good shape.

The Suez Canal is constructed as if it were designed to be the world's best anti-tank ditch. The Sinai desert is Orchard Beach as far as the eye can see, apparently designed by a God of History as the perfect buffer zone, with a wealth of oil thrown in for good measure.

As one travels through this vast expanse of desert (15,000 square miles crossed only by a few roads), the wonder of it all is how the Egyptians were able to evacuate it so quickly. Weizman, a former air general, says: "With air power we could hold this territory against any force on earth," and one of his tank commanders mutters in Hebrew: "Also without air power."

SINAI THE KEY

Militarily, the Sinai would seem to be the key to the Middle East situation. The Egyptians are the only Arab force that are even in the same league with the Israelis. To wage war, they must make a complex amphibious or airborne landing, only to get to an open, invulnerable desert—a highly dubious proposition. For this reason, many Israelis see no serious territorial war in the immediate future. The Arabs can't; the Israelis won't.

(That, at least is the rational way of looking at it. But there is that potent old story about the scorpion and the camel that haunts any rational approach. It seems that the scorpion wanted to cross the Nile and, not being able to swim, asked a nearby camel for a lift. "Scorpion," said the camel, "I am not crazy; if I give you a ride across the Nile you'll sting me and I'll die." The scorpion considered that for a moment and countered, "Camel, this is nonsense. If I sting you while we are crossing the Nile together, we'll both drown." The camel was convinced, and the two set out to cross the Nile. Midway across the river—wham!—the scorpion stings the camel and soon the camel is floundering. It is apparent that both camel and scorpion will soon meet a watery grave. The camel talks: "Scorpion, idiot, why did you do it? Now we'll both die." The scorpion pauses thoughtfully as the water inches up to his neck and then says quietly, "Camel, you forgot one thing. This is the Middle East.")

Middle-Eastern irrationality aside, most Israeli military men regard the Arab guerrillas as no real threat. They are thought of as killers, not fighters, who will squeal on their brothers and are vastly overpublicized and overrated, only a few thousand in number drawn from a pool of millions of Arabs and capable only of nuisance value within the borders of Israel.

(That Israel is secure within her own borders can be verified by Wattenberg's First Law of Human Behavior, which states, "If there is something to be nervous about, Wattenberg will be nervous about it." And to a traveler in Israel these days the feeling is not one of nervousness despite the roadblocks leading into major cities and the Uzzi machineguns slung on the shoulders of young soldiers who are just in from the front. There are many Israelis who also claim they are not nervous when traveling through the Arab towns on the occupied West Bank of Jordan—but they are crazy. I found Wattenberg's Law clearly applicable in Jenin, Nablus and other West Bank Arab communities.)

EARNED CURRENCY

To Ezer Weizman, Israel's current military security and her economic, psychological and demographic booms are not providential gifts from the Six-Day War. They are earned currency accumulated by Israelis by many years of back-breaking work, by many dead soldiers, by boys today who volunteer for paratroop training, and by mothers who in a classic reversal of the Jewish Mother story now plead with the generals to get their boys in the paratroops so that there will be peace in the house.

Weizman's view of recent Jewish history has variations in emphasis from Ben-Gurion's. Of course, like Ben-Gurion, Weizman likes to remind a visitor that there have been Jews in their land for 4,000 consecutive years, but he also notes that if Israelis ever have to cross the Suez Canal they will find pyramids built by Jewish slave labor in the time of the Pharaohs. He remembers that the Sinai is not historically a part of Egypt but only an uninhabited region that has been tacked on to that country for the last 50 years. He remembers that in his boyhood there was a great national celebration each time the Jewish National Fund was able to purchase land from the Arabs, and he sees lots of purchasable land in the West Bank territory that would be ideal for Jewish settlement. He remembers that the Palestine of the 1917 Balfour Declaration included both sides of the Jordan River (as did Biblical Israel) and that if there is an "artificial" state in the Middle East it is Jordan.

As Weizman flies a military plane from base to base around Israel, he often observes: "It's a big country now," and it is clear that he wants it to stay big even if this means that the present deadlock will have to continue. If shells must fall, better they fall in Suez and Sinai than on Tel Aviv and Jerusalem. And that seems to be the mood throughout the rest of the country, unless some real peace can be guaranteed.

If Weizman is regarded as somewhat of a hawk, Israel's Ambassador-At-Large, Michael Comay, former U.N. Ambassador for Israel, is certainly not a hawk in any man's aviary. Yet, in London earlier this year he described in blunt terms what would be the results of any imposed solution regarding the Mideast. "If you dictate a solution that Israel does not accept," he said, "you must be prepared to see it become a worthless scrap of paper or else mount an invasion of Israel. Are you prepared for that?"

DOOMSDAY TALK

The same question can be asked of the U.S., of France—and of Russia.

When the hour is late and the drinks are low and Israeli military men gather, the doomsday possibilities surface, as they do with military men all over the world. Because the Arabs pose no real military threat in the foreseeable future the military guessing game turns to what the Russians might or could do.

The ultimate questions are asked. Question: "Could the Russians invade?" Answer: "Very doubtful militarily. It would make Vietnam look like a tea party." Question: "Suppose the Russians attacked Israel with missiles?" The retort is quick: "Nuclear-tipped or conventional warhead?" And the breakdown is that the idea of Russians using nuclear missiles on the Israelis is most far-fetched, that conventional missiles hurt no worse than bombers, and that Tel Aviv could survive bombing from Egyptian or from Russians if it ever came down to it.

Political and economic pressures are another matter, and they could most effectively be wielded by the United States. The Israelis are deeply friendly to the United States, by kinship and by ideology. They are grateful for past help and understand that good relations in the future are crucial. But they know that the first order of national business is survival, and they are aware that no pressure that the U.S. can bring to bear could make them risk that survival. Israel's survival, they know, is ultimately in Israel's hands.

So Israel today is settled down for the long pull.

David Ben-Gurion looks to the future and says the Arabs could conceivably win a fifth or sixth or seventh war and what Israel needs for long-term survival is more Jews. He says that if Hitler had not killed the European Jews the current population of Israel might be 5 million or 7 million instead of 2½ million. Still, there are 14 million Jews in the world, 11½ million not living in Israel. Ben-Gurion is hopeful that many Russian Jews and some American Jews will one day find their way to Israel. He also hopes the Jewish birth rate in Israel will rise, and to this end supports plans for new and larger forms of housing, for creating part-time jobs for working mothers, for nursery schools. In Israel these days one also hears talk about making abortions much more difficult to obtain.

A FEW

Ben-Gurion views Jewish history as an eternal struggle of quality versus quantity. Moses said the Jewish nation would be "a few among people." This has proven to be true, but Ben-Gurion and most other Israelis are casting about for ways to boost the quantity in order to preserve the quality for the generations ahead.

In the meanwhile, the quality is still there. My grandfather's family has flourished and prospered. In their number today are a leading artist, a bulldozer driver, an agronomist, a micro-biologist, several English teachers, and my beautiful young cousin whose mother didn't let her compete in the Miss Israel contest (she would have won.)

Two years ago one of the great-grandsons of my writer grandfather was in the Israeli Army force that stormed the Golan Heights. A slight young man with horn-rimmed glasses, he was creased by a bullet that came within an inch of his heart. He continued up the Heights and boarded a half-track that pursued the Syrians across the plains. The half-track hit a mine and shrapnel pierced his legs. He climbed aboard another half-track, which also hit a mine and sent additional shrapnel into his legs. He was on his way to a third half-track when he fainted from loss of blood.

Today, he is fine and preparing to take entrance exams for the Hebrew University. The shrapnel is still working its way out of his legs.

He is a fourth generation Israeli. He does not feel that he is in a new, or tiny, or artificial, or surrounded nation. He is there to stay.

He is the young man to remember while the dance of the diplomats continues in the capitals of the world.

THE 25TH ANNIVERSARY OF THE POLISH-AMERICAN CONGRESS

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. PUCINSKI. Mr. Speaker, the 25th anniversary of the founding of the Polish-American Congress was fittingly honored here in Washington this past weekend during a 3-day meeting of this very worthwhile organization's officers and executive board, headed by Mr. Aloysius A. Mazewski, president of the Polish-National Alliance who also serves as president of the Polish American Congress.

The Polish-American Congress was organized in 1944 when it became quite apparent that the heroic people of Poland would not be able to negotiate for themselves at the peace table a future of freedom for which they so gallantly fought in World War II.

It became abundantly clear to outstanding Americans of Polish descent and Americans not necessarily of Polish descent that representatives of the free Polish Government would not be permitted a full voice in negotiations for postwar Europe. These negotiations were dominated by representatives of the Soviet Union, Great Britain, and the United States, and the Communists were cleverly beguiling both the American representative and the British spokesman into accepting for postwar Europe a cordon sanitaire of Soviet-dominated East European captive nations which to this day keeps 180 million people in Communist bondage.

The people of Poland were helpless at the peace table despite their heroic and gallant contributions toward the victory won by the Allies in World War II.

The 25th anniversary of the Polish-American Congress makes it crystal clear that the goals of demanding justice and freedom from Communist oppression for the people of Poland, which were established by the Polish-American Congress in 1944, are just as valid today as they were 25 years ago. For Poland continues to remain in the grip of a Marxist-Communist group of self-styled leaders who have the same contempt for human dignity today as their Stalinist predecessors had 25 years ago.

Very little has changed in Poland in the past quarter century and her people continue to be the victims of Soviet deceit and chicanery.

During the weekend here in Washington we had an opportunity to see outstanding Americans of Polish descent from all over the United States assemble to rededicate their determination that the work of the Polish-American Congress shall continue to be necessary until that glorious day when the people of Poland will again rejoin the family of free nations.

It gives me great pleasure to place in the RECORD today the resolution adopted by the board of directors of the Polish-American Congress.

Let this document serve notice both on the Communist leaders of Poland and the leaders of the Soviet Union that America's vast Polish-American community will not rest in its efforts to "secure freedom and independence for Poland."

The Polish-American Congress resolution follows:

RESOLUTION ADOPTED BY THE BOARD OF DIRECTORS OF THE POLISH-AMERICAN CONGRESS AT A MEETING HELD ON JULY 26, 1969 IN WASHINGTON, D.C.

1. As we gather to celebrate the 25th Anniversary of the Polish American Congress, we pause to pay tribute and take inspiration from man's epic achievement—landing of American astronauts on the moon, thus culminating the revolutionary concept of universe advanced by the Polish astronomer Mikolaj Kopernik (Copernicus) over 400 years ago. Indeed, this unique feat, combining unsurpassed technological superiority with the magnificent spirit of free man, represents, to quote Neil A. Armstrong's historic phrase "one giant leap for mankind".

More than ever before we are proud to be Americans. And as we look back to 350 years of Polish American participation in the development and growth of our nation, we salute the Polish pioneers of Jamestown, Va., and legions of those who in the succeeding years came to these shores from far-away Poland and who gave freely of their skills, talents, loyalty and perseverance, to help make this country the great leader of freedom the world over.

As we stand awed by this dramatic display of the seemingly unlimited technological capabilities of man, let us echo the words spoken to Neil A. Armstrong and Edwin E. Aldrin by President Nixon: "as you talk to us from the Sea of Tranquility it inspires us to redouble our efforts to bring peace and tranquility to Earth"; let us re-dedicate ourselves to use this vast potential to eradicate from the surface of the Earth mankind's scourges; hunger, disease, hatred and oppression, so that all the nations may enjoy the benefits of our civilization in peace and freedom.

2. The Polish American Congress was organized 25 years ago with the express purpose of continuing Polish nation's fight for freedom, independence and the integrity of its frontiers, at the time when as a result of unjustified concessions granted Soviet Russia by the Western Allies during World War Two and its aftermath, they were being subjugated by Russian tyranny.

We pay tribute to those of our leaders who had the foresight and vision to lead the Polish American community in this just and solemn cause, and to thousands of men and women, who supported their efforts with sacrifice and zeal.

Then, as now, our position reflects the conviction, that peace based on the supremacy of Soviet Russia over the nations of East-Central Europe is contrary to the principles of freedom, democracy and self-determination cherished by the American people.

Then, as now, we espouse the principle, that freedom—the right of each nation to choose its own path of economic, cultural and political development, while safeguarding individual dignity of man, is the only guarantee of durable peace.

Events of the past few decades proved the soundness of our judgment.

The nations of East-Central Europe have never accepted their enforced status of Russia's satellites. Rumania maintains a sustained, though limited defiance of Russia's omnipotence; Czechoslovakian experiment in progressive economy, and humanization of Communism had to be suppressed by brute force; similar reform movements in Poland, as well as the open revolt in Hungary in 1956, have been rolled back in the successive years by subservient to Moscow Communist governments of Poland and Hungary; yet, the free spirit of Poland demonstrated itself again in the spring of 1968.

East-Central Europe remains tense and apprehensive, leaving open the possibility of sudden conflagrations which may constitute a real threat to peace in Europe.

On our home front, America's involvement in two major wars, in Korea and now in Viet Nam, presence of Communist power 90 miles from the shores of this country in Cuba and the enormous cost of our defense budget, which annually drains our national resources of some 80 billion dollars, urgently needed to combat the evils, which threaten the continued progress and well-being of this nation, are direct consequences of world tensions resulting from Russia's imperialistic policies after World War Two.

3. The atomic age precludes the possibility of liberation of nations now dominated by Russia through an armed conflict. Instead we must pursue these goals in hard bargaining with Soviets.

True, there is no reason to believe, that the Kremlin leaders are inclined to relinquish willingly their absolute rule over the

nations of East-Central Europe. Indeed, it is clearly apparent, that what they aim at is the confirmation of the status quo in Europe and the acceptance by the Western Allies of the principle of non-intervention in the affairs of the Soviet-bloc nations.

This is the meaning of the so-called Brezniev doctrine, which proclaims Russia's right to intervene militarily in order to reimpose the Moscow oriented brand of communism, which she unilaterally considers to have been undermined by the so-called "forces of imperialism".

The said doctrine having been promulgated by Brezniev in Warsaw, emphasizes the key position of Poland in the Soviet satellite system of East Central Europe.

The Brezniev doctrine and its enforcement in Czechoslovakia, the overthrow of Dubcek's reform regime indicates that Russia intends to exercise complete control over the satellite countries. It serves notice, that to this end Russia will tolerate within these countries only regimes completely subservient to its will.

Yet, there are developments in the world political situation, which provide an opportunity for a determined western diplomatic offensive.

There is a widespread discontent with the communist rule in East-Central Europe.

Chinese threat to Soviet Asiatic empire looms over any future decisions, which affect security and stability of Russia's western frontier.

Evidence is mounting of growing unrest within Russia itself. Young intellectuals and technocrats are beginning to question ideological infallibility of the orthodox old-guard, while the Soviet-bloc economy fails to sustain a reasonable rate of growth and is unable to meet the ever expanding demands of frustrated populace.

Clearly, there are stressed within the Russian monolith which may force its rulers to be amenable to resolute Western insistence of relaxation of rigid controls over its satellites.

Thus, for the first time since 1945 there appears a possibility for the United States to influence developments in East-Central Europe in the direction of open societies, national independence and economic cooperation, creating conditions favorable to eventual establishment of peace based on freedom and democracy.

However, in order to succeed our government must approach negotiations with Soviet Russia with these goals clearly and forcefully formulated, supported by a nation determined to use its unmatched potential to realize an American dream of freedom and peace for all.

4. We regret that Polish American participation in the political, economic and intellectual life of this country is not fully recognized and does not reflect the potential of our community.

Accordingly, the Polish American Congress will continue and expand its efforts to increase our effective participation at all levels of the governmental civic, educational, cultural and economic areas of American life.

We condemn the unwarranted actions aimed to defame the Polish nation and the American Polonia.

We dedicate ourselves to project in the American society an objective image of Poland and of Polnoia and the many contributions of our people to the development of world culture and the growth of this country.

5. As we celebrate the 25th Anniversary of the Polish American Congress, which coincides with the 30th Anniversary of the savage invasion of Poland by Germany and Soviet Russia, we pledge to continue our efforts to secure freedom and independence for Poland, and to support our government in its efforts towards this ultimate goal, realization of which will add another glorious chapter to the history of the American people.

FINE TEACHING AND RESEARCH PROGRAM OF HADASSAH

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a pleasure to place in the CONGRESSIONAL RECORD the excellent remarks of Mrs. Max Schenk, national president of Hadassah, the Women's Zionist Organization of America, Inc.

These remarks were made before the Foreign Affairs Committee of the House of Representatives and I am glad to place them in the CONGRESSIONAL RECORD for the consideration of my colleagues.

The remarks follow:

TESTIMONY PRESENTED JULY 29, 1969 TO COMMITTEE ON FOREIGN AFFAIRS BY MRS. MAX SCHENK, NATIONAL PRESIDENT, HADASSAH, THE WOMEN'S ZIONIST ORGANIZATION OF AMERICA, INC.

The name is Mrs. Max Schenk (Faye). I am the President of Hadassah, an American voluntary organization, incorporated under the laws of the State of New York as the Hadassah Medical Relief Association, Inc. My appearance today is to request an amendment to the Foreign Assistance Act that will provide for part of the dollars required for the expansion of Hadassah's teaching and research program, as will be outlined hereafter.

The estimated cost of this program, which we hope to implement over the next five years, is approximately 66.7 million Israeli pounds, or about 19 million dollars. Of this about 23 million Israeli pounds or 6.5 million dollars represent foreign exchange requirements. The balance represents local expenditures, that is, Israeli pounds. A breakdown of these expenditures is submitted for the record. (Table I)

It is expected that practically all of the foreign exchange component will be spent in the United States for items such as elevators, air conditioning and related building needs, as well as medical, communication and transport equipment. It is in this area—the United States purchases—that Hadassah requests inclusion in the section of the Foreign Assistance Act dealing with Aid to American Schools and Hospitals Abroad. Specifically, our request is for a 5 million dollar grant for a five-year period.

Hadassah was founded in 1912 by Henrietta Szold, an American woman, and has grown over the 57 years of its existence into an organization of 318,000 members working as volunteers through 1320 chapters and groups in every state of the United States and Puerto Rico. We are registered with the President's Advisory Committee on Voluntary Foreign Aid, under the aegis of the Department of State.

Hadassah's work is carried out in the United States and Israel. In each respect, it has been instrumental in developing ties between the people of the United States and the peoples of Israel. The impact of our programs reaches hundreds of thousands of families in the United States through our membership and our widely circulated publications. The result of our efforts is evident in our work in Israel, affecting the lives of many throughout the country. The goodwill and friendship which is developed through this has importance in the public image of the United States in Israel. It is another tie between two democratic nations with common interests and mutual goals.

WORK IN THE UNITED STATES

An objective, non-partisan program, identified as American Affairs, enables our members to understand, protect, and strengthen the role of democracy as a force for freedom and peace abroad. Its thrust is to stimulate interest in major issues by providing factual information. Our members cooperate as volunteers in civic affairs, participating in communal programs and those of the Federal Government, especially those directed towards the disadvantaged and deprived.

Hadassah supports the United Nations. We are recognized as a non-governmental organization. Our chapters participate in such activities as United Nations Day and sale of UNICEF materials.

Our Education Program provides study, discussion and book review groups, courses in Bible and Hebrew language, seminars and institutes. These are designed to equip our members for creative Jewish living and to help them understand their Jewish heritage as inherent in the development and enrichment of their lives as Jews and as Americans.

A dynamic youth program is supported, including summer camps in the U.S. directed to Jewish education, with additional programs to give opportunities for study and work in Israel.

ISRAEL PROGRAMS

In Israel the programs are: Medical Services; Youth Aliyah; Vocational and Educational Schools; Land Reclamation and Afforestation.

Although this presentation is directed towards our Medical Services, which I shall discuss in greater detail later, I would like to include a brief statement of our other projects, each important in and of itself.

YOUTH ALIYAH

Since its founding in 1933, thousands of young people coming from 72 lands have been settled and trained to assume a vital role in the agricultural, industrial and cultural development of Israel. Special schools are maintained for the rehabilitation of those disturbed or retarded. Hadassah is the official representative in the United States of Youth Aliyah under the auspices of the Jewish Agency for Israel.

VOCATIONAL AND EDUCATIONAL SCHOOLS

We maintain the Hadassah Israel Educational Services, which comprise the Louis D. Brandeis Center and the Alice Seligsberg Vocational School. These schools are designed to train youth for the expanding economy of Israel. They provide a range of technical and home economic courses, such as precision mechanics, printing, instrument making, nutrition, fashion, as well as training for secretaries and laboratory technicians.

In addition, a vocational guidance bureau is maintained to service the Jerusalem area as well as other parts of Israel. In cooperation with Government and public institutions, it engages in follow-up, training and research work.

LAND RECLAMATION AND AFFORESTATION

In cooperation with the Jewish National Fund, Hadassah participates in this important work in Israel, opening up new areas for colonization, restoring the land, and planting hundreds of thousands of trees.

Before developing the basis of the request for a grant under the Foreign Assistance Act, Hadassah records deep appreciation and heartfelt gratitude for the 1 million dollar grant provided through the Foreign Assistance Act of 1967 and for the cooperation given by the Agency for International Development in its implementation. This grant, received in Israeli pounds, has been used for building, equipping, and furnishing a physicians' residence in the John F. Kennedy Memorial Building attached to our Medical Center, adding and equipping a fourth floor to the existing Henrietta Szold School of Nursing, adding and equipping a second floor to the existing building for the Division of Social Medicine and Public Health, and extending the Kiryat HaYovel Family and Community Health Center (Public Health). These buildings have now been completed and equipped, and are being used to maxi-

mum advantage. They have materially increased opportunities for teaching and training for Israeli students and those students coming from foreign countries (especially from Africa and Asia), as well as broadened service for patients.

In addition, operating assistance was provided by the 1967 grant for additional professional personnel responsible for medical, nursing, public health, dental training and education.

Coming now to the main purpose of this presentation, *our Medical Services*, I would like to outline them as they have developed over the years and indicate the increased needs for which assistance is sought through the present grant request. I resist the temptation, in the interests of brevity, to give the long history of Hadassah's medical work, first in Palestine and now in Israel, and I shall concentrate upon the immediate past and future plans.

Our work is centered in Jerusalem. It is carried out through the Hadassah Medical Organization. It consists of a wide range of medical services emanating from the Hadassah-Hebrew University Medical Center at Ein Karem, located on the Judean hills outside Jerusalem. It services the entire population of Jerusalem and outlying areas and, since the Six-Day War in June 1967, many of the inhabitants of the Israel-administered areas of the West Bank. It was originally designed as a 500-bed hospital and to serve as clinical facilities for the Hadassah-Hebrew University Medical School. There has been a steady growth in the need for services due to the constantly rising number of patients, the increased number of medical and dental students, the added disciplines to the services performed, the inclusion of foreign students, principally from African and Asian countries, the expansion of the public health facilities, and the emphasis placed on training and research. These increased needs at Ein Karem can be divided under the following headings and for the reasons outlined:

1. Services

The annual volume of services in the Medical Center divided into general hospital categories is:

Outpatient	288,000
Inpatient	18,000
Emergency	80,000

for a total of 386,000. This heavy load is the result of:

(a) service to a population increased by 30 percent;

(b) changes in the content of medical care for a people whose pathology of disease is undergoing continuous change;

(c) change in knowledge of the medical sciences and their application to medical care; and

(d) change in the overall administrative set-up of health service in Israel and its application to Hadassah's clinical facilities.

2. Teaching

The Hadassah-Hebrew University Medical Center has a total teaching load of approximately 2700 comprising undergraduate, graduate, and post-graduate students. The number of students in the various medical disciplines ranges from 683 in the School of Nursing, 551 in the Medical School to 4 in Clinical Psychology.

The urgently needed increase in the number of students to be admitted to the Medical School (up to 120 from 80) will necessitate an increase in clinical material for teaching purposes in both the outpatient clinics and the inpatient services. Ten beds are required per student for providing adequate clinical material. There is a serious shortage of young physicians, especially in outlying areas and smaller hospitals. Accordingly, there is a demand for more doctors and nurses.

To the added number of medical students (which includes Arabs), we must provide for an increased intake of nursing students, enlarging the present average of 50 to 75. Additionally, seminars, and short refresher courses are held for doctors from East Jerusalem to provide opportunities for presenting the growing knowledge and developments in the medical sciences as practiced in the Hadassah-Hebrew University Medical Center.

3. Research

Over 600 physicians and scientists are engaged in research. Each department has its own research program carried out in 39 types of laboratories. In 1967, 248 separate research reports were published in world-wide medical literature by staff of the center. This is a constantly expanding area, demanding additional facilities and personnel to meet the needs for clinical work and to provide background for teaching and training.

4. Outpatient department

It is noteworthy that the original functional program of the outpatient clinics was based on a maximum annual intake of 200,000 patients distributed over 30 specialized services. Today, the total intake has reached 288,000 patients spread over some 60 departments and units.

5. Emergency

The Emergency Department in the original functional program called for 6 beds to serve 5000 patients annually. Shortly after opening the Medical Center in 1961, this had to be increased to 16 beds serving 20,000 emergency patients and 50,000 emergency treatments. Today, with the added Israel-administered area population coming to the Medical Center for emergency service, and the unfortunate increase in traffic accidents, the Emergency Department must be enlarged, not only for service, but to provide teaching and training in meeting emergency needs.

6. Inpatient facilities

Inpatient needs have become such that additional beds have been required, bringing the present total to 660. With the completion of the Institute of Oncology, now projected, 60 more beds will be added, bringing the total number to 720—all required for clinical teaching and training purposes. In addition, 10 beds will be needed for a Burns Unit with specialized facilities for skin grafting and related services, making the grand total of beds at Ein Karem 730.

With the expansion of the student body, as heretofore pointed out, 10 beds are required for optimum teaching purposes. Accordingly, with a projected increased student body, it is apparent that at least 1000 beds are required in the immediate future.

7. Diagnostic laboratories

In view of the increased patient load and added bed capacity, there is obvious need for increase in the facilities for diagnostic laboratories. The laboratory load is made even heavier by the quality and type of laboratory examinations. These are constantly increasing in variety and number as medical knowledge spreads. For example, since 1961, biochemical tests have risen by 130%; microbiological tests by 50%; pathological examinations by 66%; hematology laboratory examinations by 300%. As the work done in diagnostic laboratories is an essential part of teaching and training, it is urgent that new areas and equipment for these facilities be made available for the increased incoming student body.

Further, recent advances in genetics and physics demand that additional facilities be provided for a genetics laboratory and a medical physics department. The latter will serve all departments with its specialized knowledge and its application to medicine.

8. X-ray department

The increased patient load necessitates added space and equipment for the x-ray department. This department is a major need in the care of the patient and is of growing importance in view of the variety and complexity of x-ray examinations. The number of examinations has increased by 50% since 1961 and will be further increased as the number of patients grows. The part of x-ray in teaching and training is so well established that the needs for this department require no further elaboration.

What has been outlined with reference to increases in facilities applies as well to space and equipment for *operating theatres, post-operative recovery rooms, acute care units, pharmacy services, the occupational and physiotherapy departments, the central sterile supply department, laundry, kitchen and dietary services, and stores.* For example, consider that 5000 major operations were performed in 1961, while in 1968 the number was 7200. Prescriptions issued in 1961 amounted to 254,299, while in 1968 the number was 466,223. In 1961, the central sterile supply department supplied 365,000 items; in 1968 it supplied 910,000. Expanded facilities for meeting these needs must be provided, as present facilities are overtaxed.

It must be emphasized that all the services which I have discussed are essential in maintaining the high standard clinical facilities required for teaching and training provided by Hadassah.

Inherent in the enlargement of the areas described, provision must be made in the Medical Center complex for added lines of communication, such as elevators, both passenger and freight, and enlargement of the telephone exchange with provision for added inter-communication equipment.

It is evident that space must be provided for administrative personnel required to meet the enlarged services which have been described in broad outline.

Over and above the teaching and training responsibilities which Hadassah has for the the Medical School, there are responsibilities for providing for additional students of the Dental School; The School of Nursing; The School of Occupational Therapy; The School of Postgraduate Education; and the Graduate Residency Training.

In the case of the Dental School, it is anticipated that the annual student intake will rise from 25 to 65 requiring added space and equipment. The Nursing School intake is to be enlarged to 75 from the present annual student intake of 50. It will require additional housing for these students, as well as more living quarters for graduate nurses. Also, facilities will be needed for 10 additional students in the School of Occupational Therapy, the present 20 students to be increased to 30. Physicians taking courses in the School of Postgraduate Education, usually in residence while studying, require living quarters during their training period. The number of such physicians runs into several hundred registrants, from which as many as possible are selected. Presently, there are 300, with anticipated needs indicated as 1000. This School of Postgraduate Education also requires one 150 and two 50 seat lecture rooms for in-service training programs for interns, resident physicians and lay staff. There is special need for physicians undergoing specialized resident training. Of our 250 physicians, 30 are involved in this program which extends over a period of four to six years, according to the specialty concerned.

During this time, a large part of their time is spent within the hospital where they undergo practical as well as theoretical instruction. Living quarters for these physicians is badly needed, as due to their limited tenure of office and reduced income while training, they cannot afford to provide their own living accommodations.

Even at the risk of repetition, the need for the added facilities and equipment in the various schools and department which has been outlined, cannot be over-emphasized. This need must be met to assure the maintenance of the high level and standard of

teaching and training for which Hadassah is known to provide for the increased student body of Israelis, Arabs and those coming from abroad, for undergraduate work and for post-graduate or refresher courses. As shown in Table I, the Ein Karem expansion is estimated to cost about 28 million Israeli pounds, of which almost 7 million Israeli pounds—or $2 million—are hard currency needs. Table II indicates these needs by broad categories.

The complex of the Hadassah-Hebrew University Medical Center is to include the Moshe Sharett Institute of Oncology. Hadassah recognizes the increasing role of cancer as a cause of death and invalidism. We are concerned that in the developed countries, there are as many as 2000 new cases of cancer per million of population each year, and that cancer has become the second most common cause of death in those countries, reaching 1511 deaths per million of population annually. Cancer in Israel is not dissimilar to cancer in Western countries. The incidence of the disease amounts to 1920 per million, while mortality reaches 1119 per million of population—the second most common cause of death after cardio-vaccular diseases. Recognizing this, Hadassah has undertaken to extend its existing Department of Oncology by establishing a Center for the care of patients suffering from cancer and allied diseases. This Center will provide not only patient care, but also basic and clinical research facilities which will contribute, we hope, to the etiology of cancer and its prevention, its early detection, diagnosis and treatment, as well as early rehabilitation of patients. Apart from this, it is to be a focal point for teaching and training undergraduates, graduate and postgraduate students of the medical and para-medical professions in all areas relating to cancer and allied diseases.

The projected Institute of Oncology will service, it is estimated, approximately 2,500 patients, being about one-half of the cancer victims in Israel. It is estimated that one-half of this 2,500 will need radiotherapy and one-half hospitalization. In addition to meeting these patients' needs, the Center will serve for epidemiological and clinical research studies. Clinical, diagnostic, therapeutic, rehabilitative facilities will be required, as well as nursing care in the hospital, at home, and for follow-up.

The Institute of Oncology will provide the most advanced equipment for diagnosis, treatment and research, such as isotope laboratory facilities, deep x-ray therapy, chemotherapy, hormone therapy, a betatron, radiation equipment (cobalt for irradiation), and a cyclotron. It will serve to teach students, train specialists, and offer possibilities for conducting basic and clinical research in the fields of cancer and allied diseases. Even before the completion of the Institute, Hadassah, in its present Oncology Department, is providing treatment, through a special program, for cancer victims in the Israel-administered areas, cooperating with the World Health Organization under an agreement providing for this service.

Total costs for the Institute of Oncology are estimated at 14.7 million IL. Of this, over half will be required in hard currency expenditures. Table III shows a general breakdown of the $2.3 million required.

With the return to Hadassah of its buildings located on Mt. Scopus, Hadassah has undertaken to rehabilitate the hospital there as a general hospital to serve the Jewish and Arab populations of Jerusalem, the West Bank and Gaza area, and even patients from across the Jordan. It should be recognized that although forcibly isolated, Mt. Scopus has always been a geographic part of Israel and so recognized by the United Nations. Our hospital there was unavailable to Hadassah from 1948 to 1967 and stood unused following an Arab attack on a Hadassah convoy in which 78 medical and other personnel were killed. When restored, the hospital will function as an extension of the Medical Center at Ein Karem, with departments linked with their opposite numbers. It is planned that the medical personnel is to include Arab doctors and nurses, both as staff and for training. The 230 beds in this hospital will provide for this and, related as they are to the services at the Medical Center, will offer possibilities for teaching and training. It is planned to include facilities for rehabilitation in the set-up of this hospital, especially for the disabling and degenerative diseases, such as cardiac cases, cancer, brain injury, arthritis, and paraplegics. The Mt. Scopus renovation, estimated to cost 24 million IL, will require about $2.2 million in hard currency purchases. Table IV gives a general category breakdown of these expenditures.

This is a general outline of Hadassah's work and plans for the coming five years. Necessarily, this statement is only in outline form in regard to all of Hadassah's programs.

I shall be delighted, of course, to answer questions, and to provide the Committee with further information, together with such documentation as may be required. An important item in this presentation cannot be overlooked. It is that Hadassah holds itself responsible for the continued maintenance and support of the Hadassah Hospital and related facilities and is dedicated to their development and growth. We believe that the Medical Center is a personal link with Israel for our 318,000 Hadassah members. We are glad that we have helped to build bridges with leading medical centers throughout the world, and that we are able to provide teaching and training for nurses and doctors in Israel and in developing countries. This, together with carrying out medical programs in these countries, has helped to forge links of friendship throughout the world and especially in parts of Africa and Asia. In a world beset with many problems, where there is so much emphasis on destructive forces, we dare to believe that in some way our work for people of all races and creeds will help to build that better and peaceful world which all of us seek.

TABLE I.—SUMMARY OF COST ESTIMATES, HADASSAH DEVELOPMENT PROGRAM SHOWING TOTAL AND FOREIGN EXCHANGE REQUIREMENT

Purpose	Total requirement (in thousands of Israeli pounds)	Foreign exchange requirement: Amount (in thousands of Israeli pounds)	Foreign exchange requirement: Amount (in thousands of dollars equivalent)
Oncology Institute (new)	14,650	8,050	[1] 2,300
Ein Karem expansion	28,000	6,965	2,000
Mount Scopus renovation	24,000	7,890	2,231
Total	[2] 66,650	22,905	[3] 6,531

[1] Includes $700,000 for cyclotron, gift.
[2] Equal to $19,042,000.
[3] Exact equivalents lost in rounding.

TABLE II.—*Ein Karem: Foreign exchange estimates for planned expansion*

Clinical analysis and research:	
Diagnostic laboratories and X-ray	$300,000
Operating theaters and post-operative rooms	75,000
Occupational and physiotherapy departments	50,000
Central sterile supply and laundry [1]	300,000
Kitchen equipment	50,000
Elevators (freight)	150,000

[1] To also service Mount Scopus.

TABLE II.—*Ein Karem: Foreign exchange estimates for planned expansion*—Con.

Clinical analysis and research:	
Internal communications—telephone	$50,000
Outpatient departments, including medical emergency department	125,000
Inpatient department	100,000
Standby facilities: air conditioning and mechanical equipment	200,000
Dental school	600,000
Total	2,000,000

TABLE III.—*Institute of Oncology: Foreign exchange estimates*

Scientific equipment list (see appendix A)	$760,000
Elevators—2 passenger, 1 freight	120,000
Air-conditioning equipment	350,000
Mechanical equipment, water, steam, sanitary, plumbing	220,000
Electricity and telecommunication	100,000
Generators and transformers	70,000
Cyclotron	[1] 700,000
Total	$2,300,000

[1] To be received as gift from individual donor.

TABLE IV.—*Mt. Scopus renovation foreign exchange requirements*

Clinical equipment—270-bed facility including:	
All medical equipment, x-ray, operating theaters, diagnostic laboratories, beds, mattresses, etc	$900,000
Engineering:	
Elevators (7)	243,000
Boiler plant equipment	143,000
Kitchen equipment	100,000
Generators	43,000
Air-conditioning material and equipment	171,000
Water, steam, sanitary (pipes and plumbing equipment)	
Incinerators	29,000
Electricity and telecommunication	130,000
Laboratories	143,000
Transport—ambulances, etc	43,000
Total	$2,231,000

RESOLUTION OF THE COUNCIL OF THE CITY OF BOWIE, MD., URGING THE IMMEDIATE RELEASE OF SUBWAY CONSTRUCTION FUNDS

HON. LAWRENCE J. HOGAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. HOGAN. Mr. Speaker, I am pleased to call attention of my distinguished colleagues to a resolution adopted by the City Council of the City of Bowie, Md., which is in my district. This resolution points out quite emphatically the great concern and the note of urgency for action now for the release of subway construction funds for Metropolitan Washington.

By bringing this problem to the attention of Congress, this community emphasizes the needs of all the communities surrounding the District of Columbia. These communities want—and need—this service to be initiated as soon

as possible in order to be able to cope with a chaotic transportation situation.

The city fathers of Bowie are well aware of the serious effect that this delay in funding is causing them and they have seen fit to call it to our attention by passing this resolution. I commend them for their community interest, an interest which includes the entire Greater Washington area. I hereby place that resolution in the RECORD so that my colleagues may know the feelings of one of the many communities which are to be served by the projected subway system. While I support a balanced transportation system which includes adequate freeways and buses as well as subways, I urge that the funds be made available now so that construction of the subway system can begin.

The resolution follows:

RESOLUTION OF THE COUNCIL OF THE CITY OF BOWIE, MD., URGING THE IMMEDIATE RELEASE OF SUBWAY CONSTRUCTION FUNDS

Whereas, after many years of planning a regional rapid rail transit system has been adopted by the Washington Metropolitan Area Transit Commission and all of the participating jurisdictions; and

Whereas, most of the participating jurisdictions have expended large sums of money for administrative and planning purposes in preparation for construction of the adopted regional rapid rail transit system; and

Whereas, an immediate start in the construction of the rapid transit system is in the public interest, benefitting the citizens of Bowie and every part of the Metropolitan Washington area and the nation as a whole by improving transportation in the Nation's Capital;

Now, therefore, be it resolved by the Council of the City of Bowie, Maryland, that the Executive and Legislative branches of the Federal government be urged to take immediate steps to release subway construction funds to permit construction to begin at the earliest possible date; and

Be it further resolved that copies of this resolution be sent to the President of the United States, all United States Senators and Congressmen from Maryland, all members of the District of Columbia Appropriations Committees and Public Works Committees, the Secretary of the Department of Transportation and the Chairman of the Metropolitan Washington Council of Governments.

Introduced and passed by the Council of the City of Bowie, Maryland at a Regular Meeting on ——.

LEO E. GREEN,
Mayor.

Attest:

EDITH MAYLACK,
City Clerk.

THE NIXON APPROACH TO THE DRUG PROBLEM: A LACK OF SENSITIVITY AND UNDERSTANDING?

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. CHARLES H. WILSON. Mr. Speaker, increasing criticism is being leveled at the administration's approach to the narcotic addiction and drug abuse problem. This criticism emanates from all parts of the political spectrum and apparently voices are being raised in opposition to the President's "off with their heads" attitude within the administration itself.

William Robbins reporting in the New York Times yesterday stated that "a confidential memorandum urging the Department of Health, Education, and Welfare to oppose the bill in its present form, composed by one of the agency's top health officials, drew strong support last week, but it was turned down at the highest echelon in the Department." Later in the same article, Mr. Robbins quotes an HEW official who considered Mr. Nixon's proposal "regressive legislation."

As sponsor of the proposed "Comprehensive Narcotic Addiction and Drug Abuse Care and Control Act of 1969," I and 22 cosponsors have sought to provide a realistic approach to the problem, an approach that will get to the root causes of drug abuse as well as eliminate its outward and apparent manifestations. The Nixon treatment of this area, in my opinion, will not bring about solutions and will not provide the help desperately needed by those who have fallen prey to the sickness that narcotic addiction and drug abuse is. I had thought that the days of bedlam would be only a matter of historical interest in these "enlightened" times. Should the President's proposal be promulgated, as it now stands, we shall have witnessed a most unfortunate and regressive day that will set back the many efforts being made to solve the drug problem that we face today. The reemergence of a bedlam-type approach to our problems is the last thing our Nation needs at this time.

For my colleagues' information, I now include into the RECORD the full text of the Robbins article:

DISPUTE IN ADMINISTRATION ON NIXON BILL TO STIFFEN DRUG PENALTIES MAY BREAK INTO OPEN

(By William Robbins)

WASHINGTON, July 27.—Disagreement within the Administration over the stiffened penalties in President Nixon's drug abuse bill is threatening to break into open conflict.

A confidential memorandum urging the Department of Health, Education and Welfare to oppose the bill in its present form, composed by one of the agency's top health officials, drew strong support last week, but it was turned down at the highest echelon in the department.

It was understood, however, that there would be no pressure to prevent experts in the health agencies from stating their professional reservations about the bill when called on to testify in Congress.

The opposition has focused on the general law enforcement emphasis of the bill, the penalties on users, and certain administrative prerogatives that would be given to the Justice Department.

The bill would establish a minimum of two years' imprisonment for possession or use of such substances as marijuana and LSD, although it proposed possible probation for first offenders. It would provide higher penalties for distribution or possession with intent to distribute.

DRUGS WOULD BE GRADED

The bill would also classify substances and grade them as to the degree of danger their use might involve as well as the penalties provided. It would give the Attorney General the authority, in consultation with health advisers, to make some changes in the classifications as well as add new substances to the list.

It also charges the Justice Department with the responsibility for research into the problems involved.

The ferment brewing among the mental health and drug experts of the Health, Education, and Welfare Department could break into the open tomorrow when two high officials, who are known to oppose the stiffening of penalties for drug possession and use, are scheduled to appear before a Congressional subcommittee.

They are Dr. Joseph T. English, administrator of the Health Services and Mental Health Administration, and Dr. Stanley F. Yolles, director of the National Institute of Mental Health. They will appear before a Senate Labor and Public Welfare Subcommittee that is considering extension of the Community Mental Health Centers Act.

EGEBERG'S TESTIMONY

The subject of the drug bill could arise naturally, observers say, because of such sentiments as one expressed recently by Dr. Roger O. Egeberg, Assistant Secretary for Health and Scientific Affairs, Dr. Egeberg, the Administration's top health official, said in Senate testimony leading to his confirmation that the law enforcement approach to drug problems would require "building stockades" because so many people were involved.

In any case, these observers say, it is likely that Senator Ralph W. Yarborough, Democrat of Texas, will try to draw out the opinions of the two drug experts. Senator Yarborough is the author of one of several bills that seek to curb drug abuse through education and research. He is also the sponsor of a mental health center bill.

The confidential memorandum calling for opposition to the Administration bill, it is understood, was submitted last week during conferences attended by Dr. Egeberg and Secretary Robert H. Finch.

If it had been adopted, it would have produced the unusual circumstance of two Administration departments taking conflicting public stances on a Presidential program.

At the end of the week, however, Creed C. Black, Assistant Secretary for Legislation, said that the Health, Education, and Welfare Department would not oppose the Administration bill. But he added, "We certainly are not going to ask any professional people to take a position that is contrary to their professional beliefs."

Health officials questioned were unanimous in their opposition to the bill in its present form, although only one, Dr. Sidney Cohen, would speak for attribution. Dr. Cohen is director of the Division of Narcotics Addiction and Drug Abuse of the Institute of Mental Health.

Dr. Cohen said: "This isn't the way to solve the problem. I am not concerned with the penalties for the pushers, but I am concerned about the young person who might be caught with a marijuana cigarette and thrown into jail for a long period of time. I would hope that we could find a more sensible approach."

The approach that Dr. Cohen and most other experts have urged has been that of research leading to education that would discourage abuse as well as to new forms of treatment of addicts.

"This is regressive legislation," said another official. "If I am called upon, I will have to say so."

CALLS BILL DETRIMENTAL

A top health official in the department who is an authority on drugs remarked: "This bill is more detrimental than helpful."

A "hair-raising" provision of the measure, he said, is that it will make simple possession of marijuana a felony. He added:

"The hooker in it is that possession with intent to distribute would bring a minimum of five years in jail with no probation or parole. That means that a student who had some marijuana intending to give it to another, could be thrown in jail for years.

"And if a college senior 21 years old gives a freshman under 18 a marijuana cigarette, the penalty can be doubled. It gets into the realm of the ridiculous.

"There's nobody here [in the department's health agencies] who wouldn't come out strong against that."

The official reserved some of his strongest comments for the provisions placing responsibility for research in the Justice Department.

"It's like having the police, judge and jury in the same identity," he said.

The department's top authorities on drug abuse were not consulted on the penalties, he said, and they were not able to see a final draft of the proposed legislation. He added that "some of the people at Justice are just sick, too, about those penalties."

It was understood that much of the pressure for increased penalties had come from White House aides.

"It's all part of the law-and-order theme," one official said.

DISTRICT OF COLUMBIA—DEMAGOGS IN THE URBAN JUNGLE

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. RARICK. Mr. Speaker, again I call attention to the shocking condition of our Nation's Capital—the constitutional responsibility of the Congress.

The District Democratic chairman, attacking the honest, loyal, working, taxpaying Americans who are the backbone of this Nation—calling them "all the nice white middle-class people opposing tax increases"—issues a thinly veiled call for racial violence.

The 27th murder of the month occurs.

Among the weekend rapes is the mother of a wounded Vietnam veteran, gang-raped when she left Walter Reed Army Hospital after visiting her son.

The police forces request buildup to three regiment size.

Another bank robbery, downtown in broad daylight.

Special security measures at the U.S. courthouse to stop the molestation of secretaries and the theft of typewriters.

Twenty armed robberies and another rape on Monday.

Left-wing "protesters" on the Capitol steps.

Mass again interrupted at St. Matthew's Cathedral.

I include local news clippings:

[From (D.C.) Washington Daily News, July 26, 1969]

MOTHER OF VIETNAM VET ROBBED, RAPED

The mother of a wounded Vietnam veteran was gang raped last night just after she had visited her son at Walter Reed Army Hospital, District police said.

Police said the 42-year-old resident of Ohio, who is white was walking north on Georgia-av near the hospital when a Negro man threw a sweater over her head, forced her into a car and drove her to an unknown location, where he and five friends robbed her of $120 and raped her.

She was treated at D.C. General Hospital and released.

Police earlier said a Southeast woman, 20, Negro was attacked while getting her laundry out of the washing machine in the basement of her apartment.

She told police a Negro man put a sharp object to her neck, pushed her into a boiler room, raped her, and took her gold wedding band.

On leaving, he said, "I'm sorry."

[From the (D.C.) Washington Daily News, July 28, 1969]

A 33-year old Glover Park woman was raped early today by two teenagers, police said.

They said the woman, returning from her job at Maryland nursing home, was grabbed by two Negroes in their late teens as she was entering the front door of her apartment building.

The woman, white, was robbed of $3 and a ring and forced to a parking lot behind the building where both men raped her.

[From the Washington (D.C.) Evening Star, July 28, 1969]

TERRIS SUGGESTS DISTRICT OF COLUMBIA ACT BOLDLY ON SELF-RULE

The District's Democratic chairman yesterday suggested from the pulpit that if Washington residents want self-rule they will have to act as drastically as American colonists did.

In a sermon at All Souls' Unitarian Church, 16th and Harvard Streets NW, Bruce J. Terris recommended a boycott of banking institutions that refuse loans to inner-city homeowners. He also suggested an increased effort by churches to support housing programs.

Terris suggested a taxpayers' revolt. "If the answer to our forefathers was to dump tea in Boston Harbor," he said, "maybe we will have to take similar action to prevent the collection of taxes in this colony.

"If tyranny justifies the taking of life, maybe it at least justifies continuous picketing of the homes of congressmen who act as arbitrarily over the District as King George did over the colonies."

He criticized "all the nice white middle-class people opposing tax increases" that apply to them, but remain silent on revenue proposals for social needs.

The contemporary prophets act rather than just talk, Terris said.

He mentioned as examples Reginald H. Booker, chairman of the Emergency Committee on the Transportation Crisis, and Sammie A. Abbott, the group's publicity director, "who breaks up meetings to stop freeways from being driven through black neighborhoods."

"The great sin of our blacks and of our young people," Terris said, "is that they are neither so cynical nor complacent that they have ceased to take our proclaimed values seriously."

Patience, he indicated, is not entirely virtuous.

"It is wrong to demand change at a rate which is impossible, which destroys more than it accomplishes," he said.

"But it is even more wrong to hide behind the need for patience when we can easily do far more to remedy the gross evils of our society."

POLICEMAN, SHOT IN EYE, WILL RETIRE

Capt. John F. Reynolds, the 48-year-old police official who lost the sight of his left eye during a wild shootout in February in which three private citizens were killed and seven officers injured, will be granted a disability retirement effective Friday.

Reynolds, an official in the Traffic Division, was hit on the left side of the face by a shotgun blast during the Feb. 21 gunfight. A shotgun pellet damaged the optic nerve, leaving him permanently blind in that eye.

The shootout took place at 1420 Madison St. NW., a rooming house owned by Mrs. Lela M. Bannister. When two policemen answered a call that a woman had been shot inside the house, they were hit by a shotgun blast as soon as they stepped from their squad car.

MAN FATALLY STABBED IN NORTHWEST ARGUMENT

A Northwest Washington man was fatally stabbed Saturday night during an altercation with an unidentified assailant in front of an apartment house in the 300 block of Sheridan Street NW, police reported.

Police said Louis Reed, of the Sheridan Street address, was found about 9:45 p.m. with a wound in his chest. He was pronounced dead at Washington Hospital Center.

POLICE FORCES SEEKING BEEFUP—TO THREE REGIMENTS

(By Ronald Sarro)

The Nation's Capital will have enough policemen to fill the ranks of more than three Army combat regiments if all pending requests for additional men are filled.

The latest force to request an increase is the 250-member White House Police, which initially wants to more than triple its size and assume major responsibility for protecting foreign embassies here.

After increasing its strength to 850 men immediately, the force probably go up to 1,000 in a couple of years, Secret Service officials told Congress last week.

The size of the Metropolitan Police Department was increased last year from an authorized strength of 3,100 men to 4,100 men, and the department has been working on filling these 1,000 vacancies.

An appropriation request now before Congress with strong conservative backing, would increase the authorized strength of the city department by another 1,000 men—to 5,100 men during the next year.

This second 1,000-member increase has a good chance of passing Congress despite the fact that no one will be able to measure the impact of the first 1,000 additional men on crime until they are hired and go on the street to fight it.

In addition to the total of 3,000 more men the Washington and White House police seek for the future, smaller police departments with jurisdiction in the nation's capital also are seeking more men.

The U.S. Park Police here have an authorized strength of 363 men, and have a budget request pending to add 35 more. But the department says it really needs a total force of 450.

Another force is the U.S. Capitol Police, which protects the congressional homestead. It has a strength of 600 men, but has held off asking for any additional help by the fact that it has run out of locker space.

Even the 26-member National Zoological Park Police, who protect the zoo and its animals, say they could use two or three more men.

If all of these aforementioned requests were filled, there would be more than 7,150 policemen active in the city. A combat regiment, ranges between 1,500 and 2,400 men, not counting headquarters personnel.

That 7,150 figure does not count a number of smaller police forces, hundreds of federal building guards, FBI agents, Secret Service or CIA agents in Washington.

THE METRO SCENE—SONGFEST AT CAPITOL PROTESTS ABM, WAR

The week-long vigil on the Capitol steps against the controversial anti-ballistic missile system erupted yesterday afternoon into an anti-war and anti-ABM songfest, complete with accordion accompaniment.

For about an hour and a half, tourists were treated to such homemade ditties as "O Beautiful for ABM" and "Hymn to the Pentagon Monster."

The informal chorus of about 16 voices was lead by Carlos Van Leer, 62, local member of Veterans for Peace in Vietnam. Van Leer said he fitted the new words to the well-known tunes "because satire is the best sermon for today."

Capitol police reported no trouble with the group, although they said they warned the protesters to keep their signs and posters out of view.

An informal coalition of Washington area opponents of the ABM has conducted the continuous vigil since July 20, and a spokesman for the group said they plan to continue their protest until the Senate votes, possibly this week, on the measure.

NEW PROTEST INTERRUPTS MASS AT ST. MATTHEW'S

(By William Willoughby)

Two 12:30 services were held at St. Matthew's Cathedral yesterday after the pastor, the Rev. John Kuhn, ordered about 200 protesting Catholics out of the church when they refused to be seated during the reading of the Epistle, as is customary.

As Kuhn continued the interrupted mass in the sanctuary, an impromptu service was conducted by the Rev. George Malzone, a priest disciplined last year by Patrick Cardinal O'Boyle for resisting him on the birth control encyclical.

The outdoor service, on the center section of the steps, took on many of the forms of a combined fundamentalist street meeting and a freedom rally.

Kuhn interrupted the lay reader of the Epistle after all but the protesters had sat down. He read from a prepared statement, obviously anticipating that some kind of disruption would take place. This marked the 10th time a "teach-in" was attempted at the seat of the archdiocese.

He began his statement by telling the congregation of the events that led to the arrest last week, in the sanctuary, and during the services, of James Gibbons, a leader in the Center for Christian Renewal, which sponsors the teach-ins.

"I can only interpret the actions of the group from the socalled Center for Christian Renewal again today as a disregard for the law of this land," Kuhn said, "as they have repeatedly disregarded the rights of St. Matthew's parishioners upon whom they choose to force their aggressive and uninvited presence and their unwarranted opinions."

Although the particular portion of his statement was not read yesterday, one paragraph made it clear he was ready to press for additional arrests if the provocations became serious enough.

This was the biggest show of strength the protesting group, which is contending that "racism" is practiced in the archdiocese, had made to date.

Once outside the church, Gibbons challenged the followers to "fight from within . . . We must show them we're not just a movement of kookie people . . . that we're not trying to tear down anything." Charges against Gibbons following last week's arrest have been dropped, but he was warned he would be prosecuted if he was again arrested.

When he asked the group what counteraction they wanted to take, the initial suggestion was to go as a group for communion. Soon the reaction had simmered down and the decision to hold a service outdoors "as a witness" prevailed.

When the parishioners—only a small number of protesters belong to St. Matthew's—came out, most stayed clear but many muttered in disgust. "What the hell is this world coming to?" one man said.

After the service, Kuhn renewed charges against the protesters that their attack on racism is not legitimate. "They're only trying to keep us from doing what we might be doing."

[From the Washington (D.C.) Post, July 29, 1969]

HIDDEN CAMERA FILMS SUSPECT—DISTRICT OF COLUMBIA BANK ROBBED OF $2,000

A robber fled with more than $2000 in cash yesterday morning from a crowded downtown bank.

"Don't be alarmed. Don't look up. Just fill this brown paper bag," the bandit had written on a deposit slip that he handed to teller June E. Quarles, 23, in The First National Bank of Washington, 509 7th st. nw., police reported.

They said Miss Quarles stuffed the money in the bag as directed. The robber was last seen walking out of the bank into the rain.

Most of the bank employes and customers, who were waiting in long lines to be served, were unaware a robbery had taken place until police and FBI agents arrived at the bank shortly after the holdup at 11:33 a.m., police said.

The FBI later released a sequence of six photographs of the robbery suspect that agents said had been taken as he walked "almost directly" toward a concealed surveillance camera.

OWNER IS FOUND SLAIN IN NORTHWEST LUNCHEONETTE

The owner of a Northwest Washington lunchroom was found bound and gagged and savagely beaten to death yesterday morning.

Police said the body of Pantels Scarvelakis, 63, was found about 6 a.m. in the Arcade Lunchroom, at 3308 Georgia ave. nw., by one of his regular customers and a waitress after they found the front door locked but the back door open.

Scarvelakis was lying face down on the floor, according to police, who said his hands and feet were bound, his eyes blindfolded and his mouth gagged with strips of white cloth.

The proprietor was pronounced dead of head injuries at the scene by Deputy Coroner William Brownlee.

Police said no weapon was found. They said the slaying apparently took place after Scarvelakis surprised someone inside the lunchroom or was followed inside when he started to open for the day's business.

Scarvelakis, whose home address was listed by police as 5512 13th st. nw., had owned the lunchroom for the past 11 years, police said.

His death was the 153d District homicide this year, compared with 104 homicides at the end of July last year.

YOUTH ARRESTED IN FATHER'S MURDER

A Northwest youth was arrested by police yesterday in the stabbing death of his father during an argument Saturday night.

Police said they have charged Lawrence Reed, 19, of 1709 Lamont st. nw. with second-degree murder. His father, Louis Reed Jr., 57, of 530 Sheridan st. nw., was stabbed in the chest about 10 p.m. Saturday in front of his home, and died shortly after at the Washington Hospital Center.

CITY LIFE—U.S. COURTHOUSE SECURITY TIGHTENED

In the latest in a series of measures to combat an outbreak of petty crime at the U.S. Courthouse, security locks have been installed on all self-service elevators in the building.

Complaints ranging from the molestation of secretaries to the theft of typewriters led to the precautions taken during the past month by the building's guard force.

Use of the self-service elevators in the courthouse at 4th Street and Constitution Avenue nw. is now limited to persons equipped with elevator keys issued by the guards. Others must use the public elevators, which are manually operated by Government employes and do not run at night or on weekends.

Entry into the courthouse during non-business hours is now limited to persons carrying a night, weekend and holiday pass signed by Maj. Howard McGonigal, chief of the security guards.

And only those persons carrying a separate pass authorizing the removal of property are permitted to take any equipment out of the building, which is directly across the street from police headquarters.

THREE WOUNDED POLICE STUDY RETIREMENT

(By Alfred E. Lewis)

Three Metropolitan policemen, each of whom was wounded last February in the left eye during a shooting siege that left three civilians dead are expected to terminate their service with the force.

Capt. John F. Reynolds, 48, of the Traffic Division, who lost the sight in his eye, said yesterday he is retiring as of Thursday. He has served 22 years with the Police Department.

Sgt. Robert Householder, 36, of the Sixth Precinct, a veteran of 10 years on the force, appeared before the police board of surgeons on July 15 and expects to be retired, it was learned.

Police said that while he has not lost the sight of his eye. Householder suffered other injuries at the time of the shootings.

The third policeman, Officer Ronald Bennett, 39, said that he had never regained full vision in his left eye after he was shot. He said that while he has not asked for retirement, he is considering it. On the force for three years, Bennett was attached to the Sixth Precinct at the time of the shooting.

None of the officers has returned to duty since the shooting.

Thomas Walton, 36, a construction laborer, shot and killed his landlady, Lela Bannister, 65, at her home at 1420 Madison st. nw., also killed her maid, Ethel White, 66, and then shot himself to death after he had held some 75 policemen at bay with a shotgun the morning of Feb. 21.

Two other tenants in the house scrambled to safety after the building was set on fire, apparently by a tear gas shell containing incendiary fragments.

TWO BEATEN IN HOLDUP OF RESTAURANT

Two men robbed a Northwest Washington restaurant of an undetermined sum of money Sunday after a fight with the manager and a customer, police reported.

Arthur L. Seabolt, manager of the Little Tavern at 5100 Georgia ave., told police that two men, one armed with a gun, entered about 3 p.m. demanding money. He said the gunman hit him in the face with a raw hamburger and pulled the trigger of the gun, but it failed to fire.

According to police, one of the men then struck Seabolt over the head and knocked him to the ground. The other man floored a customer, Max Steinmetz.

Seabolt told police the assailants then took the money from the cash register and ran out the front door where they were joined by a third man.

Seabolt was treated at Washington Hospital Center and released, police said.

In other serious crimes reported by area police up to 6 p.m. yesterday:

ROBBED

William Boyd, of Washington, was robbed of $70 at about 5:45 a.m. Sunday by two men who approached him while he was sitting with a friend in his car in the 2000 block of Benning Road ne.

Willie Boones, of Washington, was treated at Rogers Memorial Hospital for injuries he suffered at about 6:25 a.m. when he was beaten to the ground at 8th Street and Massachusetts Avenue ne, by several men who took $8 from his pocket.

Charlie Goodman, of Washington, was robbed of $25 at about 12:30 a.m. by three men, one armed with a gun, who approached him at 4th and V Streets nw.

Frank J. Hollis, of Washington, was beaten to the ground as he was getting out of his car in the 5500 block of 14th Street nw., by several men who escaped with his keys and wallet at about 9:55 p.m. Sunday.

Frager Daniels, of Washington, was robbed of $6 and a watch by two youths who beat him to the ground at about 2 a.m. in the 500 block of Rhode Island Avenue nw.

Esso Gas Station, 900 11th st. se., was robbed of $50 at about 3:05 a.m. by four men who attacked the night manager while he was in the grease pit and took the money from his pocket.

High's Dairy Store, 3518 Georgia ave. nw., was robbed of an undetermined amount of money at about 10:55 p.m. Sunday by a man who appeared to have a gun.

High's Dairy Store, 5002 1st. nw., was held up by two gunmen who obtained an undetermined amount of money at about 5:45 p.m. Sunday.

High's Dairy Store, 8th and Upshur Streets nw., was robbed of an undetermined amount of money at about 4:25 p.m. Sunday by two men, one armed with a hand gun.

Buddy Norwood, of Washington, was treated at D.C. General Hospital for wounds he suffered when two men, one wielding a knife attacked him at about 3:30 p.m. Sunday at the underpass at 7th Street and Virginia Avenue se. One of the men cut Norwood on the hand and chest and the other man took $100 from his pocket.

James E. Livingston, 49, of Washington was attacked at about 10:55 p.m. Sunday at the corner of 12th and H Streets ne., by three men who took $26 from his pocket.

Janice Thomas, 22 of Washington, was treated at Rogers Memorial Hospital for injuries she suffered when a man grabbed her at 12th Street and Maryland Avenue ne., and beat her in the face and head with a revolver, at about 11:30 p.m. Sunday.

James A. Lincoln, 42, of Washington, was admitted to Rogers Memorial Hospital with a gunshot wound in the thigh. Lincoln told police he was sitting at the corner of 5th and D Streets ne., at about 8 p.m. Sunday when he was approached by three men one of whom fired a shot at him.

Carl M. Smith, 18, was treated at Rogers Memorial Hospital for stab wounds in the back which he received when a man armed with a knife attacked him in the 600 block of H Street ne., at about 7:45 p.m. Sunday.

Jack F. White, 19, of Kentland, Md., was treated at Prince George's Hospital for stab wounds he suffered during an argument at about 1:30 a.m. at 73d Avenue and Forest Road, Kentland, in which White was stabbed in the chest and cheek by a youth armed with a pocket knife.

Joseph A. Gibbs was robbed of $150 by a man armed with a revolver who jumped into his car when he stopped at 18th and Church Streets nw. Gibbs was forced to drive to an alley in the 1300 block of Riggs Street nw., where the theft occurred.

Unico Wine and Liquor Company, 2645 Connecticut ave. nw., was robbed of an undetermined amount of money at about 1:20 p.m. by a man armed with a pistol who ordered the manager to turn over the money from the cash register. The man then demanded more money and followed the manager, Irving Levin, into a back room where he struck him on the head several times with the gun. A witness told police he saw the bandit enter a drug store, walk out the rear door and drive away in a waiting car.

The Adelphi Terrace Pharmacy, 9107 Riggs rd., Adelphi, was robbed by two armed men of $436 yesterday at 9:30 a.m.

Samuel Brookbank, a truck driver for the Central Distributing Co., was robbed by two men, one armed with a gun, yesterday at 2 p.m. in a parking lot next to 1701 Kenilworth ave., Beaver Heights. They took $2 in coins and Brookbank's watch.

ASSAULTED

A 33-year-old Washington nurse was raped and robbed at about 2:30 a.m., by two youths who approached her as she was entering her Northwest apartment building. The woman told police they took a ring and $3 from her and then both of them raped her in a parking lot near the building.

LOWERING THE VOTING AGE TO 18

HON. SHIRLEY CHISHOLM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mrs. CHISHOLM. Mr. Speaker, our young Americans will one day inherit the management and maintenance of our political system. In order for our system of government to work at its best it must produce the greatest good for the greatest number of people while it continues to protect the basic rights and liberties of each individual.

At a time when there is a great amount of talk and interest throughout the country about the rights and welfare of minority groups and at a time when we have just finished celebrating the basic holiday of our democracy—July 4—I would like to enter a plea for what is estimated to be either the first or second largest minority group in our country. That minority group is the youth between the ages of 16 and 21.

The U.S. Bureau of Census in July 1968 estimated the size of that age group at 21,679,000—close to 10 percent of the population of the country. The size of that figure alone would seem to warrant their occasional refusal to participate in the war in Vietnam and other salient activities and aspects of our society on the basis that they have no direct representation.

The reason that I quote the statistics for the age bracket between 16 and 21 is very simple. If we wait 2 years to pass a bill lowering the voting age, approximately 200,000 youths will have joined the ranks of that unrepresented minority group.

In the war the average age of those who fight and die are under 21. In fact in Brooklyn, where my home district is, there was a recently reported case of a young marine who, at only 15, acquired the distinction of being our youngest fatality in Vietnam.

Many youths are now politically involved and have a deep concern for the complex social problems that now plague the country. At present there are about 5,000 VISTA volunteers on active duty in this country and there have been more than 16,000 since inception. The overwhelming majority have been youths between 18 and 21.

In this past election many young men and women were actively involved in political campaigns, but there were also many who were not. Those who were not were youths who have been discouraged from participating in the political system for various reasons. One of these reasons was to be found in the response of the general electorate in the last election involving the late Robert Kennedy, Senator EUGENE MCCARTHY and the recent primary mayoralty election in New York City.

At the age of 18 young Americans must bear arms if called upon, and are considered adults in civil and criminal courts of law. The age of 18 is and has been considered the age of maturity in America.

Opinion polls have shown that 64 percent of the American voting public favors a lowering of the voting age to 18.

Young people, because of educational emphasis in the high schools on politics and our particular life—style, are generally more aware politically than their parents.

They are well-steeped in the belief that the right to vote is the fundamental requirement for citizen participation in our democracy. They are as aware as we are that this country came into being because American colonists would not stand for taxation without representation. They are aware of the close parallels between their present situation and the position of earlier Americans. They are also aware of the close parallels between their situation and the struggle of black Americans for political freedom in this country because many of them are black.

We cannot, in good faith, continue to deny these young adults the rights and privileges of adulthood while calling upon them to exercise their restraint and responsibilities.

House Joint Resolution 18 follows:

H.J. RES. 18

Joint resolution proposing an amendment to the Constitution of the United States to provide that the right to vote shall not be denied on account of age to persons who are eighteen years of age or older

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, to be valid if ratified by the legislatures of three-fourths of the several States within seven years from the date of its submission to the States by the Congress:

"ARTICLE —

"SECTION 1. No citizen of the United States who is eighteen years of age or older shall be denied the right to vote by reason of age.

"SEC. 2. The Congress shall have power to enforce this article by appropriate legislation."

GARBAGE BY ANY NAME

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. DERWINSKI. Mr. Speaker, it was with great interest that I noted a lighthearted editorial commentary in the Chicago Heights, Ill., Star, Sunday, July 20, discussing present-day political debate phraseology.

In view of the fact that the editorial carries some practical suggestions that

might be pondered here in Washington, I hereby insert it into the RECORD:

GARBAGE BY ANY NAME

Not too long ago, in a suburban municipal election campaign a candidate referred to an opponent's material as "hogwash." Even at that level, it seemed that the term was lacking in class. And in the particular case, we weren't sure a well-bred hog would "buy" the stuff, much less eat it.

Under the circumstances, we were a little surprised more recently to note that Illinois Senator Charles Percy classified as "hogwash" some of President Nixon's remarks concerning the anti-ballistic missile system.

For our part, we are among the thinning ranks of non-experts who are neither dogmatically opposed nor unreservedly in favor of the BM, although if an error is to be made, we should prefer to have it made on the side of self-defense rather than self-neglect. But irrespective of the junior senator's position, it is somewhat disappointing—having supported him for governor and for his present post—to see him employ a somewhat tasteless word in referring to a fellow Republican.

Perhaps we can take comfort in the suspicion that Senator Percy was attempting to reintroduce a down-to-earth quality in the American dialogue. The tendency has been toward bandwagon adoption of new words and phrases. And although "mainstream," for example has almost run its course downstream, "thrust" and the like might be with us for a long time.

And on television, anyway, one no longer talks about a question or subject; he talks to it, resting assured that it cannot talk back. Not only that, but the lexicographers have at length caved in, and "host" is a verb in fact as well as in misdeed.

But "hogwash"? The junior senator might do better to mend his political fences and build upon the good start he made in the Senate with his low-income housing plan.

WAITING FOR THE FUNERAL?

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. ROBISON. Mr. Speaker, in my address to the House, Tuesday, July 22, 1969, on the subject "Let Us Go Down To The Station And Watch America's Last Passenger Train Come In," I tried to focus attention on the growing problem of the decline of railway passenger service as one of the greatest examples of legislative and administrative neglect that I could think of. In this regard, I was most interested in the following editorial from yesterday's Evening Star which takes the Interstate Commerce Commission to task for inaction in this area, and I recommend its message to my colleagues:

WAITING FOR THE FUNERAL?

The Interstate Commerce Commission recently completed a nine-month investigation into the costs of operating passenger trains. The well-documented report clearly shows that while the railroads, using the ICC's own accounting methods, have for years been vastly over-stating losses incurred from operating passenger trains, the fact is that these trains do run at a big deficit. The eight railroads studied could have saved perhaps $118 million in 1968 had they not run any passenger trains.

At the same time the ICC has urged Congress—now that the costs of running passenger trains are known—to launch a study aimed at formulating a national policy on rail passenger service. It would determine what type of service is necessary, and whether the federal government should help subsidize it.

Having said that, the ICC goes back to its usual slumber—handling the tricky-track of minuscule trucking operating rights cases—content that it has done its job by telling Congress what to do.

But the ICC hasn't done its job. The commission has for more than a year been sitting on top of the most important railroad passenger case ever before it—a case in which one of its examiners has urged the ICC to assert that it does indeed have the power to protect the traveling public, and require at least bare minimum civilized services aboard trains—such as sleeping and eating facilities.

The examiner, John S. Messer, issued his historic report in April 1968 in a case that has been at the ICC since 1966. The commission heard arguments on it last September—and for 10 months since has dawdled over the matter while train after train has been discontinued, and while services aboard those remaining have dwindled.

There is no doubt Congress must set forth some national policy on rail passenger service. But Congress also is buy with such pressing matter as inflation, taxes and the war. Congressional action on rail passengers could take years. And while Congress deliberates, and the ICC waits, more trains make their final trips, and those still running are downgraded. Eventually, as things are going, the railroads will kill all of their remaining service.

Then, of course, there will be no need to rule in the Messer case because there will be no more trains. But the ICC could always say, "well, we tried—we told Congress it ought to act."

CAPTIVE NATIONS—CLEVELAND URGES SPECIAL HOUSE COMMITTEE

HON. JAMES C. CLEVELAND

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. CLEVELAND. Mr. Speaker, last week marked the 11th annual observance of Captive Nations Week, first proclaimed in 1959 by President Eisenhower.

The plight of the countries made captive by the Communist empire greatly concerns our freedom-loving Nation. For the past 11 years, our nationwide observances of Captive Nations Week in July have demonstrated the determination with which the American people support the hopes of freedom-loving people everywhere.

For us, this is not an idle exercise. Our Nation is rooted in the hatred of tyranny which drove our forefathers to the stark shores of the New World. Many thousands of our citizens today are refugees from European lands submerged beneath the tides of Red oppression. Many thousands more have kinfolk in those oppressed lands. All look to America as the bulwark—the last remaining bulwark of liberty.

Each year thousands of persons flee or attempt to flee to the West from the Communist world. At the risk of life and limb, these refugees vote with their feet and they vote for freedom.

It is important to support them. For this reason, I have again introduced legislation to establish a special House committee on the captive nations. This committee would maintain a constant surveillance of the captive nations. It would periodically summarize its findings concerning the totalitarian control of these unfortunate nations and publish them on behalf of the legislative branch of the Government. The knowledge that such a committee in the U.S. Congress was at work would hearten the people of the captive nations. Its reports of tyrannical behavior by the Communist overlords would help to embarrass the Communists in the eyes of world opinion.

There are some overt indications on the part of the Soviet Union of a softening in its view of the West. Past history gives us no reason to consider this attitude as anything more than temporary—probably due to internal troubles and divisions within the Soviet Union. The regime will, as always, defend itself. As with Czechoslovakia, it will strike down any deviations toward liberty. It will do so with whatever ruthless force is necessary, even accepting the risk of war with the West in the process.

In this atmosphere, which promises to cloud our affairs for years yet to come, I strongly believe that the American Congress should equip itself with a Select Committee on Captive Nations. We are the leading legislative assembly in the world. All which threatens freedom is of deep concern to us.

I strongly urge the House to adopt House Resolution 349, my bill to establish a Select Committee on the Captive Nations.

DELBERT WRIGHT

HON. JAMES A. McCLURE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. McCLURE. Mr. Speaker, at this time I would like to commend some outstanding Job Corps people from my State of Idaho.

Delbert Wright, corpsman and editor of the Snake River News which is the newspaper of the Marsing, Idaho, Job Corps Civilian Conservation Center, received a gold first-place trophy in the recent newspaper competition sponsored by the Corpsman, official Job Corps newspaper.

Also honored with a certificate of recognition was Mrs. Helen Branson, editorial coordinator for the newspaper.

I think it is significant that Editor Delbert is an Idaho corpsman. He has lived in Arizona and California but now his family is in Burley, Idaho.

The contest which he helped so much to win was among Job Corps Center newspapers and was sponsored by the Corpsman, with the cooperation of the American Newspaper Guild. The judging was conducted by Robert Asher, city bureau chief of the Washington Post, Mrs. Walter Swanston, the Washington Star, and Michael Bernstein, the Daily News. I am terrifically proud of the

Snake River News and the award they have won in this national competition.

I also think that a word of praise is in order for Cleve Bolingbroke who is the director of the Marsing camp. The boys and organization under his direction have brought a lot of credit to the Job Corps concept through their work in the area. The Lake Lowell project and Caldwell municipal golf course work are only two examples of helpful projects undertaken by the Marsing Center.

Delbert, Mrs. Branson, Cleve, and all others associated with the camp have a lot to be proud of. They are an example for others to follow.

CHINESE AMERICANS IN SAN FRANCISCO

HON. PHILLIP BURTON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. BURTON of California. Mr. Speaker, at least one-quarter of the 300,000 Chinese Americans in the United States reside in the city of San Francisco where they are highly respected by their fellow citizens as patriotic, constructive, hard-working members of the community.

The San Francisco Chronicle of July 6, 1969, printed an editorial which clearly points to the unfortunate—and I certainly hope unintended—conclusions drawn from testimony before a subcommittee of this House. The editorial in the San Francisco Chronicle stated:

In the course of drumming up more men and more money for his FBI, Director J. Edgar Hoover has been warning Congress again about the Communist menace—but now it is the Chinese Communist menace in place of the traditional Muscovite.

On the evidence of the "blatant, belligerent and illogical statements" of some Red Chinese spokesmen, Director Hoover has concluded that the United States is beyond doubt Red China's "No. 1 enemy." The opinion clashes with recent events on the banks of the Ussuri, and with the respected testimony of numerous Sinologists, but the director is entitled to it.

On the other hand, when he speaks of Red Chinese infiltration and cites the fact that there are "300,000 Chinese in the United States, some of whom might be susceptible to recruitment," he oversteps the bounds. He is irresponsibly slurring a large substantial segment of American citizens and he ought not to do it.

Mr. Speaker, the testimony referred to by this eminent newspaper was made by Mr. Hoover before a subcommittee of the Committee on Appropriations of the House of Representatives. Mr. Hoover stated:

We are being confronted with a growing amount of work in being alert for Chinese Americans and others in this country who would assist Red China in supplying needed material or promoting Red Chinese propaganda. For one thing, Red China has been flooding the country with its propaganda and there are over 300,000 Chinese in the United States, some of whom could be susceptible to recruitment either through ethnic ties or hostage situations because of relatives in Communist China.

Mr. Hoover further testified:

In addition, up to 20,000 Chinees immigrants come into the United States each year and this provides means to send illegal agents into our Nation.

The inference invited by his testimony denies the basic heritage of our Nation, that we all have roots from other countries. We or our forebears settled in this land to build a better life, bringing the cultural diversity which has made this Nation great.

George Washington appointed our first Ambassador to China in 1786, Maj. Samuel Shaw, and the impact of Chinese art and culture on colonial and early American life can be seen even today by those who visit historic shrines like Mount Vernon, Monticello, or Williamsburg where intricate objects of jade, ivory, and porcelain are to be found.

The transcontinental railroad, whose centennial is marked this year, would have been impossible without the effort of the forebears of today's Chinese Americans.

Chinese-American citizens have lived in California since before she was a State. Thousands have fought and died in our Nation's wars. Their contribution to the arts and sciences, to the advancement of freedom and the development of this Nation and its history are too well known to belabor.

I am sure that all thoughtful Americans regret the unfortunate connotations which may be drawn from Mr. Hoover's poorly conceived comments.

POWER SHORTAGE AGAIN

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. DULSKI. Mr. Speaker, the shortage of electric power which threatened a large section of the Eastern United States last week is one more example of the need for legislative action to give the Federal Power Commission authority and responsibility to oversee the adequacy of all major transmission lines, interconnections, and capacities.

I introduced enabling legislation last February.

Except for prompt action on the part of power companies and the cooperation of consumers, notably the Federal Government, there could have been another catastrophic breakdown in power service at the height of a summer heat wave last weekend.

The Washington, D.C., Evening Star carried a perceptive editorial on this matter on July 28, as follows:

POWER SHORTAGE

The recent power shortage throughout the middle Atlantic states should have come as no surprise to anybody—especially anyone who follows matters at the Federal Power Commission.

The FPC's outgoing chairman, Lee C. White, has been warning for years that unless the utilities increased their plant capacity—and fast—we could face the disaster of massive blackouts or power shortages.

Instead of moving quickly enough, however, the utilities dawdled—but all the time telling us to increase our electricity consumption. How ironic. During the winter some utility companies tell us to buy air conditioners so we won't swelter during the summer. Then summer comes, and they tell us—during the hottest days of a heat spell—to shut off our air conditioners because they haven't enough electricity available.

It's not only electric utilities, however. The FPC warns us that we face a potential shortage of natural gas unless the producing companies expend more effort on exploration. And in New York City especially—though elsewhere as well—telephone users have complained bitterly that their calls are not going through because the telephone company hasn't expanded its facilities to meet needs.

Obviously, we cannot tolerate a telephone plant inadequate for our needs any more than we can power shortages during the heat of summer—or a potential gas shortage hitting some winter.

At the same time, however, the utilities are caught in a squeeze. They realize they must modernize to meet ever-increasing demands for more service caused by an increasingly affluent population. But in order to build new facilities they must borrow at current exorbitant interest rates being demanded by bankers. If they opt to pay these high rates, the additional money will come from utility users or from stockholders' dividends. They also face public opposition to nuclear-fueled power plants.

Locally, Potomac Electric Power Co. has decided that for the first time in 65 years it will omit its cash dividend for two quarters and instead give shareholders more stock in the company. By doing this it is saving $10.5 million. PEPCO contends it has taken the step because of lower earnings and continuing construction needs.

PEPCO apparently has found at least a temporary way to keep pace with growth. But the ultimate solution lies in a change of basic philosophy by all utility companies. While the public must realize the stockholders who own these companies are entitled to a fair return on their investment, the utilities must realize that as long as they are granted virtual monopoly franchises, in their respective fields, service to the public must come first.

ECONOMY IN THE DEFENSE DEPARTMENT—WHERE?

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. ANDERSON of California. Mr. Speaker, several weeks ago I protested to the Department of Defense two proposals for centralized supply procurement. Although the Defense Department has replied, I do not consider their reply either responsive, realistic, or in the interest of economy. I have, therefore, felt it necessary to report to the people of my district with respect to the Department of Defense proposal. A copy of my report follows:

REPORT BY HON. GLENN M. ANDERSON

One of the most frequent concerns mentioned in letters from the people of the 17th Congressional District is for increased economy in government. It is a concern that I share fully with my constituents, but I am equally concerned by two recent proposals of the Department of Defense which I strongly oppose as false economy.

Both of the Department of Defense suggestions for, in their opinion, improved government efficiency involve the transfer of supply procurement personnel into centralized purchasing and procurement offices for perishable and nonperishable food supplies. Nonperishable commodity procurement would be centralized in Philadelphia and branch offices in California would be shut down. For perishable items, a West Coast office would be retained but the district offices in Los Angeles and Seattle would be concentrated into one central office in Oakland.

Considering the Defense Department's sizable activity and involvement in the western part of the United States and the level of military activity in the Pacific theater, it does not appear consistent nor in the realm of efficient planning to consolidate and centralize procurement activities on the eastern seaboard.

To the contrary, business is discovering that the most efficient method of operation is to centralize its data processing equipment but decentralize the personnel who deal with suppliers and customers. With modern communications methods, these personnel scattered throughout the nation can remain in instant contact with a centralized office while remaining physically near the sources of supply.

People are not like bricks. There is no need to dismantle the Defense Supply Agency's offices throughout the nation and expand the concentration of government personnel on the eastern seaboard where they are less responsive to the citizens they serve in other parts of the nation.

The Department of Defense argues that centralizing procurement offices will reduce costs, but an examination of some statistics supplied by the Los Angeles Chamber of Commerce graphically illustrates the effect closing the Los Angeles office will have on procurement costs.

During the 1968 fiscal year, the Defense Supply Agency office in Los Angeles accounted for the purchase of $59.6 million worth of meat and dairy supplies compared to $28.8 million for Oakland and $13.5 million for Seattle. The proportions remained the same for all perishable commodities with the Los Angeles office doing more business than the other two combined. D.S.A. deals with more than 600 suppliers in the Los Angeles area, more than double the number for Oakland.

Thus the relocation of the D.S.A. procurement offices to Oakland—and to Philadelphia for nonperishable items—is a highly unrealistic policy for two reasons: (1) On those items with a limited number of suppliers, cost to the government will rise because of higher liaison costs. (2) On those items with many competitive bidders, those bidders whose operations are near the procurement office may either enjoy an advantage in bidding or make a higher profit while remaining competitive with more distant bidders.

In either case, there appears to be no advantage to the government and there seems to be an increase rather than a decrease in costs.

HOUSE REPUBLICAN TASK FORCE ACTIVITIES

HON. GEORGE BUSH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. BUSH. Mr. Speaker, during the past 2 weeks the House Republican research committee task force on earth resources and population, of which I am chairman, has heard from Gen. William H. Draper, Jr., national chairman, Population Crisis Committee, Mr. J. Steele Culbertson, director, National Fishmeal and Oil Association, and Dr. William Moran, president, Population Reference Bureau.

In order to keep the Members informed of the program of the task force activities, I offer the highlights of these hearings for the RECORD:

HEARING HIGHLIGHTS OF THE POPULATION CRISIS COMMITTEE, JULY 15, 1969

Gen. William H. Draper, Jr., National Chairman, Population Crisis Committee.

Members Present: Bush, Gubser, Horton, McCloskey, MacGregor, Henry Smith, Taft, Wold.

Special Guest: Frank Borman.

General Draper claimed that because decisions on the population problem do not face federal officials every day, the problem is like a rising tide. We don't realize the full implications until we are up to our necks.

Despite political promises of prosperity, economic growth in the underdeveloped nations has been neutralized by the population explosion. In India and Pakistan, public frustration is beginning to show in political, economic and social breakdowns.

General Draper stated, "Our strivings for the individual good will become a scourge to the community unless we use our God-given brain power to bring back a balance between the birth rate and the death rate."

The governments of Latin American countries realize the significance of their own population growth rates, but cannot politically support family planning programs due to the opposition of the Roman Catholic Church.

General Draper stated that he would like to see the number of people assigned to population control in AID increased from the present 67 to approxamately 400.

General Draper pointed to three areas which are related to population control, which have not been adequately covered:

(1) the 1970 and 1971 censuses should be supported on a world-wide basis.

(2) contraceptive research should be accelerated both here and abroad.

(3) the World Health Organization should step up its proposed international programs.

Referring to a possible trend to liberalize abortion laws, General Draper pointed out that the Executive Committee of Planned Parenthood World Population has adopted a policy resolution claiming that abortion is not a legal matter, but rather one for the husband, wife and doctor to decide without the help of the state.

Col. Frank Borman added that he personally couldn't see any hope for a meaningful life on earth, "living in a cubical apartment with a bowling alley in the basement."

HEARING HIGHLIGHTS OF THE NATIONAL FISHERIES INSTITUTE, JULY 17, 1969

Mr. J. Steele Culbertson, Director, National Fishmeal and Oil Association.

Members Present: Bush, Frey, Horton, Lukens, McCloskey, Pettis.

In order to negotiate beneficial fishing treaties with the Russians, we need an expanded research program in the United States. Mr. Culbertson explained that very little is known about the migratory patterns of our Atlantic specie and that by negotiating we are "taking a broad step in the dark."

According to Mr. Culbertson, the death of the California sardine fisheries can be attributed to a lack of research. In the 1930's those fisheries were producing 1.5 billion pounds of fish annually, until the fish began to inexplicably disappear. Research projects were begun too late to save the industry.

The meat-feed ratio for poultry is approximately 1 pound of meat for 2 pounds of feed. Producing 1 pound of catfish meat requires only 1.6 pounds of feed. Ten pounds of catfish can be produced on 17 cents of fishmeal feed.

Mr. Culbertson claimed that harmful marine pollution can be prevented by careful plant processes analysis. In Alaska pulp mills are allowed only if they use a magnesium process which does not endanger the salmon industry.

Our national fish production has decreased from 23 pounds per person to 10 pounds per person in the last 10 years. Mr. Culbertson predicted that without federal action that in five years we would be producing only 5 pounds per person.

HEARING HIGHLIGHTS OF THE POPULATION REFERENCE BUREAU, JULY 24, 1969

Dr. William Moran, President, Population Reference Bureau.

Members present: Bush, Horton, McCloskey, Pollock, Smith, Taft, Wold.

Dr. Moran, President of the Population Reference Bureau expressed considerable concern over projected resource consumption rates. In 1900 the United States used 40.9 billion gallons of water. In 1960 that amount had increased to 322 billion gallons of water annually. Furthermore, these growing consumption rates apply to almost all of our resources.

One of the major problems the United States has in resource management is attitudinal. Dr. Moran feels that we have adopted a "frontiersman" attitude and seem to believe that there will always be new resources available. The fact is that we are already failing to replenish some of our most essential resources. For instance, in the Southwestern United States we are tapping fossil water, or water left from the last ice age.

In this country today we produce only 60% of the oxygen we consume. We have introduced into our atmosphere more carbon dioxide than our plants can absorb and convert to meet our oxygen requirements.

We have in the United States, 6% of the world's population, but we are presently using ¼ to ½ of the world's resources. If the world is to someday manage its resources better, the U.S. must assume an important leadership role.

Dr. Moran believes that our efforts should be spent convincing young couples that their family will be happier and that their children will have a better chance for an education if family planning is practiced. Finding a way to convince and motivate the general public should be our first priority.

The Population Reference Bureau concentrates a great deal of its resources in both Latin and South America. Dr. Moran explained that the influence Catholicism has over national family planning programs varies with each country. Nationalism in countries like Brazil also limits the extent to which family planning services may be introduced. Brazil allows only 15% of those women who are considered fertile to receive any family planning services or information.

SCHOOL PROJECTS ARE GUILLOTINED

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. CONTE. Mr. Speaker, we are currently debating appropriations for Labor, Health, Education, and Welfare, and related agencies. The extent to which funds have been cut back has been pointed out time and time again. The

effect that these cuts will have upon our educational system has also been mentioned on numerous occasions.

I read a most interesting article on the extent to which schools would be affected by these cuts in the Sunday Star on July 20, 1969. The article is entitled "School Projects Are Guillotined" and is by Sylvia Porter.

I think the Star article is especially good reading and, therefore, I include it in the RECORD at this point:

SCHOOL PROJECTS ARE GUILLOTINED

(By Sylvia Porter)

A House Appropriations subcommittee is about to complete a bill to provide cash for the national education budget during the 12 months ending July 1970. In the form prepared by the Nixon administration, this bill would downgrade education to a very low place on the list of national priorities. It would, in fact, erase several education advances achieved under the three previous administrations of Eisenhower, Kennedy and Johnson. Specifically, in its Nixon administration form, this bill would:

Reduce the total Office of Education budget from $4.1 billion in fiscal 1968, to $3.2 billion in fiscal 1970, a reduction of 25 percent at a time when more and better education is a must;

Reduce to zero funds for school library materials under the Elementary and Secondary Education Act of 1965;

Reduce to zero matching funds for materials and equipment for elementary and secondary schools under the National Defense Education Act of 1958;

Reduce to zero funds for guidance and counseling services, also under the NDEA, passed during Eisenhower's administration;

Cut in half funds for college library materials, under the Higher Education Act of 1965;

Cut in half matching funds for public library programs and materials under the Library Services & Construction Act of 1956, another Eisenhower education law.

In summary, eliminate entirely three education-library programs and emasculate another two and shrink to less than 1½ percent of the federal budget the total for education-libraries.

The fact that this is a very real threat and may well happen is just starting to penetrate education circles; until now, educators could not believe that the Nixon administration would adopt such policies of retreat on education in a period of explosive social unrest.

They are fighting back. A National Citizens Committee to Save Education & Library Funds (SELF) under the chairmanship of Detlev W. Bronk, president emeritus of the Rockefeller University, is publicizing the crisis.

On July 9, 150 trustees of libraries from 33 states marched on Washington to obtain pledges of votes for restoration of the funds from 100 lawmakers.

A fight on the House floor seems a certainty.

No one denies the need for curbing federal spending now; this is imperative to dampen inflationary psychology and control the price-wage spiral. But what is swelling the federal budget are such items as military spending in general, the Vietnam war in particular, skyrocketing interest on the national debt. As one comparison, Texas Democratic Senator Yarborough cites the fact that we are spending $21,666 per American for ammunition to fight the Vietnam war—against 25c per American for libraries and teaching materials. As another, while our national education budget is threatened with mutilation to the $3 billion a year range, interest going to owners of the U.S. debt is soaring above an annual $17 billion.

These cutbacks would wipe out libraries in areas where the need is greatest; for instance, many bookmobiles would disappear in regions of New Mexico where the Indian pueblos and Spanish-American migrants live. Thousands of children would suffer; the key cause of failure in school is inability to read.

In the words of New York GOP Senator Javits: "Guillotining the education budget is not responsible fiscal belt tightening." Or even more to the point, as Yarborough asks in obvious disgust:

"What kind of priorities do we have in this country?"

MASS TRANSPORTATION TRUST FUND

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. MOORHEAD. Mr. Speaker, on May 28, in my CONGRESSIONAL RECORD comments, "Money for Mass Transit—Let Us Get Moving," I said that "the gravity of the transportation situation in our cities demands prompt Federal action to help cities and States build modern mass transportation systems to meet tomorrow's needs." I further stated that those of us in the Banking and Currency Committee who have been advocating money for mass transit would welcome the support of Secretary Volpe who has stated that this is top priority. But we are still waiting for the administration's message.

Meanwhile, our colleague, the gentleman from New York (Mr. KOCH) has shown great perception of the problem since coming to the Congress, and I would like to insert at this point in the RECORD his very fine testimony of July 23—urging the trust fund approach—before the Housing and Urban Affairs Subcommittee of the Senate Banking and Currency Committee, for the thoughtful attention of my colleagues.

The testimony follows:

TESTIMONY OF HON. EDWARD I. KOCH OF NEW YORK BEFORE THE HOUSING AND URBAN AFFAIRS SUBCOMMITTEE OF THE SENATE BANKING AND CURRENCY COMMITTEE ON THE MATTER OF THE MASS TRANSPORTATION TRUST FUND, JULY 23, 1969

Mr. Chairman, I am pleased to appear before your Committee today, and I must say that I feel something like Paul Revere in coming over here to tell your Committee of the forces marshaling in the House for a mass transportation trust fund and of the support that I have found all over the country for such a program. In getting here, however, I rode not a horse, but the House subway costing $7.7 million and the Senate subway costing yet another $2.4 million. A total of $10.1 million for 1,728 feet while only $175 million was appropriated for all of the nation's mass transportation needs in Fiscal Year 1969. Mass transit is expensive, the facilities in most cities are antique and grossly inadequate, and the municipalities, overburdened by other urban problems, cannot support the expenditures for capital improvements.

On February 18th I introduced a bill in the House to provide $10 billion over the next four years for capital improvement grants to mass transportation. The bill, H.R. 9661, is identical to S. 2656 introduced by Senator Alan Cranston of California now before your Committee; and it is similar to Senator Williams' bill with, however, some major exceptions. Briefly, the bill provides for the establishment of a trust fund, financing by the existing 7% automobile manufacturer's excise tax—and provision for the excise tax's continuation at this level, a change in the present mass transportation program's 2/3 federal share to 90%, and the elimination of the 12½% limitation on funds going to any one state.

Since February, 95 Members of the House of Representatives have joined in sponsoring the bill.

In addition to gaining support for the trust fund in the House, I have established an action alliance, ZOOMass Transit, to organize the interest that exists all over the country for an increased federal financial program for mass transit. I have written over 1,000 letters to mayors, city and state legislators, local chambers of commerce and transit authorities across the country, giving particular attention to the 25 largest cities.

These 25 metropolitan areas present a vivid picture of the desperate situation of urban areas in not being able to provide adequate public transportation. Highways simply do not meet the needs of our cities. They demand too much space. 20 lanes of highway are needed to carry the traffic supported by one set of railroad tracks. As a result, cities like Los Angeles find more than 50% of their land area covered by ribbons of concrete and asphalt.

In my own City of New York two highways had been mandated by the City's administration, namely the Brooklyn Clearview Expressway and the Lower Manhattan Expressway. Fortunately, because of the ever continuing pressures and demonstrable outrage of the community, the present administration of the City of New York has finally seen the light and killed those particular highways.

The responses which I have received from a number of mayors and city legislators have overwhelmingly affirmed the need for more federal funds for mass transit. At this time 70% of our population lives in urban America. Unfortunately, their mass transit needs until this day have never received adequate attention.

It is my understanding that there have been some in the Administration who suggest that we need more time to plan and have questioned whether an amount of $10 billion could be committed in the next four years if indeed it were made available. The information which I have received indicates that it surely can. Plans have already been made by a number of our cities and are ready to be executed once the funds are available. Mass transit like highways require advance planning. The plans are there; unfortunately, the money has been wanting.

There also have been members of the Administration who take the position that while they support an expenditure of $10 billion over the next four years or perhaps over the next 10 years on public transportation, the money should be made available out of the general treasury and through annual Congressional appropriations. If we were to do that and set a goal of $10 billion over the next four or more years and simply provide that it shall be annually appropriated, then we here in Congress would be perpetrating a hoax upon the American public. I believe it is most unlikely that Congress will annually appropriate the funds necessary to do the job. To confirm my feeling in this area, one only need look at the goals set forth in the Housing Act of 1968 which contemplated 26 million new units of housing over the next ten years. The funding to start toward that goal would have required at least $4 billion this fiscal year. Instead, the House has appropriated $1.7 billion.

Our cities, aware of the unreliability of the

annual appropriation method and already faced with enormous demands on their limited revenues, cannot commit their own share of funds necessary for the kind of long range planning and construction required by mass transit without knowing in advance that the federal funds will be available at the time they are needed so that contracts can in fact be entered into.

To substantiate my assertion that cities are able to go forward with construction based on sound plans already developed, I should like to bring to the Committee's attention information on some of the projected costs I have received from transit authorities across the country.

In Atlanta, Georgia, the Metropolitan Atlanta Rapid Transit Authority was organized in 1965 and has spent over one and a half million dollars on planning. The plans for mass transit capital improvements and expansion call for a total of $751 million over the next nine years ($235 million in the next five years); but, just recently the execution of these plans was thwarted by the public's defeat of a $500 million bond issue. According to Mr. W. P. Maynard, President of the Atlanta Transit System, the bond issue referendum was "defeated by a vote of 57% to 43%, primarily because there was no substantial long range federal help in view." Mr. Maynard continued, "Even though the urgent need for a rapid transit system was recognized by voters, there was a strong feeling that this was such a large financial undertaking that the total financing could not be borne locally."

In Seattle, a bond issue was similarly defeated and the effects of that can best be testified to before this Committee by the Honorable James D. Braman, Assistant Secretary of the Department of Transportation and former Mayor of Seattle.

Once again, in New York City with which I am most conversant, the Metropolitan Transportation Authority estimates that the metropolitan regional needs for the next seven years will be in the order of magnitude of some $2.1 billion. Dr. William Ronan, Chairman of that authority stated in a letter to me that "the missing ingredient is federal funds in sufficient amount and timely enough to help bring this whole program into realization. Time is of the essence as construction costs mount daily, making all such programs increasingly expensive."

To give you just a couple more project cost estimates, may I briefly note that the Chicago Transit Authority has plans for a capital program of 1.5 billion dollars in the next five years and part of its $2.4 billion ten year program, and in Washington, D.C., execution of the Regional Rapid Rail Transit Plan and Program will require an expenditure of at least $2.5 billion.

For the record, Mr. Chairman, I would like to submit some of the letters which I have received from the mayors of several of the larger cities. These letters explain further the urgent need for a mass transportation trust fund and an expanded program of federal financing. I would like to submit a list of the Members of Congress who are cosponsors of H.R. 9661 and city and state legislators who have responded to my letters setting forth the mass transit trust fund concept and telling them of the founding of ZOOMass Transit.

In closing, I wish to pay particular respect to Senator Harrison A. Williams, Jr. of New Jersey as being the leader in the field of mass transit. I know that we are indebted to him for the enactment of the 1964 Urban Mass Transportation Act, and he has been the standard bearer for all the Congress in recent years as the program has developed. I know that when I first came to Washington in January and expressed my interest in mass transit, everyone responded, "Pete Williams has been the leader of the fight for years. Support him." Gentlemen, I am—along with over a hundred other Congressmen who have joined together in support of the mass transportation trust fund and adequate funding now.

AN OPEN INVITATION TO THE ALLENTOWN FAIR

HON. FRED B. ROONEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. ROONEY of Pennsylvania. Mr. Speaker, on Friday of this week one of the Nation's oldest and best known fairs will open its 114th exposition, in Allentown, Pa.

The great Allentown Fair, sponsored by the Lehigh County Agricultural Society which was formed in 1852—117 years ago—was unable to stage its annual exposition only three times in its history. One year during the Civil War the fairgrounds were occupied by an encampment of a Pennsylvania militia unit. And for 2 years during World War I, the fairgrounds were utilized as a training site for the U.S. Army Ambulance Corps.

I am pleased to call the attention of my colleagues to the great Allentown Fair of 1969, which opens August 1 and closes August 9. I extend to each of you an invitation to visit the fair and to enjoy the countless exhibits and activities, the huge midway and the star-studded afternoon and evening programs and shows on the fairgrounds' trackside stage.

Lehigh County has long been an agricultural area, and even today, as its economic base grows more diversified industrially, the traditions of agriculture and the agricultural industry continue to play an important role. The fair, in turn, helps to maintain these traditions with outstanding competitions and exhibits of livestock and agricultural products.

And the fair does more. In the belief that a fair is an excellent showcase of a community, the great Allentown Fair works hand in hand with local government, local industries, and civic organizations to promote goods and services of the broad Lehigh Valley. The fair annually draws more than a half million visitors, a great percentage of which are from outside the immediate area. Through the hundreds of exhibits and displays, they have the opportunity to view the progress of a hard-working people and a growing area. The fair also provides free space for a large number of exhibits from the agencies of the Federal Government and from the embassies of foreign countries.

The fair opens each year with Government Day. Leaders from Federal, State, and local governments are invited, as are members of the clergy, industrial and civic leaders, and the press and veterans organizations. The program opens with a veterans memorial service and includes a salute to all men and women in Government service. This year, the U.S. Army Field Band and the Soldiers Chorus will take part in this opening program. The U.S. Navy Sea Chanters will take part in the fair Saturday and Sunday, August 2 and 3.

Stage shows will begin August 1 and 2 with Lawrence Welk and his orchestra. Johnny Cash, with June Carter, the Statler brothers, Carl Perkins, and the Tennessee Three will be on stage August 4 and 5. The Harlem Globetrotters, making their first fair appearance, will be on stage August 6 and 7, and Merv Griffin, John Davidson and the Doodletown Pipers will close out the week with shows on the 8th and 9th.

Afternoon events will include harness racing August 2 and 3 with TV's Gentle Ben, the lovable bear, on stage between the races; a demolition derby, the famed Tamburitzans from Duquesne University and Dan Fleenor's Hurricane Hell Drivers.

APOLLO 11 SUCCESS

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. MARSH. Mr. Speaker, all Americans can take pride in the success of Apollo 11. I think the following editorial is very timely when we examine the achievements of the space program:

[From the Staunton (Va.) Leader, July 23]

NOW IT'S A MIRACLE

Only yesterday, there were those in Congress and other high places who tried to make the term military-industrial complex a dirty word. Today, speaking of the voyage of Apollo 11 to man's first moon landing, the tune has changed. Now it is a miracle of industry-government teamwork.

There were 17,000 companies that supplied the component parts of the Apollo series, including 9,000 that made substantial contributions and 20 that developed highly important parts. Also there was the group of companies who built the rocket, the engines, and the rest. With the precision assembly the final touch of another industrial cooperation, so it is this same teamwork that has kept the United States in the forefront in defense.

The military-industrial complex, to call it by the no-longer dirty word appellation, includes most of the top names of American industry. Theirs has been the dedication, the scientific know-how, the technology that put the hardware together for the whole space program from its inception to the moon launch.

It is time we recognized this industrial-government teamwork for what it is, the first line of defense behind which the world's most prosperous nation, and the world's people with the highest standards of living have been protected from the Communist world that covets our hard-earned wealth and well-being.

Although President Eisenhower inadvertently mentioned its power, he nonetheless called upon it to keep our defenses strong. John F. Kennedy, a Democrat, called on this massive industrial-military complex to put a man on the moon before 1970. Lyndon B. Johnson, another Democrat, rode hard on the team and saw it begin to produce astonishing results. Richard M. Nixon, another Republican, carries on this tremendous teamwork for its climatic event.

It has been a nonpartisan job. Politics has only shown its head recently when some challenged the top priority of the task. As for ourselves, we say well done, and let's put an end to questioning the worth of the great military-industrial complex which made it all possible and kept us all free.

OPPORTUNITY FOR CREATIVE WORK NEEDED IN OUR COUNTRY'S EDUCATIONAL SYSTEM

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. MOORHEAD. Mr. Speaker, a few weeks ago I was delighted to bring to the attention of my colleague an editorial from the Washington Post praising one of my constituents, Fred Rogers, for his outstanding children's television program, "Mister Rogers' Neighborhood."

Speaking to a group of the Nation's school administrators recently, this expert on working with our younger people made the point that since all children are unique, it is the opportunity to reach this uniqueness in the individual and nurture the creative self-expressions which is the real challenge of our educational system today.

I include his very perceptive and interesting remarks before the Advanced Administrative Institute at Harvard on July 18 for the attention of my colleagues:

ADDRESS BY FRED M. ROGERS

What you are about to hear is an old story. Oh, the characters may have different names and the walls have different colors, but the plot is the same. The drama has been going on ever since a group of children was first herded into a classroom, told to sit down and be nice and quiet, not to look at each other's papers or to ask each other any questions or to wiggle in their seats or to let their minds wander anywhere beyond the walls of that classroom. This story is as old *and as new* as a teacher confessing to fellow teachers, "I spend 75% of my time with discipline."

My question to you is a simple one. Why is the story such an old one? Why has it gone on so long?

I am not an educational historian so I'm not qualified to answer that question. I am, however, a creative artist who has chosen to work with children, so it is with this identity that I look at the revolutions of youth today.

I know a 12-year-old girl who finally had to give up studying piano because she had too much homework. I know two high school seniors who spent every evening for two months preparing a one-act play for an English class because it was the only assignment in four years in which they were really interested. (These two children said that the course was so crammed that you could hardly get a seat.) I know fourth graders who have three and four hours of homework every night and during the summer vacation don't want to even *look* at a book, and you know hundreds more children than I do just like these: different names, but the plot's the same.

It is my conviction that the Youth who are in revolt today are being revolted by our failure to know who they really are. They are tired of being enrolled, assigned, programmed, graded and molded from without. They are weary of the passive verbs of education and they want to work at their own developmental level of becoming who they really are.

Compare a child in a healthy nursery school, building highways and skyscrapers with wooden blocks, trying on big hats and shoes and making pies out of mud and deciding which song to sing when his turn comes—compare that child with that same child 12 years later. Somewhere along the way everything that was important to that alert, curious young person, everything that he felt he was creating was somewhere, somehow labeled extra-curricular. The child's own growth tasks, his own inner ways of coping with his environment, as well as his feelings, were all labeled as unimportant and the business of memorizing somebody else's book and doing what he's told became the only way to PASS. What happened to the highways and skyscrapers, the grown-up hats and shoes and food and songs and choices? How did they turn into alleys and cellars and nudity and pot—monotone and copout?

Why do nursery school children who are so ready to identify with the grown-up graduate from high school already revolting against what they once dreamed of becoming?

Why? Because we, their parents and teachers, have taught them that their dreams of becoming like us were of no value, that the creative work of growing from within, of using and appreciating each unique endowment was not the way to succeed. By our stifling opportunities for creative expression, we have blown up their highways and skyscrapers which were miniatures of ours, we have ripped off the hats and shoes which were just like our own, we have withheld the food and the music and the choices which they always wanted to make, and we have told them that that kind of world was no good, that the things of great value were letters, numbers, lesson plans, homework (never home-fun) and examinations. And so they have taken the assignments that we've given them and little by little they have given up wondering whether some day they might be asked to do something which *they* felt was important. It is we who have done the violence—not they. Why should they want to become like us. Why should they want to become people who limit opportunities for creative expression?

My thesis, therefore, is that *Creative work is absolutely essential to the healthy growth and development of the human personality. It is the mode by which new solutions for every field evolve, and therefore the opportunities for creative work must be greatly expanded in our country's educational system.*

A few weeks ago I had the opportunity of spending a fortnight in Britain. Besides reviewing some excellent television work, I was privileged to assist in several sessions at the Hampstead Nursery School and Clinic with its director, Anna Freud. Incidentally, this nursery school is for children within the normal range of development: a demonstration center for all those working in pathology to use as a place where they can keep in constant touch with the norm! After the presentation of developmental material of one of the nursery school children (a four-year-old girl by the name of Maria whose earlier years were filled with the uncertainties of moving a large family two at a time from Italy to England), after hearing the latest observations of this little girl, Miss Freud leaned back in her chair and with her beautiful Viennese accent said so simply, "What fascinates me about this child is that with all the difficulties in her young life how she turns out to be such a normal little girl. This is what we must constantly search for what we must constantly build upon." This spirit pervades that place and I learned again what my earlier work at our Arsenal Family and Children's Center in Pittsburgh had helped me discover that respect of persons breeds respect of persons. But I've found this also beyond the halls of psychoanalytic centers.

By now, most people who are the least bit interested in education have heard of the work of some of the Leichester schools in Great Britain. On the chance that I could see some of this expression of primary education firsthand I called for an appointment. To make a long search story short, I discovered that these poor schools have been so swamped by American visitors that they simply are refusing most people who request a time to come. One inspector said to me, "It seems that every American who buys an airplane ticket to England thinks he should be able to observe in our schools. We just can't begin to handle them all." Well, to tell you the truth, I'm glad my request was refused because otherwise I might not have discovered the John Hamden Junior School of Thame, a tiny town 17½ kilometers London side of Oxford. It was a cool morning when I drove there and the school from the front didn't look much different from any old school building, but what went on inside surely was. Gordon Cumming, teacher of nine and ten year olds greeted me and showed me to the headmaster's office. Vernon Hale is the headmaster and his office consists of three armchairs, a round coffee table, a bookshelf, a telephone, and children's original paintings on the walls. This is a state school (a public school in our terms). It's the public school of a very small town. Well, Vernon talked about his views of education, of that school's policies of allowing the children to create their own work from within and I was impressed with his own excitement about *his* own work.

I know that this kind of work is beginning in this country and the main thing which holds it back is the old tyranny of college entrance exams. Well, when examinations are revised and the ways of administrating them are civilized, then we needn't fear the adoption of creative innovation in education. Then teachers won't have to be tested every month to see if their kids have delivered what they have been told to have them deliver.

Every week day I make a television visit to millions of children throughout the United States. The object of these visits is to remind children that each one of them is unique and that each one has something special to bring to any relationship. I help them to discover that people's feelings are mentionable as well as manageable and that each one of us has endowments of which we can be proud. I let them know in very certain terms that *I need them* in order to be who I am. In fact the very beginning of a new recording entitled "You Are Special" which I just made goes like this:

"You really *are* special to me. Do you know why? Well, you see, I'm a man who likes to talk and sing with children so I need someone like you who likes to listen to a man like me. After all, it's you who make your Dad a father and it's you who make your Mom a mother and it's really you who make me your special friend. I need you. See why you're so special to me?"

And then we go on to talk and sing about such things as the assets of being small, and age-appropriate worries like just what does the barber cut off with his scissors and just what does go down the bathtub drain and just what is it like to have an injection and just what is the difference between thinking of something and doing it.

Oh, to be sure there are lots of times that we play with letters and numbers and weights and measures and poetry and science and opera and machines for they are all part of the world about which children are so naturally curious. But the child's real triumphs are reflected in his abilities to cope with his own feelings to make the most of his own unique endowment and those are the tri-

umphs which I applaud. Those are the triumphs which must not pass unnoticed. It is a person's creativity which allows him to make something of himself. It is this natural human creativity for which I have such deep respect. It is this creativity which must be fostered far beyond the five-year-olds.

How do we go about encouraging creative expression in young people (which of course means also how do we go about encouraging young people to bring about change constructively rather than destructively)?

Well, first I think that just by our being here we admit that our present system needs revision. You have ways of bringing about constructive change of which I couldn't even dream and I trust you to use all your resources for that change. Being a producer in a medium such as television I'm used to problems, but I'm also used to finding solutions to problems. After having observed children's development for a good many years, I'd like to make just one specific suggestion today and that is that all of us should turn our attention to creative adults of all kinds: such people as designers, dancers, writers, painters, sculptors, musicians, mechanics, printers, carpenters, actors, basket-makers, dress-makers, shoemakers, cooks—anyone who uses his craft as a creative mode of expression and finds deep satisfaction in it—*and* that we should woo these people into the educational fiber of our country so that our children have as many contacts as possible with these creative adults.

There was a sculpter once at our Center who loved his work. He didn't *teach* clay to the children; he *delighted* in it. The children have never used clay so freely as they did when that man sculptured in their midst.

When a pianist and puppeteer came to our staff, dusty pianos and unused puppets began to have great appeal for our children. They dramatized and sang about intimate themes of growing, of coping with age-appropriate tasks.

We *must* make available this kind of opportunity if we are to expect our children to be able to develop their own constructive modes of expression. There are creative adults in all fields who already care deeply about children who will welcome the invitation to become something other than extracurricular. They will welcome the opportunity of reinstituting the age of Apprenticeship; and who knows, some of the almost-forgotten hand-crafts of the past may not have to die but rather may gain new dignity in the hands of the young. And what's more, our children will be exposed daily to images of constructive change in the adult world—they will be in touch with the adults who actually design the highways and build the skyscrapers, adults who sew the clothes and make the shoes, adults who cook the pies and write the songs and make the decisions because they've found their way of expressing who they are. And then the children will find their way, too—along the route of lifelong learning with the magnificent sense of being truly worthwhile.

SPACE AND MAN'S FUTURE

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. TEAGUE of Texas. Mr. Speaker, Dr. Thomas O. Paine, Administrator of the National Aeronautics and Space Administration, thoughtfully discusses the future of our national space effort in the August 1969 issue of Pace magazine. Dr. Paine points out, "Man's future in space is limitless." Because of the significance of Dr. Paine's remarks and the urgent need for decisions in our national space effort I am including this article in the RECORD:

SPACE AND MAN'S FUTURE

(By Dr. Thomas O. Paine, Administrator, National Aeronautics and Space Administration)

Space exploration is to me the greatest adventure of the human mind and spirit. In the last decade space travel has opened up an entirely new destiny for man—and, indeed, for terrestrial life. We who are alive today are taking part in a fundamental new step in the evolution of life, perhaps as significant as the ancient emergence onto land of primitive organisms from the sea. We are providing the most exciting possible answer to the age-old question: Can life exist on the moon and other planets? The answer is, Yes!

With advancing science and technology, men of vision and spirit, working together, can send forth life, upward and outward into limitless new frontiers beyond its original home on the blue planet Earth.

This exciting prospect has been sensed by thoughtful people around the world who view the American Apollo program as a venture of, and for, all mankind. The global satellite-communications network has been born in the human drama of space travel. At Christmas, television screens in Moscow brought into Russian living rooms that awesome close-up view of the lunar surface from Apollo 8, with the crew's voices reading clearly across 240,000 miles the opening verses of Genesis. More than a hundred million Europeans watched Apollo 10's beautiful color-TV pictures from the moon.

If our Mariner probes to Mars perform well this summer, TV viewers everywhere will learn more about the red planet's surface in a few hours than generations of astronomers have learned with earth-bound telescopes. Two spacecraft from Russia recently plunged into the cloud-shrouded atmosphere of Venus, radioing back new data on that white planet. The age of space travel by piloted and automated spacecraft is advancing rapidly in full view of all mankind.

As with all bold new movements, however, dissident voices are being raised. Doubters ask whether space holds any practical economic promise, and couldn't we better work on projects here on earth, or shouldn't the world's social ills be cured before we proceed further? These are reasonable questions that deserve thoughtful answers.

Space does have substantial practical economic benefits, direct and indirect. Global satellite communications and worldwide weather forecasting via meteorological satellites are two major direct benefits already realized in the first decade of space. You can buy stock on Wall Street in the ComSat Corporation; it is a going venture of sound economic worth.

Savings from weather satellites may run into the billions; TIROS III's spotting of Hurricane Carla made possible the evacuation of 350,000 people from the Texas coast with a great saving of human life.

Beyond this, we forsee navigation satellites, geodetic satellites, TV broadcast satellites, data link satellites, and earth resources satellites of major future economic value. The potential of earth resources satellites alone, in mineral surveys, petroleum prospecting, agriculture, forestry, oceanography, hydrology and other fields may be sufficient in the long run to pay for our entire space program.

The indirect values of space exploration are more difficult to assess. To get to the moon, we have had to advance U.S. technology on an extremely broad front, with many breakthroughs spinning off new techniques into other fields. Space has challenged our universities and our industry—and they have met the challenge magnificently. We cannot yet say precisely what new economic developments will emerge; the lead time is often a decade. History tells us, however, that from the challenge of World War II emerged a number of new multibillion-dollar industries that today play a major role in our economy: computers, jet transports, synthetic materials, antibiotics, nuclear power, microwave communications and others.

Space-age advances will undoubtedly create similar new wealth in the 1970s and 1980s. This is an important reason why we should proceed vigorously with our space program. This work is, of course, all done down here on earth: the benefits accrue to all people.

To improve conditions in our society we need to create more wealth through greater productivity based on new technology. We should be restless and dissatisfied with our slowness in overcoming social ills, and I hope that the space program will continue to spur us onward here. If we can go to the moon, why can't we build great and shining cities? Why can't we eliminate ignorance, crime and poverty? If our space program highlights such questions and helps form a national commitment to find new solutions, it will have served the nation well.

Our space advances should embolden the nation to proceed forward with increased confidence in these other areas. Our Apollo program has demonstrated anew what Americans can accomplish given a national commitment, capable leadership and adequate resources.

Man's future in space is limitless. We have embarked on a new stage of evolution that will engage all future generations of men. We face the unknown in countless areas: What are the effects of sustained zero and artificial gravity? Of time-extending flight at nearly the velocity of light? Of societies genetically selected for extraterrestrial living?

We must find the answers. We must move vigorously forward in space. The practical benefits alone justify this venture, but there are many other compelling human reasons. Progress in space should continue to spur us onward to find new solutions to our age-old problems here on Spaceship Earth. We must make the blue planet Earth a home base, worthy of the men who will set forth one day on journeys to the stars.

THEY COME UNNOTICED FROM WAR

HON. WILLIAM L. DICKINSON

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. DICKINSON. Mr. Speaker, today we live in an age of computers, space technology, and rapid communications. It is an age where the pace is so fast that we often fail to remember our heroes—the soldiers who live, fight, and much too frequently, die alone and forgotten.

Patriotism and Americanism are two words that are becoming extinct from our vocabulary. It is indeed unfortunate that this is now more the rule than the exception.

Recently, I was privileged to read an excellent article in the Montgomery Independent by Joe Azbell. It is a very well-written, succinct statement of his frustrations, and I believe this article well reflects the feelings of the average American.

I was so impressed with the article, Mr. Speaker, that I would like to incorporate it into the RECORD at this point and share its contents with the Members of the House:

[From the Montgomery (Ala.) Independent, July 29, 1969]

I'M SORRY I DIDN'T SAY THANKS—THEY COME UNNOTICED FROM WAR

(By Joe Azbell)

You're back home.
Here on a railway platform.
I didn't say "thank you, soldier."
I'm sorry, fellow.
I should have.
No excuses.
Maybe I can make up for it a little now.
Maybe you will understand.
I know you never expected to come home in this casket box.

All alone. Here on a cart on a railway platform with all the hissing brakes and steaming engines and clanging noises and people passing.

None of the people know who you are.

That you died for them.

I wouldn't have known myself. A porter told me. He said it like a bulletin: "He's one who didn't make it." He explained with one word: "Vietnam."

I never saw your face. I didn't know you. Or maybe I did. You were young. All your life in front of you. Full of plans and ideas. A whole world to conquer. All kinds of dreams of fun, excitement and joys you will never know.

All that is left is the lifeless shot up corpse in this casket box.

And I didn't say "thank you."

And I'm sorry.

Your mother and father raised you and loved you and took care of you when you were hurt and did the best they could by you and never intended that you die 12,000 miles from home shot to pieces by a Viet Cong.

And that young girl you married and with whom you hunted up second-hand furniture and installment payment appliances to outfit a little apartment and the baby whose picture you carried but whose chubby little hands you never touched or loving smile you never knew—they'll miss you too.

And I didn't say "thank you."

And I'm sorry.

Your mother didn't believe the telegram. A mother never does. Any minute now she thinks you'll walk in the door and throw your big arms around her and say "Hi, Mom." But you won't. Never again.

Your wife and baby will know you are gone most. A young girl in an apartment with a job to make ends meet and a baby left with a maid. A girl too young to be a widow. A baby boy who should have a father to teach him to fish and box and to pin to the floor and look up to tall.

Your wife will re-read your letters and touch the gifts you sent her and re-read your letters again.

The government will send her your medals. She'll frame them and put them up on a wall. But they will be little comfort on lonely nights when she'll remember all about how it could have been if the bullet from a sniper's rifle of a yellow skinned man in black pajamas hadn't hit you.

People will keep reminding her. It will tear at her. Certainly she's proud of what you did. But it hurts. She is like you, fellow. She doesn't really understand why you had to die in a little sweathole of a jungle country 12,000 miles from home. She keeps saying to herself, "Why?" and holds your baby close to her.

You didn't understand either. Not really. They said it was for freedom and liberty and to preserve America and it was hard to understand. You went with a lot of courage and a lot of fear and a lot of doubt about what it was all about. But you went there where you didn't understand the language or the people or the war. You went because they said you were needed. And you came back in a casket box.

And I didn't say "thank you."

And I'm sorry.

* * *

I probably saw you on the street. Or a thousand others like you.

Soldiers. Men in uniform. You figure "so they're soldiers."

In World War II, you would have been a hero in a military outfit to everybody.

People would have stopped you on the street, slapped you on the back. And said "give 'em hell, buddy."

They would have let you know you were doing something for your country and them. But not today.

Today there are too many like me.

We see a uniform and we don't ask a soldier if we can do anything for him. We don't say a word.

There's no Sunday dinner for the boy away from home. No free phone calls home. No pat on the back.

There's no picking up the meal check to let the boy know somebody cares and appreciates.

There's no signs in the windows that say "We're Proud Of You" or flags waving or parades or people seeing soldiers off.

You go away unheralded and some of you come back in a casket box. And the funeral crowd is small and the service is brief.

And yet you go. You go with a brave face and a tight heart and fight in the most fearsome war in the history of our country 12,000 miles away.

We never say "thank you."

Not me. Not anybody else.

It's like we expect you to die for us without a word of appreciation.

It's wrong. I'm sorry. I'm one of them.

And how brave you fight. How brave you live. Just being in that jungle country with a strange language and a strange people where the next second could end your life with a booby trap or a mine or a sniper's bullet takes guts.

And what gutsy men you are. Sure you're the young generation. But there's no generation gap when it comes to your guts and loyalty.

When others are trying to burn America down with a torch in the streets you are trying to keep our communist enemies from burning America down by fighting them in Vietnam.

And I never said "thank you."

And I'm sorry.

I know you didn't understand all the headlines. Assassinations. Riots, College kids protests. Demands to the college board. I know how you felt.

You read about college kids protesting and said to yourself. "Boy, have they got gripes! They ought to be over here. They ought to wake up in a jungle camp in steaming heat not knowing if a bullet from a tree sniper will get you before you get coffee. They ought to be here where your every step could explode a hidden mine. Then they'd have something to protest about."

And you shook your head and threw down the paper from home and laughed at the bums on the campus with their phony protests. Then you picked up a rifle and went on patrol and never knew if you would get back.

You didn't protest.

You didn't make up a list of demands you wanted "or else."

You went into battle for your country. You never really understood what it was all about. But you didn't protest.

And I never said "thank you."

And I'm sorry.

And when you read about people burning down cities and rioting and killing people you wondered if it was all worth your being over there.

Maybe you talked about it. Maybe you wondered about it. But you picked up your rifle and did your job anyway. Why? Because you loved this land, your home. You loved freedom. You loved the right to worship God and own a mortgaged home of your own and say your piece about things and work hard to get ahead and to raise your family decently. And you were willing to fight for it.

And I never said "thank you."

And I'm sorry.

Now you're home. You came home in this casket box. They draped a flag over your casket. There'll be a little notice in the newspaper about a funeral.

But there will be too many like me.

They'll read the newspaper notice and it'll be a statistic. They'll read it and say "it's a stinking war." Then they'll finish their morning coffee and go to work and forget until they read another statistic. Then they'll say again "It's a stinking war." And forget to attend the funeral. Too much trouble.

You can't hear me now, soldier.

You are dead. Killed. Gone.

You won't see your loved ones ever again.

A bullet voided your sweet taste of life on this earth.

The clock stopped forever.

You can't hear me now in this casket box.

You can't hear me say "thank you."

But I'm going to say it anyway.

Maybe somehow you'll know.

Thank you for dying for my freedoms.

Thank you for dying for my country.

Thank you for dying for my children.

Thank you for dying for my rights.

Thank you for dying for me.

I'm sorry I didn't say "thank you" sooner.

I should have.

Everybody should have.

MINORITY AID

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. MINISH. Mr. Speaker, none of us can be satisfied with our rate of progress in providing equal opportunity to all our citizens, but it is a heartening fact that many ambitious men and women are being given the chance to establish profitable business enterprises, especially in ghetto areas.

Following the Newark riots of 1967 the Graduate School of Business Administration of Rutgers University dedicated itself to a program of working with minority group entrepreneurs. There have already been very real achievements and now with a Ford Foundation grant of $65,400 and a contribution from E. I. du Pont de Nemours & Co., Dean Horace J. De Podwin and his dedicated faculty will be able to accelerate and expand the program.

The news clippings reporting these grants follow below. The nine business-

men who have been helped under the program are forging out satisfying, profitable careers. Their success will inspire others to take advantage of the new opportunities for participation in our free enterprise business system. I commend these fine citizens and the graduate business school for their excellent work. The articles follow:

[From the Sunday Star Ledger, Newark (N.J.) July 13, 1969]

BLACK CAPITALISTS FIND IT REWARDING IN NEW PROGRAM

(By William Harvey)

Black capitalism is beginning to take root in Newark, largely due to the foresight and imagination of a Rutgers University business professor and a desire by black citizens to improve their lot in life.

Within the past two years, Professor Louis German has helped to establish 11 black-owned business concerns in the greater Newark area, and six more applications for loans are on file with the Small Business Administration.

This year, with the aid of a $65,400 grant from the Ford Foundation, to the Rutgers Graduate Business School in Newark, Prof. German plans to initiate an expanded program to assist 25 minority group members in opening their own businesses.

The program is the outgrowth of work started after the Newark riots in 1967 by Prof. German and Dr. Horace J. De Podwn, dean of the graduate business school. They worked closely with the Interracial Council for Business Opportunity and the SBA.

SEMINARS SERIES

Prof. German gave a series of 10 seminars to minority group people to give them a grounding in the rudiments of profitable small business operations and accounting. To encourage participation, a certificate of attendance was offered to those persons who were present at eight of the ten meetings.

In addition, he helped some promising students to ge. special training, assistance and financing to start or expand businesses. None of the applicants had adequate financial resources and some of them were flat broke.

Nevertheless, local banks and the SBA made loans available on little more than the borrower's display of ambition to go into business and some indications of ability to make a go of it.

GOOD RESULTS

With the help of Prof. German, and a financial base of support, the new businessmen began their operations. "Not everyone was an overnight sensation, but the high degree of success is extremely gratifying," said Prof. German.

"We give the guys a chance if they have the incentive and a little gumption to do something on their own," he added. "More than that, we give them encouragement and show them there is a void they can fill."

Prof. German views black-owned shops and markets as "the way to get real progress in the inner city."

Among some of the successful graduates of Prof. German's lecture series are a factory worker who, trained as a mortician, converted the first floor of his house into a funeral chapel; an upholsterer who formerly worked as a stevedore, and a drycleaner who was burned out during the 1967 riots, but now has three stores.

After their first year of graduate school, Rutgers business students are permitted to work with black entrepreneurs through the school's minority group business program to get first-hand experience concerning the problems of a black or Puerto Rican businessman.

"The students see if they can help the business to increase sales by putting into operation certain business techniques they have learned," Prof. German said.

"We want the student to benefit himself and the merchant he is working with, and we also want them to see how poor people live and how things are in the real world."

"With the Ford Foundation grant," he continued, "we can make some studies and improve our operations. Also we can ask some of our former students to come back and join our board of directors where they can make suggestions and contribute their ideas."

In addition to the Ford Foundation grant, a $5,000 grant has come from E. I. duPont de-Nemours & Company to support the same program. Additional aid from industry is in prospect, Dean De Podwin said.

"These grants will permit Rutgers University to work more effectively toward the solution of the most critical problem facing the nation—helping minority group members break out of an economic cycle which generates so much misery and despair," concluded Dean De Podwin.

[From the Camden, (N.J.) Courier-Post July 11, 1969]

FORD FOUNDATION GIVES GRANT TO RUTGERS

NEWARK, N.J.—The Ford Foundation yesterday granted $65,400 to Rutgers University's Graduate Business School in Newark to expand its program of helping minority group persons to go into business and be profitable.

The grant will support a comprehensive program at the business school that links minority group businesses with students and faculty, according to Dr. Horace J. De Podwin, dean of the school.

The program, he said, has already helped ambitious persons with small businesses including a laundromat, a television repair service, a fish market, a funeral home, a meat store, an upholstery shop and a dry cleaning chain.

MANAGEMENT ADVICE

The objective for 1969–1970 is to help establish 25 new minority group businesses.

The grant will allow the school to expand its program of management advice and technical assistance to minority businessmen in Newark, Camden, and Paterson.

Faculty members of the Graduate School of Business will offer courses in these cities, supplemented by technical assistance to new and existing enterprises. The school will work closely with the Newark Chapter of the Interracial Council for Business Opportunity and the Small Business Administration.

A $5,000 GRANT

A $5,000 grant has come from E. I. DuPont deNemours & Company to support the same program. Additional aid from industry is in prospect, De Podwin said.

"These grants will permit Rutgers University to work more effectively toward the solution of the most critical problem facing the nation—helping minority group members break out of an economic cycle which generates so much misery and despair," he said.

[From the Newark (N.J.) Evening News, July 10, 1969]

MINORITY AID—$65,400 TO RUTGERS

The Rutgers University Graduate School of Business has been awarded a $65,400 grant from the Ford Foundation to expand its program of helping minority group persons get into business, it was announced today.

The funds will be used to help establish 25 new minority group businesses, according to Dr. Horace J. De Podwin, dean of the school.

Under the program which was started in 1967 after the Newark riots, the university offers management advice and technical assistance to minority businessmen in Newark, Camden and Paterson.

The original program was developed by Dean De Podwin and Prof. Louis T. German in conjunction with the Interracial Council for Business Opportunity and the Small Business Administration.

The new grant is in addition to a $5,000 grant recently from the E. I. duPont De-Nemours & Co. to support the same program.

[From the Newark (N.J.) Sunday News, July 20, 1969]

BLACK-OWNED BUSINESSES NO LONGER JUST A DREAM

(By Chester L. Coleman)

To be black and own a business in the Greater Newark area is no longer just a dream. Such a vision has become a reality for nine aspiring minority group entrepreneurs.

The potential of black capitalism is at hand and its growth is, in some cases, due to the foresight of the Rutgers Graduate Business School.

Rutgers hopes to establish a minimum of 25 minority group businesses each year for the next three years, at an annual cost of $50,000, according to Dr. Horace J. DePodwin, dean.

Last week the school was awarded a $65,-400 grant from the Ford Foundation to expand its program of aiding black and other minority group members to go into business. E. I. duPont deNemours and Co., recently gave a $5,000 grant to support the same program.

The original program was developed by De Podwin and Prof. Louis T. German two years ago in conjunction with the Interracial Council for Business Opportunity and the Small Business Administration.

SEMINARS HELD

The program is the outgrowth of work started after the Newark riots in 1967, German started a series of seminars for minority groups where the rudiments of operating a small business and accounting were discussed.

Among those who have already established businesses, some in areas where the rioting occurred, is Willie Pool, 40, and Wilbur Richardson, 31, partners of the Sky-View Radio and TV Co., 708 Springfield Ave., Newark.

Pool said he was inspired to go into business 12 years ago when he could not get a "break" while employed at a factory in Lancaster, Pa. "I was limited," says Pool, "but in my own business I can push myself and if I fail it's my own fault."

Pool and Richardson, who is married and the father of two children, repair television and radio sets and electrical appliances. They also buy sets in need of repair, recondition them and offer the sets for sale as used equipment.

HELPED WITH LOAN

The two men attended the Rutgers seminar on small business and worked with German in September, 1968. The next month the school helped them obtain a bank loan for $2,500. Together, they applied for a $20,000 Small Business Administration loan and now gross $45,000 a year, after being in business 20 months.

In another case, a man who had a persevering, though unsuccessful record operating small window washing and porter service, was drawing unemployment insurance, but also had his eye on a grocery business.

The man, William O. Wright, an Air Force veteran, attended the Graduate Business School's seminar, and in October of last year he became the proprietor of a grocery-delicatessen at 537 South Orange Ave., Newark.

"I just couldn't get ahead," Wright said, "and I never had money to save for those rainy days."

German estimates that in the first year Wrights income will be approximately $10,-000. Wright, 31, said that the food stamp

program recently started in Newark, is a "great asset" to his business.

Benjamin Joseph, a 32-year-old Newark fireman, said he had dreamed of owning a small business for years so he decided to attend the lectures.

Joseph was able to purchase a laundromat at 139 Belmont Ave., Newark, for $20,000 in July of last year entirely on borrowed money.

"I just walked up to the owner one day and made him an offer for the business . . . I didn't have a dime in my pocket at the time," Joseph explained.

SUCCESSFUL LAUNDROMAT

Today he estimates that his business will produce a net income of $25,000 in its second year. The coin-operated enterprise is described as the largest in the city, with 46 washers and 15 dryers. The firefighter supervises the operation, when he is off duty. He employs one other person.

A highly-motivated entrepreneur had started several small businesses, but saw them go up in smoke in the Newark riots of 1967.

This serious-minded person is John Mitchell, 32, of South Orange.

However, following German's counselling, Mitchell was granted a loan and started a cleaning business at 120 W. South Orange Ave., South Orange. He now has two other stores, one in Newark and another in Westfield.

Mitchell said that by attending the lectures he was taught how to make money and how to spend it wisely. "I was given the strength to help myself and others too," explained Mitchell.

He employs 10 persons and operates the only black-owned business in the South Orange shopping center.

LeRoy Brickus, a trained mortician, had once been a factory worker. He now operates his own funeral chapel at 183 Littleton Ave., Newark.

Brickus, 40, said that by attending German's course, he obtained knowledge that was the "key" to his success. "It had been but a dream so long," Brickus admitted, "but I had the desire to have something of my own.

He received his training at the American Academy in New York and has been in business since April, 1968. His wife, Marie, who is active in civic and social organizations, said, "It's hard work, but the benefits are rewarding."

Another Newark resident who has established his own business under the Rutgers program, is Freeman Thomas, a skilled refrigerator and appliance repairman who obtained a loan to expand his operation at 504 Springfield Ave., Newark.

He received bank financing that helped him provide storage facilities for some 3,000 refrigerators, air conditioners, stoves and washing machines.

WASN'T MAKING IT

Norris Knott, a Montclair fish merchant, had been in business for a little over a year but "wasn't making it."

He was ready to close his shop at 154 Bloomfield Ave., and seek employment, but instead Knott decided to attend the Rutgers course and he gained advice on better management and purchasing policies.

Knott had purchased the business in November, 1967, and his volume was approximately $200 a week. German said his prices were too high and his volume too small because he purchased fish from a wholesaler who would make deliveries and carry the accounts receivable week-to-week.

Knott needed a truck, but he did not have the cash. It would have enabled him to go to New York to buy fish more cheaply.

German assisted Knott in getting a small business loan for $8,000 and with this money he purchased a truck. The professor said it is estimated that Knott's income will now be approximately $10,000 per year.

John Cheatam, father of 10, was referred to Rutgers by Knott. Cheatam is an assistant shop steward with a stevedoring company and had been doing upholstering work from his home, 579 Orange St., Newark, on a part-time basis.

He received a $1,000 loan from a Newark bank with the assistance of the school and has opened a small upholstery store in Newark.

German said that a program to offer classes for minority group persons who are interested in learning "how they can help themselves" is now under way in Paterson, Camden, New Brunswick and Newark.

Associate Dean David W. Blakeslee said, "We want them to learn how they can help themselves in the approach to government agencies and banks, and ways and methods to improve their businesses."

Benjamin Zwerling, a consultant to the Rutgers business school, said: "This is a program whereby black people with no assets except their initiative and drive, can build a business and eventually hire workers of their own race."

RARICK ON FREEDOM OF CHOICE—LET MY PEOPLE GO

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. RARICK. Mr. Speaker, last week I addressed my constituency on the controversial decision of the U.S. Court of Appeals of the Fifth Circuit, which has denied freedom of choice to my people and, in effect, made every child in my district hostage.

I include the text of my televised address to my people:

TELEVISION SPEECH BY JOHN R. RARICK, JULY 27, 1969

Hello. I'm John Rarick, your representative in Washington. I'm happy for this opportunity to visit with you on another important issue in government—one which I feel will touch almost every family in our District.

I want to talk to you today on the crisis facing education in our State . . . a crisis which has been forced upon you parents and your children as a result of the tragic decision by the Fifth Circuit Court of Appeals which has outlawed freedom of choice and forbidden a child to attend a school of theirs or their parents preference.

What these appointed judges have done is to outlaw freedom of choice because you, the people, as a free people did not choose to change to a radical social order that you did not ask for merely to satisfy some federal bureaucrats' whims.

By their ruling, the federal judges have, in effect, convicted every parent and child in the affected school districts of a new kind of crime against their government . . . that crime being that you acted like free people who exercise your freedom to choose, to accept and to reject. Your crime is then that as free people you did not voluntarily cooperate with the federal bureaucrats to overthrow your existing society and change your entire way of life.

In courts of law, in any civilized country, a prejudiced judge or a judge who has passed on the case before the trial, is universally held to be disqualified and unfit to sit in judgment on the case. There has never been a greater showing of judicial prejudice . . . to the point of outright tyranny . . . than that exhibited by the Fifth Circuit against the freedom of our individual citizens. It is obvious that the judges have collaborated with the litigants who oppose our people. That they counseled with HEW and the Justice Department in unprecedented non-judicial activity.

These extremist judges have made a mockery out of the very purpose for which federal courts were established by Congress. That is, to protect the individual in his God-given, Constitutionally secured rights from the ever-present threat of tyranny from big government . . . and that includes unelected bureaucrats. I say they have defeated their purpose because who now can have faith in appointed justice where they have misused their trust and revealed themselves as veritable rubber stamps—"judgment signers"—under the influence of H.E.W. and the Justice Department who blatantly notify the judges in advance of hearings or trials . . . without regards to the facts, or the law . . . what the court's ruling must be.

There is no bona fide trial or hearing in the American sense of the term when the conclusion is foregone. There is no justice when a case is prejudged. The dignity of impartial justice is then reduced to a sham—a kangaroo court.

Let no scalawag confuse you into thinking that some law has made freedom illegal in our country. In our state and in most other civilized countries, law is considered a solemn expression of legislative will except where the legislature has exceeded constitutional limitations. The Fifth Circuit cites no law or authority to support its decision. Its decision was based only on its own previous misguided utterances. In fact, the laws enacted by the U.S. Congress and the Bill of Rights of the U.S. Constitution are not silent on the subject. Rather, they are expressly worded to prohibit exactly what the court has here set out to do.

The Fifth Circuit ruling far exceeds desegregation or even any concocted theory of a compulsory use of education to bring about integration as a so-called national goal. Never before in America has the shadow of tyranny fallen so darkly over our people.

The philosophy and social ideology is foreign and alien to our people and many seek the cause of provocation. Americans who have known tyranny fully realize that public acceptance of this edict can only be followed by more severe restrictions in the future. The so-called national goals are extra-constitutional and for political propaganda purposes only. Certainly you people never voted on or set any such goals. Nor are they authorized under any of our basic laws.

The Fifth Circuit ruling cannot be made any sensible outgrowth of *Brown vs Topeka* handed down by the Warren court in 1954. The Brown case only held that no child could be denied admittance at a public, tax supported school solely because of his race. Racial percentages of students and teachers, bussing, pairing, dual schools, and bi-racial committees weren't even mentioned . . . and guidelines hadn't even been heard of.

Even federal judges must find difficulty in maneuvering the Brown case—which called freedom of choice the ultimate in justice—to any justification of the Fifth Circuit decision which would deny freedom of choice to all the people.

I've talked with many of our people and my office has been swamped with letters and phone calls from concerned people and local officials asking what can be done for our little children and to save our schools.

I can't tell you what to do with your children—but then, neither can the federal government, federal judges, HEW or the Justice Department. They're your children and the decision belongs to you and you alone. It's your duty to rear them, to guide them, and take care of them as you know you must.

There's no one to whom you can delegate your responsibility as a parent.

Because of the tremendous frustration and increased tensions this court's decision has wrought upon our people, I have—with other members of the state delegation—met with the U.S. Attorney General, members of the Justice Department and H.E.W. in exerting every effort to point out the inequities and illegality of this high-handed court action. But to no apparent avail.

Determined to exhaust every available avenue as your voice in Washington, with other members of our delegation, we were able to gain a personal audience with the President of the United States.

This unnecessary crisis facing you parents was discussed in detail and your fears were presented firsthand. In all fairness, the President was most attentive and indicated genuine surprise over the extreme measures being undertaken against our children. President Nixon's interest seemed to lie in securing quality education for all and maintaining our public school system.

It was made clear by those of us who had asked for the audience that we felt it our duty, as representatives of our people, to report firsthand to the President the seriousness of the school situation as it now exists and our grave concern for the consequences if no relief is forthcoming.

On leaving the meeting, I was somewhat encouraged that the people in control are fully advised and understand the crisis facing our educational system. But I was also disappointed because I fear there can be no material help to ease the pressures of our problem before school opens this Fall.

I might add here that it was truly frightening to see the powers of government concentrated in the hands of a few men who are so far removed and so well insulated by a complex bureaucracy that they seldom are made personally aware of conditions in various parts of the country. Indeed, our fears of impersonal and unrealistic rule by a centralized government are well justified.

In some instances, of course, the court rulings may eventually be appealed and the guidelines altered or the judgments modified.

It grieves me no end to tell you as a parent you should anticipate no easy or early let-up through the court. If you expect to fight for your schools, you should start considering using the existing legal channels for remedy.

You are the descendants of a free people—you have known freedom as no other individuals. What will you do to preserve it? You, as parents, are the front line in the defense of your children. Your children are the future of our country. Tyranny disguised as progress and reform which would take your child knocks at your front door.

What can you do? I am deeply concerned by talk repeated in the streets, and shops, and business places indicating a mood of mass retaliation suggestive of a form of direct violent response. I do not suggest, nor do I encourage violence or rash action. Why should we have to take to the streets? The children are in your homes and in your custody. The ultimate decision of whether you send them or where you send them is yours. If the federal governments demands to take your children from you forcefully, then let it be the government who is the aggressor . . . without provocation on your part. If those of the party in power are so desperate as to chance a police state reaction by exerting overwhelming powers . . . then let it be the decision-makers in government who become violent.

Freedom of choice is not the real issue—it has been made the present issue because it was forced upon our people by the same federal judges who now would discard it because they do not trust freedom to attain prescribed social goals as rapidly as they would like. The real issue is, and has been, where does the power of government reside? With the people, the parents of children, or with a bunch of emotionally confused bureaucrats—some of whom don't even fully understand the crisis they have created and the tyrannical course they are pursuing.

Nor is race an issue—although it is discussed and exploited to silence opposition. We do not accept the meaningless cliche advanced by a few agitators that freedom is racism. It may be, or it may not be. But doesn't freedom also grant the right to choose or to refuse—the right to discriminate or not. Racism in its emotional current usage can only be eliminated if all freedom is destroyed. To realize the deep significance of the ruling toward making us all puppets, let's see what would happen if we carried the guidelines to a logical conclusion.

The judges, in a manner of speaking, would put us all in a box, shake it up, redivide us and relocate us at their pleasure.

Having regrouped us, the question arises—how will the judges keep us from relocating or redividing—I think the term is "resegregating."

We all know that free people act like free people. They don't stay put and unless they are chained can be expected immediately to start moving and relocating themselves to seek their own associations—and better school facilities. Can we expect these judges, H.E.W., and the Department of Justice to sit idly by and permit the people to resegregate their schools? Or isn't it more likely they would assume the function of a court of housing control. Can we not expect that judges who have been so extreme as to outlaw freedom will utilize every power at their disposal to perpetuate their created social order? And wouldn't this include denying parents the right to move? Even refusing employment transfers—unless the parents first appear before a judge to get permission to move. And we can assume permission would depend on a showing that moving or a new job was not intended to escape the ordered school program? Every unconstitutional usurpation of power necessitates an endless chain of additional usurpations.

These judges have already ruled you don't own your business—aren't in control of your labor union—don't know what is best for your child—that your home ownership is subject to their caprice. Don't think they can't develop their wishy-washy thinking to rule that you can't move.

Our schools in Louisiana were not the product of any socialistic federal program, nor were they built overnight. Our Louisiana public school system had been achieved over many years through the sacrifices and dedicated efforts of thousands of sincere parents and conscientious educators and paid for by Louisiana taxpayers.

As a parent, you are the God-appointed guardian of a tender life and soul, and until your child matures, you and you alone bear the awesome responsibility for his guidance.

THE CRISIS IN EDUCATION

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. HALPERN. Mr. Speaker, America's hopes and aspirations are tied to the education of its children. For the quality of American life depends largely on whether each generation can learn to govern itself and expand democracy's horizons. Indeed, the Nation continues to grow because we have invented a marvelous weapon to fuel our freedom—education.

And yet, today we are being asked to slash away at the growing Federal commitment to education. Instead of giving to education the same kind of urgency we imbued the space program with, we are reducing, not increasing, appropriations.

Congress is being asked to reduce total Federal spending for education by 25 percent. And what does all this financial aid to public schools, colleges, libraries, and students equal? Less than 1½ percent of the total Federal budget.

Even if the full authorization set for educational programs was appropriated, it would still be less than that spent on getting a man on the moon. The sad fact is though, we have never appropriated over 50 percent of the money Congress has authorized for the major educational program, the Elementary and Secondary Education Act.

Something is dreadfully wrong when Congress is asked to emasculate funds for school and college library materials; in effect, practically eliminating major national library programs.

Something is dreadfully wrong when Congress refuses to increase its aid for building more and better college classrooms and libraries and cuts back on aid to guidance and counseling services.

Something is dreadfully wrong when Congress puts the squeeze on today's youth, refusing to vote needed funds to enable students to borrow money to attend college.

Indeed, something is dreadfully wrong when Congress is asked to help the Nation's ghetto children and responds by appropriating $1 billion less than that authorized.

It seems to me that if we want the same kind of results from our schools as we expected from the space program—then we better infuse it with the same sense of national urgency and priority spending.

For schools are where we prepare our young for life. Education is at the heart of the learning process. Education must be the front line of innovation, the creator of ideas and the test-tube of experimentation.

Yet our school system seems to limp from one crisis to another. Although public education is at the top of the Nation's priorities, its problems seem almost insoluble. It started over a decade ago with Sputnik. Where did American education go wrong? New ideas abounded, curricula and teaching methods were revised and new equipment was purchased. Then James Conant of Harvard warned us of the "social dynamite" created by the deep gap between urban and suburban schools, the affluent and the poor. The Nation was told segregation stymies Negro children's ability to learn. Honest efforts at school integration were often obstructed. However, textbooks were changed to reflect city life, instead of the cows and chickens most children never see. And teachers taught that prejudice hurts.

But the reforms were not sufficient. Schools didn't change fast enough; school budgets weren't adequate for burgeoning suburban populations; and decaying urban schools offered little to black youth yearning to escape poverty.

Crisis overtook the schools as stagnation set in again. Underpaid teachers started striking; dissatisfied parents demanded more control of their children's future, and student behavior reflected a new era of youth questioning the older generation's wisdom.

As demands are intensified today, public schools totter on the brink of disaster. Children spend only 30 hours a week in school—less than a fifth of their time—yet parents expect formal education to outweigh the home and family influences. Studies indicate the greatest differences in children relate to factors schools do not influence. If we expect more from education, then perhaps schools should be equipped to do more.

Some 43 million children across America need better education. Teachers and students are victims of outdated classroom procedures, antiquated equipment, and a shortage of resources. Schools must learn to involve ghetto parents in the learning process. The curriculum must reflect Negro history and the lifestyle of minority groups more accurately. And most of all, greater effort must be made to integrate schools and halt the shameful miseducation of another generation of black children.

Although Negroes are fast becoming majorities in many large cities, school integration plans have succeeded in hundreds of smaller communities. Experts respond to taunts that integration is a failure by observing that generally, it has not been tried. Studies also prove that most homeowners flee cities because they seek better lives for their families. Very few actually "fear" the onslaught of lower-class minorities.

Integration, of course, is no panacea for a decaying urban school system. White children need new classrooms as badly as black and Spanish-speaking children. But the educational gap between the races must be reduced. Conclusive evidence proves that Negro children do better in integrated schools than they do in segregated schools, while not adversely affecting white children's learning ability. Indeed, educators have found that black children in integrated schools perform as much as 2 years better than their counterparts in ghetto schools.

To get around the reality of large urban Negro and Spanish-speaking masses creating a de facto form of segregation in cities, new educational concepts are being proposed. In cities, like Boston, Washington, and Philadelphia, educators are experimenting with ways of altering artificial school boundaries and isolated schools that inhibit children from learning to live and play together.

But some educators believe school problems are so vast that the educational system itself must change. Negro educator Dr. Kenneth Clark says:

> There's been a massive breakdown in the education program, so massive I think it requires massive restructuring. The Federal or State governments should literally take over the schools and reorganize them.

Public education traditionally is a local prerogative in America and it is doubtful whether parents would allow the Federal Government to "control" schools. But parents and local communities cannot continue to finance public education on their own. Last year public education cost the Nation $28.3 billion, and it will more than double within a decade.

Who pays the bill? Last year, State and local governments paid 92 percent of the cost for public education, the Federal Government only 8 percent. The revenue comes from income taxes, sales levies, and corporate taxes. But over 50 percent comes from one source—local property taxes, the escalating assessments that create havoc with the budgets of American homeowners.

What can be done? The distinguished economist, Leon Keyserling, recently issued a 10-year blueprint for nationwide educational excellence that will insure all children an opportunity for quality schooling, while alleviating the pressure on property taxes. Commissioned by the American Federation of Teachers, Keyserling's study indicates that by 1977 we must spend $70.1 billion annually for education—a yearly increase of 9.5 percent. The Federal Government would pay almost 40 percent of the cost, $27 billion.

The minimum standards of excellence would include raising per pupil outlays in 1977 to $1,534, compared to a nationwide average of $660 in 1967. The ratio of accredited teachers to enrollment should be 1 to 20; it is now 1 to 24 (rising to 1 to 35 in ghetto schools). And the number of classrooms should rise from 1.7 million to 2.3 million in a decade. This means building 123,000 new classrooms annually.

Can we afford such a multibillion-dollar education program? Economists feel it is well within our financial capabilities in a prosperous economy. The question is, can we afford not to spend billions on our children's education?

Quality education means spending enormous sums. Massive Federal aid, emphasizing the needs of decaying cities is imperative. Existing programs like Headstart, the Teacher Corps, the Elementary and Secondary Education Act, and the growing Federal sponsorship of teacher-training must expand.

And there can be no compromising on the question of school integration. The 14th amendment to the Constitution and most State constitutions guarantee equal education for all children. The U.S. Supreme Court has unequivocally stated that in a multiracial society such as ours, "equal" means integrated.

Aiding the growth of education then, must be one of the Nation's first priorities. Anything less will not suffice, for education is democracy's greatest weapon.

AN INDONESIAN PERSPECTIVE ON SOUTHEAST ASIA: PARTS I AND II

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. ZABLOCKI. Mr. Speaker, the Indonesian Ambassador to the United States, His Excellency Soedjatmoko, recently delivered two outstanding addresses as part of the Dillingham Distinguished Lecture Series at the East-West Center in Honolulu, Hawaii.

Ambassador Soedjatmoko, one of Indonesia's outstanding intellectuals, provides some interesting and relevant insights into the problems and prospects for Southeast Asia in his lectures.

With President Nixon's trip to Southeast Asia indicating a review of U.S. policies for that part of the world his ideas should prove particularly pertinent.

I am, therefore, pleased to insert into the CONGRESSIONAL RECORD the text of both lectures. The first address, given May 12, is titled "The Re-Emergence of Southeast Asia: An Indonesian Perspective"; the second address, delivered May 14, is titled "Southeast Asia in World Politics." I urge my colleagues to give both speeches their close attention.

The speeches follow:

THE RE-EMERGENCE OF SOUTHEAST ASIA: AN INDONESIAN PERSPECTIVE

Adlai Stevenson is reported to have said that the job of an ambassador consists of one-third protocol, one-third alcohol and one-third Geritol. Although lately I have been made uncomfortably aware of its basic truth, this job description makes no reference to one redeeming feature, namely the opportunity to travel and to meet interesting, as well as interested people. I am, therefore, very glad to be here in your midst.

The subject I am going to discuss with you today deals with the re-emergence of a region of many cultures, inhabited by many races. To be able to do so on this beautiful island, with its own history of racial and cultural interpenetration, very significantly adds to this pleasure. Because of the cultural sensitivity that must have developed from your history, and the resulting awareness of the opportunities that cross-cultural relations provide, Hawaii has a good chance to develop into a real center of a distinct Pacific community. Given its geographic location, it will entirely depend on the intellectual strength and creativity as well as on the commercial vigor and resourcefulness of its people, whether the state of Hawaii can play this role. The institution of the Dillingham Distinguished Lecture Series certainly demonstrates the presence of both these qualities, and I deem it an exceptional honor to have been asked to open this series. That the East-West Center is sponsoring this endeavor, only lends substance to its reputation of imaginative intellectual leadership.

The region I am going to discuss with you today is a constituent element of that Pacific community. At the same time it is also part of another group of countries bordering the Indian Ocean. The history of this area has been very much determined by this geographic location, and by its function as a link between these two great ocean basins. By the same token, this region has felt the contradictory pulls that these two basins have exerted upon it, one towards the Pacific, one towards the Indian Ocean. This is still very much the situation today.

It has been one of the ironic corollaries of independence that in breaking through to a new future the nations of Southeast Asia have been much more deeply and much more forcefully made aware of their history and its continuing impact into the present. During the struggle for freedom almost all of us only looked *forward* toward a future of freedom, toward the creation of new societies. There was in the nationalist movements of that period generally a radical rejection of the past, of traditions and the institutions that went with it. There was as openness for new ideas, a feverish and bold experimentation; many of us struck out in new directions. It was from that period that in many countries of the region a new literature

began, new pictorial styles developed, new genres in music and dance, new attitudes towards religion, and new political beliefs.

Independence, however, also brought the need for self-identification, for defining the national self in relation to the outside world. The requirement to build political organizations of mass support and participation, the need to make people share in the new freedom and modern political concepts in terms that made sense to them, likewise compelled a renewed emphasis on the particular and the traditional in our cultures. After the attainment of independence, moreover, all the new nations found themselves saddled with a number of intractable problems that could only be overcome on the basis of a clear understanding of their historical roots. It is the awareness of their history that is to many of these nations the source of their strength and their weakness. It is in their history that their pride and their sense of identity is rooted. To understand present day Southeast Asia, therefore, its problems as well as the motivational forces that determine the thrust of its movement, one inevitably has to start by turning, however briefly, to the history of the area.

Southeast Asia's early history, from roughly the fourth to the thirteenth or fourteenth century, was shaped by the confluence of the cultural and commercial currents emanating from the two great centers of culture and power of the time, India and China. Each of them left, rather unevenly, its mark in different areas and in different ways. In these areas, indigenous popular systems of beliefs, closely tied to a developing system of wet rice cultivation, were re-formulated and integrated into the higher religions that came from these centers. It should be noted, however, that these higher religions changed as well in the process. It was this syncretic adaptation of the higher religions which in many important ways influenced social organization. In those areas where more elaborate power structures developed into inland kingdoms like Khmer and Mataram, they shaped the concepts of power, of kingship and of the state.

The shift of communications on the Asian mainland from land routes to the sea subsequently promoted the growth of a number of trading principalities and even empires, side by side, and very soon, in competition with the older inland kingdoms. Of these, one of the greatest was the Kingdom of Criwidjaja near Palembang on the southern east coast of Sumatra. Up to the eighth century it exercised predominant control over the trade between China and Indonesia and between Indonesia and India. The struggle for hegemony over the important waterway of the Straits of Malacca has dominated much of Indonesian history. And when in the early part of the sixteenth century the Portuguese, the Spaniards, and a little later the Dutch, arrived to participate in the spice trade, they too became involved in the struggle for control of this vital artery.

It was through this trade route that both Islam and Christianity were introduced, spreading quickly throughout the insular part of Southeast Asia. From that time onwards, much of the history of Southeast Asia has been a history of multicornered rivalries, sometimes under the banner of different religions, skillfully exploited by the Europeans to increase their own power. The sequence of trade-religion-political control became in this way the standard pattern in the development of colonial rule. It was only after the industrial revolution in Europe, however, and the building of iron ships, that the definitive change in the balance of forces occurred. Until then, Europe had only been one of the many forces in the area, operating more or less on an equal footing.

If we now make a cross-cut through Southeast Asian history, the picture that emerges is one that resembles a layer cake with layer upon layer of cultural-religious sediment, some of them thick in some places while thin or entirely absent in others. Depending on the area under observation, one commonly finds an indigenous animist layer, a subsequent layer of Hindu or Buddhist sedimentation, or Hindu with an overlay of Buddhism in its Indian or Chinese variety. On top of this comes Islam or Christianity, either Catholic or Protestant, or both. In the political field, primitive beliefs in magical powers, covered by a layer of more sophisticated concepts of statehood and kingly power, related to concepts of the cosmic order. On top of that, more or less modern notions about state, society and politics.

Like all similes, the analogy of the layer cake does not, of course, convey the full picture. Elements of the earlier layers continue to be present in the superseding ones, up to the very top, even to this day. And more important than the origin of the various influences on the region is the fact that none of these influences retained their original identity. Whether they came from India, China, Arabia or from modern western Europe, all of these influences were changed in the process of their absorption and integration, however incomplete sometimes, into the previous cultures of the region.

It would seem to me that the capacity of the peoples of Southeast Asia to digest and adapt these influences according to their own genius does represent the most striking element in this acculturation process. As a result, the cultures of Southeast Asia emerge with an autochthony quite distinct from the sources which have helped shape them. Viewed in this light, there are sufficient grounds to assume that in developing their answers to the problems of the post-independence era, and to those which accompany their transition into the twentieth century, the nations of Southeast Asia will eventually come up with responses, structures and institutions that are once again very much their own, differing from those prevailing in either the liberal-capitalistic or communist models.

Another set of factors should be borne in mind when we look at present-day Southeast Asia from this perspective of history. The first is the cultural and political heterogeneity in the Southeast Asian region as a whole; the wide variety of historical experience and response; and thirdly, the existence in many nations of deep religious, ethnic or racial cleavages, here and there reinforced by the remnants of traditional conflicts of a dynastical nature.

The consolidation of colonial rule in Southeast Asia, as of the middle of the nineteenth century, further complicated the situation. Many of the boundaries along which Southeast Asia was balkanized by the colonizing powers were drawn quite arbitrarily, sometimes by the whim of the local colonial administrator, sometimes on the basis of erroneous assumptions, sometimes formulated in Europe as part of the effort to establish a new balance of power in the post-Napoleonic period. Colonial boundaries often cut across populations of the same ethnic origin. In several instances the colonial ruler used one ethnic group preferentially above others for purposes of administration or to facilitate and protect colonial rule in certain areas.

It was not surprising, therefore, that when the decolonization process set in, the old tensions, rivalries and conflicts, and many of the problems that had remained frozen in the general social stagnation that is characteristic of colonial rule, came to the fore again. What was more, they became heavily intertwined with the new problems of independent statehood: serious political discontent in one form or another because of neglect, sluggish economic growth, uneven distribution of wealth, population pressures or sometimes plain managerial inability on the part of the new government.

One further observation should be made. While on the one hand colonialism has led to social stagnation, stunting the natural growth of our societies, it also upset the traditional social fabric of these societies, starting from within the modern economic enclaves. In doing so, it released new creative forces from which the modern nationalist movements for independence eventually sprang.

With the attainment of independence, then, the new nations were faced with three different sets of problems. The *first* revolves around the very obvious question of how to run their country as a free nation: how to build the political and social institutions that would serve to inculcate among the population at large a sense of nationhood and shared responsibility; how to integrate the often disparate groups, at various levels of political development, and of various ethnic or racial origin, into a single political system that would enable the country effectively to deal with the need for rapid economic development; how to break out of the lopsided colonial economy they have inherited. The *second* set of problems arises out of the arbitrariness of colonial boundaries, the inequalities and injustices resulting from colonial favor and privilege. The *third* concerns the deepest motivational forces for social action that are rooted in the religious substratum of the traditional societies of Southeast Asia.

As all-encompassing systems of integration, the great religions have in the past determined the manner in which man sees reality and relates to it. They have helped shape social organization and have defined the terms in which man perceives the meaning of his life as an individual, his relations to his fellow man as well as his relations to the Divine. Colonial rule as well as modernity in general has wrought radical changes in this state of affairs, by setting in motion a largely autonomous process of rapid social development in a new direction.

Once the religiously determined system of values and attitudes, which was attuned to relatively simple, static agricultural societies, had broken down, the traditional religions in all these nations faced the problem of perceiving the new social realities and of developing a relevant relationship to them. Many of the intractable political problems that the new nations have to cope with are rooted in the crisis in which these traditional religions are now finding themselves. The depth of the religious and cultural crisis that these nations face, therefore, shows how deep the roots of political instability go and how superficial the categories of communism, anti-communism or socialism are, either as a means to understand the social and political processes that are going on, the dynamics of political choice, or the shape and structure of society toward which these nations are moving.

It should also be clear by now that the real dynamics of economic development are only partially reflected and can only be partially measured by external, quantifiable indices such as growth rates, per capita incomes, export rates and the like. When we speak of development, we speak of movement, of goals, of values, of motivation. We are essentially concerned with developing a new sense of direction for society, and with the deepest, often moral, motivations for social action. When we speak of development, we are really speaking about the modernization of the soul.

It is only when the goals of economic development and the need for social and cultural change can be shown to make sense in terms of traditionally accepted, religiously determined values and purposes, or can be shown to make sense in terms of newly acceptable structures of meaning, that the full

mobilization of the motivational forces especially within the traditional sectors of these societies become possible. Addressing themselves to this problem is for the new nations almost as important as questions of savings and investments.

No wonder then that before new value systems have crystallized we are beset by such deep emotions, of fear, insecurity, but also of hope. The emotional upheavals, the political convulsions and the instability of these countries in general should, therefore, be seen as a reflection of these deeply rooted problems that are inescapably part of the process of modernization.

Against the magnitude of these problems the importance of nationalism as an integrative and constructive force becomes obvious. Nationalism is essentially the expression of a nation's will to reassert its own authenticity. In turn, it has the capacity to release other creative forces, for freedom is the essential condition for creativity and the blossoming of all human faculties. Nationalism is in the early stages the only force of sufficient cohesive strength to consummate the process of nation building and to set into motion the process of economic, social and political development. It is inevitably accompanied by the drive for social justice as well.

It should also be stressed that the many problems I have mentioned above will remain insoluble as long as the present level of poverty in the area persists. The absence of hope for a better future reinforces the inclination to cling in desperation to traditional and familiar institutions, attitudes and concepts. Or, to the tactics of violence and destruction. It is only at a higher level of economic life, when the most pressing problems of material want have been reduced in intensity that these tremendous problems will lend themselves to solution.

The first prerequisite facing all these governments, therefore, is rapid economic development. It goes without saying that economic development in the final analysis rests on the peoples of the Southeast Asian region themselves. It will very much depend on their will and their determination to pursue this path, on their capacity to create a political system that will make possible the fullest mobilization of all internal resources. It requires in short, the reorganization of these nations for development purposes and the capacity to harness the desire for a better life that exists among the people in general.

The role of foreign assistance is crucial in the development effort, however small it may be in relation to the magnitude of the national effort that is required. It is important for the transfer of capital or skills that are nonexistent or in short supply, thereby speeding up the development process, and as a vehicle for the transfer of developmental values and the ethos of work, efficiency and progress that is necessary to make economic growth a self-sustaining process. Even more important, it can alleviate the burden to be carried by the indigenous population, thereby reducing the need for coercion in the mobilization for development. Foreign assistance in the economic development of the new nations, therefore, will help determine in a crucial fashion what kind of societies will eventually emerge in the Southeast Asian area. Will they be open or closed societies, increasingly free or increasingly repressive, friendly or hostile to the West? It will be an important factor in determining whether nationalism in Southeast Asia will turn towards the world its aggressive, xenophobic face or its constructive and cooperative aspect.

For we should not forget that post-colonial nationalism also has its pathological sides. By now we are all familiar with the deep suspicion, the potential xenophobia, the irrationality, the egocentricity or ethnocentricity and intolerance of which it is capable.

The question, therefore, of what kind of societies will emerge in Southeast Asia, open or closed, is a question that is important not only in terms of the immediate future. It is of even greater importance when we think in terms of 30 or 50 years from now, at which time we will have moved into the 21st century. One thing seems certain to me, and that is that Southeast Asia *will* progress economically, *will* industrialize and *will* develop the degree of national power that will enable it to hold its own in the future. If we look at the changes that have taken place in the last ten years, however slow they may seem in our day-to-day observations, the strides that have been made in developing modern technologically oriented economies have been truly impressive.

In looking at Southeast Asia, therefore, we should not merely be obsessed by its difficulties and its instability. Against the background of the history and the motivational forces that I have tried to present to you, the dominant feature that emerges is that the whole region of Southeast Asia is still in the process of philosophical and ideological reorientation, and of political formation and consolidation. Of very few countries in the area can it be said that their political systems have yet found their final expression. In almost all, the search for a viable and adequate system is still going on. In almost all, some degree of political reform is bound to take place before their systems will be able to accommodate the cultural and political pluralism of their societies; absorb the social tensions that inevitably accompany rapid social and cultural change; integrate racial or religious minorities; and absorb into their political elites ever wider groups demanding political participation and responsibility.

As I have stressed before, the political systems should, above all, make possible the pursuit of rapid economic development, the harnessing of the creative energies of the people, and the mobilization of the financial resources needed to this end. At the same time, they should be able to withstand the stresses that arise out of demands for greater social justice, out of the discrepancy between the heightened expectations which political consciousness brings and the limited growth capacity of developing economies.

The depth and magnitude of the cultural re-orientation process that is part and parcel of modernization, should also make us aware of the depth of the emotions that are involved. Hope, uncertainty, fear, despair and even hatred will be the constant companions of the change, revolutionary growth and development through which the peoples of Southeast Asia are going at present. In a few other new nations outside Southeast Asia too we have seen some terrible expressions of the pathology of fear and despair. In a way, the attraction which Mao's type of communism still holds in some areas is very much a function of this despair, with an admixture of age-old chiliastic expectations.

Be that as it may, there is no doubt that it will be some time before the countries of Southeast Asia will have worked out their own, viable political systems. Nor should we be frightened by the likelihood that in this process the viability of some of these countries as nation-states will be severely tested. What we will need is time and the opportunity to work out these problems ourselves. Already a number of developments are taking place that have made it possible for us to look at the future with a greater degree of confidence.

First, there is the so-called Green Revolution. The development and increasing utilization of the new miracle strains of rice and wheat have already dramatically changed the outlook on the future. For the problem of hunger now seems, in principle at least, to be soluble. But it is also beginning to dawn on us how vast and revolutionary the consequences will be that arise out of the systematic utilization of these new strains and the new technology that they require. For it is bound to lead to fundamental social changes in the villages, the emergence of new types of economic and technologically-oriented local leadership, an increased demand for storage, transportation, and marketing facilities, for irrigation works large and small, all serving as an incentive to the development of agriculture-supporting industries. And the end may yet not be in sight.

Secondly, there is the fact that besides the already industrially developed countries of Japan and Australia, some of the new nations in the Western Pacific recently moved into their industrial phase. South Korea, Taiwan and of course China fall within this category. This has opened the perspective of new intra-regional trade patterns, which will further accelerate the development of the Southeast Asian region as a whole, and possibly the emergence of a new regional identity. In fact, this process has already set in. To the west of the region, India's entry as an exporter of manufactured goods will, in time, likewise affect the trade patterns across the Indian Ocean basin. An increased exchange here will no doubt provide a powerful pull in this direction again.

Thirdly, I should point to what may very well be the most important event in Southeast Asia, namely the emergence of the first post-independence, post-revolutionary generation in positions of power. This generation grew up, or was born in a free Southeast Asia. Their souls have not been scarred or twisted by the pain and humiliation of the colonial experience. More self-confident, less bothered by the sense of inferiority with which their elders were afflicted, they are also, perhaps helped by changing world conditions, less afraid of the specter of imperialism. Though no less patriotic than their parents, they are therefore less ideologically inclined, more pragmatic, less suspicious and more open to the outside world. They are no longer inclined to blame colonial rule or outside forces for their present difficulties and are quite willing and ready to face up to these problems themselves. But even more important than these attitudes is their acceptance of and their familiarity with science and technology. It is almost impossible to exaggerate the crucial importance of these new attitudes. In general, this generation realizes that the rate of economic development is not determined by the ideological orientation of the country, but rather by the size of investment, the application of technology and science, managerial effectiveness and efficiency and sustained commitment to the priority of development. It would be a mistake, however, to look at them only as a generation of technocrats. They themselves are too deeply aware of the structural changes in society that are required before modern techniques, skills and technology can be effectively applied. They themselves are too deeply conscious of the need to relate developmental goals, i.e., goals that pertain to the improvement of material life, to other purposes that give meaning to man's life in this world. Social justice for instance is one of these. This generation does not speak of crisis, but of challenge, and they are determined to succeed.

It is essential, therefore, that the advanced countries respond positively to the emergence of these new creative forces by helping to provide them with the means to succeed. In doing so, the forms and the manner in which assistance and cooperation is given will be of decisive importance.

For all its differences in orientation, this generation is no less nationalistic than its predecessors. History since World War II has shown that if fears of neo-colonialism and capitalist exploitation are to be avoided, economic assistance and cooperation will have to be based on new concepts and instrumen-

talities. This requires a search for new forms of cooperative endeavor, which will break with the unequal relationships of the past and effect the closer integration of foreign investment into the purposes and patterns of national development. It also means that in developing trade and investment, deliberate efforts should be made to accelerate the growth of an indigenous commercial and entrepreneurial middle class. Here the traditional American inventiveness and ingenuity could make an important contribution. On the whole, without denying their essential nature as profitmaking organizations, the creative role that private foreign business could play not only in speeding up the process of economic and social development, but also in fostering regional economic cooperation, should not be underestimated.

Beyond this, it should be realized that without foreign aid at adequate levels, private foreign investment could not play the creative role envisaged here. In a number of Southeast Asian countries, private foreign investment could only operate profitably and socially effectively after the infra-structure has been sufficiently developed. For this the continuation of government-to-government aid at adequate levels is essential. American business, therefore, also has a stake in the continuation of United States aid to these countries. To think that private foreign investment could take over the function of foreign aid is an illusion.

In the political field, an understanding of the developing nations on which economic cooperation could be based would require an awareness of the necessity as well as the inevitability of social and political change and a degree of instability resulting therefrom. Hence, a measure of political instability, should not be seen as a condition to be removed before economic development can be started. Rather stability should be seen as the end result of economic development begun under conditions of relative political instability. To be sure, certain elementary preconditions are necessary, as for instance a commitment to economic development on the part of the political elite, within as well as outside the government of the day. Also required is an openness towards private economic enterprise. But beyond this, the insistence on political stability as prior condition for economic development and for international support of economic development is both unrealistic and self-defeating. And it is even more important to understand the basic creative drives that underlie the complex situations in the new nations and to relate to them.

Within this framework we will then be able to understand that the problems these countries face and the developments they go through are inherent in their condition of underdevelopedness, and that their efforts at building political and social institutions that can effectively cope with the problems of poverty and backwardness are rooted in the underlying search for a new meaning of life.

In this first lecture I have deliberately avoided speaking about the concrete political problems that the Southeast Asian nations face, the threats to their security, or the impact of external forces on them. These aspects I intend to discuss with you in my second lecture. My purpose in doing so has been to first bring out as clearly as is possible within this brief compass some of the basic problems with which we are wrestling some of the motivating forces inherent in the region that, over and beyond the short term vagaries of international politics, constitute the region's essential dynamic thrust.

Hopefully this has also made clear the importance of the continuation of the United States' role in Southeast Asia in supporting the developmental impulses that exist in the region. It may have a crucial bearing on the way in which we will solve our problems and the manner in which consolidation will take place. In the further development of the relationship between the United States and Southeast Asia it is not only the statesmen and politicians, but the intellectuals and businessmen as well who will have to play an active role.

Inevitably this problem is bound up with the process of re-examination of basic values and purposes of American society and the re-ordering of its national priorities through which the United States is going at this juncture of its history. The developing nations of Southeast Asia can only hope that the American people, throughout their own process of transition and re-definition of their identity as a nation, will remain true to their traditional universalistic vision of mankind that has been the source of their strength, their generosity and their world leadership.

SOUTHEAST ASIA IN WORLD POLITICS

Having given you in my previous lecture, with very rough brush strokes, a picture of the history and of the motivational forces that account for much of Southeast Asia's problems and internal dynamics, let us now turn to the international realities of the situation and try to make some projections about the future. For the political animal that is man, it is the vision of the future that guides his actions in the present.

I must warn you, though, that I have left my crystal ball at my Embassy in Washington, D.C. Do not, therefore, expect any predictions from me. What is possible, however, is to identify the elements that will in all probability go into making up the constellation of forces in the post-Vietnam period.

From the outset, it is important for the clarity of our vision to free ourselves from the obsession that all of us inevitably have with the Vietnam war and the manner of its resolution. After all, the fture of the Southeast Asian region will not be determined solely by the outcome of that war. Firstly, the population of Vietnam, or even of the whole of erstwhile Indochina together, constitutes less than one-third of the total population of Southeast Asia. On the other hand, Indonesia's population alone accounts for almost half of that total. In keeping the Vietnam war in its proper proportions, it is important to realize that if Indonesia had become a communist country, any military gains in the Vietnam war would have been nullified.

The other point that should be made here concerns the so-called "domino theory." One pertinent aspect which I have tried to bring out in my previous lecture is the largely autochthonous origin of the problems that underlie the political instability in the area. I tried not only to show the magnitude of these problems, but also to convey the long period of time that will be needed to develop the stable political structure capable of coping effectively with the requirements of national integration and economic development simultaneously. What I have tried to say was largely a plea to see and to accept that many of the problems of Southeast Asia are problems in their own right. Whether a country starts off from a liberal-democratic, a traditional, a militaristic, or a communist base, the pressure of its historical problems is bound in due course to give the political structures that emerge a complexion very much their own. This holds especially true, inasmuch as the communist tide that at one time threatened to engulf the third world seems to have largely dissipated its expansive force. It is, therefore, not the political color of a regime that counts in the end, but its capacity for nation-building and development. More important than the question whether a country will turn towards communism—however important that may be to the country concerned—is the question whether in doing so it will become a satellite of outside forces or not. For underlying my whole argument is the conviction that in the present world situation no outside power can for long force any Southeast Asian country to do its bidding. The Southeast Asian nations do not constitute lifeless entities that automatically fall one way or the other, depending on which way their neighbor falls. History does not operate that way. What matters is the will, the political will, the determination of a nation to preserve its own identity. Out of our own national experience, we in Indonesia more than ever believe that this is the crucial element in the equation. Without such a will and determination, the infusion of external power will fail to make much difference. The domino theory, therefore, is to us rather a gross over-simplification of the nature of the historical processes that go in the area. It obscures and distorts rather than illuminates our understanding and offers no guide-lines for realistic policy.

Having thus cleared the obstructions from our angle of vision on the future, one observation inescapably emerges: the *multipolarity* of the new constellation of forces in the post-Vietnam era. The actual configuration of forces is inevitably still unclear at this point, for very much will depend on some fundamental decisions which, before too long, have to be made in Moscow, in Tokyo, in Peking, as well as in Washington, D.C.

One new element in this constellation of forces is going to be the continued presence of Soviet power in Southeast Asia. One of the ironic features of the Vietnam war is that, more than anything else, it has helped to solidify the Soviet Union's direct interest in the region. It seems quite unlikely that the end of the Vietnam war will see a reduction of this presence.

The level as well as the direction of Soviet interest in the area will in the first place be determined by the question whether the world is going to move towards an East-West *detente* or towards an intensification of the cold war. Much will depend also on the balance the Soviet Union will manage to strike between her responsibilities as the other super-power and her need to retain the ideological leadership of the communist movement in the world in the face of Chinese competition. Thirdly, it will be influenced by the development of Soviet interests in the Indian Ocean basin, and finally, by the manner in which both China and the United States will react to her presence in the Southeast Asian region.

The second element in our equation is Japan. Because of her tremendous industrial growth, her need for raw materials from the Southeast Asian area, her investments in resource development, and her support of Southeast Asia's developmental programs, Japan at present is already deeply involved in the affairs of the region.

Having reached the stage of now being the third industrial power of the world, she is becoming increasingly conscious of her accomplishments and potentialities and of the need accordingly to redefine her national purposes and the place and role she ought to assume in the present international order.

Specifically with regard to Southeast Asia, or more broadly, the Western Pacific region, Japan is approaching the point where she has to make a fundamental choice, affecting her own future security policies as well as the security of the area as a whole. The options available to her in this respect appear to run between two basic courses: either continue to emphasize and enlarge the predominantly economic role she is playing now, or assume a direct political and military role.

The first course offers her the convenience of not having to carry the full load of expanded defense expenditures. At the same time it provides her with the opportunity to enlarge her contribution to the development efforts of the Southeast Asian region, thus speeding up the region's own security capability. But its weakness is that it will place

her in a position of continued dependence in security matters on the United States. How long this course could be maintained, in the face of the growing assertiveness of Japan's newly-found national pride and self-respect, however, remains to be seen.

On the other hand, if Japan decides to assume a military role, the mere existence of China's nuclear capability will make it impossible for her not to go nuclear as well. This in turn will compel her to move out from under the American defense system and to assume a political and defense posture of her own. Japan's implicit desire not to tangle with Communist China and simple calculations of warranted risks as against national interest, will in all likelihood propel her in this direction.

One sometimes has the impression that those in the United States who are eager to see Japan shoulder part of the military burden in the Pacific do not all fully realize the far-reaching implications of such a proposition. While it is possible to argue that Japan's assumption of an enlarged military role many conceivably add to the security of the region as a whole, this may very well mean a reduction of United States control. The manner in which this dilemma between security and control will be resolved in the coming years will have an important bearing on the constellation of forces that will constitute the environment in which Southeast Asia will have to find its place.

It should be said, that in Japan itself at the moment there is still strong psychological resistance against such a military role. Still, when the time comes to make the decision, it may very well be psychological factors, more than anything else, that will tip the scale.

To an important degree, these factors relate to some specific aspects of Japanese-American relations. Of these, the Okinawa question and the impending review of the U.S.-Japan Security Treaty in general, appear to present themselves as the first crucial tests of the direction in which things will move.

Moreover, as Japan's life depends on her trade and her access to markets in developed countries, a development towards protectionism in the United States would inevitably affect the manner in which Japan will position herself in relation to the countries of the Western Pacific, including the Asian part of the Soviet Union, mainland China as well as Southeast Asia. An abandonment on the part of the United States of its vision of the world as a single economic unit by withdrawing into a protectionist isolationism, will clearly open the door towards the development all over the world of closed systems of economic spheres of influence. I think it would be folly to minimize the fear that within these spheres, the price for progress that the underdeveloped nations would have to pay might well be the acceptance of a neo-colonial relationship.

The configuration of forces of which I am speaking will further be influenced by China's stance and where she moves once the Vietnam war is over. The crucial question that will soon come up before her is whether she should persist in a hostile isolation or break out of it. The prospect of a global understanding between the United States and the Soviet Union and the consolidation of a new balance of power in the Southeast Asian and Western Pacific region may make it advisable for China to break out of her isolation. As to whether, within the context of her own domestic balance of forces, China will have the capacity to do so, is of course a different matter. Here again, the manner in which the United States conducts its search into the possibilities of a Chinese rapprochement will to a large extent condition China's initiatives and reactions in the years to come.

Two more elements, I think, should be briefly mentioned to complete the picture at this stage. First, Australia's decisions regarding her defense strategy and her relationship to Southeast Asia; the choice she has to make between concepts of forward defense or a "fortress Australia" posture, and her defense relations with the United States. Secondly, the development of strategic significance in and around the Indian Ocean, to which I have referred earlier.

It appears possible then at this juncture to draw a few tentative conclusions.

First and foremost, one is struck by the tremendous extent of interaction and the far-reaching implications of the decisions that will have to be taken by the countries I have just mentioned. It is obvious also how greatly the manner of this inter-action is going to affect the scope within which the nations of Southeast Asia themselves will have to work out their own destiny. Thus, for example, political decisions taken by the United States in the context of her global policies vis-a-vis the Soviet Union, Japan and others, as well as her economic decisions related to her balance of payments difficulties will inescapably affect the Southeast Asian environment.

The second conclusion that logically presents itself is that as long as Southeast Asia is unable to fill the power vacuum left in the wake of decolonization by its own indigenous strength, or in other words, without a Southeast Asian indigenous component, the constellation of forces in the Western Pacific will remain unstable.

Lastly, it appears valid to assume that it is against the interest of Southeast Asia to see any single force within this constallation emerge in a position of paramount power. If my reading of American history is correct, this conforms also to the traditional position the United States has taken in the past with regard to her interests in the Pacific.

This brings us to the question of the relationship between Southeast Asian security and the re-definition of the American defense posture after Vietnam. The importance of the power umbrella provided by the nuclear guarantee and naval presence of the United States is beyond question and needs no elaboration. It seems to me, that in further defining the American military role in Southeast Asia, the new logistical deployment capabilities which have been developed could be an important element in giving greater flexibility to the United States defense strategy. But beyond this, I would imagine that it will also very much depend on the way in which the Southeast Asian nations themselves see their security problem, and on their readiness to assume responsibility in meeting that problem.

Let us, therefore, first have a look at the nature of the threat to the security of the Southeast Asian area. Provided that the present stability of mutual nuclear deterrence remains, I think it is realistic to assume that the danger of massive open military aggression against this region is very small. China's capacity to project its military strength outside its boundaries is for a long time going to be quite limited. While her growing nuclear capability undoubtedly will give her some diplomatic and political leverage, the rationale for a nuclear threat or for nuclear blackmail against any of the Southeast Asian countries seems rather distant, if not absent. The threat to the security of Southeast Asia, therefore, lies not in China's military capacity, but rather in the fact that China constitutes a political and ideological high-pressure area, that is bound to exert an influence on the shape and direction of political discontent within the Southeast Asian countries. The primary threat, therefore, is one of internal subversion and insurgency.

It is not primarily a nation's military capability that will determine its capacity to overcome these threats to internal security, but rather the cohesion of its political system, the viability and the effectiveness of its government in dealing with the problems of poverty, social inequalities and injustices, in bringing about economic development and in continually expanding its base for popular participation. Here again it is not only factors of economic growth, but beyond that the elements of will and determination that are decisive, as well as the people's loyalty to the government and faith in its purposes. As Indonesian Foreign Minister Adam Malik once remarked: "In dealing with the defense against insurgency it does not suffice for the people to make verbal expressions of loyalty. It requires a government for whom they are willing to die."

In this light, therefore, military alliances will add little if anything to a nation's capacity to cope with the problems of insurgency. One might even say that at this stage of political formation and consolidation through which Southeast Asian nations are going, the infusion of external military power runs the risk of becoming a destabilizing factor, leading to a false polarization of forces in the country or giving its leaders a false sense of security and a corresponding unwillingness to engage in necessary political and social reform.

Recently, President Soeharto of Indonesia reiterated this viewpoint in unambiguous terms. When asked by the press how he viewed probable developments in Southeast Asia after an end to the Vietnam war, he said: "I do realize that the general situation in the area after Vietnam will give the communists a bigger scope for infiltration and subversion in the countries of the region. The main threat, however, will not derive from communist military strength but rather finds its source in ideological fanaticism. This threat should not be met by military pacts or military power, but by strengthening these countries' national will and capacity to resist, through international and regional cooperation in the fields of economic development, culture and ideology. The strengthened will and capacity to resist in the countries of the region will form the strongest defense against this infiltration and subversion."

It is important, therefore, to see ASEAN, the Association of Southeast Asian Nations, not as a prelude to a military alliance, but very definitely as an attempt to speed up the economic development and political viability of the region as a whole, as well as that of the individual member countries. ASEAN is an expression of the will and determination that exist among its member nations to shape their own future and to work out their problems of stability and economic development in freedom.

We of course realize that to transform potential into reality, much more is needed than pious intentions. Even at this moment, unresolved tension and conflict among ourselves, such as manifested by the dispute over Sabah, threaten to disrupt the fragile structure of our preliminary efforts. But if we understand the nature and basic causes of instability in the region, then we will understand that problems like these will continue to crop up, as the unavoidable agonies in a process of growth.

It does, however, point to the need for Southeast Asia's leaders to bring up the kind of statesmanship capable of preventing the deterioration of this conflict into a state of self-destructive armed hostilities. It also reveals the necessity for ASEAN to develop as quickly as possible the organizational machinery for peaceful conflict-solution in the area. As for Indonesia, we remain confident that within the context and in the true spirit of ASEAN, the current tensions over Sabah can and will be overcome in due course.

It should be noted that ASEAN, in its present composition of Thailand, the Philippines, Malaysia, Singapore and Indonesia, was from its inception only seen as a beginning. I do not think that its members have relinquished the hope that eventually ASEAN will include all other nations in Southeast Asia. The possibility of a neutralized Indochina emerging from a peaceful settlement of the Vietnam war would open new possibilities along these lines.

Let me now recapitulate very briefly the major internal requirements that will have to be met if Southeast Asian regional cooperation is to become a reality. *First*, there should be a continuing top-priority commitment to economic development on the part of the political leadership in each of these countries. *Secondly*, these countries should be able to develop a mechanism for regional conflict resolution which would obviate the need or compulsion to arm against each other and to seek solutions by force of arms. *Thirdly*, plan harmonization; though given the strength of narrow nationalist feelings, this will take some time, they must gradually develop the willingness to agree on the most suitable location of certain industries in terms of their overall regional impact. This means a willingness to sacrifice short-term national interests. *Fourthly*, increased intra-regional trade, common endeavors in the field of price stabilization of primary commodities, joint marketing operations and eventually, after all the countries of the area have developed a sufficient manufacturing capability, a regional common market. This may still take a very long time, but it is the direction in which we have to move. *Fifthly*, effective population control.

The nations of Southeast Asia must be able to develop these capabilities if regional cooperation is to mean anything in the immediate foreseeable future. Above all, there is an urgent need for clarity of vision as to the community of destiny in which their future is bound up; the realization that there is no future for each of them, unless they jointly work together to secure their common future.

The awareness of the historic opportunity that has opened, and the will to move in that direction, should inspire not only the statesmen of Southeast Asia, but its intellectuals, scientists and businessmen as well. These are the internal requirements.

There are, of course, certain external requirements, the most important of which is the continued willingness of countries like the United States, Japan, Australia, Europe, and hopefully the Soviet Union and the Eastern European countries in continuing foreign assistance at adequate levels to the countries in this region.

The recent announcement by the Japanese Government of its intention to allocate aid at substantially higher levels was therefore welcome news indeed. In a way it further emphasizes the crucial importance for us in Southeast Asia of the decision that the United States will have to make regarding the level of her aid program in coming years as well as the new concepts underlying it. More than anything else the United States could do in relation to Southeast Asia, the continuance at adequate levels of her aid program would significantly bolster political morale, accelerate the indigenous capacity for development, and commensurately the indigenous capacity of these nations to deal with their own security problems. Without it the U.S. military role in the security of the Southeast Asian area would become politically meaningless.

One other aspect should be mentioned here. One of the side effects of the Vietnam war has been an annual outflow in recent years of close to two billion dollars from the United States to East Asia for expenditures that were related to the war. Many of the countries in this area have benefitted considerably from this transfer of resources. I think that Indonesia may be the only country which did not derive any benefits from this. It would be a sad commentary indeed on the quality of the present international order if peace in Vietnam, for which we are still hoping, would also come to mean the cessation of a transfer of resources of this order of magnitude, which would give rise to a serious depression in this general area. It would seem to me that economic cooperation of a stable and mutually beneficial nature would require the development of a capacity for the continuation of the transfer of such resources *without* war.

The search for new and more effective concepts of aid is, of course, a legitimate and needed endeavor. The increasing attention that is being paid to multilateral aid, whether through international organizations like the United Nations, the World Bank, IDA, ADB, or through formal or informal arrangements between a number of countries, is an important development in this connection. It makes possible better coordination, more objective assessments of requirements, a more integrated development strategy by the receiving country, at a lower political cost. The multilateral emphasis tends to reduce the fear of undue influence or political domination by a single donor nation. It also reduces the possibility of bilateral aid programs being too closely tied to specific private investment projects from the donor nation concerned, which would give rise to fears of the development of eocnomic neo-colonialist enclaves in the receiving country.

As an interesting side effect of this new emphasis it should be noted that it has at the same time made it possible for bilateral aid to operate more effectively and at a lower political cost as well, for both the donor and the receiver nation.

A review of aid strategies for development in Southeast Asia could not ignore the importance of price stabilization for primary commodities. This, as well as putting a stop to the worsening terms of trade for these primary products, would significantly reduce the need for much higher levels of aid input. It would have additional beneficial effects as well. Very little really has been achieved in the way of increasing trade rather than aid, and the failures of both the UNCTAD I and UNCTAD II conferences is a matter of great concern to most of the countries in Southwest Asia.

The failure of these conferences, like the failure of the UN Development Decade to reach its targets, has made it obvious that unless there are fundamental changes in the state of the world, in its present divisions, its preoccupations, and its levels of tension and conflict, there is little hope for a major redirection of world resources to effectively cope with the problem of international poverty. Still, international stability and security at the subnuclear level will largely depend on this. At the same time it is only one of the problems that mankind is facing today.

For too long already has the fear engendered by the cold war, and the corresponding flight for security into a blind reliance on military hardware, made it impossible for many nations, rich as well as poor, adequately to respond to new and pressing needs resulting from major social and cultural changes, in their own societies as well as in the world at large. For too long has man been locked into frozen postures, attitudes and concepts that made sense in the fifties, but are inadequate to our understanding of the problems that have emerged in the meantime.

It has been the unrest of youth that has now made us realize that for the continuation of civilized life on this globe the mere avoidance of nuclear extinction is not enough, and that it will be necessary to come to grips with problems like the depersonalizing effects of modern life and its institutions, the destruction of human ecology, the problem of race, the problems of the cities, the population explosion, and domestic and international poverty. These are the problems that will really determine the shape and the quality of life in the decades ushering in the twenty-first century—if we ever make it.

The reorientation of our thinking,. the development of new and more appropriate concepts, and especially concepts of security that allow for social change, imply a reordering of our priorities and a redirection of our resources; to do these things however, is only possible at a lower level of international tension.

The attainment of strategic parity between the U.S. and the U.S.S.R. provides a new, unique—and maybe the last—opportunity mankind has to make the effort at developing a new world order that is more responsive to the new and crying needs of man, poor as well as rich; a world order, more morally satisfying, based not only on power and the calculus of power, but also on trust and compassion, motivated by a clearer and stronger universal vision of man, of human solidarity and a sense of international social justice.

Southeast Asia's future is certainly bound up with the success of this endeavor.

RENEWING OUR FAITH

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. DINGELL. Mr. Speaker, on July 4, 1969, Dr. Lee A. DuBridge, the distinguished and able science adviser to the President of the United States, made a powerful and moving speech to a large audience at Greenfield Village in Dearborn, Mich., at the celebration by that great museum of the founding of this Nation.

Because of the outstanding character and ability of Dr. DuBridge, and the very appropriate nature of his remarks, I am proud to insert this excellent speech in the RECORD:

RENEWING OUR FAITH

(Address by Dr. Lee A. DuBridge, science adviser to the President, at Greenfield Village, Detroit, Mich., July 4, 1969)

I regard it as a great privilege to be able to participate in this glorious 4th of July celebration. It is inspiring indeed to see so many people here to commemorate the founding of our nation, to pay tribute to those far sighted men and women who risked their lives and fortunes to make this country free and to reassert our faith in the ideals of freedom and justice and hope on which our nation was founded, and toward which we have striven for almost two hundred years.

We are here today because we are patriotic, because we love our country and believe in it. We believe in its present—we believe in its future. We have already pledged allegiance to the symbol of our nation and we reassert our faith in the theme of this occasion "Let Freedom Ring".

It is inspiring also to know that in addition to the many people gathered here today, there are similar gatherings throughout the country where in thousands upon thousands, hopefully millions, of our fellow citizens, are setting aside their time on this date to renew with us our pledge of allegiance to a great and free nation.

And yet, I must sadly remind you that there are other millions of people, especially young people, who will refuse to join with us in our pledge of allegiance, who would even denounce our assertions of faith and loyalty, who have indeed lost all faith in our nation's ideals, in its government, in the very foundations of our society.

I feel sorry for those people. It is a tragic thing to lose faith—whether it be faith in God, faith in our country, faith in our fellow men, and specially faith in ourselves. For without faith there is no hope and life itself loses its meaning.

Now we all recognize some of the reasons why young people have lost this faith. We cannot claim that our society or our nation is perfect. We cannot claim that we have achieved the ideals which we often proclaim. We cannot assert that we, as a nation, have done all we could do to insure freedom and justice to all our people, to assure opportunity for every person to live a decent and a fruitful life. We have fallen short of our ideals. But can anyone name a nation that has done better?

We know too that these are dangerous times. We know of nations in the world that are not friendly to our democratic ideals, who do not believe in the kind of free society which we have built on this continent and who would gladly, if they could, or if they thought they could, undermine and even destroy the civilization which we have built. We are vastly distressed and frustrated by this situation. We all dislike the nuclear arms race. We would all like to see an end to the tragic loss of many American lives in a far distant place. We would like to see an end to all wars and threats of wars. We would like, in other words, to see the time soon arrive when we could live in peace, tranquillity, friendship with all peoples.

That time has not arrived and many of our fellow citizens are so angry with the nature of the world in which they live that they want to withdraw from it, to denounce it, possibly even to undermine and destroy the institutions which they find nearest at hand on which to vent their anger—their schools, their colleges, their universities and their government.

We do not cure the ills of our society by destroying it or even losing faith in it. We do not cure the ills of all the world by weakening a great nation which strives for freedom and justice and peace. Our nation has faced grave dangers before and it has surmounted them. We can surmount them again, if we loyally and energetically unite to seek out our dangers and our defects and remedy them one by one.

The troubles of recent years, at home and abroad, have emphasized and sometimes exaggerated the things which make us unhappy. Let us see what we can do about them and let us look at what we are doing.

First let us look at our colleges and universities which have been under attack and under severe strain. Our system of higher education has been denounced from within and berated from without. But is our system all that bad? I think a case can be laid for the thesis that in this country our system of higher education is the victim of its own success. If our system were not such a success, why would so many millions of students flock to our colleges and universities? There were seven million enrolled during the year just ended. Some 50% of our high school graduates now seek to enter a college or university. To them and their parents higher education surely must seem to be a pathway to a better life.

Within my own lifetime there has been a vast change. A college education was once a privilege reserved for the very few. In the early years of this century only 5% of our young people ever thought about going to college or even believed that it had great value. It was all right for those who wanted to be doctors or lawyers or engineers, but it was hardly a prerequisite for life in business, agriculture or the service trades. But year by year Americans began to realize that a college education really prepared young people for a better life. Also the nature of our society was changing and there was more and more demand for educated men and women. A large number of educated citizens became a necessity for our business, agricultural, industrial, educational and governmental systems. So our colleges grew—and indeed grew much too rapidly for their own good. Hence they became short of money, short of building space, short of good teachers, short of adequate libraries and laboratory equipment.

And yet students continued to flock to our colleges and universities and after graduation went out into successful careers. The colleges saw no need to change their ways of doing things. They were doing fine. The professors and administrators were so busy with their daily chores that they had no time to ask the question of whether the rapid changes in the world around them required changes in the academic policies of the institutions themselves. They were so devoted to the ideal of providing educational opportunities to a larger and larger fraction of our young people that they did not give adequate attention to the question of whether the kind of education they were providing these young people was adequately fitted to the world into which they would be going.

Today, however, our colleges and universities are no longer complacent. Though in certain institutions violent uprisings have left wounds that will take a long time to heal, in many other universities a peaceful self-examination is going rapidly forward. Curricular policies are being revised, administrative structures altered, relations between students, faculty and administration are undergoing healthy changes. A spirit of unity is being revived and new approaches to problems of higher education are being invented.

I cannot claim that all of our problems in higher education will be quickly solved or that our colleges and universities will overnight become new centers of excellence in a changing world. But there is reason for faith, there is reason for hope, there is reason for greater and more concerted effort. Our universities have been in the past great fountainheads of freedom, of learning, of understanding, of innovation and progress. They can be, and I am confident they will be, even greater assets to our society in the years to come. But not without more perceptive public understanding, patience and support.

Let us turn to another major institution of the American society, our Federal government. In our democratic system the Federal government is not supposed to do everything, in spite of what some people seem to believe. But it can and must do some things and let us inquire as to some of the things that are now going on which give hope for the future.

First, of course, we all know that President Nixon is making an energetic attempt to bring to an end the American involvement in Vietnam. This is not an easy task, even though there are plenty of people who think they know easy solutions. But the determination to find the right way out is there and days and nights of determined effort are being directed to this task. We need no longer be hopeless nor lose faith.

The Federal government is aware of the grave dangers and potential disasters in the nuclear arms race. The President and the National Security Council and a large number of people in many departments of government with the help of many private citizens are working long and earnestly trying to develop proposals to make to the Soviet Union to bring this race under control. There is a real expectation that next month will see the beginning of serious talks with representatives of the Soviet Union and serious proposals will be presented by the United States for practical first steps in de-escalating this fruitless and costly enterprise. I personally believe there is hope that the Soviet Union is anxious to end this race too, and while we should not expect sudden miracles, there is reason for faith and reason for hope.

Within our own country we face grave problems. Poverty and hunger and racial conflict still exist in this affluent land. Our cities are decaying and we are desperately seeking ways to stop the decay and make them better places to live. We continue to degrade our environment, polluting our air, our water and strewing waste products around our land.

But again these crises are now recognized. Mechanisms have been established within the government to provide Federal leadership and to provide Federal cooperation with states and cities to analyze their problems and take measures to solve them. The Urban Affairs Council and the Environment Quality Council, both under the active leadership of the President himself, are mobilizing the talents in our government to seek these solutions. Solutions will not be found overnight but the problems are now recognized and are no longer neglected. There is reason for faith, there is reason for hope.

But, as President Nixon has frequently said, while a nation must examine its own internal problems and give them energetic attention, it must, even in times of troubles, look outward, upward and forward. A nation must search for new knowledge, must search for enlightenment, must seek beauty and inspiration, must foster idealism and encourage great achievements. "We stand at a crossroad in our history" the President has said. "We shall reaffirm our destiny for greatness or we shall choose instead to withdraw into ourselves."

One week from next Wednesday three astronauts will take off from Cape Kennedy headed for the first manned landing on the moon. Four days later, we all hope, their spacecraft will rest on the moon and two human beings will step on the surface of the moon for the first time in all history. Hundreds of millions of people all over the earth will watch this event on their television screens, will hear about it on their radios, will read about it in their newspapers; and hundreds of millions of human beings will rejoice in a great new human adventure and a great human achievement. All over the world that night people will look at the moon with a new sense of awe and wonder, knowing that two human beings are there. And they will be inspired at the power of the human intellect and of the human spirit. And for a time, at least, the troubles of the world will be forgotten as the great potential of man is so visibly displayed.

On this point also President Nixon has expressed his views eloquently. "The journey of the astronauts is more than a technical achievement," he said. "It is a reaching out of the human spirit. It lifts our sights. It demonstrates that magnificent concepts can be made real. (It) inspires us and at the same time teaches us true humility."

For untold millions of years the human animal was chained to the surface of the earth. Sixty years ago he found a way of soaring into its atmosphere. Ten years ago he learned to break the chains of gravity and to soar out into space. This month the first man will set foot on another world. Later this month two spacecraft will reach Mars and send back new information about that Planet. Americans will have no reason to be ashamed of their nation on those days. Is it worth while? Is it worth while to lift the spirits of millions of human beings? If not, what else is worth while?

There are, of course, those who ask why, if we can land on the moon, we can't clean up our cities? Well, we can. Of course, we can. And we will. But I must emphasize the point which is often forgotten—namely that developing the technology of landing on the moon was relatively easy. The laws of nature which made it possible have been well known for a long time. The engineering skills required to put the spacecraft together were available and were brilliantly organized. Hundreds of thousands of Americans worked together to make this dream come true. They had faith and they had hope.

The problems of our cities and the other social problems which beset us are not all that easy. In this area human beings are not working together but are in conflict. We find that we do not yet know the cause of these troubles nor do we yet have the mechanisms for curing them. Hence we must study, we must experiment, we must try and we will often fail.

We have learned how to discover and use the laws of inanimate nature. We do not understand and thus cannot use the laws governing human nature. This challenge is still ahead. It will be a far more difficult task to understand the human mind and the human heart than it is to understand the physical universe. It is the easy problems that always can be solved first. The tougher ones still lie before us. But they constitute our great challenge.

And yet we are beginning to learn something about human behavior, about social behavior. We are developing some of the tools required to enable the human intellect to address itself more effectively to the problems of our society. We are a long way from their solution. But there is reason for faith; there is reason for hope.

If we were not a democratic society we might solve our problems more easily. An authoritarian state can order people who live in the cities to move back to the farms. It can force people to accept menial jobs whether they want to or not. It can fail to make enough automobiles to cause traffic congestion. It can fail to provide consumer goods for people to buy so all the productivity of the nation may be used for the purposes of the state. It can control the press so the people only learn of those things that the state wishes them to know about. A ruthless military machine can maintain law and order. A dictator can do many things, except the one all important thing. He cannot provide freedom to his people. He cannot adopt the motto "let freedom ring". He cannot grant freedom of religion or freedom to learn. He cannot allow faith. He cannot allow hope. He can only dictate. Is that what we want?

Free men, of course, face many problems. They face the problem of earning their freedom, of preserving it and making it worth while for themselves and all their fellow men.

But the power of the free human mind and of the unfettered human spirit is endless. It may face frustrations and tragedies, as has happened so often since man came to this earth. But these frustrations and tragedies only challenge men to greater efforts and higher achievements. Man never solved any of his problems overnight. To solve problems requires study, imagination, energy, devotion and sacrifice. Men have learned that before they can act effectively they must try to understand what they are doing and to invent effective methods of doing it. This often takes time and in this rapidly changing and very dangerous world, time is getting short. But panic will not solve the problems faster. It may only lead to fruitless actions which make the problems worse. We are often tempted to attack symptoms because we cannot find, do not understand, or do not know how to attack causes. We must frequently admit that we have failed and then seek to do better. And we shall learn from our failures.

Human beings, we must admit, are still ignorant. They are not as ignorant as they were a thousand years ago, or even ten years ago. They are slowly but surely learning how to learn. And even though learning seems to come sometimes with agonizing slowness, we still see that our capacity to learn is without visible limits.

Providing the opportunity and the encouragement for learning is one of the great achievements and great assets of a free society. We encourage and support our schools and colleges. (And let us not fail to do this!) We support science and new technology—because we know that the discovery and application of knowledge has been our mainstay of past progress and is a major hope for the future. We encourage research in social science, economics, political science and urban problems—because we are not chained to a fixed ideology which is inflexible and unadaptable to new insights and new understanding. We encourage the humanities and the fine arts because they can elevate the human spirit, and because free human beings have always yearned to do something more than just satisfying their daily physical needs. "Man achieves his own greatness," President Nixon said, "by reaching out beyond himself. And so it is with nations."

Our nation is at a time of testing, a time of challenge. And in a time of testing we must not abandon but must renew our faith; not abandon but renew our hope; not abandon but renew our determination, renew our energies, reaffirm our unity, rededicate ourselves to our highest ideals.

ROSES, RIVERS, AND ELEPHANTS

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mrs. GREEN of Oregon. Mr. Speaker, recently Ford Times magazine carried a delightful story by Oregon freelance writer Ellis Lucia about Portland, Oreg., the elephant capital of the United States and pride of the Oregon country.

Mr. Lucia, well known on the west coast for his tales of the Oregon country and its inhabitants, is also the author of an exciting account of the great 1962 windstorm and a popular book full of advice and admonitions to visitors to our State entitled "Don't Call It Or-e-gawn."

The Ford Times article contains many interesting and relatively unknown bits of Portland history which I would like to share with my colleagues.

ROSES, RIVERS AND ELEPHANTS

(By Ellis Lucia)

About seven years ago, the eyes of the world of zoos were turned on Portland, Oregon, because of a blessed event: Belle, the great gray lady of the Portland Zoo, was elephanticipating.

News media in the City of Roses issued daily bulletins on Belle's condition. Stores featured pachyderm toys, books and pictures. School children drew elephants in their art classes. Portland had completely flipped over an elephant.

There was good reason. Since the first elephant landed in this country in 1796, only six had been born here, and four did not survive. There had been no birth in nearly half a century. No one was sure what would happen—nor when. Facts were very sketchy about elephant births, occurring as they usually did in the privacy of remote jungles.

At long last, on April 14, 1962, the youngster arrived and was gently nudged to his feet by his apparently amazed mother. Packy was popeyed, very hairy and 41 inches long.

He also sported an oversized schnozzle over which he constantly tripped. Next day, when zoo attendants managed to weigh him, Packy checked in at 225 pounds. He soon became a celebrity throughout the land.

Since then, the City of Roses has also gained a reputation as the City of Elephants. Six more calves have been born since Packy, who now weighs over two tons. More are believed on the way. Portland has become a world center for the scientific study of elephants and their breeding habits.

Other zoos hopefully ship their female pachyderms to Portland for mating with Thonglaw, a swaggering young 12,000-pound bull. Until Packy was born, Thonglaw was the only bull in captivity that could be handled. But when he strangely showed only scant interest in one pair of visiting females, it was discovered that, after dark, ladies of his harem were jealously bumping the newcomers into the moat.

The zoological gardens in the city's West Hills are one of Portland's most popular attractions—part of a major educational-recreational development of the past two decades. The zoo's inhabitants range from South Pole emperor penguins to giant Russian bears, obtained in a secret trade for Oregon beaver at the Brussels Fair. The area also contains a rapidly growing Oregon Museum of Science and Industry. A new Forestry Building is to be built nearby, replacing the giant log cabin of the 1905 Lewis and Clark World's Fair which burned to the ground a few years ago.

PORTLAND'S GREEN BELT

The West Hills of tall timber, large parks and magnificent old homes with beautiful gardens provide a green belt setting visible throughout the city. Council Crest, where Indian tribes once gathered, affords a sweeping view of Oregon's largest metropolis, the broad rivers and the snowy peaks. The 140-acre Hoyt Arboretum contains 500 trees.

Included too are the international rose test gardens and the new Japanese Gardens of Washington Park, one of the largest and oldest of Portland's 125 parks and playgrounds. There's a bird refuge, the municipally-owned Pittock mansion for public viewing, and 3,535-acre Forest Park with its deep-woods trails, the largest wilderness area inside any American city, a spectrum of color in the fall.

The Portland Zoo Railroad maintains half a dozen narrow-gauge trains. Built by local hobbyists, the railroad is adult-sized, radio-controlled. The trains twist, turn and snake through the woods, overlooking awesome ravines. They are of various vintages, ranging from 19th century to modern streamliner. Most popular, however, is a diamond stack live steam locomotive, styled like its forebears of the 1880s, which puffs up steep grades as did Oregon logging trains of yesteryear.

Portland's interest in all kinds of railroads is long-lived. Railroads and river boats actually built the community, as many historical markers attest. Today it is one of a few cities served by five major lines.

It came close to not being a city at all, though. Many pioneers were unimpressed with the site, and favored instead Oregon City, 13 miles up the Willamette River.

"BLUE RUIN" ARRIVES

However, in 1842,, a buckskinned trapper, Bill Johnson, built a log cabin a few miles from where the Willamette joins the mighty Columbia. Johnson started brewing a con-

coction called "Blue Ruin" and his place became mighty popular until the Provisional Government closed him down in Oregon's first vice rail.

But "Blue Ruin" indirectly attracted attention to the thickly timbered area. Eventually two New Englanders staked out a village that went nameless because each partner favored his home town (one was Boston, Massachusetts, and the other was Portland, Maine). The flip of an 1835 copper cent settled the matter. Even so, originally folks called it "Stump Town" because of the rooted tree butts everywhere. Settlers splashed them with whitewash for after-dark visibility.

The city's name troubles were not to end quickly. A century later, local author Stewart Holbrook suggested it be changed to Multnomah or to Willamette to avoid mail confusion. The resulting cries of anguish shook Mount Hood, 60 miles away.

Portland life is keyed to its rivers, for this is a major west coast seaport. An average of 1,700 ships annually, one every five hours and flying the world's flags, ply the 125 miles up the Columbia to Portland's harbor. Lumber, wood chips, grain, livestock, agricultural and manufactured goods arrive by river barge, truck and rail from the vast inland Pacific Northwest. An enticing Import Plaza displays the goods of the world. Local drydocks are a major repair station for private vessels and even those of the U.S. Navy.

Colorful sternwheelers once plied these waterways. Only one is left, used for maneuvering big ships past the city's many gaily-colored bridges. The *Portland* puts on quite a show with her great thrashing paddlewheel. She is best watched from aboard the *River Queen*, the former San Francisco ferryboat, that is now a swank waterfront restaurant.

In lumbering's heyday, the old North End loggers and mariners found the docks as wild and dangerous as San Francisco's famed Barbary Coast. Many a celebrating lumberjack wound up on the high seas. Often he had been the shanghaied guest of Bunco Kelly, who got $50 a head for these unwilling crew members. It is told he once smuggled a cigar store Indian aboard an outbound ship to filll the desired quota.

The air of robust color and romance of the 1800s is retained by Harvey Dick's Hoyt Hotel and its Barbary Coast restaurant-nightery, an entire block surrounded by gas lights. Everything there is genuine—an amazing collection from bullet-scarred mahogany bars and a tinny rinky-tink player piano to crystal chandeliers, gold-framed paintings, statuary and plush trappings of the early days when Klondike Kate was a familiar figure on Portland's streets.

CITY'S FACE HAS CHANGED

Portlanders respect their heritage but never let it hold them back. Thirsty pedestrians may quaff the water from bubbling brass fountains, the long-ago gift of a wealthy lumberman who hoped his loggers might decide to patronize them instead of the saloons. But freeways, high rise apartments, a new coliseum and remodeled auditorium have changed the face of the city and—along with top grade eateries—make it a lively and exciting convention town.

Sprawling Lloyd Center best exemplifies the new and modern Portland. Built on land of stagecoach mogul Ben Holladay that long lay idle, it's really a city within a city. There are 120 acres of cool malls, flowered walkways, over 100 shops, hotels, motels, apartments, offices, an auditorium, parking space for 8,000 cars and an ice rink larger than that of Rockefeller Center. Lloyd Center, with its gay atmosphere even on rainy days, is a setting for everything from political rallies to top entertainers, from strolling minstrels to balloon races.

IN SPRING . . . ROSES

Everything in Portland reaches a feverish pitch in late spring when lawns and parks of the tree-lined residential streets are festooned with bright azaleas, rhododendrons and roses. Portland was paying homage to the rose long before there were hippies. No one dares reside here long without at least one rose bush. They even grow in parking lots. Business men wear roses in their lapels. Police display the rose on their patrol cars. The public transit system is called "Rosy"; so is the zoo's first elephant. And the international test gardens of 900 varieties and 14,000 bushes are a sight to behold during Rose Festival time in June.

Even the elephants enjoy the roses. Presented a bouquet for his birthday, Packy will eat the blooms right along with the peanuts.

DESALTING PLANT IN ISRAEL

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. ROSENTHAL. Mr. Speaker, today I offered a statement to the Foreign Affairs Committee in support of an amendment to the Foreign Assistance Act which provides for a U.S.-Israel partnership in the construction, operation, and maintenance of a prototype desalting plant in Israel. Congressman Frelinghuysen has cosponsored this amendment with me.

The United States would greatly benefit from the desalting technology derived from the operation of this plant, for there are many areas in this country which suffer from a lack of water. The same technology could be applied for agricultural purposes to help feed hungry people throughout the world.

The fact is that for years the United States has been committed to advancing desalting processes as a way of solving our own water problem. In working with Israel on this venture, the United States would be engaging a partner with the experience, the environmental conditions, the trained personnel, and the commitment to participate in a large-scale experiment that could offer a valuable contribution to mankind.

My statement, and a related editorial by C. L. Sulzberger which appeared in the New York Times on July 27, 1969, follow:

STATEMENT OF REPRESENTATIVE BENJAMIN S. ROSENTHAL OF NEW YORK, BEFORE THE HOUSE COMMITTEE ON FOREIGN AFFAIRS, JULY 29, 1969.

Mr Chairman: I appreciate this opportunity to testify in support of United States assistance for the cooperative construction of a dual-purpose desalting and power plant in Israel.

I personally believe that the proposed amendment to the Foreign Assistance Act, sponsored by Representative Frelinghuysen and myself, would give us a unique opportunity to attack a problem of alarming dimensions. Staggering water shortages offer a challenge that few countries are willing to confront. But pressing water needs throughout the world can no longer be ignored.

Israel is the only country with the commitment and technical capability to effect a breakthrough in converting usable salt water into fresh water. By assisting Israel in the construction of a prototype desalting plant we can develop a process which will insure the survival and growth of vast regions and whole countries which today face aridity and economic desolation from lack of water. This project represents, therefore, a real contribution to peace in the Middle East and the world.

It would be difficult to exaggerate the world-wide need to immediately develop new sources of fresh water. In some sections of the United States, water shortages already threaten to turn flourishing communities into insignificant back lands. The Commission on Marine Science, Engineering and Resources reported to the President in January of this year, "As increasing numbers of people move to the Pacific Coast, the problem of providing additional increments of water will become acute".

Our country faces a rapidly growing population, an expanding percentage of which will live in arid and semiarid lands. Progressive industralization, a rising standard of living, and the further development of irrigation agriculture has made the availability of water a matter of grave concern.

Currently, the United States is using fresh water at the rate of approximately 360 billion gallons a day—almost three times the rate of 30 years ago. In 20 years, our requirements are expected to triple. Indeed, as I speak here, the water use in the United States increases at the rate of 25,000 gallons per minute.

The problem, as grave as it is in the United States, is even more acute in other areas of the world. According to a recent survey of the World Health Organization, "About 450 million urban people in 75 countries of Latin America, Asia and Africa will need new or extended supplies of water by 1977." As the population of these regions expands, the demand for fresh water will mount. Further economic growth—in some places even survival—urgently awaits the development of new water sources.

This problem exists in Israel to an alarming degree. The last of Israel's meager natural water resources will have been fully utilized by the 1970's. Over 95 percent of the available water has been already tapped. The remaining natural waters in the south will probably be completely exploited in the next few years.

Israel now has 2,775,00 inhabitants. Planners estimate 1,600,000 more by 1981. Unless 36 million additional gallons of water daily can be produced by that time, these people will face severe problems. Israel's already densely-populated areas will swell in size if the arid land in the south cannot be cultivated, and economic development will soon have to be drastically curtailed.

Desalination holds the greatest promise as a long-range method of coping with water shortage. Almost 75 percent of the earth's surface is covered with water. Most of it, however, contains about 3½ percent salt, making it unsuitable for human use or consumption. Until recently, methods of lowering this salt content on a large-scale were technically unfeasible. Oceangoing ships carried distillation plants for this purpose but more extensive projects were far too costly.

The depletion of natural sources and the advancement in desalting techniques offers dramatic new opportunities. Small-scale desalination plants exist in some 20 countries. Israel, herself, has one in Eilat with the capacity of 1.5 million gallons a day. In the United States a plant was opened in Key West, Florida in 1967 capable of providing 2.2 million gallons per day with excellent water quality. The cost of the water provided by these plants has exceeded $1 per 1,000 gallons. With larger plants and better technology the costs will significantly decline.

The Office of Saline Water of the Department of the Interior estimates that a 100 million gallon per day desalination plant can operate at less than 25¢ per 1,000 gallons. This competes favorably with the cost of today's chemically purified water and should make the water available for agricultural use.

Desalination permits the location of plants in the areas of greatest need. It also affords

the production of electricity, another critical requirement for these arid regions. Finally, the desalination process may be used to purify polluted and brackish water as well as sea water and hence can play a major role in conservation. It is no wonder that the Marine Science Commission in January recommended that the United States initiate "an aggressive and diversified desalination research program, with increased emphasis on very large-scale applications."

The plant which this Act will help to construct is an essential step—a crucial prototype for this larger enterprise. To the maximum of $40 million over a five year period which the United States would contribute, Israel would add about $100 million.

With American assistance the cost would be about 35¢ per 1,000 gallons. In the absence of this plant, the cost would soar to about 60¢, probably making the construction of a large-scale plant financially prohibitive.

The completed plant would produce almost 40 million gallons per day or 10 times the currently largest yield from existing desalination plants. In addition, the plant will generate 450 megawatts of electricity.

For the Ashdod region in which the plant will probably be built, this can mean intensive irrigation of approximately 25,000 acres of land and dispersion of electricity to the nearby Gaza area where increasingly parched soil threatens the citrus industry of the 350,000 Arab residents and refugees. It can also be piped to the south to provide energy and permit irrigation for the development of the Negev desert.

The people of Jordan also badly need new water supplies. The development of a desalination technology may pave the way for the construction of such plants in Jordan and in other countries of the Middle East. This would provide jobs for refugees, irrigate the desert, and establish a broad base for cooperation in agricultural ventures between the Arab world and the Israelis.

Israel provides a unique opportunity and location for the development of a prototype plant. Its urgent need for water makes Israel willing to accept the great financial burden which construction of this plant would entail. Having the most knowledgeable scientists and technicians in the field of desalting, Israel can also easily assume the great responsibilities of constructing and running the plant, collecting data, making reports, and performing all the other myriad maintenance duties.

Israel has also developed the methods necessary for utilizing expensive water. For the past five years, Israel has experimented with environmental agriculture to permit increasing the yield of crop acreage under adverse conditions. By varying the inputs of humidity, fertilizer, sunlight, and chemicals, Israel is able to utilize to its fullest every drop of water.

Representative Frelinghuysen and I are not the first to recognize the great needs and unique capacities of Israel in the field of desalting. The idea of a larger-scale U.S.-Israel desalting project has been gaining legislative steam and bipartisan support since 1964. On February 3 of that year, President Johnson announced that the United States and Israel had "begun discussions on cooperative research in using nuclear energy to turn salt water into fresh water." In July 1965, the American-Israel Desalting Board reported that a plant producing 100 million gallons of water and generating 200 megawatts of electricity was feasible. They projected that it could be completed by 1972 at a cost of $200 million.

The next major consideration of the project came from former President Eisenhower and the former Chairman of the Atomic Energy Commission, Lewis L. Strauss. They recommended a regional plan to attack simultaneously the water and the refugee problems. Their proposal envisioned three plants with a combined capacity of about one billion gallons to be constructed on the Mediterranean and the Gulf of Aqaba. This proposal, while commendable for its recognition of the water needs of the area, is not feasible because of the political climate and technological obstacles to the undertaking. Desalting complexes of the size envisioned would require the prior testing of equipment and techniques. This would only be accomplished through the development of a prototype of more limited capacities. The amendment offered by Congressman Frelinghuysen and myself provides for that prototype.

In August 1967, Senator Baker introduced a resolution embodying the principles of the Eisenhower-Strauss Plan. Thirty-two Republican and twenty Democratic Senators cosponsored the proposal. Former Secretary of Interior Udall supported the measure and it was adopted by the Senate. No action was taken on the resolution in the House. Through the efforts of Representative Frelinghuysen and others of the Republican Coordinating Committee, it appeared as a recommendation of the 1968 Republican platform.

Gradually, however, Members of Congress and of the Executive Branch had come to recognize that this regional plan for desalination was not practical.

In 1968 the Johnson Administration supported a proposal that the United States participate in the "construction of a dual-purpose electric power and desalting plant in Israel." This measure set a limit of $40 million as the United States share in costs. It had the merit of recognizing the immediacy of the water problem while not requiring, as did the Eisenhower-Strauss Plan, that a solution await the cessation of all hostilities.

By developing a desalting technology that could be used by all countries of the Middle East, the desalting plant could actually strengthen the possibility of a permanent peace in that region. As President Nixon said after his 1967 trip to the Middle East, "There is within the United States an increased recognition that, for any peace settlement to become permanent, a solution must be found, with Western assistance, to two underlying *casus belli* of the Middle East—the problems of water and refugees."

I am also reminded of a particularly relevant statement President Kennedy made in 1961:

"No water resources program is of greater long-range importance—for relief not only of our shortages, but for arid nations the world over—than our efforts to find an effective and economical way to convert water from the world's greatest, cheapest natural resources—our oceans—into water fit for consumption in the home and by industry. Such a breakthrough would end bitter struggles between neighbors, states, and nations—and bring new hope for millions who live out their lives in dire shortage of usable water and all its physical and economical blessings, though living on the edge of a great body of water throughout that parched lifetime."

Those words are even more compelling today.

Foreign Affairs: Water and War

(By C. L. Sulzberger)

Paris.—The last foreign policy initiative of the Johnson Administration was to pledge American help in constructing a water desalting plant in Israel. The test of continuity in U.S. policy is about to come as Congressional hearings on the project start.

Johnson's scheme is tangentially related to that of former President Eisenhower, who proposed two or more nuclear-powered desalinization installations (with American aid) on both the Arab and Israeli sides of the disputed frontier, thus abetting the cause of peace by offering water, irrigation and power to the disputants and providing the basis for refugee settlements.

Johnson's formula

The Johnson formula is more modest and differs in three major respects. (1)—It concerns Israel alone. (2)—It would not necessarily involve atomic energy. (3)—It eschews any connection with the diplomatic and political problems of peace making.

Johnson first charged Ellsworth Bunker with investigating water-producing and water-sharing prospects. After Bunker's assignment as Ambassador to Saigon, his previous task was allotted to George Woods, former head of the World Bank.

On Jan. 17, 1969, just before leaving the White House, Johnson cabled the late Premier Eshkol of Israel: "I have accepted Mr. Woods's recommendation for United States participation in the construction of desalting plant in Israel which could produce forty million gallons of desalted water per day. . . . Accordingly, as one of my last official acts, I have included request for authorization of a maximum of $40 million for this project in the legislative program which I am recommending to the Congress for our fiscal year 1970."

Woods's team of experts envision distillation processes powered either by fossil fuel or atomic energy. The Israelis would prefer to depend on petroleum or gas for energy. Jerusalem is especially eager to get the project started soon and inexpensively because it recognizes that Israel faces a serious water shortage in the nineteen seventies.

An Israeli report forecasts: "Israel's water economy must rely, as of the middle of the next decade, on the large-scale sea water desalination that will form, from then onwards, an integral part of its national water-supply system." The report claims Israel is unequaled in "inventory of water resources" or "water management practices."

The report also foresees a shrinkage of per capita growth rate in the national product and predicts that "the country's population towards the end of the century is likely to reach the figure of five million or more." The present population figure is under three million.

What is carefully omitted is any definition of the final frontiers within which the proposed new water supply would be disseminated or the population would dwell. These borders are now one of the most contentious subjects of the current international scene and the source of steadily increasing military pressures.

Gen. Efraim Ben Arzi, Israel's principal negotiator for the project, specifically assures that the water is envisioned for use within Israel's borders as they existed prior to the Six-Day War and that the desalting plant would be erected between Tel Aviv and Ashkalon.

Nonpolitical scheme

Ben Arzi, the personal representative of his Premier says, the present scheme "is based on our previous frontiers and therefore has no political significance." The suggested new water source would be linked to Israel's existing national pipeline grid.

It is obvious, nevertheless, that despite efforts to isolate water from frontiers and refugees, it will be difficult to separate this long-time peace project from war's immediate fury. Anything the United States does to assist Israel economically will be seen by the Arabs as developing its war potential.

The fact remains that continuing conflict cannot be allowed to stultify economic development. An American-assisted water supply is an approximate Israeli equivalent, on a smaller scale, to the Russian-assisted Aswan Dam program in Egypt.

Unacceptable alternative

In each case living standards are improved, thereby strengthening the country involved;

but the alternative of allowing people to decline, starve or die of thirst between rounds of ceaseless battle is too grim and too idiotic to contemplate.

One may hope economic development will not only persevere but that some day its benefits may exert a calming atmosphere on the passionately emotional Middle East. If that day ever arrives it could perhaps prove possible to go ahead on the grand scale of water power, prosperity and peace envisioned for both Arabs and Jews by Eisenhower in the last great dream before his death.

THE FITZHUGH-LEE HOUSE—HISTORY OPENS ITS DOORS IN ALEXANDRIA

HON. FRED B. ROONEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. ROONEY of Pennsylvania. Mr. Speaker, during this month in which we observed not only the anniversary of the birth of our Nation but also the successful completion of our Nation's greatest technological achievement—albeit the most daring feat ever undertaken by man—it seems fitting that we take time to recall and to revere the memory of those great men who on that day 193 years ago placed their signatures on the document that founded our Nation.

It is fitting too that we preserve as much as is practical of the setting and physical surroundings in which these and other great men of our history lived and moved. Fortunately, the greatest historic shrine in the United States, Independence Hall at Philadelphia, where the Declaration of Independence was signed and our Federal Constitution written, has been preserved through the years. Much effort, time and money have been expended by the Department of the Interior in recent years to refurbish this monumental building and protect it against any future physical decline. This is a great accomplishment. But there are many other buildings of historic and architectural interest which have housed or been frquented by the great men and women in American history which also deserve preservation. I think it is appropriate as we approach Independence Day, our greatest national holiday, that we direct our attention and bend some efforts toward further preservation of such buildings wherever they may be located in the United States.

Right here in the greater Washington area there are such buildings. And one in particular, in our National Capital's sister city of Alexandria, Va. For some time, I maintained my own Washington area residence in Alexandria, and during that period there was opened to the public for the first time a historic mansion which deserves the attention of all of us in Congress and of the visiting public from around the Nation.

Known for decades as the Fitzhugh-Lee House, and standing near the heart of Alexandria's historic Old Town section, the building was well known to George Washington. For he was a dinner guest there many times—the last time being as late as November 1799, only weeks before his death. The house was known also to the Marquis de Lafayette, who visited there in 1824. And it was the boyhood home of Gen. Robert E. Lee, who spent 9 of his first 18 years there, leaving the house to enter the U.S. Military Academy in 1825. Lee had been brought to the house first at the age of five by his father, Gen. Henry "Light Horse Harry" Lee, one of Washington's most trusted generals and who as a Member of Congress first described the Father of Our County as "First in war, first in peace, and first in the hearts of his countrymen."

The Fitzhugh-Lee House was built in 1795 by a Pennsylvanian, John Potts Jr., another friend of Washington. Potts was a member of the family that built historic "Potts Grove" and gave its name to the city of Pottstown, Pa.

Through the efforts of another native Pennsylvanian, Jay W. Johns, who became a Virginian some 40 years ago, the Fitzhugh-Lee House was taken over by a historic preservation society and opened to the public 2 years ago. Mr. Johns, a resident of Charlottesville, Va., since 1930, is one of the remarkable men of our time. Eighty years old, and sightless, he has worked to preserve for posterity a number of historic houses in old Virginia. He was born at Uniontown, Pa.

The singular story of Mr. Johns' altruistic activities and the fascinating history of the Fitzhugh-Lee House has been compiled by John Koenig, Jr., and published in recent issues of the New York Times and the Washington Post. Mr. Koenig, now a resident of Alexandria, is a native Philadelphian and former reporter and writer for the Associated Press bureaus in Washington and at the Pennsylvania State capital at Harrisburg.

I offer for insertion in the CONGRESSIONAL RECORD a copy of each of these stories drawing attention to a valuable historic shrine. Visitors to our National Capital could well profit from a side trip to Alexandria and the Lee boyhood home. It should be of interest to them also that Alexandria from the 1790's until 1846 formed a part of the District of Columbia—so it's not a long trip from downtown Washington. The articles follow:

[From the New York Times, Feb. 2, 1969]

OPENING HISTORIC DOORS IN VIRGINIA

(By John Koenig Jr.)

ALEXANDRIA, VA.—A handsome, red-brick structure that served as the boyhood home of Robert E. Lee, and which is believed to be the last house in which George Washington dined as a guest, is becoming a leading tourist attraction here.

The house stands at 607 Oronoco Street, near the heart of Alexandria's "Old Town" section. The section, a little more than a mile square, includes one of the best-preserved, but still inhabited, 18th-century neighborhoods in America. As a result of all this development, Alexandria as a whole is gaining ground as a major target for visitors to the Greater Washington area.

It was in this house that young Lee spent nine of the first 18 years of his life; he left in 1825 to attend the United States Military Academy. The home also has associations beyond the young Lee and the elder Washington.

In 1824, Lee's mother, Mrs. Henry Lee, entertained the Marquis de Lafayette, who had come to pay his respects to her as the widow of Gen. Henry Lee, his comrade-in-arms in the Revolutionary War. The general was better known as Light Horse Harry Lee.

OPENED LAST YEAR

The house, which was opened to the public in 1967, was constructed in 1795. Its acquisition by a historical preservation society, Stonewall Jackson Memorial, Inc., and the assurance of its continued existence can be attributed to the foresight of a blind man, Jay W. Johns of Charlottesville, Va.

Indeed, the 80-year-old Mr. Johns, founder and head of Stonewall Jackson Memorial, Inc., has saved a half-dozen other historic homes and tracts in Virginia for posterity. He never actually has seen any of them, having lost his sight some years ago. Despite his handicap, he travels continually around Virginia and elsewhere to handle business pertaining to the historic properties.

In the case of the Lee boyhood home, the owner indicated that he was planning to keep the house, but parcel off the extensive garden into small, separate lots for the construction of new, luxury town houses. This plan was opposed vigorously by some of Alexandria's history-minded citizens, who feared that the old house itself might suffer a similar fate.

BIRTHDAY ANNOUNCEMENT

Into this breach stepped Mr. Johns. Realizing the historic, architectural and romantic value of the Georgian mansion, he made the necessary arrangements for its purchase. The acquisition was announced on Jan. 19, 1967, the 160th anniversary of the birth of Lee.

Since that time, the ubiquitous Mr. Johns has been busy rounding up funds to meet the $180,000 cost of the house. He has also bought or borrowed rare and beautiful period furniture to fill its rooms, and has enlisted the aid of Alexandria women to act as hostesses for visitors.

The city of Alexandria provided $10,000 toward the purchase of the house, and the Commonwealth of Virginia, through Mr. Johns' effort, has provided additional funds. Mr. Johns is hopeful of attracting 20,000 or more visitors a year, whose admission payments will help further.

"The beauty of the house and its strategic location should draw more and more people as time goes by," he says.

NEAR WASHINGTON

The building, about six miles from the White House, is just off Washington Street, Alexandria's main thoroughfare.

The house was built by John Potts Jr., a friend and business colleague of George Washington and a member of the family that gave its name to Pottstown, Pa. It was purchased four years later, in 1799, by Col. William Fitzhugh, a relative of the Lees and another friend of Washington. The Lees first came here to live in 1812, when Robert E. was 5 years old.

As one enters the Lee house through its high-stepped front doorway, he finds himself in a spacious center hall containing an elegant turning stairway. The paneled woodwork is in the manner of James Adams, one of the two brothers who were architect-designers to King George III and whose woodwork appeared in many Virginia manor houses.

Opening from the center hall on each side is a large family room. One of these is known as the Lafayette Room, since it is believed to be the room in which Mrs. Lee entertained the visiting French dignitary in 1824. Upstairs are two massive front bedrooms. Other living quarters are contained in an "ell," a wing extending to the rear.

SUNKEN DINING ROOM

Bedrooms line the second floor of the ell. The first floor includes a kitchen, pantry and sunken dining room.

It is believed that this dining room was the scene of Washington's last meal away from home. On Nov. 17, 1799, about a month

before he died, Washington recorded in his diary that he "went to church in Alexandria and dined with Mr. Fitzhugh."

A later visitor to the Fitzhugh house was George Washington Parke Custis, grandson of Martha Washington and adopted son of the President, who was courting Colonel Fitzhugh's daughter, Mary Lee Fitzhugh. The two were married in this house on July 7, 1804, and went to live at "Arlington," now known as the Custis-Lee House, in what is now Arlington National Cemetery.

LEE'S WIFE

There was one daughter born to this union, and she became the wife of Robert E. Lee after his graduation from West Point.

Stonewall Jackson Memorial, Inc., is a nonprofit organization that now maintains seven properties in Virginia, including the home of Gen. Thomas (Stonewall) Jackson in Lexington and Jackson's military headquarters in Winchester.

[From the Washington (D.C.) Post, May 4, 1969]

HISTORY ON TOUR: THE LEE HOME

(By John Koenig Jr.)

It took foresight of a blind man to open to the public one of the most historic and architecturally interesting houses in the National Capital Area.

Due to the efforts of Jay W. Johns, the boyhood home of Gen. Robert E. Lee in Alexandria, which also has important associations with George Washington and the Marquis de Lafayette, can now be visited any day of the week. A drive is under way to make it an important tourist attraction.

The Lee House, a red-brick, Georgian-type structure nearly filled with valuable period furniture, is a "natural" as a tourist site but the project has had its problems. For one thing, the preservation organization headed by the 80-year-old Johns assumed a sizable debt in acquiring the house for purely altruistic reasons. Secondly, the house has not yet been synthesized into the group of "name" shrines the visitor to Washington and Alexandria is usually familiar with and wants to see.

Johns, who spends much of his time traveling around Virginia by plane, train and even bus to handle the business of historic houses, has obtained financial support for the Lee House project and has sought to have it added to the list of stops of the organized tours.

The house, at 607 Oronoco st. in Alexandria's "Old Town" section, was purchased from a private owner in the name of the Stonewall Jackson Memorial, Inc., on Jan. 19, 1967, the 160th anniversary of Lee's birth. This price for the old mansion and its garden was $180,000. The city of Alexandria contributed $10,000 and has posted signs to direct visitors.

Since then, private contributors have helped reduce the debt substantially, and the Virginia Legislature pledged $30,000 to be made available when the debt can be paid off. Money still will be needed, however, for additional furnishings.

As for making the site better known, Johns has received a promise of cooperation from the Virginia State Conservation Commission, which advertises the State's attractions, and from the Metropolitan Washington Board of Trade, which provides information for planning visits to this area. A $1 admission charge will help maintain the property.

Johns has had considerable experience in preserving historic homes. In 1930, he bought Ash Lawn, the Charlottesville, Va., home of President James Monroe. He used the house as his own residence for a while and then dedicated it to history lovers by opening it to the public.

Some years later, he formed the Stonewall Jackson Memorial, Inc., a nonprofit organization, which now maintains seven properties in Virginia, including the home of Confederate Gen. Thomas (Stonewall) Jackson at Lexington and Jackson's military headquarters at Winchester. Some are battlefield sites that Johns has slated for future development. Ironically, he lost his sight 16 years ago and has never seen some of the properties.

The Lee House has become his favorite. Built in 1795 by John Potts Jr., a friend and business colleague of George Washington, the house is a prime example of the brick classical construction of the day. It was sold in 1799 to Col. William Fitzhugh, a relative of the Lee family and another friend of the first President, who as a resident of nearby Mount Vernon and property owner in downtown Alexandria, was a frequent visitor to the house.

In one of the last recordings in his diary, Washington wrote that he "went to Church in Alexandria and dined with Mr. Fitzhugh." That was on Nov. 17, 1799.

Gen. Henry Lee, one of Washington's dependables in the Revolutionary War and better known as "Light Horse Harry," moved with his family into the Fitzhugh house in 1812, when one of the sons, Robert was five years old. Here young Lee spent nine of his first 18 years and left for the U.S. Military Academy in 1825. Just the year before, his widowed mother entertained the Marquis de Lafayette at the house on the occasion of Lafayette's last visit to the United States.

The rooms of the house now feature furniture pieces of the late 18th and early 19th century, much of it on loan from old Virginia families and collectors. Col. Fitzhugh's daughter, Mary Lee Fitzhugh, was married at this house in such a setting on July 7, 1804, to George Washington Parke Custis, grandson of Martha Washington and adopted son of George Washington. The couple then went to live at "Arlington," now known as the Custis-Lee House in a part of what has become Arlington National Cemetery. There was one daughter to this union, and she became the wife of Robert E. Lee after his graduation from West Point.

It is easy to get to the Lee Boyhood Home from downtown Washington. One of historic house preserver Jay Johns' laments is that too many visitors drive right by on their way to Mount Vernon. Instead of continuing on through Alexandria, he declares, some of these sightseers should turn left from Washington Street (part of the George Washington Memorial Parkway) into Oronoco st. and go one block east. There the house stands—at the corner of Oronoco and St. Asaph streets.

The Lee House actually is a twin, with the next door dwelling having been occupied by Benjamin Hallowell, a Quaker schoolmaster who tutored young Lee in mathematics to prepare him for West Point.

Few people are aware of it now, but when Gen. Light Horse Harry Lee, a three-time Governor of Virginia, took his family to live in Alexandria, the city was not Virginia territory. During the entire Lee family tenure there, Alexandria actually was part of the District of Columbia, having been ceded to the Federal government upon ratification of the U.S. Constitution. It was not retroceded until 1846.

COLLEGES MOVE ON STUDENT UNREST

HON. MARVIN L. ESCH

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. ESCH. Mr. Speaker, inherent in today's debate on the appropriations provisions dealing with student dissent is the implication that the colleges and universities of the Nation have failed to take any action to deal with this problem on their own. The implication is that the Federal Government must step in because the institutions of higher education themselves have failed to take appropriate action to meet the problem.

This simply is not true. Both on an individual basis, and through their associations, the colleges and universities of this Nation have begun to deal with the problems of dissent and have taken action to quell future disorders.

First, they have taken strong action against individual students who have been involved in violence. Although the press has given the strong university disciplinary action little attention in its headlines, in school after school, campus administrators have taken strict disciplinary action against those who have disobeyed the law. The Los Angeles Times recently cataloged some of the actions taken by individual campuses.

Of the eight colleges surveyed, some 75 students had been expelled for their part in the disorder. 265 students were suspended. 346 students were placed on probation and many more were warned about further disruption. As the Times points out:

Expulsion, dismissal or suspension may seem minor to angry citizens. But to the student who may lose his 2–S draft status or financial support, or who may fail to graduate, these are not small matters.

Under unanimous consent, I submit the article by John Kendall and George Kannar for inclusion in the CONGRESSIONAL RECORD, as follows:

[From the Los Angeles Times, June 23, 1969]

DISCIPLINING ON CAMPUS TOUGHER THAN BELIEVED—COLLEGES HAVE BEEN FAR FROM SOFT IN DEALINGS WITH DISSIDENT STUDENTS

(By John Kendall and George Kannar)

From the cradle of the student movement, UC Berkeley, to the nation's oldest university, Harvard, scores of campus disturbances this school year have prompted this question: "Why don't they just throw the troublemakers out?"

The question implies an easy answer: get tough. The implication is that nothing is being done.

But the fact is, universities and colleges have disciplined scores, probably hundreds, with more than clucks of disapproval and slaps on the wrist. During the last school year, for example:

UC Berkeley dismissed 15, suspended 35, placed 160 on disciplinary probation in three disturbances and collected some $20,000 in fines for property damage. Those totals do not include possible action against 272 students involved in the "people's park" incident.

HARVARD TAKES ACTION

Harvard dismissed 3, "separated" 13 for periods up to two years, placed 20 on probation and warned 99 against future misconduct after 400 policemen were called to clear University Hall of protesters.

Stanford University suspended 14, placed 77 on probation and levied fines totaling $5,425 after demonstrators disrupted the Jan. 14 board of trustees meeting and occupied Encina Hall on May 1.

University of Chicago expelled 43 and suspended 81 for periods up to six quarters for a two-week building sit-in and an invasion of the Faculty Club. Police were never called.

Dartmouth obtained a court order to clear a seized building. When it was violated, 40 undergraduates were arrested by police.

Thirty-six of them were sentenced to 30 days in jail. Campus disciplinary hearings were under way at the end of the school term.

SUSPEND 42 AT OCCIDENTAL

Occidental College suspended 42 students for the remainder of the spring term after they sat in the placement office to protest on-campus military recruiting.

San Francisco State College expelled 1, suspended 27, placed 10 on probation and issued letters of reprimand to 97 students in a tumultuous period marked by repeated use of police on campus.

San Fernando Valley State College placed 46 students on disciplinary probation after the take-over of the upper floors of the Administration Building Nov. 4. The college has reserved the right to review the cases of 27 of the students waiting trial on felony charges.

Expulsion, dismissal or suspension may seem minor to angry citizens. But to a student who may lose his 2-S draft status or financial support, or who may fail to graduate, these are not small matters.

What's happened at UC Berkeley illustrates the effectiveness of university discipline, in the opinion of Chancellor Roger W. Heyns.

He told the Comstock Club in Sacramento recently that in the past two years "only 32" of more than 350 disciplined students have committed a second violation and five have committed a third.

Heyns said the impression that UC Berkeley ignores discipline and enforcement of rules among its students is a "myth" which survives outside the campus.

In the four years prior to 1969, the chancellor reported, more than 350 Cal students were disciplined for rules violations, not including what he termed "beer, sex and cheating" cases. (There have been only two of this traditional type at Berkeley since Jan. 1.)

Today political activity is the principal reason for rule-breaking, not panty raids, and just as the reasons have changed, so have the university's methods in dealing with violators.

Going—if not gone—are the days when the dean of students handled each discipline case like a parent, judging the student informally with a minimum of rules.

BECOME SPECIFIC

Lately, rules have proliferated along with statements of the rights and responsibilities of students. Instead of vague commands against misbehavior, many colleges and universities have become specific in spelling out offenses, punishment and procedures.

Last month, the Board of Trustees of the California state college system amended general rules which said any student may be placed on probation, suspended or expelled for:

A—Disorderly, unethical, vicious or immoral conduct.

B—Misuse, abuse, theft or destruction of state property.

New rules list cheating, forgery, misrepresentation, obstruction or disruption, physical abuse, theft, unauthorized entry, sale or possession of dangerous drugs, possession or use of explosives or deadly weapons, lewd or indecent behavior and soliciting others to do an unlawful act.

The new regulations define "deadly weapon" as "any instrument or weapon of the kind commonly known as a blackjack, slingshot, billy, sandclub, sandbag, metal knuckles, any dirk, dagger, switchblade knife, pistol, revolver, or any other firearm, any knife having a blade longer than five inches, any razor with an unguarded blade, and any metal pipe or bar used or intended to be used as a club."

As the rules become specific and as the number and types of offenses increase, the procedure for dealing with violators becomes more legalistic, taking on the appearance of an adversary proceeding—a trial.

Changes in the students themselves help foster the trend toward legalization.

Increasingly distrustful of what they think is secrecy and behind-the-scenes maneuvering, many students demand that everything must be conducted in the open. Many want the procedures written down so they know how to defend themselves against charges.

But "openness" itself has a positive value for some of them. At Yale University, for example, "open decision-making" is one of the most appealing revolutionary rallying cries. Opening the disciplinary procedures somehow seems to lead almost inevitably to regularizing them, and eventually making them more formal and legalistic.

At UC Berkeley, regulations issued more than a year ago guarantee due process for the accused student, including right of counsel at an impartial hearing, safeguards against self-incrimination and an adequate summary of the hearing.

To William Van Alstyne, general counsel of the American Assn. of University Professors, the system becomes "more judicious" as it becomes "more judicial."

But not everyone agrees that legalism is good. State College Chancellor Glenn S. Dumke doesn't.

PROCESS COLLAPSES

"There is . . . a very real danger that student discipline on university campuses is being jeopardized by the imposition of administrative injunctions, providing attorneys for the prosecution and for the defense, the use of legal rather than academic vocabularies, etc." Dumke said in a recent speech.

"Not only can such judicial trappings provide a false impression of due process, but they can seriously slow down that process to a point where it simply becomes inoperative."

At San Francisco State College, one of Dumke's administrative headaches during this school year, the usual disciplinary process collapsed when the student body president refused to appoint student members to a student-faculty committee.

Emergency procedures were invoked by acting President S. I. Hayakawa. He appointed an associate as the coordinator for internal affairs, charged with gathering information about violations and conducting hearings before panels of volunteer faculty members.

"We've sort of staggered along as best we could under tremendous handicaps," says a college spokesman. "We have tried to make it a fair system although it has not been satisfactory."

This fall San Francisco State administrators plan to use the same emergency system, unless the Academic Senate approves a new one.

At UC Berkeley, a new judicial system was proposed by a student-faculty Study Commission on University Governance. In a report, issued last year, the group said:

"We, too, share the nostalgia for a community whose limited size and shared purpose permit it to dispense with rules and procedures. Reality compels the admission that such a community does not resemble the Berkeley of 1968."

The commission proposed that the central adjudicatory function of the university community should fall to a faculty-student Student Conduct Court, divided into a preliminary hearing division and trial division. The planners foresaw the occasional need for a campus review court.

They called for formation of a legal services board, an agency composed of law-trained faculty members and students. The board would prepare cases, supply advisors to students brought before the courts and assist the courts in resolving legal issues.

The commission's stated objective was to provide for a judiciary independent of executive or prosecuting functions and to create judicial and rulemaking machinery which is broadly representative of all campus interests.

RULES COORDINATOR

So far, nothing has been done about the recommendations.

With one exception, UC Berkeley's disciplinary machinery remained largely the same through the university's recent troubles. A difference is the appointment of a coordinator of rules and facilities, separate from Dean of Students Arleigh Williams' office, whose task is to initiate cases according to the time, place and manner of rules infractions.

Cases which Dean Williams thinks are serious enough are heard by the Committee on Student Conduct, composed of five faculty and four student members.

Williams admits that the volume of cases has had a "serious impact" on the university's disciplinary machinery, but he says the Committee on Student Conduct continues "to meet the calendar."

"I feel our system is fair and a very wise system," he says. "I think it has handled discipline in a very capable manner. It is not lenient, nor is it repressive. It is a system that is able to provide proper justice for persons accused of violating the rules."

Not so, says Charles Palmer, UC Berkeley's student body president this year.

"I think there are tremendous problems here," he says. "Many of the structures are irrelevant. Discipline often appears arbitrary and not terribly consistent. Lots of people are tried for what they couldn't be tried for in court. It has become a political thing. Some people are disciplined and some are not."

In Palmer's opinion, the system is not representative. He says it is run by faculty members appointed by the chancellor and by students who are "not our peers."

Palmer's view is strikingly different from that of Pat Shea, a member of the Council of Presidents at neighboring Stanford.

"I think Stanford has made tremendous steps in community government and community respect for its own laws," the political science major said.

Stanford's new president, Kenneth S. Pitzer, agrees.

At his recent inauguration, Pitzer said the university's new system is intact but "seriously overburdened." But, he said, "We are gaining rather than losing in this area. I hope for further progress next year.

"We are moving forward in rebuilding the understanding and confidence among the constituencies at Stanford."

Stanford has attempted to involve the entire campus community in determining what constitutes a community disruption, then engage each element further in solving the problem and applying disciplinary measures.

To accomplish this, a Committee of 15 last year recommended a new legislative and judicial charter.

At the same time, I think it is well to point out that student unrest and concern need not necessarily deteriorate into violence and disruption. Although the headlines and the television screens focus attention on the violent disruptions which have occurred throughout the Nation, the hundreds of college campuses which have dealt with the problem in an amicable and cooperative fashion have been ignored. The Association of American Colleges has furnished me with reports on the way in which eight colleges and universities throughout the Nation handled their student dissent problems successfully, avoiding violence, meeting those legitimate concerns which moderate students were expressing and

avoiding capitulation to the demands of the radicals. I submit the reports of those colleges, the University of Delaware, Colby College, Franklin and Marshall College, Mundelein College, Ohio Wesleyan University, Southern Methodist University, Wesleyan University and the University of Pennsylvania for inclusion in the CONGRESSIONAL RECORD, as follows:

UNIVERSITY OF DELAWARE

Land-grant university, located in Newark, Delaware; coeducational—12,000 students.

The action taken by the University over the past two years is summarized in the following extract from a letter from the Dean of Men.

TWO YEARS OF CHALLENGE

1. Early in the spring of 1967, prior to any problem, Vice President Hocutt asked the Student Government Association to consider the issue of disorders on campus and to suggest a policy. The result was a brief statement expressing the right to dissent provided the rights of others were not infringed upon. We have reiterated this basic premise (orally and in print) on which there was agreement by all and it now appears firmly established.

2. In the fall of 1967 a protest against ROTC gave us an opportunity to apply the policy making clear to the campus that the University intended to enforce it. Specifically, seven students who disrupted an ROTC class were suspended.

3. Continuing and intensive discussion of the policy and the suspensions by all segments of the community led to a high degree of consensus before the year was out. Of course, the Columbia tragedy helped, too.

4. Large amounts of patience, talk, flexibility and firmness have been key ingredients in dealing with the provocations and confrontations of recent years. Hand in hand with this approach has been the acceleration of student involvement in the governance of the University via increased participation on faculty committee and an enlargement of the role of student government.

5. During the past year student, faculty and staff committees through many hours of work together have reached consensus on a statement of student rights and responsibilities, a new Student Government constitution and a revised judicial system. These significant steps have reduced the need for confrontation and demonstration and have kept the majority of students separated from the activists.

6. A challenge to our policy and practice came via an attempted building takeover in December 1968. Patience, persuasion and firmness caused the effort to be aborted without the need for outside assistance. This event appears to have established a widespread awareness that the University means to manage its affairs and protect the rights of all members of the community.

7. Continued success appears to hinge on working out a structure which will permit easy and regular communication between all segments of the campus and the resolution of issues by persuasion and compromise.

COLBY COLLEGE

Liberal arts college located in Waterville, Maine—independent, coeducational—1500 students.

The action taken by the College in response to a student sit-in is described in the following extracts from a letter from the president.

"In late February the Student Government presented me with a list of nine "demands," accompanied by a somewhat peremptory letter, and evidently they had succeeded in working the campus up to quite a pitch of excitement over what everyone regarded as an assertion of student rights. I won't trouble you with what ensued other than to say there were times when it was quite unpleasant. The administration succeeded in convincing the students that reasonable proposals were more appropriate than "demands" and we went on from there on that basis.

There was for a period of two and a half weeks a somewhat distasteful occupation of the college Chapel, a sort of extended live-in, teach-in, and love-in, but we managed to avoid panic and by dint of not forcing the students out but rather mostly ignoring them we avoided the polarizing of the campus that often takes place under such circumstances. Spring vacation finally got them out of the Chapel and we did not let them return. Committees with equal representation of students on the one hand and faculty and administration on the other were established by mutual consent of the administration and Student Government to discuss at length the nine proposals. Not all these issues have been resolved as yet but some good results have emerged.

Meanwhile student representation had been going on for two years, on all major faculty committees. I thought this was a healthy move, and with only a few exceptions the students demonstrated both insight and a constructive purpose.

Toward the end of April we had a special meeting in Boston of about a dozen trustees, about a dozen students, and six of us from the faculty and staff to discuss openly and frankly the difficulties of the spring term. It was agreed by everyone there that we should establish some sort of mechanism to deal rationally and intelligently with proposals in the future without having to go through quite as much trauma as we had this spring. The upshot of the Boston meeting was a recommendation, enthusiastically endorsed later by the Board of Trustees in full assembly, that early in the fall we have a "Constitutional Convention," the purpose of which will be to re-examine the governmental structure of the institution and to make suggestions for constructive change. A planning committee has been established which will meet for overnight sessions on three occasions during the summer here in Waterville, and again two or three more times in September. This planning committee will lay the ground work, prepare the agenda, prepare position papers, and generally establish the modus operandi for the "Constitutional Convention," which will take place in October.

On the planning committee there are ten students representing among them all three of next year's upper classes, two members of the senior class just graduated, about eight trustees, three members of the administrative staff (the President, the Dean of the Faculty, and the Dean of Students), six faculty members chosen from among the three different academic divisions by the elected division chairmen, five alumni chosen by the Alumni Council, and three or four parents chosen by the Parents Association. This seems a representative group, and the composition is endorsed with enthusiasm by the students, the faculty, and the trustees along with one alumni representative who formed a steering committee to set up the planning committee during the month of May.

It seems to me that what has been accomplished here is a clear recognition of the proper role of students in the decision-making process. There will surely be some discussion of the appropriate role the students should play in academic policy and in the social framework of the college. I am sure that the lines of communication among all our constituencies will be improved by this planned conclave in the fall, and I am confident that as an institution we will be strong enough thereafter, if the Board of Trustees sees fit to accept the recommendations of the Convention, to withstand most of the kinds of attack on peace and order that have become commonplace in academic communities. To be sure, there are always a small minority of dissident students, and sometimes faculty, whose purposes may not be entirely constructive, but I think our best protection against the kind of influence such groups might have is the establishment of a realistic governmental structure with which the students themselves will feel some identity and for which they will be willing to take some responsibility.

I probably am making this all sound easier and simpler than it is, but at least we think we have found a way not only to set our own house in order but to provide safeguards to preserve that order through future generations of students and the changing times."

FRANKLIN AND MARSHALL COLLEGE

Liberal arts college for men, located in Lancaster, Pennsylvania—independent—2300 students.

The action taken by the college after two disruptive incidents occurring in the spring of 1969 is summarized in the following extracts from a statement addressed to the College Community by the president on May 25th.

"For years, Franklin and Marshall has been second to none among colleges and universities in affording freedom to its faculty and students, and in defending that freedom against the forces of erosion. This has been a healthy freedom. The College has been justified in placing its confidence in the belief that the members of the College would use freedom responsibly. With only rare exceptions, they have done so, and in those exceptions, the strong disapproval of the responsible majority has brought the remedy.

The absence of repression and labyrinthine regulations, the preoccupation with affording equity, mutual respect and unhampered communication among the members of the College, the whole concept of collegiality—all these things stem from the College's dedication to providing an atmosphere of freedom in which learning can best take place.

Twice within the last year, these values have been put in jeopardy by the actions of small groups. The strains resulting—not from violence because no violence has been perpetrated, but from the threat of violence—have shown how deeply everyone within the College must cherish the concept of freedom indivisible for all.

We must learn all we can from the incidents we have faced. The subtle shadows they cast have demonstrated the natural history of disruptive confrontation. Without ever having matured into full-scale disruption, happily, they have nonetheless revealed the vulnerability of a college to the threat of violence, reaction, polarization and escalation. They have shown how quickly a trigger issue can get lost in other emotional-laden concerns. We have seen how rapidly and surrealistically two or more logically unrelated events or issues can become one morass of confusions and discontents. We have learned that the academic process cannot operate in a climate of crisis. We have learned that in every incident, we are limited by human frailty and the myopia of the moment.

Now I am advised, correctly, I am sure, that it is no longer sufficient simply to depend upon the spirit of the College and our sense of common purpose. Some greater specificity is required to guide those who may, unknowingly or by intent, with valid cause or evil design, seek to express their dissatisfaction in ways that exceed the limits considered tolerable by the College. We must make clear our expectations of the members of the College.

While a college operates in democratic mode, with high regard for individual dignity and individual desires, and while it attempts

to give students leverage and influence in the decisions affecting them, it cannot operate on a balance-of-power basis. An overriding obligation rests with the faculty and other educators to exercise carefully reasoned professional judgments in the maintenance of the academic integrity of the institution.

There can be no compromise with our belief that violent disruption or forcible interference with the orderly activity of Franklin and Marshall is intolerable. Where it occurs, we must be in a position to deal with it promptly, with firmness and fairness.

It is not tolerable for anyone to use means involving real or threatened physical restraint, intimidation, or coercion of others.

It is not tolerable for any of the college community or guests of the College to be denied ingress or egress to offices, classrooms or other facilities of the College by force or the threat of force.

It is not tolerable for anyone to disrupt the activities or the orderly conduct of the academic processes of the college by any intimidative means.

If despite all that has been said, a use of force in disruption of the College's activities were to occur, our response would be prompt and firm. Our first concern, of course, would be with the imminence of restraint or harm to persons, or the danger of serious property damage. In any steps taken, we would hope to exhaust the resources of the College before calling upon civil authority, unless the extremity of the circumstances dictated otherwise, in which case our action would be swift and purposeful. In most such cases, conditions permitting, I would hope to employ the judicial injunctive process. Where time permitted and the urgency of circumstances allowed, if police assistance were to be requested, I would hope to be joined by faculty observers. I would request also that concerned students assist by keeping curious spectators and others away from the scene, by establishing a rumor control center and by helping to keep the campus cool.

In the event of a disruption impending or in process of settlement, time and information are our most valuable commodities. I earnestly call upon all members of the College to inform the officers of the College promptly when they see a crisis in being or in process of development.

It is neither wise nor possible to publish a script for every succeeding step to be taken. In the first stages of a disruption, however, I would be inclined to invite a meeting with the disrupters or their chosen spokesman at a stated time and place where, with such officers and members of the faculty as I might find it appropriate to assemble, their concerns could be freely discussed without interruption of the activities of the College.

If that invitation were not accepted, I would be inclined to remind the disrupters that their actions were in violation of College policy, remind them of the possible consequences of their action, and give them a reasonable brief time to cease the disruption and repair from the scene.

If they then did not cease, I would inform them that if they did not stop their disruptive actions before a reasonable deadline in the near future, they would be subject to immediate suspension.

It might be at this point, then, if not required earlier, that I would seek an injunction, after due warning, which would, when served, inform them that if they did not desist, they would be in violation of a law and subject to the actions of civil authority. There are of course other resorts to civil authority, and those would be chosen which provided the most appropriate means of assuring order and free movement of individuals, and of restoring College facilities to normal use.

If the suspension were invoked, it would of course be in effect until, through the instrumentalities providing due process, it were confirmed, revoked or amended. After due consideration, the suspension might, of course, result in expulsion.

I see no other way to provide for the swift decisions necessary to deal with a violent disruption. Whenever possible, consultation is desirable, but that the responsibility for action rests with the President of the College in urgent circumstances is clear. . . .

The approach above has the virtue that it provides for the prompt response and decisive action necessary to preserve the order and integrity of the institution while at the same time assuring individuals protection from injustice. Firm administrative action can be used to prevent violence, cool tempers, avoid escalations. The due process of hearing and review of those decisions made in the swift flow of events assures fair treatment of individuals.

But again I would emphasize that all members of the College can best find their remedies in reasoned discussion.

MUNDELEIN COLLEGE

Liberal arts college for women, located in Chicago, Illinois—independent but historically-related to the Roman Catholic Church—1500 students.

The College's responses to the recommendations contained in the Association of American Colleges statement of July 1968 on *Student Unrest* are as follows:

Statement (1): "to accord students, as members of the academic community, an appropriate share in the determination of institutional policies in respect to both the instructional program and its social framework."

At Mundelein such matters as Curriculum, concert-lecture programs, Academic Affairs, etc. are discussed at Committees made up of students, faculty and administration.

A College Council of College Administration and Student Officers meets regularly to discuss problems and creative projects at the college. Students and faculty are on some trustee committees and have attended and participated in trustee meetings.

Statement (2) "to involve the several components of the academic community in the determination of such rules for the conduct of its members as may be necessary for effective realization of institutional policies."

The Student Dormitory Council studies student needs and makes recommendations in regard to policy to the Administrative Council. For example, this year they requested a new no-hours policy for sophomores as well as juniors and seniors and the removal of a dress code for class attendance. Each floor of the dormitories has a student resident-assistant who is in charge of the floor and implements policy.

Statement (3): "to make it known that these rules, representing the common will of the community, will be enforced through procedures that include a guarantee of the due process to anyone accused of breaking the rules."

At the regular meetings of the College Council any difficulty in interpretation of policy or rules is discussed. Such meetings are open to all students if the agenda is important enough to attract them. Due process, as established by the student congress, is described in the Student Handbook.

Statement (4): "to establish recognized lines of communication among all parts of the community."

In a small school, the student finds it possible to communicate easily with the administrator in question. The president and other administrative officers have made special efforts this year to be frequently and informally available for exchange of ideas.

Statement (5): "to make definite plans, including both academic sanctions and resort to civil authorities, for countering any wilful attack on the peace and order of the academic community."

It is the opinion of faculty, students and administration of this campus that the open exchange of ideas should be such that a major difference of opinion could not go undetected very long. Readiness to listen and frequent opportunities for meaningful exchange, open faculty meetings—with students free to speak, and regular committee discussions are the present means used to make attacks on peace and order unnecessary. Campus discussions of nation-wide problems have helped to focus attention on the need to keep our own house in order.

Such meaningful statements as those of the Association of American Colleges and the American Council on Education have been distributed to faculty and student leaders and discussed by them.

OHIO WESLEYAN UNIVERSITY

Liberal arts college, located in Delaware, Ohio, related to Methodist Church, coeducational—2500 students, 65 per cent out-of-state, 84 per cent white American Protestant, 1.2 per cent American Negro.

Council on Student Affairs, with Student majority, has full authority for all non-academic regulations.

Student newspaper is completely unsupervised and uncensored.

Choice of visiting speakers is unrestricted.

Students have voting representation on all faculty standing committees except faculty personnel committee.

Typical black student demands (1967–68) were met by intensified recruitment program, appointment of black admissions counselor, enlarged academic program in African culture and Afro-American programs, and provision of social center for primary but not exclusive use by black students.

Single incident of drug use and sale (1967) was dealt with through established disciplinary procedures: thirteen students were suspended without unfavorable reaction from student body.

Current tensions—Vietnam, the draft, race and poverty—all felt on campus. SDS chapter has existed and has conducted orderly demonstrations. But disruptive violence has been avoided as a result of constructive reforms, open communication and clear disciplinary procedures.

Student morale shown by record contribution in June 1969 to Senior class gift fund—over $18,000 from graduating class of 545.

SOUTHERN METHODIST UNIVERSITY

Privately controlled university located in Dallas, Texas—related to the Methodist Church; offering bachelor's, master's and doctoral programs; coeducational—9300 students.

In the spring of 1969 the president was presented with a document containing a number of demands formulated by a recognized student organization called the Black League of Afro-American and African College Students. After giving a chronological summary of the events of April 25–May 2, the University newsletter *SMU Today* concludes as follows:

"At no time during the president's meetings with the black students did these students cause any disruption or destruction. They were present in the president's office by appointment.

SMU has made very clear, both to white students and to students from minority groups, that this University will not allow disruption of the University's normal functioning. There has been no disruption.

The University has made it very clear that it will fulfill all of its commitments to all of its students, faculty, and staff.

The University has made it clear that admission to SMU will continue to be per-

mitted on the basis of a student's ability to do the work expected by SMU.

The University has made it clear that financial aid will continue to be given to any admitted student on the basis of need, as far as available resources permit.

The due process followed by the president during his meetings with the black students has assured the University that duly authorized groups are expected to carry their appropriate responsibilities. The duly constituted authority of the faculty over its areas of responsibility was honored. The responsibility of students was honored. The administration, charged with a wide variety of responsibilities—including the peaceful, normal functioning of SMU—made clear by its actions, restraints, and preparations, that SMU will function normally, to the interest of all the members of the University community.

The president's handling of his conversations with the black students was given the unanimous approval of SMU's Faculty Senate, a prolonged applause from the 400 members of SMU's General Faculty, and a standing vote of approval and appreciation from the University's Board of Trustees.

Three student leaders bearing concerns that the majority view of students might not be represented in the University's actions on the BLAACS' document met for an hour in the president's office May 16th with the president and other members of the administration and later issued statements—in behalf of a larger group of student leaders—supporting the University's actions.

SMU intends to live through these difficult days of unrest with a clear understanding of its particular purpose, and under the leadership of an administration and a faculty which will seek to be wise, firm and compassionate. They are encouraged in this effort by a student body which has clearly indicated that the students of SMU want their University to stay a university committed to its primary objective of teaching and learning.

WESLEYAN UNIVERSITY

Liberal arts college for men, primarily undergraduate but offering a number of doctoral programs; located in Middletown, Connecticut; independent—1700 students.

What follows is an extract from a letter addressed by the president in May 1969 to the Joint Education Committee of the Connecticut Legislature in response to a request from the chairman of the committee.

"ATTITUDES TOWARD CAMPUS DISRUPTIONS

"The fundamental conditions of university life are rationality, civility, integrity, humanity, mutual respect and cooperation. Any significant erosion in these conditions tends to jeopardize academic and social freedom and, at some extreme, to demoralize the institution. For these reasons, the objectives we share are as follows:

"(1) The university must maintain order and equity in the conduct of its affairs;

"(2) Every individual in the university must be free of intimidation and of harassment;

"(3) Peaceful, non-obstructive forms of protest (including demonstrations, picketing, etc.) are rights to be protected;

"(4) Protest methods which violate and subvert principles of freedom of expression, academic freedom, and freedom of movement—or any of those—are not rights to be protected in our society or on our campuses; and

"(5) Any protest which deprives any person of the right to speak or be heard, or which involves disruption of educational or related processes, or which inhibits the freedom of movement or the legitimate privacy of any person, is contrary to basic principles of civil liberties and is incompatible with the purposes of a university.

"The confrontation technique—in some cases an effort to produce instant change or instant capitulation by establishing or threatening an inconvenience—has been embraced by some as a quick and sure method for producing change. And change *has* resulted in many places. But this type of confrontation substitutes coercion for persuasion. It is based on conflict, not on participation; it is negative, not affirmative; it leads to hit-and-miss change which may not be genuine improvement.

"This type of confrontation provokes resistance and slows the pace of considered reform by turning administrators and others into keepers of the peace. It is an illegitimate and self-defeating extension of the type of peaceful protest and dissent available to those who object to policies and who have exhausted traditional remedies through use of established channels of communication.

"Confrontation based on coercion ultimately forces a choice between freedom and peace: freedom lost as a result of the actions of those who use coercion, or peace lost through the use of counter-force by or on behalf of the university.

"The need for reform is recognized at Wesleyan and at every other reputable university. At Wesleyan, academic policies are being reoriented; institutional structures and decision-making procedures are being redesigned; methods of self-governance are under review; and restraint has been exercised in dealing with both individuals and group challenges during a year when every university has experienced some degree of unusual pressure.

"It is obvious that crisis, confrontation, confusion and coercion are unacceptable as norms of university life. But flexibility has been and remains important. Colleges and universities must be permitted to deal with questions of order and discipline just as they are entrusted with other responsibilities. Campus officials must retain the right to determine when (if ever) the support of public authorities is needed, and what (if any) discipline may be warranted. Legislation designed to prod campus officials into particular patterns of response to events which cannot be pre-defined would not be in the public interest.

"CODES AND PROCEDURES FOR SELF-GOVERNANCE

"At Wesleyan University, disciplinary authority is delegated by the Board of Trustees to the president, who is technically accountable to the Board and morally accountable to the entire University.

"Students live under principles set forth in a University Code and by procedures set forth in a Constitution. Each document was adopted and may be amended by students, subject to concurrence by the faculty and the president.

"A Student Judicial Board (of students) has initial jurisdiction over questions of student discipline. Its findings and penalties are subject (on appeal) to review by a faculty-student committee and (in any case) to review by the president, who may reduce or enlarge penalties. Severe penalties (probations, suspensions, explusions) are meted out from time to time.

"An elected faculty committee is available—in accordance with procedures recommended by the American Association of University Professors—to consider questions of faculty conduct which may be raised by the president. The president may initiate a dismissal proceeding in a case of serious misconduct and the Board of Trustees is the ultimate decision-making body.

"We have not had a riot or other calamity at Wesleyan. But we have had difficulties and tensions which prompted the creation, this year, of a faculty-student Review Panel to find the facts and make comments to the president if there should be a disruption.

"Actions in response to conflicts

"Wesleyan University attempts to keep channels of communications open and to maintain the atmosphere of mutual trust and commitment to reason so essential to civilized academic life. This year, the administrative apparatus was supplemented by the election (by students, from a faculty-nominated slate) of three faculty Ombudsmen, prepared to help students and others get appropriate attention to policy questions raised but not resolved. The faculty has, in addition, been responsive to students in establishing new programs (e.g., a Center for the Humanities, an Afro-American Institute, an Experimental College) and in reconsidering the extent of student participation in decision-making processes.

"If there should be a disruption in spite of the attempt to remain open and responsive to student and faculty interests, the reaction would be guided by the following initial and immediate objectives:

"(a) to avoid violence and to protect persons from injury and the threat of injury;

"(b) to protect property;

"(c) to protect freedom of movement and expression for all, including demonstrators;

"(d) to avoid interruption of normal processes, such as classes, research, public events, and administrative functions; and

"(e) in the event of such interruptions, to respond so as to effect de-escalation as promptly as possible.

"It is well to remember that a university is not a collection of bricks and mortar: it is a place of learning. A disruption—however severely the conduct may be judged on review—may not in itself imperil the life of the institution or call for any particular action such as an immediate confrontation or police intervention.

"If there were an acute difficulty threatening or involving injury, serious property damage or major disorder, we would be conscious of the fact that an academic institution may turn to public authorities for help. We are aware of court procedures which can be invoked: the restraining order in the event of an identified thereat; the injunction in the case of an established difficulty. When a university uses such procedures, it removes itself from the business of law enforcement. It should do so if it has reason to believe its own mechanisms for self-governance will not be effective. Wesleyan would make this decision if necessary.

"A university can, without turning to public authority, establish its own conditions: it can find equivalent facilities for those who are inconvenienced; it can warn disrupters that they are, by their own actions, setting themselves apart from the university; and it can recognize that fact through suspensions which can be continued or made permanent after judicial review. I advised the Wesleyan community of these possibilities in a written statement this winter."

UNIVERSITY OF PENNSYLVANIA

State-supported Ivy League university, located in Philadelphia, Pennsylvania; coeducational—22,000 students.

The following extract from a letter from the Vice-Provost for Student Affairs explains the origin and development of the *Guidelines on Open Expression* which have been adopted by the university and of which a copy is annexed.

"The Guidelines arose out of an earlier demonstration about 18 months ago at which time it became apparent that we did not have a proper mechanism or manner of response to the confrontation tactics being utilized with recruiting officers on campus. The President appointed a committee of stu-

dents and faculty as a result of that demonstration who held hearings and after about four months of work came up with a document which is the core of the document which is attached. The document which they first brought forward was subjected to conversation in open meetings of the student body, in the Faculty Senate, and in various parts of the administration. It was modified by the Senate (which is the formal body of the University Faculty), and the Forum (which attempts to bring students, faculty, and administrators together in open conversation) and finally was approved at the highest level of decision making in the University, the University Council. It was then put out for student referendum and received a sufficient majority to now be considered in effect.

In the demonstration that we had in February of this year, the Guidelines had not yet been adopted so that we took them to the demonstrators and suggested that they might be approved by them and by the administration in the situation in which we found ourselves. Inasmuch as the thinking had been going around the campus for about 12 months there was a certain background of acceptability of utilizing those Guidelines at that time. I do want to reiterate however that they were adopted by both parties in the midst of the demonstration and were not in effect previous to that demonstration.

This brings me to a third and rather sensitive point and that is the whole background of how decisions are made on a university campus is probably key in this whole area under discussion. Earlier conversation and lines of communication become a base upon which you can build in times of duress and if they are not present in those moments of duress, I have the feeling they must be virtually impossible to create at that particular time. Thus the Guidelines are in and of themselves important and the process by which those Guidelines are arrived at which brought persons from the several sectors of the University together to draw up the Guidelines is also important. At the same time if other informal networks of communication are not being carried forward and easily available, then in the midst of times of utmost urgency these will be impossible to construct.

UNIVERSITY OF PENNSYLVANIA GUIDELINES ON OPEN EXPRESSION

(Draft approved by the University Council on April 9, 1969)

I. PRINCIPLES

A. The University of Pennsylvania, as a community of scholars, affirms, supports, and cherishes the concepts of freedom of thought, inquiry, speech and lawful assembly. The freedom to experiment, to present and to examine alternative data and theories; the freedom to hear, to express, and to debate various views; and the freedom to voice criticism of existing practices and values are fundamental rights which must be upheld and practiced by the University in a free society.

B. Recognizing that the educational processes can include demonstrations and other forms of collective expression, the University affirms the right of individuals and groups to assemble and to demonstrate on campus within the limits of these Guidelines. The University also affirms the right of others to pursue their normal activities within the University and to be protected from physical injury or property damage.

C. The University should be vigilant to ensure the continuing openness and effectiveness of channels of communication among members of the University on questions of common interest. To further this purpose, a Committee on Open Expression is hereby established as a standing committee of the University Council. The Committee on Open Expression has as its major tasks: monitoring the communication processes to prevent conflicts that might emerge from failure of communication, recommending policies and procedures for improvement of all levels of communication, advising administrative officers where appropriate, and participating in evaluation and resolution of conflicts that may arise from incidents or disturbances on campus.

II. COMMITTEE ON OPEN EXPRESSION

A. Composition

1. The Committee on Open Expression consists of twelve members: five students, five faculty members and two representatives of the administration.

2. Members of the Committee are appointed by the Steering Committee in the following manner:

a. Student members shall be nominated from undergraduate students, graduate students and graduate-professional students by a means arrived at by representative student groups. If the students are unable to agree upon such a procedure, and instead propose several different procedures, the Steering Committee shall make an interim choice between the student proposals. Students selected by an interim process shall serve only until their peers have established a permanent selection process.

b. Faculty members shall be nominated by the Senate Advisory Committee. The administration members shall be nominated by the President.

c. Each member shall be selected for one year. Any individual may not serve for more than two consecutive terms.

3. The Chairman of the Committee shall be selected by the Steering Committee from among the members of the Committee on Open Expression.

B. Jurisdiction

The Committee shall have competence to act in all issues and controversies involving open expression under these Guidelines. The Committee's functions include, but are not limited to, the following:

1. Giving advisory opinions interpreting the Guidelines at the request of an interested member of the University. If the Committee does not give a requested opinion, it should indicate its reasons for not doing so.

2. Reviewing administrative decisions taken under these Guidelines, without prior consultation with the Committee.

3. Issuing rules for interpreting or implementing the Guidelines. Before adopting a rule, the Committee should hold an open hearing on the text of the proposed rule and receive the views of interested individuals or groups. An affirmative vote of eight members is required for any such rule to be effective.

4. Recommending to the University Council any proposals to amend or repeal the Guidelines. An affirmative vote of seven members is required to make such recommendations.

5. Publishing an annual report to the Council and the University on the status of the Committee's work.

6. Advising administrative officials with responsibilities affecting freedom of expression and communication, including particularly the use of University facilities for meetings and the utilization of force to terminate a demonstration.

7. Mediating in situations that threaten to give rise to incidents that may possibly violate the Guidelines.

8. Evaluating and characterizing incidents that have occurred, both to determine whether the conduct of any group, considered as a whole, has violated the Guidelines, and to attempt to discover and remedy any failures in communication that may have caused or contributed to the incident. The Committee does not act as a disciplinary body to try charges against individual students and impose punishment, but its interpretation of the Guidelines shall be conclusive in any disciplinary proceeding that may ensue.

9. Adopting procedures for the functioning of the Committee, varied to suit its several functions consistent with these Guidelines. Procedures that are not wholly matters of internal Committee practice shall be published in advance of implementation.

C. Procedures

1. Seven members of the Committee constitute a quorum. No member may participate in the consideration or decision of an issue in which he is or may become involved.

2. The Committee can authorize subcommittees, selected from its own members, to act for the Committee in any matter except the issuance of rules interpreting or implementing the Guidelines, or the making of recommendations to amend or repeal the Guidelines.

III. STANDARDS

A. The right of individuals and groups peaceably to assemble and to demonstrate shall not be infringed.

B. The substance or the nature of the views expressed is not an appropriate basis for any restriction upon or encouragement of an assembly or a demonstration.

C. The University should permit members of the University, upon suitable request, to use any available facility or meeting room for purposes of open or private discussion.

1. The responsibility for determination of the policies and procedures for assigning University facilities should be lodged specifically in the office of the President or his delegates.

2. The Committee on Open Expression should be consulted in the determination of the substance of the policies and procedures and the manner of their publication to the University.

3. Specific attention should be given in the policies and procedures to the groups of organizations, other than recognized student, faculty or administration organizations, entitled to request use of University facilities.

4. Before a request of a University group to use any facility is rejected, for reasons other than the prior commitment of the facility or the like, the President or his delegate should consult with the committee on Open Expression to obtain the advice and recommendation of that body.

D. Groups or individuals, including faculty, students, administrators, and other University personnel, planning or participating in demonstrations should restrain their activities in accordance with the following standards:

1. Conduct that causes injury to persons or damage to property, or which threatens to cause such injury or damage, is impermissible.

a. Demonstrations should not be held inside laboratories, museums, computer facilities, libraries, or the like, because of the risk of loss, damage or destruction of rare or irreplaceable documents, collections or equipment.

b. Demonstrations should not be held in places where a significant hazard of fire or building collapse or falling objects is presented.

c. Demonstrations should not interfere with the operation of hospitals, emergency facilities, communication systems, utilities, etc.

2. Demonstrations should be conducted in a manner that keeps within reasonable bounds any interference with or disturbance of the activities of other persons. The reasonableness of conduct may be determined by such factors as the time and place of the demonstration and the general tenor of conduct.

a. Demonstrations should not be held inside libraries or private offices, or inside class-

rooms or seminar rooms in which meetings or classes are being held or are immediately scheduled.

b. Demonstrations should not interfere with free and unimpeded movement in and out of buildings and rooms and through all passageways. This will generally be satisfied if at least one-half of each entrance, exit, or passageway if free from obstruction of any kind.

c. Noise level is not of itself a sufficient ground for making a demonstration improper, but may possibly, in particular circumstances, interfere and disrupt the activities of others in an impermissible way.

3. The refusal of persons participating in a demonstration to follow the instructions of the Vice-Provost for Student Affairs or his delegate to modify or terminate the demonstration is a violation of these Guidelines. The Committee on Open Expression plays a vital role in such situations, either in an advisory capacity or in immedately reviewing the instructions.

4. When the Vice-Provost for Student Affairs or his delegate considers that an individual or a group has violated the Guidelines, he may request to examine their matriculation cards or other University identification. Failure to comply with this request is a violation of the Guidelines.

E. Supervision of demonstrations, where necessary, is the task of the Vice-Provost for Student Affairs and his assistants.

1. In carrying out this responsibility, the Vice-Provost obtains the advice and recommendation of the Committee on Open Expression whenever feasible, but it is recognized that he is the responsible administrative official who may have to act in emergency situations without prior consultation.

2. All members of the University are expected to comply with the instructions of the Vice-Provost or his delegate at the scene of a demonstration which he finds violative of the Guidelines, the fire laws and other laws, ordinances or regulations relating to occupancy of the University's buildings. Such compliance is a defense to any disciplinary proceedings under these Guidelines for the immediate conduct to which the instructions are responsive, unless the violators are found to have caused or consciously threatened injury to persons or damage to property or to have demonstrated wilfully in a protected area, as defined in D1 and D2 above.

3. Terminating a demonstration by force is a most serious step. It is frequently a mistake to terminate a demonstration by force, as this may exacerbate existing tensions and lead to personal injury and property damage.

a. Avoidance of injury to persons by the continuation of the demonstration is a key factor in determining whether it should be forcibly terminated. Property damage and significant interference with educational processes are also factors to be considered, and may be of sufficient magnitude to warrant forcible termination.

b. Whenever possible, the Vice-Provost should consult with the Committee on Open Expression before seeking a court injunction against the demonstrators or calling for police action.

c. The Vice-Provost or his delegate should attempt to inform demonstrators that he intends to seek an injunction or call for police intervention before he does so.

4. When a demonstration is forcibly terminated, a full statement of the circumstances leading to the event should be published by the Vice-Provost within the University.

e. Attendance at demonstrations of unarmed campus police is a normal and useful aid to the Vice-Provost and his assistants.

I am convinced that such instances are not rare. Indeed, I am confident that every Member here today can point to similar instances where student dissent has been dealt with successfully within their own districts. Certainly this is true in my own district in Michigan where both the University of Michigan and Eastern Michigan dealt promptly, firmly, and rationally with student problems. These campuses and others such as Adrian College have dealt with the issues successfully because the lines of communication between faculty, administrators and students were truly open so that problems and questions could be dealt with in a frank and open basis.

The success of many colleges in dealing with the problem of student dissent is something which can be capitalized on by other schools. Although no two schools are identical, the experience of one school can be most helpful to administrators in other schools in reacting to similar problems at their university. The advantages of shared experiences are obvious and I therefore wrote to the major associations of colleges and universities early this summer suggesting that national and regional conferences be convened to discuss means of dealing effectively with campus dissent. The reaction has been overwhelmingly favorable. In several instances, conferences have already begun, or are being planned. There is clearly a widespread and deep interest and concern on the part of college and university officials in meeting their responsibilities in this area. As evidence of that concern I submit my letter, plus a number of the replies that I received, for inclusion in the CONGRESSIONAL RECORD, as follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., June 11, 1969.

DEAR ——— ———: I write to you, a leader in the higher education community, urging you to take immediate action which might contribute constructively to the problems associated with the present unrest on our college campuses.

Having served on the Education and Labor Committee and having visited college campuses during the past two months and having constant contact with the public constituency, I believe the time is fast approaching when every representative organization must reappraise its efforts in responding to student unrest. The problem on the campuses is more structured and of greater potential intensity than many of us are aware. The results of continuing disorders and the resultant publicity are finding a restive audience in the American people.

For some time politicians, columnists, the news media, professional observers, and government officials have been berating, commenting or praising the motives and actions of our campus youth. If nothing else, this inconsistency is creating a demanding and an active majority in the American people who want to know what is or is not acceptable behavior in their society. In time, if allowed to continue in this manner, campus disorders may well result in the appearance of restrictive state or federal legislation which will have the ultimate effect of controlling the operating procedures of our colleges and universities. Further, as evidence has shown, the public reaction will curb the expenditures of local, state, and federal funds used to support the finest educational system in the world.

I will not support, nor will I vote for repressive legislation nor do I believe that the majority of students should be penalized by the cutting back of operating funds in order to punish a few.

Currently under consideration before our Education and Labor Committee is H.R. 11941. While I believe that the role of this bill is laudable in that it attacks the major problems inherent in our college campuses today, I am nonetheless concerned that it may set an unhealthy precedent.

Therefore, at this time I am calling upon your Association and urging that you join with others and convene a series of national and regional conferences of college and university administrators. Such meetings can have a positive effect upon this growing crisis. They would help to create better communication and understanding on the part of the American people, aid administrators in developing practices regarding discipline and conduct of students and faculty, and establish new means of communication with students. The interface which could be obtained by such a meeting would be most valuable to college leaders in providing an experience base for dealing with student problems. It would provide suggestion for solidifying the support of the large silent majority on our campuses and ideas for isolating the behavior and motives of militant reactionaries.

In general their purpose would be to develop concepts which would replace the current atmosphere of disruption and disorder on our campuses with a new positive force of creative interchange. I do not envision the conferences to establish standard regulations or practices as each college and university community is diverse and unique and must be governed by the factors within its environment. The independent operating integrity of each institution must be protected. Voluntary efforts on the part of the educational community must begin now.

I also recognize the limitations of such a conference and that there is no panacea for today's unrest.

The leadership your Association has shown in developing informal and overt actions in regard to this problem is most assuredly recognized. However, the urgency of this crisis requires the efforts of a massive coordinated breakthrough to bring about positive results.

It is my opinion that the National Administration is concerned about protecting the operational autonomy of our colleges and universities and they will be willing to participate cooperatively in any voluntary effort toward this end. I have written the President and members of his staff requesting this support.

I urge your consideration of my proposal and await your urgent response.

Sincerely,

MARVIN L. ESCH,
Member of Congress.

THE ASSOCIATION OF
AMERICAN UNIVERSITIES,
Washington, D.C., June 16, 1969.

Hon. MARVIN L. ESCH,
U.S. House of Representatives,
Washington, D.C.

DEAR REPRESENTATIVE ESCH: I wish to acknowledge with appreciation your letter of June 11, 1969 in which you express concern about current campus disorders and particularly for your desire to have order restored without resort to federal or state legislation which conceivably might be repressive.

With reference to your specific request that the Association of American Universities join with others in convening a series of national and regional conferences of college and university administrators, I shall refer this question to our Association's Executive Committee for consideration. You are aware, I am sure, that some conferences have been held already and it is my guess that if additional meetings are needed, the American Council on Education should take the initiative in convening them. I may say that in the case of the Association of American Universities, which meets semi-annually and is an organization of university presidents,

I cannot recall a single meeting of the Association since October, 1964 when a great deal of consideration has not been given to these very matters which are of concern to you. These discussions and exchanges have been helpful to all of our members and will doubtless continue in the future, but I believe most if not all of our members firmly believe that remedial action can and should be taken at each institution by its own trustees, administrators, faculty and students. We are already encouraged to believe some institutions are proving the efficacy of this procedure. . . .

Sincerely yours,

CHARLES P. MCCURDY, Jr.

AMERICAN COUNCIL ON EDUCATION,
Washington, D.C., June 30, 1969.

Hon. CARL PERKINS,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. CHAIRMAN: I should like to bring you up to date on the activities of the American Council on Education as we plan this summer to undertake an action program on the causes and prevention of campus disruption. As the principal coordinating agency for all of higher education we feel a particular responsibility to address ourselves to this problem and to try to come up with constructive proposals for educational institutions prior to the opening of the next academic year.

In retrospect it is easy to see that the academic community was ill-prepared to cope with the revolutionary tactics of a very small but admittedly very militant minority of students and faculty. It is equally apparent that communication lines between large numbers of moderate students and their counterparts in the facilities and administrations had broken down to an extent we had not realized.

As a result, we announced last week and are moving immediately to appoint and put to work a Special Committee on Campus Disruption. We shall involve administrators, faculty, students, trustees, and lay leaders in the work of this Committee. We hope very much that through workshops, seminars, and a collection and analysis of existing information to have ready for the new academic year in September some practical guidelines to offer our institutions.

We know that at the same time the Department of Health, Education, and Welfare is studying the implications and the implementation of Section 504 of the Higher Education Amendments of 1968. This legislation was enacted by the Congress in an effort to provide to institutions tools that might be useful in the settling of campus disputes. Assertions have been made that this legislation has not been used. This may or may not be the case. The higher education community has consistently maintained that once it understood the nature of its problems, it had adequate machinery to deal with them. We are now getting closer to such an understanding and are in the process of putting our machinery to use.

For these reasons, it would seem to us wise for the Congress to await a report on how existing legislation has been utilized before moving to still additional legislation. It would also be our hope that the Congress would give the higher education community generally and the ACE specifically time to put its own planning into effect rather than forcing us to adjust to a whole new set of problems that would be raised by new legislation in this area.

Sincerely yours,

LOGAN WILSON.

[A news release from the American Council on Education]

WASHINGTON—The American Council on Education today (June 16) announced establishment of a Special Committee on Campus Disruption which will propose ways to strengthen procedures of self-regulation by colleges and universities.

In announcing the board action, Council President Logan Wilson said the committee "will focus on more effective decision-making, appropriate means of presenting grievances and proposing changes, clarification of due process and the use of campus and civil authority in response to disorder, and improved communication both within the academic community and between it and the public."

The action was taken by the Council's Board of Directors at its regular June meeting. As the nation's major coordinating agency for higher education, the Council has a membership of 1,538 colleges, universities, and education associations.

President Wilson said he is proceeding at once to name the chairman and members of the special committee in consultation with leaders of representative higher education associations.

A specific objective of the committee will be to formulate ways to deal effectively with campus disruption while protecting the academic or constitutional rights of members of the academic community and avoiding resort to repression or counter-violence.

The special committee will be asked to begin its work as soon as it is appointed and to report its findings to the Council's president and board at the earliest feasible date.

Establishment of the committee is one of a number of actions initiated within recent months by the Council in its concern about campus disorders and its historic interest in critical problems of campus governance.

In May 1968 the Council, acting jointly with the University of Denver Law School, sponsored, and distributed the proceedings of, a national conference on "Legal Aspects of Student-Institutional Relationships." The Council's Office of Research is conducting extensive research into the causes of campus unrest. In April the Council issued "A Declaration on Campus Unrest," a statement formulated by prominent educational administrators, trustees, and foundation officers. Most recently the Council published and distributed to its members the June 9 statement on campus disorder issued by the National Commission on the Causes and Prevention of Violence. In October the Council's Annual Meeting, in Washington, will focus on "The Campus and the Racial Crisis."

A DECLARATION ON CAMPUS UNREST

(NOTE.—This statement was formulated by a group of educational administrators, trustees, and foundation officers who met April 4–5, 1969 in Chicago under Council auspices. Those present were three Council officers—President Logan Wilson, Vice-President Kenneth D. Roose, and David C. Nichols II, assistant to President Wilson—and the following:

(Louis T. Benezet, president, Claremont Graduate Center; Landrum R. Bolling, president, Earlham College; Herman R. Bronson, president, Central State University; Robert D. Clark, president, San Jose State College; Fairfax M. Cone, trustee, University of Chicago; Thomas H. Eliot, chancellor, Washington University; Robben W. Fleming, president, University of Michigan; David D. Henry, president, University of Illinois; Theodore M. Hesburgh, C.S.C., president, University of Notre Dame; James M. Hester, president, New York University; Ralph Hetzel, trustee, Pennsylvania State University; Roger W. Heyns, chancellor, University of California, Berkeley; Joseph F. Kauffman, president, Rhode Island College; William R. Keast, president, Wayne State University; Malcolm Moos, president, University of Minnesota; Mrs. Henry Owen, trustee, Washington State University; Harvey Picker, trustee, Colgate University; Alan Pifer, president, Carnegie Corporation of New York; Wesley Posvar, chancellor, University of Pittsburgh; Nathan M. Pusey, president, Harvard University; John Ritchie, dean, Law School, Northwestern University; John S. Toll, president, State University of New York at Stony Brook; Edmund A. Stephan, trustee, University of Notre Dame; F. Champion Ward, vice-president, The Ford Foundation; Herman B. Wells, chancellor, Indiana University; Charles E. Young, chancellor, University of California, Los Angeles; and Edwin Young, chancellor, University of Wisconsin, Madison Campus.

(The statement was subsequently approved by the Council's Board of Directors, comprised of the following individuals:

(Mason W. Gross, president of Rutgers—The State University, chairman; Anne G. Pannell, president of Sweet Briar College, vice-chairman; Gustave O. Arlt, president of the Council of Graduate Schools in the U.S., secretary; Fred Harvey Harrington, president, University of Wisconsin; Grayson Kirk, president emeritus, Columbia University; Frederic W. Ness, president, Fresno State College; Alan Simpson, president, Vassar College; Thomas A. Spragens, president, Centre College of Kentucky; Sharvy G. Umbeck, president, Knox College; Kingman Brewster, Jr., president, Yale University; G. Homer Durham, president, Arizona State University; Samuel B. Gould, chancellor, State University of New York at Albany; Darrell Holmes, president, Colorado State College; Kenneth S. Pitzer, president, Stanford University; Edgar F. Shannon, Jr., president, University of Virginia; Joseph P. Cosand, president, Junior College District of St. Louis; Theodore M. Hesburgh, C.S.C., president, University of Notre Dame; Roger W. Heyns, chancellor, University of California, Berkeley; Martha E. Peterson, president, Barnard College; Calvin H. Plimpton, president, Amherst College; and Willis M. Tate, president, Southern Methodist University.)

The unprecedented, comprehensive, and often unpredictable changes that are taking place in this age both disturb and alarm large segments of our society. Most of the changes and attendant alarms affect the operations of our institutions of higher learning. They are also related to the values, concerns, and behavior of our young people. In coming to grips with the compelling issues, all who would think seriously about them must recognize that present-day society—in America and in many foreign lands—is in serious trouble on many fronts. We see around us racial conflict, continued poverty, and malnutrition midst unparalleled prosperity and seemingly unlimited promise. We are confronted by pollution of our environment, decay of our cities, the continuation of wars and the threat of war and everywhere a vague but widespread discontent with the general quality of life.

These problems affect all of society not the university alone or the young alone. We must all be concerned to deal intelligently and responsibly with these problems that are neither the exclusive discovery nor the sole responsibility of the young. Yet the depth of feeling among young people in many countries today about the issues, their general dissatisfaction with the slow-moving ways of society, and the extreme behavior of a small minority of students are evidence of the profound crisis that involves our entire society and, specifically, the university community.

The university itself has often become the immediate target of student discontent, sometimes couched as legitimate complaints about the deficiencies of the universities, sometimes devised as a softening-up exercise for assault on the wider society.

How to deal with campus crises arising from the widespread protests has become a major public issue and the cause of confused and angry debate. That there should be deep anxiety about the course of the con-

flict and its possible outcome is understandable. No social, racial, or age group that perceives itself and its values to be seriously threatened will fail to strike back. Increasingly there are blacklash temptations to enact strong, often ill-considered, and largely futile measures to cope with a youth rebellion that none of us fully comprehends, not even the youth themselves.

Certain balanced judgments are proper to make, however, as we search for understanding and solutions:

1. It is important for the public to understand that, despite the nationwide publicity given to student disorders, the great majority of American campuses have remained peaceful. On campuses where conspicuous disorders have occurred, educational programs generally have gone along their normal ways. Most students and faculty have continued to carry on their regular work. In the main, good teaching and good research, as traditionally defined, have been uninterrupted.

2. On the undisturbed campuses and among the majority of orderly students, however, there are widely shared discontents which extremists are at times able to manipulate to destructive ends. Moreover, even in the absence of violence, there has developed among some of the young a cult of irrationality and incivility which severely strains attempts to maintain sensible and decent human communication. Within this cult there is a minute group of destroyers who have abandoned hope in today's society, in today's university, and in the processes of orderly discussion and negotiation to secure significant change. Students and faculty are increasingly aware of the true nature of this group and are moving to deal with its destructive tactics. The necessity to deal with extremists, however, is placing an extraordinary burden upon the whole educational enterprise and upon those who man it. Consequently, universities are having to divert their energies and resources from central educational tasks in order to deal with student unrest in its various forms.

3. The spectacular events precipitated by the extremists should not be allowed to obscure the recent accomplishments of those students, faculty, and administrators who have serious interest in constructive changes in society and in the university. They have broadened the curriculum and improved teaching. They have moved toward a more open and participating pattern for university governance. And they have begun to make the work of universities more meaningful in dealing with the problems of society. Those efforts must continue. Reform and self-renewal in higher education are ongoing imperatives.

4. Meanwhile, the speed and scale of social change have imposed many kinds of demands upon educational institutions for which their programs, their capabilities, and their funding are not always adequate. Moreover, universities are increasingly asked to perform functions for society, particularly in reshaping the behavior, values, and lifestyles of the young, on which the family and other social institutions have already had major influence—or lack of influence. Some of society's expectations for universities are quite unrealistic. Insofar as these expectations can be dealt with, they involve a sharing of responsibilities among diverse social institutions. Many of society's demands require new resources and fresh approaches to old and new problems.

5. Recognizing the right of and even the necessity for constructive dissent—and allowing for inevitable arguments over what is in fact constructive—certain axioms must be accepted as basic to the operation of any university:

a. Disruption and violence have no place on any campus. The academic community has the responsibility to deal promptly and directly with disruptions. If universities will not govern themselves, they will be governed by others. This elementary reality is increasingly becoming understood by all components of the university community. Student and faculty groups, including the American Association of University Professors and the National Student Association, have recently joined in efforts to improve disciplinary procedures and to formulate clear and realistic codes for dealing with misconduct, and more particularly with violence and disruption. Also, by involving students and faculty effectively in the governance of the university, it can be demonstrated that there are better ways of getting views considered and decisions made than by disruption.

b. The historic concern of the university community with academic freedom needs to be restated, reaffirmed, and vigorously defended against all, within or without the university, who would obstruct the right of scholars to investigate, teachers to teach, or students to learn. This reiteration is not to claim for the university special privileges that put it above the law or that free it from critical public appraisal—rather it affirms that the university must maintain a basic institutional integrity to function as a university.

c. Violations of criminal law must be dealt with through the ordinary processes of the law—and universities must attempt to deal with disruptive situations firmly before they reach the stage of police action. Governmental attempts to deal with these problems through special, punitive legislation will almost certainly be counterproductive. Meanwhile, students and faculty whose consciences demand that they express dissent through law violation must be prepared to accept the due processes and the penalties of the law. They should not be encouraged to expect amnesty from the effects of the law. Such an expectation would be the ultimate use of the *in loco parentis* concept against which many young activists passionately protest. Nor should they expect amnesty from academic discipline, which is the most effective sanction in disruptive incidents.

6. The education community needs to undertake a far more comprehensive effort than ever before attempted to study the underlying bases of youthful discontent and alienation and the broad social problems to which they are related. As social critic, the university must help society understand and solve such problems.

7. All universities should give particular attention to a continuing search for ways, including new social inventions, by which the life of rationality and civility, shared concern, and mutual respect may be supported and strengthened within the university community. The survival of the university and its long-term contribution to society depend upon the ability of the institutions to make their everyday life reflect that spirit and pattern.

OFFICE OF THE PRESIDENT,
June 23, 1969.

HON. MARVIN L. ESCH,
Cannon House Office Building,
Washington, D.C.

DEAR CONGRESSMAN ESCH: Thank you for your recent letter regarding campus disorders and seeking ways to stop them. I agree completely with your point that these disorders should be stopped by changing the causes rather than by punitive and repressive treatment of the symptoms.

I am enclosing a copy of the position taken by the NEA Legislative Commission at a meeting last month. It is, of course, a statement of principle with specific reference to pieces of legislation that had been proposed at that time. It did not take into account the range of proposals that have been made lately, such as H.R. 11941.

In addition to this statement, the Legislative Commission has been directed by the Executive Committee to make a thorough study of the matter of student unrest and develop a statement of NEA's position on related legislation. If such a statement is approved by the Executive Committee, it will become official NEA policy. I shall, of course, let you know the outcome of this process.

Meanwhile, NEA would be more than willing to cooperate with other groups in setting up conferences with higher education personnel as you suggest. Any improvement in communication must result in an improvement in the situation on our campuses. NEA recognizes its responsibility as the leader in the educational field to make every effort to secure peace and the rights of all individuals on campuses.

I look forward to working with you and others toward these goals.

Sincerely,

GEORGE D. FISCHER,
President, National Education Association.

POSITION OF N.E.A. LEGISLATIVE COMMISSION

The National Education Association reaffirms its support of peaceful dissent on college and university campuses but abhors the violence so frequently connected with protest. NEA is concerned, however, with the rights of individuals who may suffer injustice as a result of such dissent. Federal legislation, in Section 504 of the Higher Education Amendments of 1968, provides recourse to institutions in dealing with disruptive individuals and should be retained. In addition to Section 504, NEA recommend enactment of legislation to create a mediation service to mediate disputes among students, faculty, and administrators of colleges and universities.

AMERICAN ASSOCIATION OF
JUNIOR COLLEGES,
Washington, D.C., June 25, 1969.

HON. MARVIN L. ESCH,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. ESCH: Dr. Gleazer is on vacation so I am taking the liberty of responding in his behalf to your letter of June 11.

We see great merit in your idea of a series of regional conferences among college administrators and other concerned leaders which would examine the issues behind campus disorders. I am confident that such conferences, given broad sponsorship including White House support, would attract most of our two-year college presidents. We would like to work with you as your plans develop.

Personally, I share your deep distress over the way the campus disorders have been sensationalized, particularly in Congress. Unfortunately, most of the hearings have brought out only one side of the issue. They have presented a distorted picture of the searching change which is occurring in campus life. By stressing only the bizzare, they have given a carnival image to a reformation that has a very positive side.

The college campus is a much more open society today than it ever was in the past. The student bodies are much more heterogeneous. For every agitator on the average campus, there are at least a hundred disadvantaged youth who are quietly trying to make the most of the crack at college they would never have had in an earlier generation. Of course, we have only just begun to move toward equality of opportunity in higher education. We still have a long way to go to correct the old inequities. Perhaps the conferences you propose would help us chart a clearer course. Surely, they would help develop a fuller, more balanced picture of campus change.

Certainly we are pleased that you see the folly of repressive legislation. Such legislation can only injure the programs that Congress has worked so hard in the last decade

to develop. Congress must face up to the fact that it has contributed to the campus unrest. The disorders in deeper significance reflect the rising expectations that Congress helped to foster through the imaginative programs it has recently enacted for education. Congress has delivered only a fraction of the resources and opportunities promised in these programs. Perhaps the conferences you are promoting can help the Congress, as well as the public and the colleges, see more clearly the need for a new order of national priorities.

Thank you again for sharing your concerns and your plans with us.

Sincerely yours,

FRANK MENSEL, *Director, Governmental and Urban Affairs.*

ASSOCIATION OF AMERICAN COLLEGES,
Washington, D.C., June 19, 1969.

Hon. MARVIN L. ESCH,
U.S. House of Representatives,
Washington, D.C.

DEAR MARVIN: Since receiving your letter of June 11th, members of our staff have been in touch with you and your office several times concerning information at least partially responsive to your inquiry and suggestions. Because of the urgency of affairs in the Committee on Education and Labor, we have all wanted to act as quickly as possible in any and all ways that might be helpful to you and other Committee members.

Meanwhile our giving attention to these matters has delayed this more formal response in writing to your letter itself. We are grateful for your constructive posture and ideas on the very complex questions of student unrest and related legislation. More specifically, your idea of timely conferences strikes a very responsive chord. It would be inappropriate and inefficient for us to proceed alone on this, and my understanding is that several other national associations are also giving active consideration to the idea. A number of us are meeting together this afternoon, and I believe the proposed conferences are one of the principal topics on our agenda. None of us wants to delay any action that promises to be of any assistance to the colleges.

With all good wishes,

Sincerely yours,

RICHARD H. SULLIVAN,
President.

THE COUNCIL FOR THE ADVANCEMENT OF SMALL COLLEGES,
Washington, D.C., July 2, 1969.

Hon. MARVIN L. ESCH,
U.S. House of Representatives,
Washington, D.C.

MY DEAR MR. ESCH: We wanted to answer your letter in detail and thus I am sending you more information about what it is we are doing during the first week in August at Michigan State University in cooperation with their Department of Administration and Higher Education.

First, let me say how pleased and encouraged we are that there are some members of Congress, including yourself, who are expressing a more enlightened view toward the current campus and student unrest. We are deeply concerned about some of the restrictive state and federal legislation which has been introduced in recent months. We are further disturbed to know that some of this legislation at the state level is evidently going to pass. However, we are hopeful that men such as yourself will not support nor vote for any kind of repressive legislation which, as you indicate in your letter, would penalize the majority of students by cutting back operating funds in order to punish a few.

CASC is beginning a program this summer entitled "In-Service Training of Top-Level Administrators and Members of Boards of Trustees of Small Colleges." This is a three-phase program and will involve a national level summer program to be held on the campus of Michigan State University from August 3–8. The second phase will take place during the 1969–70 school year and provide for up to six regional institutes with as many trustees as possible attending from each institution. The third phase will also be conducted during the 1969–70 academic year and will include consultant service and visitations to those member colleges requesting such consultation with their boards of trustees. On the second day of our summer institute the program will be devoted partially to "Today's College Student." Dr. Richard Gross, Dean of Gordon College, and Dr. Eldon Nonnameker, Professor of Higher Education and Associate Dean of Students at Michigan State University, will be the major speakers for that particular session. It is during this time that we can well devote some time to the topic of the current student unrest on our campuses. Later that same day we are having a panel discussion devoted to the topic "Who's in Charge?" We expect that student representatives will be present for both the earlier sessions and to take part in this particular panel. By providing for student participation in this program we are attempting in a small way to "establish new means of communication with students" as you have called for in your letter.

Once again thank you for the support which you have indicated in your letter, and although we are unable to convene a special conference of college administrators and faculty members, we do hope that our special program for trustees with its feed-in of student participation will add to the atmosphere of increasing communication between students and administrators. Thank you for your educational leadership in these very trying times for our society and for our institutions of higher learning.

Sincerely yours,

RICHARD M. WITTER,
Assistant Executive Director.

AMERICAN ASSOCIATION OF STATE COLLEGES AND UNIVERSITIES,
Washington, D.C., June 16, 1969.

Hon. MARVIN L. ESCH,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. ESCH: In response to your letter of June 13th and in anticipation of the House hearings this morning before the Committee on Education and Labor, I have taken the liberty of doing two things over the weekend.

Firstly, the American Association of State Colleges and Universities has asked Chairman Perkins if a member of our Board of Directors, Dr. Darrell Holmes, President of Colorado State College, might be allowed to testify this morning anent the concerns of your letter. Secondly, I have prepared, along with President Holmes, a statement which he will present if given the floor by Chairman Perkins. I enclose a copy of that statement along with material which the statement alludes to.

I trust this strategy on our part is adequate in terms of the intent of your letter, Mr. Esch.

If I may be of further assistance at any time in the future, please call on me.

Best regards.

Sincerely yours,

JAMES E. CIPRIANO,
Executive Assistant.

TESTIMONY BEFORE THE HOUSE COMMITTEE ON EDUCATION AND LABOR, ON BEHALF OF THE AMERICAN ASSOCIATION OF STATE COLLEGES AND UNIVERSITIES ON H.R. 11941; BY DARRELL HOLMES, PRESIDENT, COLORADO STATE COLLEGE, GREELEY, COLO.

Mr. Chairman; members of the Committee: My name is Darrell Holmes. I am President of Colorado State College in Greeley, Colorado and a member of the Board of Directors of the American Association of State Colleges and Universities. AASCU consists of 254 institutions and 14 statewide systems of state colleges located in 45 states, the District of Columbia, the Island of Guam and the Virgin Islands. Approximately 1.6 million students—or over one out of five college students in the United States attend the type of institution represented by the Association. The institutions are the fastest growing degree-granting institutions in the nation.

With this overview in mind, I should like to point out in explicit, unequivocal terms that AASCU member institutions are doing much about the present unrest on our college campuses. First, in connection with campus disorders, we must not confuse dissent with genuine concern on the part of students about problems which we have not been able to solve . . . we must not confuse dissent and genuine concern with violence. We must not confuse orderly activism with disruptive and irresponsible actions. In the latter, I know of no president in our Association who has turned his back on the law. Every president, I know has administered the law as it was meant to be.

Our Association has been active for several years in considerinng student dissent. Let me list some of our activities:

1. The theme of our annual meeting was "Who's in Charge Here?" I should like to place on file with you the proceedings of that meeting. A variety of means for involving students in institutional policy matters was explored. It was clear that the governing board of the institution is responsible for campus policies and that the college or university president is the board's chief executive officer and is held accountable for all activities on the campus.

2. A statement of due process as it relates to student discipline will soon be published by AASCU. We see the need for students to be accorded their due rights, and actions are being taken on our member campuses around the country to guarantee them.

3. In cooperation with the Association of Student Governments, our Association is presently exploring the possibility of a joint and voluntary mediation service to help resolve campus disturbances.

4. We have published a statement on student rights and responsibilities. A copy is hereby placed on file.

5. AASCU also has in operation a Consulting Service which assists member institutions meet and solve campus difficulties. Consultants with a backlog of experience in state colleges and universities are available to visit, study, and make reports and suggestions in areas where member institutions may wish for objective advice.

6. We are planning a statement about alternative responses to different kinds of campus disorders. We believe that a simple plan cannot be developed that covers all possible disorders. Rather workable alternatives must be ready for immediate use for a given kind of problem.

7. Student participation in program and policy consideration is being broadened around the country. For example, most of the Association's institutional committees contain student representation—yet it is clear that the faculty continues to be held accountable for academic affairs. In at least one instance, students sit with the Board of Trustees and in another, students sit on a statewide policy committee which is advisory to a council of presidents.

8. We have asked presidents of our 254 member institutions to give serious consideration to joining with other higher education associations in convening a series of national and/or regional conferences of college and university administrators. The general purposes of such conferences would be to pursue and create better communication and understanding on the part of American people, aid administrators in developing practices regarding discipline and conduct

of members of the campus community, and to establish and maintain effective means of communication with students.

9. We favor the passage of legislation only when it is in the national interest to do so, and only when state and local laws are inadequate. For example, legislation prohibiting the interstate transfer of fire arms from being carried, displayed or used on campuses illustrates a possible needed federal law. The problem of fire arms is most serious. On the other hand, it is our firm conviction that the Congress should be very careful about getting into the management of the internal affairs of the college and determining in advance an approved administrative course of action for a situation that might occur at some future date. We can and have administered our institutions in accordance with laws which govern all people. We should not be confronted with a law which dictates methods of compliance. In connection with the administration of the Civil Rights Act, you did not require us to explain how we intend to implement the law. The Federal Administration does, as you know, run a compliance review. This is a much more reasonable approach than passing laws which dictate method of compliance which is suggested in HR 11941.

You may rest assured that our institutions are firmly committed to the maintenance of the rights of every student to free inquiry, study, and expression in the academic community. Laws which preserve these freedoms are most welcome.

The Federal Government, too, has started constructive action to coordinate college efforts to deal with dissent. The Office of Education has been involved in informal conversations with college administrators, members of college faculties, and college trustees. An informal conference between leading representatives of the higher education community and the Office of Education was held on July 12.

It is my understanding that this conference resulted in the recognition that the Office of Education can assume great leadership as the advocate of change and relevance in higher education. The Office of Education can and must play an important role as a national spokesman, a coordinator and the interested, but neutral third party.

As a result of the conference, the Office of Education has under consideration at the present time the possibility of a National Conference on Higher Education.

Mr. Speaker, I strongly support this role for the Federal Government not as an all-knowing overseer and/or as a national policeman but as a coordinating and encouraging force to bring about orderly change in the campus community. The Nixon administration has pledged its support of such a Federal role and I hope that the Congress today will not override that Federal commitment.

MSGR. JOHN A. CASS

HON. ALLARD K. LOWENSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. LOWENSTEIN. Mr. Speaker, I want to pay tribute to a good and honorable man, Msgr. John A. Cass, who died recently in the city of Long Beach, N.Y., at the age of 79, still young in outlook and vigorous in spirit, working until the end for the well-being of the people of his parish, his community, and the Nation.

Monsignor Cass was the founder of St. Ignatius Martyr Church in Long Beach and its pastor for almost half a century, emerging during that time as the leading citizen of the town and as one of the few men genuinely beloved by all its sections and factions. He did everything anyone could do to tend to those in need, spiritual or material, and managed somehow to remain a simple, unpretentious, cheerful man despite all the burdens of the years and of his own increasingly fragile health. He knew no bounds of race or caste, and took the world as it came, making it a better place for those whose lives he touched.

Monsignor Cass was for 55 years a priest of the poor and the unfortunate, a priest for the lonely and for those without hope. He was often ahead of his time in his dreams and ideas, as he was always a vital part of it in his works. He will be deeply missed by all who came in contact with him, and by large numbers of people as well who never knew him but who sensed and benefited from his presence and his leadership in troubled times. He brought great credit to his church, his profession, and his hometown, and we are grateful for the privilege of having passed his way.

I include in the RECORD at this point the memorial address delivered by Monsignor Cass' successor, Msgr. Edgar P. McCarren, and a remarkable and elegant prayer for unity and justice offered recently by Monsignor McCarren. It is good to know, as we struggle to make do without Monsignor Cass, that his successor is a man of similar spirit and energy, and of equal commitment to help all who are in need. The material follows:

RT. REV. MSGR. JOHN A. CASS

For most of his life—fifty-five years as a priest—Monsignor John A. Cass, founder of St. Ignatius parish, Long Beach, and pastor for forty-one years, began each morning at Mass. He prayed, in the words of the sacred psalmist, to the God who gave joy to his youth. And he died a young man, although he would have been eighty next November 17. He had young blood and a young mind to the end.

The spirit of the pioneer was in his veins. He delighted in talking about his parents traveling in a covered wagon out west to the prairies of Kansas where he was born and where he began his initiation into the eternal priesthood by baptism into Christ Jesus. All his life he had an open and venturesome mind. His gaze was always toward the future, toward the improvement of the human condition.

In many and varied ways he was a man far ahead of his time. He was interested a generation ago—long before anyone dreamed of Vatican Council II—in the ecumenical dialogue among Christians, and between Christians and Jews. In the prime of his life he was already passionately committed to social reform and the activation of Christian social principles.

In the last decade of his life he was the man with the vision to see the need and to create (with the help of Cardinal Cushing) the Pope John XXIII Seminary for older men to study for the priesthood.

One who knew Monsignor Cass as a young priest has said that he could excel at almost anything to which he put his mind. He was an unusually talented man, specially gifted by God. His shy and quiet manner could be very deceptive.

He walked with the easy natural grace which betrayed the born athlete he was. His reflexes were faster than men twenty-five years younger (by their own testimony). His intense competitive spirit was revealed in his abiding interest in sporting events of all kinds: football, baseball, prize-fighting, horse-racing, basketball, hockey—you name it. His loyalty to his favorite teams was undying.

In his own activities he made everything look easy and effortless. In his youth he was a fine second baseman and later a crack shot with a rifle. Still later he was to become a budding architect, an author of many writings, a musician, and a musical composer.

All of these accomplishments of his were a reflection of his deep appreciation of human achievement in all its many and varied facets. A long forward pass, a fast double-play, a knock-out punch: these and other physical attainments fascinated him along with an admiration for the great masters of spiritual effort in art, music, and literature.

He had impeccable taste and his response to beauty in any form was immediate.

Everything human interested him. This accounts for his love of place. He loved not only Long Beach and New York, but the great historic cities of Paris and Rome. He had a real feeling for the history of a place and the people down through the ages who had made the place what it was.

In a word, he loved life—he loved people in all their variety—people of all colors and all creeds—people of East and of West—people old and young. This man who was so loved (with good reason) by the poor, was never ill-at-ease with the rich and powerful. The innate courtesy of the country boy from the Kansas cornfields had grown into a man of urbanity, poise, charm and sophistication. But he never lost the common touch.

He was humane to his finger tips. He not only looked distinguished; he *was* distinguished.

But the real man was much more. He was a genuine intellectual. He loved good books and he reveled in the world of ideas. He was as interested in ideas as he was in people—which is saying a great deal. He enjoyed nothing more than stimulating and lively conversation about the great issues of the day—political, economic, social, philosophical and theological. He had an alert and enquiring mind to the very end of an advanced age. He was always a great listener. He was a scholar in the most authentic sense.

The moral character of Monsignor Cass was shaped (in the providence of the God he loved so much) by unusual suffering. For most of his life he battled frail health. As a young priest he was disabled for four years by a serious lung ailment. His great fear at this time was that he would not be able to return to active duty as a priest. Perhaps at this time he developed the patience and outer serenity so characteristic of him.

His priesthood was threatened by an even worse kind of suffering. He was viciously accused before ecclesiastical authorities with lie and calumny. These very serious charges had a superficial plausibility. His accuser was one of that strange and dangerous breed of trouble-maker who specializes in the half-truth—who would never think of telling an outright lie—who loses all reverence for truth as he spreads hilf-lies everywhere he goes.

This kind of suffering was worse for John Cass than physical illness—to have his reputation as a priest placed in jeopardy. But this priest of God, ever young, never quitting, never giving up, survived a deadly sickness, overcame calumny, and struggled on to serve the people of God for more than half a century.

This was a man of faith, of prayer, of hope, of Christian optimism. It was no accident that his great heart always went out so swiftly and so compassionately to anyone who had a problem. Suffering was more than a word for him—it was a way of life.

He was proud of the beautiful buildings of the parish plant, but he once said that for every brick there was a tear. His own tears and the tears of his people.

Monsignor Cass was, above all, a priest of God. It was his whole life. He loved the priesthood. This man of faith, who spent so many hours of prayer before the Blessed Sacrament, loved both God and man who was made in God's image. After fifty years of service, he insisted that from a human point of view the life of the parish priest was the perfect life.

When he was almost eighty years of age he still delighted in bringing God to men and men to God: in hearing confessions and counseling the weak, going on sick calls, distributing Holy Communion on Sunday at one Mass after another, preaching and teaching his favorite themes of the mercy and love of God. Christ was his light and his life.

His love of the poor and the disadvantaged has become a legend. The alcoholic, the narcotic, the broken in spirit sought him out with a sure instinct. He was an easy mark for a touch. It was not that anyone fooled him. He was too intelligent for that. It was just the conviction by his Christian faith that Christ was present especially in the poor and unfortunate. Before anyone ever heard of the Poverty Program, he had a program of his own thirty years ago.

Only God knows how many lives he helped to rebuild by his compassion, his charity, his generosity, his forgiveness of human weakness.

Good priests come in all shapes, all kinds, all temperaments. This man had the heart of a *great* priest. He was a complex and many-sided man. Widely admired, he was rarely fully understood and certainly never fully appreciated.

He appeared to most to be a gentle, kindly man (and he was that) but he had more than a heart of feeling. He had a heart of great courage. He could be tough as well as tender. He could be very angry when there was good reason.

He was a man of passionate convictions. Behind the soft-spoken voice was a strong will and steel in his backbone. He had the incredible endurance of a man of the frontier. His erect carriage almost to the end proclaimed that here was a man!

With it all, the twinkle in his bright blue eyes was a signal to those with discernment of his ever-present sense of humor and hinted at the flexibility of a man who never took himself too seriously.

The inner turmoil and tension of this man who lived life to the full was disciplined by an outer serenity, a self-control won at great cost. Because of his presence, a sense of peace pervaded the rectory like a sweet and pleasant odor. He was a strong support to countless priests who, like all humans, are often in need of help.

Hospitality was his middle name. He loved the priesthood of Jesus Christ and he loved priests. When he died—typically—he left everything he possessed to the Church and the missions.

His retirement from the active ministry was a great cross which he accepted with faith and obedience to the voice of the Church in Vatican Council II.

This was a real man, a good Christian, and a great priest—truly another Christ. St. Ignatius parish was privileged to have him as its shepherd and pastor for two generations. He served this parish more by what he *was* than by what he did, and he did much.

Priests come and priests go—the priesthood of Christ is eternal—but the people of Long Beach should never forget John Cass. If he could speak now he would beg for continuing prayers. He cared so much for us; we should care that much for him.

Once again ahead of his time, he wrote a book in 1950. "The Quest of Certainty," in which he said, prophetically, that loss of the certainties of life had "made men of today restless, unhappy and even desperate."

It was his conviction that the basic truths *are* attainable. He hoped that his argument for his position would encourage others to "recognize that where they see shadows there is also substance; where it is cold, there is warmth; and in spite of the apparent darkness, there is light."

A PRAYER FOR UNITY AND JUSTICE

God of Abraham, of Isaac, and of Jacob.

God of black, of white, of red, of yellow, and of brown.

Unknown God of those who honor the human ideal.

God of us all.

God of Infinite Intelligence and Love without limit in whose image of intelligence and love we are all made.

God who fashioned the mystery deep in the heart of things.

God who designed each of us in beauty with tender and loving care each of us unique—set apart; isolated; alone in a crowd—unique.

God who shaped us, each in our basically incommunicable person yet members of the one family of man.

God who made all of us with an eternal destiny; a destiny of intimate love with you; a destiny which begins its journey, step by step, as we learn to love one another.

O God, pity and help us all.

Help us to remember always: That our similarities are far greater than our differences; that man is one, even though religions and cultures and civilizations may be many; that diversity is opposed to uniformity, not to unity.

Help us to remember always: That it may be more cruel to deny a man freedom than to deny him bread; that the first freedom is freedom of worship—or non-worship—in the Sudan and Biafra as well as in Israel and northern Ireland, on the sidewalks of New York as well as in the valleys of eastern Europe.

Help us to remember always: That the right to human life is even more sacred than the right to the better life; that reverence for human life must extend to all human life no matter how old, or how young, no matter how maimed or how handicapped; that genocide begins with discrimination, grows into persecution, and explodes into extermination.

Help us to remember always: That most of our pains and most of our joys come from one another; that the root of war is simple hostility between individuals and small groups; that violence (real or metaphorical) is the mark of Cain; that a knife point (real or metaphorical) pressed against the skin—no matter what its color—causes red blood to flow from the wound just like our own.

Help us to remember always: That peace cannot be created out of nothing by mere words; that the enemy of man is not war, but injustice (the cause of war); that there is no peace without justice; that one hungry man is one too many.

Help us to remember always: To keep trying: life is not television, in which every human problem is solved in one hour; to keep being patient, but not too patient; to keep reaching out to one another; to keep clasping our hands not only in prayer but in the friendship of our common humanity; to keep loving justice and hating evil.

For to love justice is to love you, O God. Amen.

RADIATION STUDY FINDINGS

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. KASTENMEIER. Mr. Speaker, full-page advertisements in the New York Times and Washington Post today have called the public's attention to the publication soon of some rather startling findings by Dr. Ernest Sternglass. While limited attention has been given Dr. Sternglass' earlier revelations on the correlation of infant mortality with nuclear testing, this latest extension of his thesis to ABM defense is particularly cogent now and deserving of the most serious consideration. Briefly stated, Dr. Sternglass believes that given the relatively low level of radiation necessary to cause genetic and fetal damage, any future "successful" use of an anti-ballistic-missile system against incoming warheads could threaten the very existence of the entire next generation of children.

Mr. Speaker, while I am not a scientist, I appreciate the compelling logic of the conclusions reached by Dr. Sternglass on the basis of his data—particularly the charts in the April Bulletin of Atomic Scientists—clearly showing the relationship between infant mortality and nuclear testing in the atmosphere. I am afraid that I find rebuttals of the Sternglass thesis by Government scientists unreassuring and unscientific. The gist of their rebuttal is that Dr. Sternglass is unduly alarming the public—and very well he might.

I believe that Dr. Sternglass' findings can be dismissed out of hand only at our peril. Certainly, Atomic Energy Commission spokesmen cannot claim to be disinterested parties in judging the validity of his allegations, given their direct involvement in nuclear testing.

I believe that each one of us owes it to ourselves, our loved ones, the American people, and to all of mankind to see to it that this subject is most thoroughly and honestly investigated, and that a full report is presented to the Congress and the American people.

Mr. Speaker, what we are dealing with here is not merely the expenditure of billions of dollars for an ABM system, or which strategy to assume in arms control negotiations, but the very existence of human life on this planet. I, for one, am not satisfied with the very general statements by administration officials to date, and think that it is incumbent that Dr. Sternglass' thesis be painstakingly examined by our Government.

I include Dr. Sternglass' letter to me on this subject, and the New York Times July 28 account of the Government scientists' rebuttals in the RECORD:

SCHOOL OF MEDICINE,
UNIVERSITY OF PITTSBURGH,
Pittsburgh, Pa., July 11, 1969.

DEAR CONGRESSMAN KASTENMEIER: The current argument for an ABM system is that it is required to prevent the destruction of our deterrent forces by a massive first-strike of Russian SS-9 missiles carrying thousands of multiple warheads.

However, in view of new evidence on the toally unexpected action of Strontium-90 on the human reproductive cells, the threat of such an attack loses all credibility since the vast amounts of long-lived Strontium-90 necessarily released into the rapidly circulating world's atmosphere would lead to the death of all Russian infants born in the next generation, thus ending the existence of the Russian people together with that of all mankind.

The unanticipated genetic effect of Strontium-90; presented at the June meeting of the Health Physics Society, follows both from an increase of infant mortality along the path of the fallout-cloud from the first atomic test in New Mexico in 1945, and from a detailed correspondence of state-by-state infant mortality excesses with yearly changes of Strontium-90 levels in the milk.

The computer-calculated infant mortality was found to have reached close to 1 excess deaths in the U.S. per 100 live births due to the release of only 200 megatons of fission energy by 1965. This indicates that a release of some 20,000 megatons anywhere in the world, needed in offensive warheads for an effective first strike or in the thousands of defensive ABM warheads required to insure interception, would lead to essentially no infants surviving to produce another generation.

This conclusion would not be significantly altered by the development of "cleaner" hydrogen bombs, since even the cleanest weapons detonated so far still produce more than one-third as much Strontium-90 per megaton as the early hydrogen weapons, aside from the genetically damaging long-lived Carbon-14 generated even by an ideally pure hydrogen bomb containing no fission trigger at all.

Since ABM systems, whether effective or not, force an escalation of the total number of warheads, their net effect would be to seal the biological doom of mankind that much more firmly if the resulting unstabilized deterrence should ever fail.

ERNEST J. STERNGLASS,
Director of Radiation Physics, Professor of Radiology.

PHYSICIST'S THEORY THAT FALLOUT KILLED MANY BABIES IS DISPUTED

WASHINGTON.—A University of Pittsburgh radiation physicist suggests that radioactive fallout from nuclear tests may have caused the death of more than 400,000 babies in the United States since 1950. Government scientists vigorously challenge his theory.

One Atomic Energy Commission scientist described the stated theory of Dr. Ernest J. Sternglass as "potentially dangerous and unnecessarily frightening to the public."

Dr. Sternglass says he has acquired "totally unexpected" statistical evidence suggesting a serious potential genetic hazard from fallout that he says has hitherto been unrecognized. The evidence, he says, is backed by animal research in Sweden.

Dr. Sternglass, who has been challenged in the past on other concepts regarding fallout, suggests in his latest one that the alleged genetic hazard persists even though atmospheric tests by most nuclear powers have ceased since 1963.

He further suggests that there is a potential genetic hazard from underground nuclear blasts designed for peaceful purposes, such as carving out canals.

He expressed such views in a recent article in The Bulletin of Atomic Scientists, in remarks attributed to him in an article in The London Observer newspaper, in a seminar arranged by some Congressmen on Capitol Hill last week, and in an appearance on the National Broadcasting Company "Today" show on Thursday.

His theory includes the following points:

Genetic damage has been caused to many parents by fallout radiation, and this has been responsible for a leveling off, since around 1950, in the previously sharply declining infant mortality rate in the United States.

One per cent more baby deaths, both in the infant and fetal stage, than otherwise would have been expected have occurred in the United States alone as a result of fallout from "200 megatons of testing" of nuclear weapons by the United States and other nations since the initial American test in New Mexico in 1945. A megaton is the equivalent of one million tons of TNT.

Evidence, in recent years, of increased numbers of prematurely born babies in the United States is linked with fallout.

The Government scientists—who challenged his theory in separate interviews—were: Dr. William Bibb of the Atomic Energy Commission's Division of Biology and Medicine; Dr. Arthur Wolfe of the Health, Education and Welfare Department's Consumer Protection and Environmental Health Service, and Dr. Frank Falkner of the Public Health Service's National Institute of Child Health and Human Development.

Representative Chet Holifield, Democrat of California, chairman of the Joint Senate-House Atomic Committee, said that Dr. Sternglass' theories had already "been sharply criticized by a number of knowledgeable people who say his conclusions are based on mistaken use of data."

NO SUPPORT FOUND

Dr. Bibb said:

"The A.E.C. for many years has supported long-term, intensive studies of fallout, including measurements of actual fallout rates, and of low-level radiation effects. The results of these studies, and those of others not connected with the A.E.C. simply do not support Dr. Sternglass' thesis. Dr. Sternglass has based his theory on what we consider to be incomplete and inaccurate data.

"We are convinced that such statements as Dr. Sternglass' are potentially dangerous and unnecessarily frightening to the public and should not be allowed to stand unchallenged."

Dr. Falkner said there was evidence suggesting that in recent years, the birth rate of premature babies had increased in the United States and conceivably in other countries. He said that "increased effects of poverty" appeared to be a more likely explanation than the Sternglass theory.

Dr. Wolfe said:

"While Dr. Sternglass may have statistical correlations between fallout rates and infant mortality rates, scientific evidence does not support his conclusions.

"The Swedish studies with mice to which he refers in support of his theory involved radiation doses several orders of magnitude higher than those possible from fallout."

BISHOP ZIELINSKI OF BUFFALO IS FIRST AMERICAN-BORN BISHOP TO HEAD POLISH NATIONAL CHURCH

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. DULSKI. Mr. Speaker, the Right Reverend Thaddeus F. Zielinski, D.D., bishop of the Buffalo-Pittsburgh Diocese of the Polish National Catholic Church is the first American-born bishop to become bishop-primate of the church.

He ascended to the top administrative position in the church upon the death in Poland on July 15 of the Most Reverend Leon Grochowski, 82, primate of the church.

This is not the first "first" for Bishop Zeilinski in his church life. He was the first American to be named a bishop of the church, the first Polish Catholic bishop to ordain priests and deacons for another church, the Episcopal Church, and the first to participate in the consecration of a new cathedral for the Independent Church of the Philippines in that country.

Indeed, this is a well-deserved promotion for Bishop Zielinski and I am certain that he will be a great credit to his church in his new responsibility.

Mr. Speaker, as a part of my remarks I am including an article on his elevation, an article on the bishop's frequent "firsts," and two editorials:

[From the Buffalo (N.Y.) Evening News, July 18, 1969]

BISHOP ZIELINSKI TO HEAD POLISH NATIONAL CATHOLICS

Bishop Thaddeus F. Zielinski of the Buffalo-Pittsburgh Diocese of the Polish National Catholic Church will be installed as presiding bishop of the church in America and Canada within the next 90 days.

His succession to the office of prime bishop follows the death in Poland Tuesday of the Most Rev. Leon Grochowski, 82, who suffered a heart attack while preparing for a conference of bishops in Warsaw.

Bishop Zielinski had been chosen to succeed Bishop Grochowski at a 1967 synod in Manchester, N.H.

Until his formal installation in St. Stanislaus Cathedral, Scranton, Pa., Bishop Zielinski will be the administrator of the Polish National Catholic Church and remain in Buffalo at Holy Mother of the Rosary Cathedral.

ORDAINED IN 1927

As primate of the church he will administer a religious jurisdiction comprising 172 parishes in the U.S. and 18 in Canada. There are three dioceses in Poland: Warsaw, Cracow and Wroclaw.

The church was established there after World War I by missioners from the church in America. The church in Poland has been autonomous since after World War II.

Bishop Zielinski, 65, is a native of Wilkes-Barre, Pa., was ordained to the priesthood in November of 1927 after graduating from Savanrola Seminary in Scranton. He came here from Dickson City, Pa., as administrator of the Cathedral, was elected bishop in August of 1954 and consecrated in Buffalo the following September.

His present diocese includes 32 churches, extending from Rochester to Pittsburgh. Four are in western New York: The Cathedral, All Saints in Grant St.; Holy Trinity, Lackawanna and St. Michael's, Niagara Falls.

TO CALL COUNCIL MEETING

The elevation of Bishop Zielinski will give him the title of most reverend; he has had the title of right reverend.

The funeral for Bishop Grochowski will be in Scranton, Pa., central diocese of the church and the place where it was founded in 1897. However, a date cannot be set because of problems concerning the return of the body from Poland.

Bishop Zielinski said he will call a meeting of the church's Supreme Council in Scranton after the funeral. This session will concern itself with succession and other administrative subjects.

The Polish National Catholic Church separated from the Roman Catholic Church in 1897 as the result of a dispute over church administration.

[From the Buffalo (N.Y.) Courier-Express, July 19, 1969]

"FIRSTS" FREQUENT FOR BISHOP

(By Camille Curro)

The Rt. Rev. Thaddeus F. Zielinski, the new bishop primate of the Polish National Catholic Church who is "looking forward to service as the head of the church with great anticipation," has a history of "firsts" in his life.

The Buffalo-Pittsburgh Diocese bishop, who became the church's administrative head upon the death Thursday of the Most Rev. Leon Grochowski, the former primate, is the first American-born bishop to achieve the position.

He was also the first American to be named a bishop of the church, the first Polish Catholic bishop to ordain priests and deacons for another church, the Episcopal Church, and the first to participate in the consecration of a new cathedral for the Independent Church of the Philippines in that country.

Striving to give "youth a place to speak their own minds," he initiated a three-day youth convocation in 1964. Held annually since then, the convocations give young people an opportunity to study church matters and make known their own thoughts on church problems.

Instrumental in introducing the use of the English language in all aspects of church life, Bishop Zielinski in 1961 celebrated the first Mass in England in his church, Holy Mother of the Rosary Cathedral, 108 Sobieski St.

He translated and published the first English catechism, prayerbook and ritual books and introduced the first translations of church hymns from Polish to English.

On Aug. 3, he expects to present still another first for his church, the administration of Holy Communion in both forms of bread and wine.

"The method of intinction, dipping the bread into consecrated wine, will be practiced for the first time," he said. "This is very important to me and to our church."

This breaking of church tradition so prevalent in his life is paralleled by the institution of the Polish Catholic Church itself, he believes.

"Ours is the only church I know of which originated in the United States and was carried back to the homeland in Poland," he said. "In most cases, it has happened the other way around."

The bishop predicted no great changes in the church's future under his administration, though he expressed a wish to strengthen ecumenical ties with other churches, notably the Old Catholic Church of Europe, the Independent Church of the Philippines and the Orthodox and Episcopal Churches of the U.S.

The elevation, he said, "Took me completely by surprise." Though he had been elected to succeed Bishop Grochowski at the 12th General Synod of the church in 1967, he said:

"I never thought I would fill the post by the next synod in 1971. Bishop Grochowski was on in years, but his health and vigor were good. His death was a complete shock."

In succession procedures instituted in 1949, general synods are held every four years. At this time, a successor to the primate may be elected or reelected. Bishop Zielinski was elected at the last synod, but, he said, another bishop might be chosen in the next synod.

"Bishop primate is not a life-time position," he said. "It is discussed at each synod."

Bishop Zielinski described his predecessor as a man "known for his great religious stability and devotion. He devoted his whole life to the church in America and in Poland. We all feel his loss."

BISHOP ZIELINSKI TO BE HEAD OF POLISH CHURCH

The entire Western New York community joins in the prayers and expressions of best wishes extended to the Rt. Rev. Thaddeus F. Zielinski, bishop of the Buffalo-Pittsburgh Diocese of the Polish National Catholic Church, who became administrative head of the church Thursday upon the death of the Most Rev. Leon Grochowski in Poland.

The consecration of Bishop Zielinski as primate of the Polish National Catholic Church in America will take place in Scranton, Pa., within the next few months and it will be a singular honor for the only American-born bishop the church as ever had.

We extend to members of the church our sincere condolences on the passing of Bishop Grochowski as well as our sense of pride in the succession of Bishop Zielinski whose deep sensitivity to the human condition was expressed in a 1968 Eastertime message which said in part that "each human being is infinitely precious in the sight of God, created not for just a time but for eternity."

[From the Buffalo (N.Y.) Am-Pol Eagle, July 24, 1969]

BISHOP ZIELINSKI RICHLY DESERVING OF ELEVATION

A lifetime of service devoted to God and to the community was justly rewarded with last week's elevation of the Rt. Rev. Thaddeus F. Zielinski to the position of Bishop primate of the Polish National Catholic Church.

Those who have known Bishop Zielinski since his coming to Buffalo in 1953, have been amazed by the seemingly tireless efforts of the Bishop. Even under the pressures of a very demanding schedule, Bishop Zielinski has always managed to find time to lend his support to a worthwhile cause or project whenever and wherever it is sought. One example of this is his fine efforts as a member of the Broadway-Fillmore Community Corporation, a group of religious and civic leaders working towards revitalization of the upper East side area.

Being named the first American-born Bishop primate of the Polish National Catholic Church marked the second time that Bishop Zielinski has been a pioneer in his church. He was also the first American to be named a bishop in the church when he became the head of the Buffalo-Pittsburgh Diocese sixteen years ago.

We would like to congratulate Bishop Zielinski on his well-deserved elevation. May God be with him in all his future endeavors. Our only regret is that Bishop Zielinski will be leaving Buffalo as a result of his elevation. He will be sorely missed.

CAPTIVE NATIONS WEEK, 1969

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. DERWINSKI. Mr. Speaker, as in previous years, Radio Moscow let it be known to the world that the Russian regime and its associated totalitarian members view the annual Captive Nations Week observance with disdain and displeasure, especially since they seek "normalized and harmonious relations" with the United States and the West. In continuous news broadcasts on July 17 and 18, this mouthpiece of the Kremlin portrayed the 1969 observance as "a dinosaur lurking in the cities of the United States" and its "anti-Communist supporters seeking to impede better relations between the U.S.S.R. and the United States of America." They went on to show how the peaceful spirit of Mr. Andrei Gromyko's address before the Supreme Soviet contrasted sharply with the anti-Communist tone of Captive Nations Week and how our mutual interests as already reflected in "our being wartime allies" and in "the Sputnik leading the way for the Apollo today" emphasize "the dinosaur character of these Captive Nations Week observances.

Now, plainly, all of this and more demonstrates how deep a thorn the Captive Nations Week resolution is in the side of Moscow's policy of Soviet Russian imperio-colonialism and eventual world domination. One of the prime requisites of this policy is the attainment of our acquiescence to the territorial integrity of the Red empire. For well over a decade, Moscow has been endeavoring to realize this objective as an expression of "better relations between the U.S.S.R. and the United States of America." If this were realized, it would mean a tragic loss to us of natural allies from the Danube to the Pacific and over to the Caribbean, and a formidable and much-needed base of security for Moscow and its global plans. As Moscow so well knows, the Captive Nations Week observance annually crystallizes our opposition to its imperio-colonialist rule and influence over all the captive nations, particularly those in the U.S.S.R. itself, and thus serves as a monumental reminder that our people will never acquiesce to the permanent captivity of close to a billion human souls.

From all reports, the 10th anniversary of the Captive Nations Week resolution was a necessary success. As further indications of this success, supplementing those I gave in my address on July 16, are the following:

First. Proclamations by Gov. Nelson A. Rockefeller, of New York; Gov. Edgar D. Whitcomb, of Indiana; Gov. John J. McKeithen, of Louisiana; Mayor John V. Lindsay, of New York; and Mayor Bruno E. Giordano, of Stanford, Conn.

Second. An address by the Honorable John A. Volpe at the 10th anniversary captive nations banquet in Washington, D.C.

Third. Commentaries on Captive Nations Week in the July 18 issue of Korea's Freedom Center News; an article in the July 20 Washington Post on "Captive Nations"; and a resolution passed by the Chicago Captive Nations Committee.

Fourth. An address by Dr. Ku Chengkang at the Phoenix Captive Nations rally, along with his biography.

Fifth. A message by President Chiang Kai-shek on the week in the Free China Weekly of July 13, 1969, and messages from Senator Jacob K. Javits and Representative Frank Horton to the 10th anniversary banquet in Washington.

Sixth. A typical program presented by the Captive Nations Week Committee of New York, a brief address delivered by Dr. Austin J. App at the Philadelphia observance, and a commentary on the week in the July 12 issue of the Vietnam Newsletter.

Seventh. The program of the Arizona Capitive Nations Week Committee and

characteristic press coverage by the Arizona press.

The above-mentioned material follows:

PROCLAMATION, STATE OF NEW YORK

Our commitment and our basic belief as a nation is that all societies should be able to choose the political systems under which they live.

America has provided a haven for the oppressed, and we have benefited from their coming here.

We in New York State are deeply in sympathy with and support the just aspirations for freedom and independence of captive people everywhere.

Now, therefore, I, Nelson A. Rockefeller, Governor of the State of New York, do hereby proclaim July 13–19, 1960, as Captive Nations Week in New York State.

By the Governor:

NELSON A. ROCKEFELLER.

Attest:

ALTON G. MARSHALL,
Secretary to the Governor.

PROCLAMATION, STATE OF INDIANA

For Captive Nations Week, July 16th to July 22nd, 1969, to all to whom these presents may come, greeting:

Whereas, the imperialistic policies of Russian Communists have led, through direct and indirect aggression, to the subjugation and enslavement of the peoples of Poland, Hungary, Lithuania, Ukraine, Czecho-Slovakia, Latvia, White Ruthenia, Estonia, Rumania, East Germany, Bulgaria, Mainland China, Armenia, Azerbaijan, Georgia, North Korea, Albania, Idel-Ural, Serbia, Croatia, Slovenia, Tibet, Cossackia, Turkestan, North Vietnam, Cuba, and others; and

Whereas, the desire for liberty and independence by the overwhelming majority of peoples in these conquered nations constitutes a powerful deterrent to any ambitions of Communist leaders to initiate a major war; and

Whereas, the freedom-loving peoples of the captive nations look to the United States as the citadel of human freedom and to the people of the United States as leaders in bringing about their freedom and independence; and

Whereas, the Congress of the United States by unanimous vote passed Public Law 86–90 establishing the third week in July each year as Captive Nations Week and inviting the people of the United States to observe such week with appropriate prayers, ceremonies and activities; expressing their sympathy with and support for the just aspirations of captive peoples for freedom and independence;

Now, therefore, I, Edgar D. Whitcomb, Governor of the State of Indiana, do hereby proclaim that the week of July 16th to July 22nd, 1969, be designated Captive Nations Week in Indiana.

By the Governor:

EDGAR D. WHITCOMB,
Governor of Indiana.

Attest:

WILLIAM N. SALIN,
Secretary of State.

STATE OF LOUISIANA PROCLAMATION

Whereas, the imperialistic policies of Russian Communists have led, through direct and indirect aggression, to the subjugation and enslavement of the peoples of Poland, Hungary, Lithuania, Ukraine, Czecho-Slovakia, Latvia, Estonia, White Ruthenia, Rumania, East Germany, Bulgaria, Mainland China, Armenia, Azerbaijan, Georgia, North Korea, Albania, Idel-Ural, Serbia, Croatia, Slovenia, Tibet, Cossackia, Turkestan, North Vietnam, Cuba, and others; and

Whereas, the desire for liberty and independence by the overwhelming majority of peoples in these conquered nations constitutes a powerful deterrent to any ambitions of Communist leaders to initiate a major war; and

Whereas, the freedom-loving peoples of the captive nations look to the United States as the citadel of human freedom and to the people of the United States as leaders in bringing about their freedom and independence; and

Whereas, the Congress of the United States by unanimous vote passed Public Law 86–90 establishing the third week in July each year as Captive Nations Week and inviting the people of the United States to observe such week with appropriate prayers, ceremonies and activities; expressing their sympathy with and support for the just aspirations of captive peoples for freedom and independence;

Now, therefore, I, John J. McKeithen, Governor of the State of Louisiana, do hereby proclaim that the week commencing July 13, 1969, be observed as Captive Nations Week in Louisiana, and call upon the citizens of Louisiana to join with others in observing this week by offering prayers and dedicating their efforts for the peaceful liberation of oppressed and subjugated peoples all over the world.

By the Governor:

JOHN J. MCKEITHEN,
Governor of Louisiana.

Attest:

WADE O. MARTIN, JR.,
Secretary of State.

PROCLAMATION, CITY OF NEW YORK

The Congress of the United States by unanimous vote passed Public Law 86–90 establishing the 3rd week in July of each year as Captive Nations Week and inviting the people of the United States to observe this week with appropriate prayers, ceremonies and activities expressing their sympathy with and support for the just aspirations of captive peoples for freedom and independence; and

Whereas: The people of Eastern and Central Europe as well as those in other parts of the world are being denied fundamental human rights in pursuing their own destiny; and

Whereas: The desire for liberty and independence by the over-whelming majority of peoples in these conquered nations constitutes a powerful deterrent to tyranny and aggression; and

Whereas: The freedom-loving peoples of the captive nations look to the people of the United States for leadership in attaining their freedom and independence.

Now, therefore, I, John V. Lindsay, mayor of the City of New York, do hereby proclaim the week of July 13–19, 1969, "Captive Nations Week" in New York City, and call upon our citizens to observe this week by offering prayers and dedicating their efforts for the peaceful liberation of oppressed and subjugated peoples all over the world.

By the mayor:

JOHN V. LINDSAY.

PROCLAMATION, STAMFORD, CONN.

Whereas, the imperialistic policies of Russian Communists have led, through direct and indirect aggression, to the subjugation and enslavement of the peoples of Poland, Hungary, Lithuania, Ukraine, Czecho-Slovakia, Lavtia, Estonia, White Ruthenia, Rumania, East Germany, Bulgaria, Mainland China, Armenia, Azerbaijan, Georgia, North Korea, Albania, Idel-Ural, Serbia, Croatia, Slovenia, Tibet, Cossackia, Turkestan, North Vietnam, Cuba, and others; and

Whereas, the desire for liberty and independence by the overwhelming majority of peoples in these conquered nations constitutes a powerful deterrent to any ambitions of Communist leaders to initiate a major war; and

Whereas, the freedom-loving peoples of the captive nations look to the United States as the citadel of human freedom and to the people of the United States as leaders in bringing about their freedom and independence; and

Whereas, the Congress of the United States by unanimous vote passed Public Law 86–90 establishing the third week in July each year as Captive Nations Week and inviting the people of the United States to observe such week with appropriate prayers, ceremonies and activities; expressing their sympathy with and support for the just aspirations of captive peoples for freedom and independence:

Now, therefore, I, Bruno E. Giordano Mayor of Stamford, Connecticut, do hereby proclaim that the week commencing July 13, 1969, be observed as Captive Nations Week in Stamford, and call upon the citizens of Stamford to join with others in observing this week by offering prayers and dedicating their efforts for the peaceful liberation of oppressed and subjugated peoples all over the world.

JOHN C. PUSARO,
Acting Mayor.
BRUNO E. GIORDANO,
Mayor.

REMARKS BY JOHN A. VOLPE AT THE TENTH ANNIVERSARY CAPTIVE NATIONS BANQUET

Thank you for this award. I am truly grateful. To be honored for civic service is a source of great pride, but to be honored by one's old friends for this service is the greatest tribute a man could receive. I promise each and every one of you here tonight I shall do everything in my power to be worthy of it.

As the son of Italian immigrants, I have long felt a close association with the National Captive Nations Committee and I know well the determined spirit and dedication of all of you people here tonight.

It was ten years ago—just ten years ago tomorrow—July 17 that our late beloved President Dwight Eisenhower signed the original Captive Nations Proclamation here in Washington. At that time President Eisenhower said:

"While I am here, America will never concede that there has been a sound, durable or working peace that could be called global until these Nations have the right to express their own convictions, their own opinions and desires about their own fates; and then as far as the United States was concerned, it would never cease to use every peaceable means—and I have always emphasized that word peaceable—to give them such an opportunity."

And I know too, that President Nixon is equally determined to carry out that pledge. As our then-Vice President, he, too, was active in the cause of the captive peoples. And he was the man, of course, who engaged Premier Krushchev in that famous "kitchen debate."

As you know, my field is not foreign relations; but I have the greatest respect for President Nixon's ability and the ability of my fellow cabinet members whose responsibility it is to deal with such things. I see these men regularly. I work with them and respect them and I know them as dedicated men.

But the job of Government today is not theirs alone. We individual citizens must also join in. We have a job to do.

Our task is to discover, each in his own way, the way in which we can make this Nation better, and we can do it by starting where we are, with what we have, by joining those who, all over America, unknown and not praised, daily turn their backs willingly on the comforts we all love in order to help others and to become better informed and better neighbors and better citizens.

And above all, we must keep alive within ourselves the American dream—the faith that ours is still the land of opportunity—

that a free man regardless of his race, color or background—can work out his own destiny. I had that faith instilled in me early—very forceably.

That faith has never left me.

I know of another American who also shares that faith—another man who will be helping us with our task of making freedom work.

I speak of our President.

He too has been faced with the choice of comfort and duty. He too has had to choose between political safety and doing battle for what he knows is right.

He has made the hard choice.

He has chosen to settle for nothing less than a just peace in Vietnam. It would be easy, oh so easy, for him to listen to the arguments which so insidiously equate compassion with political shrewdness; it would be easy for him to say: "Everyone wants peace. Let's use this or that gimmick to get peace."

This man wants a just peace. He knows it would be easier for him to adopt some gimmick in order to appear to have achieved a just peace.

It would have been easier for him to say a few months ago: "We don't need an ABM system. We don't need a defense against missile attack." I am aware, of course, that there are those who conscientiously oppose the deployment of the "safeguard" ABM system. But let me say that on this issue I stand solidly in support of the President. I am convinced that his decision is proper and necessary.

President Nixon knows that there is a difference between doing what you want to do—and doing what you *have* to do.

That, in a sentence, is the essential heart of this Administration. When all the arguments have been given, when the purple rhetoric of the vehement critic fades away, when the attempts to obscure, cajole, and goad have been made by those who either don't know or don't care how hard this man has worked for peace and justice and freedom . . . when all this is over, what remains is the undeniable fact:

President Nixon would rather do what he *has* to do than what he would *like* to do. Duty before popularity. Duty before ease. Duty before the natural, human desire for agreement.

And although the critics do not or will not recognize this, the people do. The polls reflect it, congressional mail reflects it, you hear it everywhere. The people know that this is a man who is going to do what is right, not what is easy.

They know that Richard Nixon is a man who will never settle for ease if ease means rejecting duty.

I hope you will continue to give your support to this Administration as it tries to build bridges of understanding at home and abroad. In peace, we can be certain that the captive nations will one day evolve a better form of life. They will regain their dignity, their independence, their identity.

Truth is an irresistible force against which nothing can prevail in the long run. And that is why I have faith that political freedom and personal choice will come again to the lands between the Baltic and the Adriatic. The captive people have given much to the greatness of man—in the arts, in philosophy, in science—and they will find a way to achieve their political greatness too by undermining the foundations of tyranny.

In time—with patience and planning, persistence, and skillful diplomacy on our part—these men and women of the captive nations will enjoy a new birth of freedom.

Again, let me thank you for the honor you have shown me. I am proud of your medal. It has given me new determination. I am deeply appreciative. God bless you all.

[From the Seoul (Korea) Freedom Center News, July 18, 1969]

DISPROPORTIONATE WITHDRAWAL LEAD VIETNAM TO THE LIST OF CAPTIVE NATIONS

The National Captive Nations Committee in Washington, D.C. asserted that shifting schemes of coalition government in Vietnam, the ouster of the Thieu leadership, enclave arrangements, disproportionate pullout and the like would in time add the Republic of Vietnam to the long list of captive nations."

Marking the 10th anniversary of the Captive Nations Week Resolution which U.S. Congress passed in July, 1959 and late President Eisenhower signed, Dr. Lev. E. Dobriansky, chairman of the National Captive Nations Committee in Washington who is concurrently professor of economics at Georgetown University said Monday that "a real and genuine victory in Vietnam can still be realized if we have the guts not to fear either Moscow or Peking.

The chairman of NCNC also pointed out that the Russian rape of Czechoslovakia has sobered many Americans on the reality of the captive nations. "The long-run importance of the captive nations movement," he observed, "has never been stronger."

A 10th anniversary ceremony was to be held on Wednesday at the University Club in Washington. Prominent senators and congressmen were scheduled to speak. Dr. Ku Cheng-kang, council chairman of the World Anti-Communist League in Seoul, and ten honorables of the U.S. government was to be honored.

[From the Seoul (Korea) Freedom Center News, July 18, 1969]

SEOUL CITIZENS OBSERVE CAPTIVE NATIONS WEEK IN A RALLY

A citizens rally, condemning the Communists and pledging to emancipate people under Communist rule, was held Monday at Citizens Hall with about 3,000 citizens attending. The rally, held at the beginning of the third week of July every year under the sponsorship of Korea Chapter of the World Anti-Communist League, adopted a resolution pledging the full-hearted spirtual and material support for people under the Communist yoke.

Culture-Information Minister Shin Bumshik said in a speech read by Vice Minister Yi Chum-song that the Communists are bringing to themselves total collapse with their own self-conflicts and feuds. Participating in the rally were also Eung-joon Lee, chairman of the league's Korea Chapter, Jose Ma. Hernandez, secretary general of the League and Louise Yim, president of Chungang University.

[From the Washington (D.C.) Post, July 20, 1969]

CAPTIVE NATIONS: TIMES HAVE CHANGED SINCE CONGRESS PASSED RESOLUTION THAT IRKED KHRUSHCHEV

(By Chalmers M. Roberts)

Ten years ago this coming Thursday, Richard Nixon and Nikita Khrushchev indulged in their famous "kitchen debate" at the American exhibition in Moscow. The two men had gone there from a Kremlin meeting during which Khrushchev had charged the United States with a serious "provocation" in the form of a congressional resolution designating Captive Nations Week.

That resolution, proclaimed by President Eisenhower, asked Americans to pray for liberation of "enslaved peoples" in Eastern Europe.

This past Monday, President Nixon, under the same congressional authorization, again proclaimed Captive Nations Week, which ended yesterday. Mr. Nixon noted in the proclamation, however, that in the intervening decade "there have been many changes in international affairs."

One was apparent when White House Press Secretary Ronald Ziegler was asked whether Rumania was one of the Captive Nations. He replied that "the proclamation speaks for itself." The proclamation named no nations.

Mr. Nixon, of course, is soon going to Rumania. One of his comments in the proclamation was that one thing that has not changed in the past decade "is the desire for national independence in Eastern Europe," a phrase which fits the Communist regime in Rumania.

But more than Rumania has changed in the decade. The big change, on the Communist side of the world, is the Sino-Soviet split. Compared to that split, Rumania's ability to operate with a degree of independence from Moscow in foreign affairs—though important—is a puny thing indeed.

The Rumanians are engaged in a delicate balancing act, keeping their lines open to both Moscow and Peking. The day after Mr. Nixon flies out of Bucharest, the Rumanian Communist Party Congress is due to open with both Chinese and Soviet observers on hand.

Washington's fascination with the Sino-Soviet split grows as the split gets worse. The Russians have closed the Trans-Siberian railroad to foreigners, which adds credence to reports that Moscow is beefing up its Far East military forces just in case.

There is disbelief here that war, in contrast to past border skirmishes, could really break out between the two Communist giants. Still, officials are beginning to think it is not all that impossible.

As one put it recently, "A year ago I would have ridiculed this and said it was no more than a 2 per cent possibility. Today I would have to say it is about a 10 per cent possibility."

Yet this official and others can see no real gain for either side unless the Soviets engaged in the massive kind of strike necessary to destroy China's nuclear capability. And that, it is felt here, would be counterproductive to the Kremlin's hopes for a post-Mao regime favorable to Moscow; it would rally all dissident elements around Mao and create a lasting hatred of the Russians.

Whether Mr. Nixon or Rumania's Ceausescu will touch on any such delicate issues is doubtful. But that the subjects are on both minds is certain. The official American position, as stated by Secretary of State Rogers, is that the United States does "not intend to exploit any differences that might exist" between Russia and China.

RESOLUTION, CHICAGO CAPTIVE NATIONS COMMITTEE

Whereas, the Senate and the House of Representatives have authorized the President of the United States of America to proclaim a Captive Nations Week, and whereas the Russian and Chinese communism continues to build up its vast colonial empire and threatens the peace, security, and independence of the Free World, carrying out subversive conspiracies in Latin America, Africa, and even in our own country, conducting open, aggressive warfare in South Viet-Nam, neighboring countries of Laos, Cambodia, and Thailand, having made deep inroads into Arab countries, and building up its threatening military power in the area of the Mediterranean;

Now, on the occasion of the 10th anniversary of the Proclamation of Captive Nations Week, we feel a particular urgency and a sacred obligation to speak on behalf of the millions of human beings under the tyranny of the communist colonial empire,

Therefore, be it resolved by the Chicago Captive Nations Week Committee, to urge

the United States to assume the role of leadership by taking a course motivated by the most sacred human obligations; the horrible fact that one-third of mankind is already enslaved by the communist imperialism necessitates a new policy which would encourage the aspirations and movements for self-determination of all enslaved peoples by an expressed and unequivocal commitment of the United States of America to support, by all means possible, such aspirations for national freedom;

Be it further resolved, that in view of the indivisibility of freedom and peace, the restoration of the sacred rights of all the nations based on principles of democracy, self-determination and sovereignty within their respective ethnic boundaries, is of paramount importance to establish freedom, security and stability of the entire world. Consequently this policy is in the best interest of our country for the present and in years to come,

Be it further resolved, that we at this very critical and perhaps fatal moment for the entire free world support unreservedly the United States' resistance to Communist aggression in South Viet-Nam and the building up of forces of freedom in that part of the front of the free world; in this spirit we salute the members of the United States and Allied Armed Forces.

Be it further resolved, that following the anniversary year of the Proclamation of Human Rights and in view of the flagrant violations of these same rights by the Soviet Union through the suppression and occupation of Czechoslovakia during that very year, the United States Ambassador to the United Nations place on the agenda of the United Nations the following demands:

1. the absolishment of slave labor, mass deportations, all concentration camps, and all forms of genocide,

2. to guarantee a free return to their countries all the deported and exiled who survived the communist ordeal,

3. free elections for all enslaved nations under the supervision of the United Nations Organization,

Be it further resolved, that we oppose the admission of the Chinese Communist regime to the United Nations Organization;

Be it further resolved, that we oppose "One-way Bridges" and the opening of a Russian Consulate in Chicago;

Be it further resolved, that since every nation has the right for self-determination this right belongs also to the Biafras; in the name of humanity we most urgently appeal to the United States government to help the suffering and starving human beings being murdered in masses by the Nigerian aggressors, armed by the Russian barbarians and the British labor government,

Be it further resolved, that special efforts must be made by the United States towards an awakening and strengthening of all moral forces particularly at a time when we are warned by the burning martyrs in the interest of freedom; it is frightening that at this time we are faced by an unparalleled loss of ethical concern and incredible callousness towards the enslaved, abandoned to their ordeal,

Be it further resolved, that the United States government stop building up the communist empire, particularly the Soviet military power by selling it important military equipment,

Be it further resolved, that the United States government stop trading with the communist countries because in so doing, it helps them to tighten their grip on the enslaved; whatever is gained at great risk by the desperate, enslaved men and women through sabotaging Soviet economy is completely destroyed through trading,

Be it further resolved, to appeal to the United States authorities to undertake utmost efforts in the interest of the sacred values in cultural, social, and educational institutions so vital for the preservation of freedom. It is appalling to see how free men let themselves be used in the portrayal of anarchism, nihilism, defeatism, amoralism, pacifism, and atheism in the service of the blood-stained Red Empire,

Be it further resolved, that this Committee reiterates its support for the establishment of the permanent Captive Nations Committee (House Resolution 211) and Freedom Academy; there is a desperate need for a forum in which the free world would have confidence; the U.N. has failed to be such a forum to handle the issues of injustice and crimes against humanity; the recent appeal of 54 citizens of the USSR which has been ignored up to this day speaks for itself; the Unesco's decision to commemorate the centenary of Lenin by peddling this criminal as a humanist is an insult to the civilized world community and reveals the real interests of this organization; by the establishment of a trustworthy forum, the United States will prove to the entire world that it will not cease in its efforts until all the Captive Nations are able to enjoy their God-given rights in their sovereign states.

VIKTORS VIKSNINS,
General Chairman.

———— ————,
Chairman, Resolution Subcommittee.
ULANA CELEWYCH,
Secretary.
(And 13 others).

ADDRESS BY DR. KU CHENG-KANG AT PHOENIX RALLY

Coming from Asia where people have suffered the most at the hands of the Communists, I am privileged to attend this rally of great significance. I bring to the people of America the respect and admiration of all the peoples of Asia for your fight for the freedom of all mankind.

The "Captive Nations Week" movement has become a moral support to peoples everywhere who are opposed to Communist slavery. America's advocacy of this movement has further engraved in the hearts of peoples throughout the world her long record of fighting for freedom during the past two hundred years as well as her contribution.

The Declaration of Independence and the Constitution of the U.S.A. clearly state that freedom is the inalienable right of all men. The United States has fought in two World Wars in defense of this right for all men. In both the Korean War and the Vietnam War, the United States has, in upholding the spirit of her founding Fathers, stood side by side with Asia's free peoples.

Since, the initiation of the movement in 1959, however, mankind's struggle for freedom is still beset by serious difficulties. The continued existence of the Iron Curtain is in itself a tragedy of mankind, and its expansion constitutes a serious crisis of our time.

The expansion of Communist influence has not only deepened the agonies of the enslaved peoples but is also endangering the Free World's remaining free. From the Hungarian uprisings of 1956 to Czechoslovakia's liberalization movement last year and the relentless anti-Communist uprisings on the China mainland including the major uprisings in Tibet, countless patriots in Asia, in Europe and in Cuba have laid down their lives for the cause of national freedom and independence.

Unless such gallant struggles receive the support of the world's freedom forces, the world may see the extinguishing of the flame of hope in the hearts of the peoples behind the Iron Curtain who may be forced to become tools of the Communists external and armed expansionism. The dangers are evident to anyone, the Iron Curtain must be destroyed at an early date.

The Communist tyranny will not perish by itself. The present divisions and chaos within the Communist bloc are not accidental. The awakening of the Free World against Communist aggression, the rising of nationalism, the progress made in the democratic countries including the improvement of social well-being have stopped the Communists' external expansion. In the face of progress achieved by the Free World, the people within the Iron Curtain have continued to struggle for freedom, rendering the Communist domestic rule increasingly difficult and causing international Communism to decline. We freedom-loving and democratic peoples must unite and work harder for the early restoration of freedom for all captive peoples and nations.

As a Chinese who has fought Communism for many years, I wish to point out that the most important thing in our fight for freedom is to actively support the peoples behind the Iron Curtain in their struggle against tyranny. Indeed the situation there as the Communist rulers themselves have admitted, is one which has "major contradictions between the government and the people". These contradictions have led to internal power struggles and a split within the Communist bloc.

However, without the onslaught of freedom forces, the Communist regimes relying on brute force and may bring about still greater troubles for the free world. And faced with the imminent threat of internal revolution, the Communist rulers will also resort to every means of suppression. The tragedies of Hungary and Czechoslovakia and the Chinese Communists' so-called "Cultural Revolution" and "Rebellion of the Red Guards" are concrete examples.

Ten years ago while proclaiming the designation of the Captive Nations Week, President Eisenhower said: "I . . . urge them to study the plight of the Soviet-dominated nations and to recommit themselves to the support of the just aspirations of those captive nations." Today this appeal is still refreshing and forceful. With the sharp split between Soviet Russia and the Chinese Communists and the utter chaos within the Chinese Communists camp, conditions are highly favorable for the liberation of those nations and peoples.

Hence, we must now unite all the forces of freedom to establish an international front against Communism. In the past, expansion of the Communist tyranny was due to the fact that the freedom forces were scattered. Now is the time for the freedom loving nations to join forces against a splintering and disintegrating Communist world.

Since 1959, the "Captive Nations Week" has become an important link in the international movement for freedom and has received the support of the Asian Peoples' Anti-Communist League (APACL). The World Anti-Communist League (WACL) organized two years ago has advanced the call to struggle for the freedom of mankind. From this Common basis, we must work for an international front against Communism and urgently-needed regional security systems.

Ladies and gentlemen, the Declaration of Independence is revered throughout the world because of its lofty ideals and moral courage, embodying the spiritual basis and tradition of the United States. However, I must point out that that spirit and tradition are being subjected to the most serious challenge and trials in your history. Certain mistaken views and compromising statements concerning Communist aggression and especially those views urging the United States to disentangle from world affairs and mind her own business have blurred the image of the United States. Such talks have even shaken the world's confidence in the United States as leader of the democratic nations in defending democracy and freedom. The Com-

munist bloc has been encouraged to move in and intensify infiltrations and subversions to cripple the United States from within.

At this decisive moment for the honor of the United States and the destiny of mankind, I wish to reiterate the words of President Nixon in his speech to the graduates of the United States Air Force Academy. He said, "I believe a resurgence of American idealism can bring about a modern miracle—a world order of peace and justice." I believe that the firm stand of the United States in the peace talks with regard to Vietnam and a firm attitude towards the Chinese Communists, the source of evils in Asia, are the premises for establishing this new world order. I wish to remind you that the Chinese Communist regime is at once the most dangerous aggressor and basically most vulnerable. To shatter the Iron Curtain and eliminate the danger of a nuclear war, we must have the courage to support the liberation struggle of the people on the China mainland to seek the realization of this new world order at an early date.

The paths of history are circuitous and uneven. I believe with you, however, that justice and truth never perish. The people behind the Iron Curtain are longing for liberation, and that task is our unavoidable responsibility. Verily we cannot remain free while our brothers are still slaves. Now is the time for us to extend helping hands to the one billion people behind the Iron Curtain.

In China, the phoenix symbolizes good fortune. It is my hope that our meeting will bring to the enslaved peoples good tidings of liberation from their purgatory.

[From the Chinese Information Service]

KU CHENG-KANG: A BIOGRAPHY

At the sixth council meeting of the Asian Parliamentarians Union in Manila last June, Ku Cheng-kang headed the Chinese delegation in his capacity as a member of the presidium of China's National Assembly.

When the World Anti-Communist League was inaugurated in Taipei in September, 1967, Mr. Ku was unanimously chosen as president by some 200 delegates and observers from seventy countries and territories. He was later elected chairman of the WACL Council, in recognition of his 13 years of hard work as president of the China Chapter of the Asian Peoples' Anti-Communist League. Many who have attended the annual conference of the APACL and the WACL, regard him actually as "Mr. APACL."

Mr. Ku is concurrently director of the Free China Relief Association, which in the past two decades has sent relief packages to millions of Chinese on the mainland and brought over 76,000 mainland refugees to Taiwan for resettlement. Under his direction, the association has provided assistance to over two million mainland escapees stranded in Hong Kong, Macao and elsewhere in the world.

A veteran Kuomintang leader, Mr. Ku was again elected a member of the standing committee of the party's Central Committee at the Tenth National Congress last April.

His friendship with numerous government and civic leaders of Japan made Mr. Ku chairman on the Chinese side of the Committee for the Promotion of Sino-Japanese Cooperation. The Committee meets annually with its Japanese counterpart, and has been instrumental in solving many knotty problems between the two neighbors.

He is also advisor to President Chiang Kai-shek and his views are eagerly sought after in the highest government circles.

At 68, Mr. Ku is perhaps one of the busiest men in free China. Indeed, any one of his many posts is a herculean job requiring the fullest devotion of time and energy of a man much younger in age. That he has held them simultaneously for so long and with such dynamic drive has surprised many of his acquaintances as well as strangers.

The National Assembly, membership of which now stands at 1,435, exercises on behalf of the people the rights of election, recall, initiative and referendum. It elects the president and vice president of the republic, and approves proposed constitutional amendments submitted by the Legislative Yuan by referendum. It is the only organ invested with the power of amending the Constitution and altering national boundaries. According to an interpretation of the Council of Grand Justices, the National Assembly, together with the Legislative Yuan and the Control Yuan, is equivalent to the parliament or congress of Western democracies. Formed in 1946 and convening once every six years, the National Assembly now has an 85-member presidium, committees on credentials, screening of draft resolutions, discipline and others, and a secretariat. Mr. Ku, a member of the Assembly since its inception, was its secretary-general from 1960 to 1966, and is now a member of its presidium. In this capacity, he has headed the Chinese delegation to the Asian Parliamentarians Union meeting for the past five years and is a vice chairman of APU. He is also vice chairman of the National Assembly's Constitutional Research Committee.

As one of the founders of the Asian Peoples' Anti-Communist League, inaugurated in Chinhae, Korea, in 1954, Mr. Ku has been president of the China Chapter of APACL ever since. It is the only going concern of its nature in the world today. He has been so devoted to the anti-Communist cause that it was only natural that when the World Anti-Communist League was established in 1967 Mr. Ku was elected its first president. He is now honorary president of WACL, which has chapters in 58 countries and areas organized under six regional leagues. To its second conference held in Saigon last December, 28 additional countries and areas sent observers. The third WACL conference is scheduled to take place in Bangkok, Thailand, on December 3–7 this year.

Occupying a major portion of Mr. Ku's time is the job of providing relief to Chinese compatriots suffering on the mainland as well as the millions who escaped to free areas. The Free China Relief Association, established in Taipei in 1950, has provided relief to millions of persons. It has helped a total of 76,772 mainland escapees to resettle in Taiwan. In the early fifties, it sponsored 166 airdrop "mercy missions" over the mainland, supplying 4,648 tons of rice, 693,247 food and medicine parcels, and over 240 million leaflets and letters. As of June, 1968, FCRA provided various assistance to 2,139,464 refugees who fled the Chinese mainland and are now living in Hongkong, Macao, Burma, Vietnam, India and other Asian countries. In the case of those brought to free China for resettlement, FCRA has helped them get job training, employment, and medical care. With an annual budget of a scant US $1 million, FCRA has done its best to solicit contributions from people at home and abroad.

Born in Kweichow, a mountainous province in southwestern China, in 1901, Ku Cheng-kang received his advanced education at the Berlin University. He was appointed a member of the Legislative Yuan in 1933. When the Constituent National Assembly was inaugurated in 1946, he was elected a delegate from Kweichow, and made president of that body which functioned as the predecessor of the present National Assembly.

During the war years, Mr. Ku served as member of the Supreme National Defense Council (1941–1945), Minister of Social Affairs (1940–1949), and Minister of Interior (1950).

Mr. Ku joined the Kuomintang when he was a student in Germany. He was a member of the KMT Central Executive Committee, 1931–1950, and from 1949–1950 was director of the Political and Party Affairs Department of the party. From 1950–1952, he was a member of the KMT Central Reform Committee. At present he is one of the 21 members of its Standing Committee.

Mr. Ku is married to the former Miss Meishiu Wang. They have five daughters and two sons.

[From the Taipei (Taiwan) Free China Weekly, July 13, 1969]

PRESIDENT CHIANG: FREE WORLD MUST CONCENTRATE ITS STRENGTH TO STRIKE FINAL BLOW AT PEIPING REGIME

President Chiang Kai-shek said that the free world must concentrate its strength and dispose of the Mao regime, which he describes as the most evil enemy of humankind.

The President warned that the Communists seek to conquer the whole world and all humankind. The free nations should combine in joint operations against them, he added.

He said, "We are confident that in winning anti-Communist hearts on the mainland and joining with formidable anti-Mao forces, we can deal blows from within and without that will sound the death knell of the Mao regime".

President Chiang made the remarks on July 10 in his message to a rally held in Taipei to observe Captive Nations Week.

Vice President and Prime Minister C. K. Yen also addressed the rally and urged "all freedom-loving countries and people of the world to step up their support to enslaved peoples. "Let us arm ourselves and clear away the inky appeasement shadows in a global movement of self-purification. The free world can win the ultimate victory in the anti-Communist revolution through steadfast struggle," Yen said.

Yen pointed out, "From Korea to Vietnam, from Asia to Africa, and from the Middle East to Latin America, virtually not a single place has been spared from the violence incited or instigated by the Maoists. The fall of the China mainland to the Communists, therefore, resulted in the erection of the world's biggest Iron Curtain and has posed a prime threat to world peace".

The Vice President went on to say, "Our righteous call has engendered towering anti-Communist tides on the China mainland and has directly or indirectly prompted schisms in the Chinese Communist Party, violent struggle among Red cadres and demoralization in the ranks of the Red forces.

"With the situation becoming increasingly favorable to us, we feel an urgent need to intensify our political march, hasten the collapse of the Peiping regime and thereby eliminate a major source of all the evils in Asia and the world," Yen added.

The rally was presided over by Ku Cheng-kang, chairman of the Captive Nations Committee in China. Some 2,000 people attended.

Ku left Taiwan two days later to attend commemorative activities for Captive Nations Week in the United States.

American Ambassador Walter P. McConaughy and U.S. Congressman Edward J. Derwinski (Rep.-Ill.) came to Taipei on July 8 for the meeting as the representative of the U.S. Captive Nations Committee.

Captive Nations Week started on July 10 and will continue through July 17 with a series of activities, including the launching of balloons from Kinmen (Quemoy) to the China mainland. The ballons carried leaflets calling on the Chinese people to rise against the Mao regime.

Messages poured in from anti-Communist organizations in many parts of the world to the preparatory committee of civic organizations that are marking Captive Nations Week in free China.

Dr. Lev E. Dobriansky, chairman of the U.S. National Captive Nations Committee, said that the observance of Captive Nations

Week by Chinese civic organizations year after year have served as a model and a tremendous source of inspiration to the free as well as the captive peoples.

Jozef Lettrich, chairman of the Assembly of Captive European Nations, said that the "morale of captive brethren is strengthened when they see that such prominent Asian statesmen, as President Chiang Kai-shek of China, find common cause with the spirit of resistance to Communist oppression."

Robert N. Thompson, member of the Canadian parliament, pointed out that "it becomes imperative that we who understand the cruel and harsh taskmaster that dialectic Communism is, hold the torch of freedom high and rededicate and recommit ourselves to the cause of these captive peoples that they too might share in the hope and liberty of true freedom."

Dr. Alfrede Ferlisi, Italian observer at the First Conference of the World Anti-Communist League held in Taipei in 1967, said that he has no doubt that President Chiang's message to the Taipei mass rally will "heighten the indomitable spirit of the Chinese people against all the oppressors and make the enslaved brothers feel that every possible effort will always be made for their liberation."

PRESIDENT CHIANG KAI-SHEK'S MESSAGE TO THE TAIPEI RALLY SUPPORTING CAPTIVE NATIONS WEEK, JULY 10, 1969

Since 1959, the United States has been observing the third week of July as Captive Nations Week to support the aspirations of people all over the world for justice and freedom. This movement has elicited a profound response and has had a far-reaching effect throughout the world. Sympathy and support have been aroused for captive peoples, strong anti-Communist tides have been raised behind the Iron Curtain and lethal blows have been dealt against the dark reign of Communist wickedness.

MAO AT ROPE'S END

As I have said before, the Chinese Communist regime is the source of all the evil in Asia and must be destroyed before the evil can be eradicated. This means that the free world must concentrate its strength and finally dispose of the Mao regime, the most evil enemy of humankind within the Communist camp, so that the people can be delivered from slavery. In the last few years Mao Tse-tung has carried out a "cultural revolution" in an attempt to seize power, prolong his personal totalitarian rule and destroy the cultural traditions of the Chinese people. Last spring he brought together a nondescript group for the so-called Ninth National Congress. This represents not the end of the "great cultural revolution" but the beginning of another round in the bloody struggle of power-seizure. The evidence of this is clearly to be seen in the mounting anti-Maoism within the Communist Party and the anti-Communism outside the Party. Now at the end of his rope, Mao Tse-tung can be expected to lash out in a last frenetic struggle and to subject our mainland compatriots to more atrocious persecution and pull tighter the bonds of slavery.

NATIONAL SALVATION

We have always felt the suffering of our mainland compatriots as though it were inflicted on us. We have never failed to push forward in our task of preparing for early counterattack to deliver them from their crucible of suffering. The anti-Mao struggle that our mainland compatriots have carried out in diverse ways is now a solid, substantial movement of Mao suppression and national salvation. This assures a new opportunity for our counterattack and guarantees final success. We are confident that in winning anti-Communist hearts on the mainland and joining with formidable anti-Mao forces, we can deal blows from within and without that will sound the death knell of the Mao regime.

WORLD PEACE

I have often said that we do not need even one soldier from other countries of the free world in our counteroffensive against the traitors on the mainland. What we do require is the free world's moral support. Anti-Communism is the common responsibility of all free people. The Communists will never limit their aggressive ambitions to one country or one region. They seek to conquer the whole world and all humankind. In their counterattack, the free nations should not fight individually and run the risk that the Communists will defeat them one by one. Adopting a consistent strategy, we should combine together for joint operations. World peace, security and freedom are not divisible. The loss of any one of these anywhere in the world will affect the destiny of all of us.

TOTAL VICTORY

Because the root cause of Asian turmoil and insecurity lies in the Maoist usurpation of the Chinese Mainland, we must deliver the Chinese people from Maoist slavery and restore their life of freedom and democracy. Only then can we assure the stability of Asia and the world. All the people of this island bastion of the Republic of China, civilians and military alike, have joined hands with the anti-Mao and anti-Communist freedom fighters on the mainland and have sworn to fight to total victory in this sacred struggle. We pray that the people and countries of the free world will understand that man cannot exist half free and half slave. If they do so, they will surely summon their courage in the cause of justice and make the sacrifices required to rescue those who are enslaved and to assure peace with honor and freedom without qualification for all the people of the earth.

WASHINGTON, D.C.

THE NATIONAL CAPTIVE NATIONS COMMITTEE,
Washington, D.C.:

Regret unable to attend this evening 10th anniversary banquet. I am pleased to pay tribute to the courageous people of the world who live in captive nations. We must help them maintain their hope for freedom and independence despite fears of suppression. The hope for freedom must be kept alive. Please convey my best wishes to all those present.

JACOB K. JAVITS,
U.S. Senator.

WASHINGTON, D.C.

WALTER PRETKA,
Rockville, Md.:

Regret am unable to attend 10th anniversary captive nations week banquet. Please extend congratulations to award recipients and convey my greetings to all present.

FRANK HORTON,
Member of Congress.

TENTH ANNIVERSARY OF CAPTIVE NATIONS WEEK—NEW YORK CITY

"It is easier for us to break the bonds of gravity which God has forged than for us to break the chains of cruelty, prejudice and tyranny that bind many people on Earth."

—Very Rev. S. K. Pastukiv

To those who bear these chains under Communist slavery, today's program is solemnly dedicated.

This Captive Nations day begins with a parade along Fifth Avenue to the Central Park Mall.

PROGRAM

Religious Services, Rev. Serhiy K. Pastukhiv, Chief Celebrant, Administrator of the Ukrainian Orthodox Church in Exile; plus clergymen of other Captive Nations.

U.S. National Anthem, Miss Vaike Turi, Soloist, Miss Frederike Tanner, Pianist.

Proclamation of Captive Nations Week, Miss Brigita Zajak.

Hon. Matthew J. Troy, Chairman, Captive Nations Committee of New York.

Byelorussian Singers, Mr. A. Machniuk, Soloist, Mrs. R. Kosciuk, Mrs. L. Machniuk, Mrs. H. Petisch; Mrs. L. Scors, Pianist.

Hon. Jaroslav Stetzko, Former Prime Minister of Ukraine, and current World President of the Anti-Bolshevik Block of Nations.

Resolution to free the Captive Nations, Mr. Charles Andreanzsky.

Ukrainian Dances, Ukrainian-American Youth Assn. Anssemble "Verchovinci" under direction of Mr. O. Genza.

Benediction, Rumanian Orthodox Priest, Rev. O. Rossi.

Master of Ceremonies, Dr. Ivan Docheff, Chairman of AF-ABN, and Vice Chairman of Captive Nations Committee of N.Y.

Following Central Park Rally, a luncheon at Hotel Commodore for advance ticket holders only.

Nations slowly dying under Communist enslavement include:

Albania, Armenia, Azerbaijan, Bulgaria, Byelorussia, China Mainland, Cossackia, Croatia, Cuba, and Czechia.

East Germany, Estonia, Georgia, Hungary, Idel-Ural, Latvia, Lithuania, Mongolia, North Caucasus, and North Korea.

North Vietnam, Poland, Romania, Serbia, Slovakia, Slovenia, Tibet, Turkestan, Ukraine, and Kurile Islands.

EXCERPTS FROM PUBLIC LAW 86-90 ADOPTED BY THE U.S. CONGRESS IN JULY 1959

Whereas the submerged nations look to the United States, as the citadel of human freedoms, for leadership in bringing about their liberation and independence and in restoring to them the enjoyment of their Christion, Jewish, Moslem, Buddhist, or other religious freedom, and of their individual liberties; and

Whereas it is vital to the national security of the United States that the desire for liberty and independence on the part of the peoples of these conquered nations should be steadfastly kept alive; and

Whereas the desire for liberty and independence by the overwhelming majority of the people of these submerged nations constitute a powerful deterrent to war and one of the best hopes for a just and lasting peace; and

Whereas it is fitting that we clearly manifest to such peoples through an appropriate and official means the historic fact that the people of the United States share with them aspirations for the recovery of their freedom and independence: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is authorized and requested to issue a Proclamation designating the third week of July, 1959, as "Captive Nations Week" and inviting the people of the United States to observe such week with appropriate ceremonies and activities. The President is further authorized and requested to issue a similiar proclamation each year until such time as freedom and independence shall have been achieved for all captive nations of the world.

LIBERATING THE CAPTIVE NATIONS: AMERICA'S DUTY AND CHALLENGE

(By Austin J. App, Ph. D., chairman, Captive Nations Committee of Greater Philadelphia)

Greetings: Master of Ceremonies, Mr. Ignatius Billinsky; Guest of Honor and Main Speaker, Dr. Ku-Cheng-kang, chief delegate of the Republic of China to the Asian Parliamentarians Union; Representative of Governor Raymond P. Shafer; Representative of Mayor James H. J. Tate; Members of the Clergy, ladies and gentlemen:

I thank Mr. Billinsky, editor of the Ukrainian Daily *Amerika* and our Executive Vice-Chairman, for his kind introduction.

As chairman of the Greater Philadelphia Captive Nations Committee, I warmly welcome all of you to our eleventh Observance on this 10th Anniversary of the Congressional

Resolution of July 17, 1959. This requests the President annually to proclaim the third week of July "Captive Nations Week . . . until such time as freedom and independence shall have been achieved for all the captive nations of the world." By 1959 the Christian West—England, France, Holland, Belgium—had liberated virtually all their Asian and African colonies, so that the twenty-two nations Congress enumerated were ones enslaved by "communist imperialism" and subjugated "since 1918 by the imperialistic policies of Communist Russia . . . through direct and indirect aggression."

Since 1959 the West has continued its policy of liberation, but Soviet Russia has not liberated one single satellite or captive nation. On the contrary, it has subverted new ones like Cuba, and last August 1968 it ruthlessly invaded Czecho-Slovakia and with tanks and guns crushed the precious tendrils of liberty that had become manifest.

GRATEFUL FOR CHINESE SPEAKER AND OFFICIAL PROCLAMATIONS

I am especially glad to welcome our guest of honor from National China, Dr. Ku-Cheng-kang, as our main speaker. His country is divided and Mainland China a Communist slave-state because from 1945 to 1949 traitors or dupes in our State Department forced Chang Kai-shek to form a coalition with the Reds whom they called well-meaning agrarian reformers, as later they designated Fidel Castro of Cuba!

We are grateful to Governor Shafer and Mayor Tate for issuing proclamations for our Observance and sending representatives to read them. Our Committee is happy, most of all, to see such a fine audience, some in native costumes, some with their national banners, all testifying by their presence to their idealism of liberty for the Captive Nations—the Soviet-Zone Germans, Poles, Hungarians, Ukrainians, Czechs, Slovaks, Lithuanians, Estonians, Latvians, Armenians, Rumanians, Cossacks, Byelorussians, Cubans, Bulgarians, and others.

On July 14, President Nixon proclaimed Captive Nations Week, he more than his predecessors experienced the impact of the 1959 Resolutions on the Soviet Russians. Just when it was first passed, he as Eisenhower's vice-president was visiting Moscow. The Kremlin's reaction to the policy of liberation for the Red enslaved nations was violent and significant. Premier Khrushchev denounced it in a high-pitched voice, frequently pounded the table, said the Resolution "stinks" and spelled out what he meant in earthy four-letter words.

(See Lev. E. Dobriansky, *The Vulnerable Russians*, p. 30).

CAPTIVE NATIONS OBSERVANCE PINPOINTS SOVIET-RUSSIAN VULNERABILITY

The Resolution's call for the liberation of the Captive Nations so upset the Kremlin because it exposes the powder-keg upon which the Red dictators sit. The USSR is not a union of peaceful federated states, like the United States of America, nor are its satellites willing ones, but a Soviet Russian tyranny, bounded by a Berlin Wall and an Iron Curtain, over some twenty-two conquered peoples, each with its own language and culture, each yearning for independence, and plotting the overthrow of its Red dictators. In all these captive nations, facsimiles of the East Berlin revolt of 1953, of the Hungarian in 1956, of the Czecho-Slovak in 1968 are forever in the making, waiting for the signal to rise and throw off the Red-Russian yoke.

And the day when enough of them do it in concert, and confident in the moral, diplomatic, and material support of the Free World, the Soviet Russian Empire will collapse, the Captive Nations will be free—and for the U.S. and the world, the threat of the third world war will have been averted. That is why Khrushchev fumed and ranted at the Captive Nations Resolution in 1959, and Premier Kosygin again during the Glassboro Summit with President Johnson in June, 1967. The Kremlin dictators know that no empire can permanently suppress the righteous aspiration for independence of civilized captive nations—if the informed public world opinion is aroused in their behalf. The worst tyranny does not have enough guns forever to defy mass public opinion on the side of right and freedom!

That is why our Captive Nations Observance is so important.

THE HUMANE AND MORAL DUTY TO SUPPORT LIBERATION OF THE CAPTIVE NATIONS

As a pure matter of humanity and justice the United States and the other Free countries must do what they can morally, diplomatically, and materially, to further the independence of the oppressed Captive Nations.

And the United States has an even more compelling obligation. It was American lend-lease and Unconditional Surrenderism, and the shameful Rooseveltian appeasements at Yalta, which very directly delivered most of Eastern Europe into the Soviet-Russian tyranny. Had America in 1945, which was before Russia had the atom bomb, honored the Atlantic Charter, there would be no Iron Curtain down the middle of Christian Europe, and no Berlin Wall. The enslaved nations now have a claim to American support for a reversal of those sell-outs.

But if "Our purpose is not to overturn other governments," as President Johnson assured the Red Puppet regimes on October 7, 1966, then how, for example, can Germany be reunited and Ulbricht's Zone and Gomulka's Poland be liberated? For fifty years Soviet Russia has clamored for the overthrow of all Western colonial governments. How can we honorably or otherwise then also demand the overthrow of the far more tyrannical Red puppet governments of the Soviet-Russian imperialism? We should as a matter of course proclaim our purpose to want all Red puppet regimes replaced by governments freely elected by the people.

LIBERATION OF THE CAPTIVE NATIONS AVERTS THREAT OF A THIRD WORLD WAR

To announce to the world this purpose is not to risk the third world war. It is on the contrary the surest, perhaps the only way of reducing the threat of such a nuclear holocaust. A Soviet Russia, whose Union of Soviet Russian Republics, plus Satellites, is exposed for the sham that it is, whose captive peoples are encouraged to agitate for their independence in the confidence of the world's good will, cannot afford to be a threat to world peace Such a Soviet Russia will hesitate to supply North Vietnam with its Migs, Castro's Cuba with its missiles, and will call back some of its ships from the Mediterranean and its submarines from Western hemisphere waters.

It is Soviet Russia, while it controls the manpower and know-how of the twenty-two captive nations, that threatens the nuclear peace of the world, not really Red China which still is short of technique. If Soviet Russia has freed its Captive Nations, is brought down to size, it will have no interest in endangering the world, and the Free World will have no more interest in worrying about its internal Communism.

Let us arouse enough public opinion to get the Captive Nations freed—be it by diplomacy or internal revolts—and the threat of a nuclear third world war will have faded. Thank you!

[From the Vietnam Newsletter, July 12, 1969]

CAPTIVE NATIONS WEEK TO BE CELEBRATED BY WACL

SAIGON, July 9.—As in previous years, WACL member-units will commemorate the tragic fate of the peoples under Communist rule by holding a Captive Nations Week from July 13–19, 1969.

The Captive Nations Week was first celebrated in the United States in 1959, by the people who escaped from Communist countries, immediately after the United States Congress passed the Captive Nations Week Resolution and the late President Eisenhower signed it into Public Law 86–90. Since then, the annual observance in symbolic behalf of the captive peoples has steadily grown and expanded among free nations.

From reliable sources, it was learned that the WACL China Chapter will sponsor a mass rally in Taipei on July 10, to be presided over by Dr. Ku Cheng-kang, WACL Honorary Chairman. Similar commemorations will also be held in other capitals of the Free World during the period June 13–19, 1969.

Meanwhile, Dr. Phan Huy Quat, WACL Council Chairman, in a message addressed to WACL member-units, urged them to denounce Communism and to support the fight for human freedom and national independence waged by the peoples behind the Iron Curtain, in compliance with the resolutions adopted at the Second General Conference in Saigon, last December 1968.

CAPTIVE NATIONS WEEK, JULY 15, 1969, PHOENIX, ARIZ.

ARIZONA BRANCH, NATIONAL CAPTIVE NATIONS COMMITTEE, SALUTES THE HONORARY PRESIDENT, WORLD ANTI-COMMUNIST LEAGUE, DR. KU CHENG-KANG

I am most proud to know that so many Arizonans have the conviction and perseverance to voice so effectively concern for the lost basic freedoms and human rights of the millions captive by the Communist totalitarians throughout the world.

My thoughts are with you as you observe Captive Nations Week, and may your dedication influence enough world leaders that free peoples might one day unify to break the yoke of totalitarian rule in all captive nations.

SAM STEIGER,
U.S. Congress,
Third District, Arizona.

PUBLIC LAW 86–90, 86TH CONGRESS, SENATE JOINT RESOLUTION 111, JULY 17, 1959

Joint resolution providing for the designation of the third week of July as "Captive Nations Week"

Whereas the greatness of the United States is in large part attributable to its having been able, through the democratic process, to achieve a harmonious national unity of its people, even though they stem from the most diverse of racial, religious, and ethnic backgrounds; and

Whereas this harmonious unification of the diverse elements of our free society has led the people of the United States to possess a warm understanding and sympathy for the aspirations of peoples everywhere and to recognize the natural interdependency of the peoples and nations of the world; and

Whereas the enslavement of a substantial part of the world's population by Communist imperialism makes a mockery of the idea of peaceful coexistence between nations and constitutes a detriment to the natural bonds of understanding between the people of the United States and other peoples; and

Whereas since 1918 the imperialistic and aggressive policies of Russian communism have resulted in the creation of a vast empire which poses a dire threat to the security of the United States and of all the free peoples of the world; and

Whereas the imperialistic policies of Communist Russia have led, through direct and indirect aggression, to the subjugation of the national independence of Poland, Hungary, Lithuania, Ukraine, Czechoslovakia, Latvia, Estonia, White Ruthenia, Rumania, East Germany, Bulgaria, Mainland China, Armenia, Azerbaijan, Georgia, North Korea, Al-

bania, Idel-Ural, Tibet, Cossackia, Turkestan, North Viet-Nam, and others; and

Whereas these submerged nations look to the United States, as the citadel of human freedom, for leadership in bringing about their liberation and independence and in restoring to them the enjoyment of their Christian, Jewish, Moslem, Buddhist, or other religious freedoms, and of their individual liberties; and

Whereas it is vital to the national security of the United States that the desire for liberty and independence on the part of the peoples of these conquered nations should be steadfastly kept alive; and

Whereas the desire for liberty and independence by the overwhelming majority of the people of these submerged nations constitutes a powerful deterrent to war and one of the best hopes for a just and lasting peace; and

Whereas it is fitting that we clearly manifest to such peoples through an appropriate and official means the historic fact that the people of the United States share with them their aspirations for the recovery of their freedom and independence: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States is authorized and requested to issue a proclamation designating the third week in July 1959 as "Captive Nations Week" and inviting the people of the United States to observe such week with appropriate ceremonies and activities. The President is further authorized and requested to issue a similar proclamation each year until such time as freedom and independence shall have been achieved for all the captive nations of the world.

Approved July 17, 1959.

PROCLAMATION: CAPTIVE NATIONS WEEK, 1969

Whereas Americans always have maintained an air of deep compassion for those around the world who enjoy far less than the freedom which is our great heritage; and

Whereas responsible individuals are developing a growing and deep concern for the human rights of those persons who live within the boundaries of the captive nations of the world; and

Whereas an annual observance of Captive Nations Week is conducted by the National Captive Nations Committee, as called for under the terms of Public Law 86–90; and

Whereas Arizonans join in support of the aim of this observance, which is to reaffirm this nation's moral support for those persons who are now under the domination of world Communism, and who seek the freedom which is justly theirs;

Now, therefore, I, Jack Williams, Governor of the State of Arizona, do hereby proclaim the period from Juy 13 to July 19 to be Captive Nations Week, 1969, and do urge and encourage all Arizonans to honor this observance fully in its spirit and its great goals.

In witness whereof, I have hereunto set my hand and caused to be affixed the Great Seal of the State of Arizona.

Done at the Capitol in Phoenix this 7th day of July in the year of Our Lord One Thousand Nine Hundred and Sixty Nine and of the Independence of the United States the One Hundred and Ninety-fourth.

JACK WILLIAMS,
Governor.

Attest:

WESLEY BOHN,
Secretary of State.

CAPTIVE NATIONS COMMITTEE SCHEDULES RALLY JULY 11

The Arizona branch of the Captive Nations Committee has announced a rally July 15 in Grady Gammage Auditorium to highlight the 11th annual observance of Captive Nations Week.

Dr. Ku Cheng-kang, deputy foreign minister of Nationalist China, will be the featured guest speaker at the 8 p.m. program.

Entertainment will be provided by the Scottsdale Boys Band, That Certain Sound, and the Impact singers. The international Mia Dancers also will perform folk dances.

Admission is $1 for adults. Students and children will be admitted free.

[From the Phoenix (Ariz.) Gazette, July 14, 1969]

"CAPTIVE" COUNTRIES RALLY SET

The highlight of an 8 p.m. rally tomorrow in Grady Gammage Auditorium under auspices of the Arizona branch of the National Captive Nations Committee will be an address by Dr. Ku Cheng-kang, deputy foreign minister of Nationalist China.

Entertainment will be provided by the Scottsdale Boys Band, That Certain Sound, the Impact Singers and folk dances by the international Mia Dancers.

Admission is $1 for adults, while students and children will be admitted free.

The rally emphasizes the annual observance of Captive Nations Week, proclaimed by President Nixon and Governor Williams.

[From the Phoenix (Ariz.) Republic, July 9, 1969]

RALLY SLATED FOR TUESDAY AT TEMPE

The Arizona branch of the Captive Nations Committee will rally at 8 p.m. Tuesday in Grady Gammage auditorium, Tempe.

It will be in observance of Captive Nations Week which begins Sunday.

Dr. Ku Cheng-kang, deputy foreign minister of Nationalist China, will be the featured speaker.

Admission will be $1 for adults. Students and children will be admitted free.

Entertainment will be provided by the Scottsdale Boys Band, That Certain Sound and the Impact singers. Folk dances will be performed by the international Mia Dancers.

Recently named to the 1969 honorary advisory committee in Arizona were, Sen. Barry Goldwater, honorary chairman; Sen. Paul Fannin, Rep. John J. Rhodes, Rep. Sam Steiger, Gov. Williams, Wesley Bolin and Marshall Humphrey.

Also, Wilson Palmer, Msgr. R. J. Donohoe, The Rev. Charles S. Poling, The Rev. Paul D. Urbano, Elwood Driggs, Eugene C. Pulliam, Thomas Dunlavey, Lou Grubb, Ned Mullan, Arthur L. Peterson and Weldon P. Shofstall.

[From the Phoenix (Ariz.) Republic, July 15, 1969]

CHIANG AIDE BELITTLES SINO-SOVIET HOSTILITY

Jauntily waving a straw boater, Dr. Ku Cheng-kang, policy adviser to Formosa president Chiang Kai-shek since 1931, arrived at Sky Harbor yesterday and immediately disputed recent public statements by Communist nations.

Dr. Ku, who is in Phoenix to speak at a Captive Nations Rally at Grady Gammage Auditorium in Tempe at 8 p.m. today as part of Captive Nations Week, scoffed at declarations by the Soviet Union and Communist China that each was the "number one enemy" of the other.

"Their conflict is more over leadership than over basic differences," Dr. Ku told The Arizona Republic through an interpreter.

When questioned about a statement by a Chinese Communist spokesman that war with the Soviet Union was imminent, Dr. Ku said, "The statement was made for the purpose of diverging the people's dissatisfaction. Skirmishes, yes. War, no."

Dr. Ku, who at 68 is a youngster compared to his 81-year-old chief, disparaged reports in the American press that arrangements have already been made for Chiang's son to succeed him.

"The vice president is expected to succeed him," Dr. Ku said.

"Recent medical examinations reveal no medical trouble for Chiang," Ku added. "He has the health of a 50-year-old."

Ku also shrugged at reports of internal dissention between mainland Chinese on Taiwan and native Taiwanese. An emigre group in Japan is currently calling for Taiwanese independence from the Chinese who came over with Chiang after the Chinese civil war, but Ku's comment on dissension was:

"We have dissension in the sense of provincial differences—like Arizonans and New Yorkers—but major dissension we do not have because of our common purpose."

[From the Phoenix (Ariz.) Gazette, July 15, 1969]

CHIANG ADVISER HONORED HERE

The honorary president of the World Anti-Communist League, Dr. Ku Cheng-kang, policy adviser to Formosa President Chiang Kai-shek, today has a new decoration—a blank blue button presented him by Arizona Young Americans for Freedom.

The button has become a symbol of opposition to radical leftist revolutionaries of the nation's school campuses, according to Mike Sanera, AYAF state chairman and an Arizona State University student.

The button is a token of mutual commitment to a freedom offensive. Sanera indicated, as he and other representatives of the group welcomed Dr. Ku to Phoenix.

The 68-year-old Chiang adviser will address a Captive Nations Rally at 8 o'clock tonight in Grady Gammage Memorial Auditorium at ASU.

Earlier, Dr. Ku met with Governor Williams for a Captive Nations Week (this week) proclamation ceremony at the Capitol, and a press conference at Hotel Westward Ho.

The rally at ASU is sponsored by the Arizone Branch, National Captive Nations Committee, whose national chairman, Dr. Lev E. Dobriansky, resides here.

Dr. Ku told newsmen war between Russia and Red China will not occur, a Red Chinese statement that war with Russia was imminent was simply to divert the people's dissatisfaction.

He disparaged reports that arrangements have been made for Chiang's son to succeed the 81-year-old chief of state. The successor would be the vice president, he indicated.

Sanera, presenting the blue button to Dr. Ku, told him that "your dedication to individual freedom, free enterprise and opposition to totalitarian philosophies such as communism is completely in accord with the Young Americans for Freedom."

[From the Phoenix (Ariz.) Gazette, July 2, 1969]

CHINA OFFICIAL TO SPEAK HERE

Dr. Ku Cheng-kang, deputy foreign minister of Nationalist China, will be principal speaker at the annual Captive Nations Week rally at 8 p.m. July 15 in Grady Gammage Auditorium in Tempe.

The rally will be the highlight of the week, proclaimed by President Nixon and Governor Williams. Local sponsor is the Arizona Branch of the National Captive Nations Committee, headed by Walter Chopiwskyj of Phoenix.

[From the Tempe (Ariz.) Daily News, July 10, 1969]

CHIANG ADVISER RALLY SPEAKER

Dr. Ku Cheng-kang, deputy foreign minister of nationalist China, will be featured speaker for an open-to-the-public rally marking Captive Nations Week, to be held Tuesday, July 15, at Arizona State University's Gammage auditorium.

The 8 p.m. rally, planned by the Arizona Branch of the Captive Nations Committee, will also feature folk dances by the internationally acclaimed MIA dancers, patriotic and religious music by the Impact '69 singers, Ron Patty's That Certain Sound musical group and Scottsdale Boys' Band.

Chief foreign policy adviser for Nationalist China President Chiang Kai-shek, Dr. Cheng-kang is expected to speak on the plight of captive people behind the Bamboo curtain, in keeping with the purpose of the annual rally—an observance to remind of the many people enslaved in captive nations.

During his Valley stay, Dr. Cheng-kang and members of his party will be escorted by members of the Arizona Young Americans for Freedom organization.

The Tuesday rally is also planned by the Captive Nations Committee to pay tribute to the "silent multitudes of young people" who love and have faith in their country.

The rally, with its accent on youth, will be open to children and students free of charge and to adults at $1.

It will highlight Valley observance of National Captive Nations Week, July 13–19.

The sponsoring National Captive Nations Committee is an educational organization founded shortly after the passage of the Captive Nations Week Resolution by U.S. Congress in 1959. It is an affiliate of the World Anti-Communist League which sponsors the observance of the annual week.

Among members of the 1969 honorary advisory committee for the Arizona Branch of the Captive Nations Committee are Senator Barry Goldwater, honorary chairman; Sen. Paul Fannin, Reps. John Rhodes and Sam Steiger, Governor Jack Williams, Arizona Secretary of State Wesley Bolin, Rev. Msgr. R. J. Donohue, Rev. Charles Poling, Rev. Paul D. Urbano and Tempean Weldon P. Shofstall.

[From the Tempe (Ariz.) Daily News, July 14, 1969]

CAPTIVE NATIONS RALLY AT ASU TOMORROW NIGHT

Youth groups and the deputy foreign minister of Nationalist China will join the Arizona branch of the Captives Nations Committee in highlighting the 11th annual observance of Captive Nations Week with a public rally at Gammage Memorial auditorium here Tuesday (tomorrow) at 8 p.m.

The rally is held annually to remind Americans of the plight of the unfortunate people in the Communists' captive nations.

Featured speaker at this year's rally will be Dr. Ku Cheng-kang, deputy foreign minister of Nationalist China and chief foreign policy advisor to President Chiang Kai-shek. Cheng-kang will be discussing the plight of captive peoples behind the "Bamboo Curtain."

This year's rally is also planned to pay tribute to the "silent majority" of American young people.

"With the riots and turmoil caused by many college students today, we lose sight of how the majority of our people really feel about this great land of ours," a Captive Nations Committee spokesman said. "Tomorrow, we will have a chance to witness the true spirit of today's youth as some of the 'silent majority' express their love and faith in this country of ours through their participation in the rally program."

Eagle Scouts from various Valley troops will be presenting the flags of the captive nations for the rally. Scottsdale Boys' Band will be providing music.

Other youth groups participating will include Ron Patty's new group, That Certain Sound; the national Impact '69 singers; and the internationally-acclaimed Mia Dancers who will be performing their famous folk dances for the event.

The public is invited to attend the rally. Admission will be $1 for adults; children and students will be admitted free.

Captive Nations Week was established by resolution of the U.S. Congress in July, 1959, to—in addition to calling attention to the plight of captive peoples in captive nations—symbolize the firm dedication of America to the freedom and independence of captive people.

"More than any event," said a committee spokesman, "it shows the right things about America stand out most when contrasted with the combination of political oppression and rampant economic poverty that exists in the Red Empire, particularly the Soviet Union.

"If we, the people of the United States, through inertia and paralysis of our power to resist, permit the internationally mistaken conspiracy against freedom to engulf us, this is what the follow-up will be in our own beloved land of freedom."

[From the Tempe (Ariz.) Daily News, July 7, 1969]

EMPHASIS ON YOUTH AT CAPTIVE NATIONS RALLY

A tribute to America's "silent majority" of young people is in the offing when the Arizona branch of the Captive Nations Committee stages its 11th annual rally at Grady Gammage Memorial auditorium on the Arizona State University campus, Tuesday, July 15.

The 8 p.m. program, open to the public, will be a Valley highlight of national Captive Nations Week, July 13–19, a week initiated by resolution of the U.S. Congress in 1959 as a time for observances to remind the world of the plight of the people in captive nations of the Red Empire. It also symbolizes, for billions of captive peoples, the dedication of America to their freedom and independence.

The accent will be on youth at the Tuesday rally with participants for the evening to include Ron Patty and his new group, That Certain Sound; the Impact '69 singers; the internationally acclaimed Mia Dancers; Scottsdale Boys' Band and Valley Eagle Scouts who will be presenting the flags of the captive nations.

Featured speaker for the evening will be Dr. Ku Cheng-kang, deputy foreign minister of Nationalist China.

Patriotic and religious songs will be presented by That Certain Sound and Impact '69. The Mia Dancers, who have been seen on the Ed Sullivan television show as well as in appearances throughout the world, will present their colorful folk dances for the program. Scottsdale Boys' Band will provide the instrumental music.

Said the spokesman for the Captive Nations Committee, "With the riots and turmoil caused by many college students today, we lose sight of how the majority of our young people really feel about this great land of ours. On July 15, we will have a chance to witness the true spirit of today's youth . . . as these youth groups join in expressing their love and faith in this country of ours as we remember those peoples who have lost their basic freedoms and human rights—the one billion captive peoples of the captive nations behind the Iron, Bamboo and Sugar Curtains.

Admission for the rally will be $1 for adults, children and students admitted free.

[From the Phoenix (Ariz.) Republic, July 16, 1969]

U.S. IDEALS ON TRIAL, CHINESE SAYS

(By Connie Cobb)

TEMPE.—American ideals "are being subjected to the most serious challenges and trials in your history," the chief policy adviser to Chinese President Chiang Kai-shek said here last night.

Dr. Ku Cheng-kang, speaking at a rally of the Arizona Branch, National Captive Nations Committee, said mistaken views and "compromising statements concerning Communist aggression" have cast doubts on the United States' avowed dedication to freedom for all.

". . . Especially, those views urging the United States to disentangle from world affairs and mind her own business have blurred the image of the United States," he told about 900 persons in Grady Gammage Auditorium at Arizona State University.

Dr. Ku said these views "have even shaken the world's confidence in the United States as leader of the democratic nations in defending democracy and freedom."

But without the support of "freedom forces," he added, "I am afraid the world may see the extinguishing of the flame of hope in the hearts of the peoples behind the Iron Curtain" and further Communist-inspired "troubles for the free world."

Dr. Ku said the most important factor in the fight for freedom "is to actively support the peoples behind the Iron Curtain in their struggle against tyranny.

"We freedom-loving and democratic peoples must unite and work harder for the early restoration of freedom for all captive peoples and nations," he added.

Walter Chopiwskyj, Arizona committee president, agreed with Dr. Ku that the "more than 1 billion people living in the 28 nations under Communist rule today . . . look to the United States . . . for leadership in bringing about their liberation and independence."

He said observance of Captive Nations Week, through Saturday, serves "as a clear demonstration . . . that the people of this country share with them their aspirations for the recovery of their freedom and independence."

The adult speakers' words were echoed by the youthful patriotic appeals of Impact, That Certain Sound, the International Mia Dancers and the Scottsdale boys' and girls' bands.

COMMENDING LYNDON JOHNSON FOR HIS PART IN THE APOLLO PROGRAM

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. ZABLOCKI. Mr. Speaker, as we rejoice over and pay tribute particularly to three brave men—Neil Armstrong, "Buzz" Aldrin, and Mike Collins—upon their amazing feat and the successful flight of Apollo 11, we would be remiss if we did not pay special thanks to the man who did more than any other man in America to make this event possible—former President Lyndon B. Johnson.

It is true that the Apollo 11 moon walk was the fulfillment of John F. Kennedy's prophecy that we would put a man on the Moon and return him to Earth within the decade of the 1960's.

However, as in so many things, it remained for Lyndon Johnson to make this dream become a reality.

Undoubtedly, history will record former President Johnson's leadership in our space program as one of his foremost accomplishments.

It was he who insisted on the United States embarking on this program, and who pushed and prodded our Nation into accepting the great challenge of conquering space.

Without his strong and inspiring leadership while serving as Senate majority leader, Vice President, and President, there is every reason to wonder when and even if we would have achieved this goal.

It is my fervent hope that the accomplishments of the Apollo 11 crew will help to lead mankind toward an era of peace and friendship and to solve the common problems of the world.

This would be the truly fitting reward and tribute to President Johnson, Astronauts Armstrong, Aldrin, and Collins, and indeed all their colleagues, associates, and personnel of the National Aeronautics and Space Administration.

A recent Milwaukee Journal editorial, "Lyndon Johnson's Part," succinctly expresses President Johnson's involvement in our space program. It is a pleasure for me to insert the editorial at this point in the RECORD:

[From the Milwaukee Journal, July 22, 1969]

LYNDON JOHNSON'S PART

One American who watched the moon flight from the take-off—to which he was invited by President Nixon—to the conclusion must have taken deep personal satisfaction in it. That was former President Lyndon Johnson, who has been out of the limelight and under a self-imposed silence for half a year since retiring.

No one had more to do with our success in space than Lyndon Johnson. He worked hard for it as a senator and majority leader. He was given chief responsibility for space by the late President John Kennedy, who made the commitment to reach the moon by the end of this decade. As president, Johnson continued his deep interest and support.

It was fitting that he was present at the launching. He said little but what he said credited a wide group of people for the successful space program. And those of whom he spoke, who have been dedicating their lives to the project, know that Lyndon Johnson deserves as much credit as anyone.

SENATE—*Wednesday, July 30, 1969*

The Senate met at 12 o'clock noon and was called to order by the Vice President.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Eternal Father, who has taught us in Thy word that in quietness and confidence shall be our strength, at this noonday pause in the heat and burden of testing times, strengthen us that we may keep inviolate the sacred altar of our inmost being. Help us, O Lord, not only here where our work is seen and our voice is heard, but also in the solitary place where, in the secret of our hearts, we decide what to do here. Make us conscious of the eternal verities which outlast the deeds of a day. Enable us to bring to our tasks not only our resolute convictions but also the reconciling grace which Thou dost freely give to all who call upon Thee.

Answer in us the prayer of the hymn writer:

"Breathe on me, Breath of God
Fill me with life anew,
That I may love what Thou dost love,
And do what Thou wouldst do."

EDWIN HATCH, 1886.

In the Redeemer's name we pray. Amen.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Tuesday, July 29, 1969, be dispensed with.

The VICE PRESIDENT. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed the joint resolution (S.J. Res. 85) to provide for the designation of the period from August 26, 1969, through September 1, 1969, as "National Archery Week," with an amendment, in which it requested the concurrence of the Senate.

The message also announced that the House had passed a bill (H.R. 8868) to authorize the District of Columbia to enter into the Interstate Compact on Juveniles, in which it requested the concurrence of the Senate.

ENROLLED BILLS SIGNED

The message further announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the Vice President:

H.R. 2785. An act to authorize the Secretary of the Interior to convey to the State of Tennessee certain lands within Great

Smoky Mountains National Park and certain lands comprising the Gatlinburg Spur of the Foothills Parkway, and for other purposes;

H.R. 3379. An act for the relief of Sfc. Patrick Marratto, U.S. Army (retired);

H.R. 5833. An act to continue until the close of June 30, 1972, the existing suspension of duty on certain copying shoe lathes;

H.R. 6585. An act for the relief of Mr. and Mrs. A. F. Elgin; and

H.R. 10946. An act to promote health and safety in the building trades and construction industry in all Federal and federally financed or federally assisted construction projects.

HOUSE BILL REFERRED

The bill (H.R. 8868) to authorize the District of Columbia to enter into the Interstate Compact on Juveniles, was read twice by its title and referred to the Committee on the District of Columbia.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The VICE PRESIDENT. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nominations on the Executive Calendar.

There being no objection, the Senate proceeded to the consideration of executive business.

The VICE PRESIDENT. The nominations on the Executive Calendar will be stated.

AMBASSADOR

The bill clerk read the nomination of Kenneth Franzheim II, of Texas, to be Ambassador Extraordinary and Plenipotentiary of the United States to New Zealand.

The VICE PRESIDENT. Without objection, the nomination is considered and confirmed.

U.S. ARMS CONTROL AND DISARMAMENT AGENCY

The bill clerk proceeded to read sundry nominations in the U.S. Arms Control and Disarmament Agency.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The VICE PRESIDENT. Without objection, the nominations are considered and confirmed en bloc.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The VICE PRESIDENT. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to, and the Senate resumed the consideration of legislative business.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Nos. 330 and 317.

The VICE PRESIDENT. Without objection, it is so ordered.

GOLD MEDALS IN HONOR OF AMERICAN ASTRONAUTS

The Senate proceeded to consider the joint resolution (S.J. Res. 140) to provide for the striking of medals in honor of American astronauts who have flown in outer space which had been reported from the Committee on Banking and Currency with amendments on page 1, line 9, after the word "program," insert "and to the widow of any such astronaut who is now deceased,"; on page 2, at the beginning of line 4, insert "There is authorized to be appropriated to the Secretary of the Treasury not to exceed $20,000 to carry out the provisions of this section."; in line 23, after the word "Mint" strike out "for" and insert "from the proceeds of the sale of"; and on page 3, line 2, after the word "Administration" strike out "Any revenues received from the sale of such medals shall be deposited in a revolving fund which is hereby established in the Treasury of the United States. After making from the fund any payments required by section 2(c), the remaining moneys in the fund shall be expended for grants for scientific scholarships to such persons; in such amounts, and on such terms, as the Administration considers appropriate." and insert "Any revenues received from the sale of such medals shall be used to pay the cost thereof as provided in section 2(c). Any revenues in excess of sums required to pay such cost shall be paid into the Treasury as reimbursement of expenses incurred by the Government under the first section of this joint resolution. Any additional revenues so derived shall be covered into miscellaneous receipts of the Treasury."; so as to make the joint resolution read:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That, in honor of the continuing achievements of American astronauts in space exploration culminating in the landing on the moon, the President is authorized to present in the name of the people of the United States and in the name of the Congress to each American astronaut who has flown a vehicle in outer space under the Mercury, Gemini, or Apollo space program, and to the widow of any such astronaut who is now deceased, a gold medal with suitable emblems, devices, and inscriptions to be determined by the National Aeronautics and Space Administration, subject to the approval of the Secretary of the Treasury. The Secretary shall cause such medals to be struck and furnished to the President. There is authorized to be appropriated to the Secretary of the Treasury not to exceed $20,000 to carry out the provisions of this section.

SEC. 2. (a) The Secretary of the Treasury shall strike and furnish to the National Aeronautics and Space Administration not more than five hundred thousand duplicate copies of such medal in bronze. The medals shall be considered to be national medals within the meaning of section 3551 of the Revised Statutes (31 U.S.C. 368).

(b) The medals provided for in this section shall be made and delivered at such times as may be required by the National Aeronautics and Space Administration, and in quantities of not less than two thousand, but no medals shall be made after December 31, 1971.

(c) The Secretary of the Treasury shall cause such medals to be struck and furnished at not less than the estimated cost of manufacture, including labor, materials, dies, use of machinery, and overhead expenses, and the Administration shall make payment of such cost to the Director of the Mint from the proceeds of the sale of any bronze medals so struck and furnished.

SEC. 3. The National Aeronautics and Space Administration is authorized to sell the bronze medals at a premium, to be determined by the Administration. Any revenues received from the sale of such medals shall be used to pay the cost thereof as provided in section 2(c). Any revenues in excess of sums required to pay such cost shall be paid into the Treasury as reimbursement of expenses incurred by the Government under the first section of this joint resolution. Any additional revenues so derived shall be covered into miscellaneous receipts of the Treasury.

Mr. DODD. Mr. President, I ask unanimous consent that the amendments be considered en bloc.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the amendments are considered and agreed to en bloc.

The joint resolution was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. DODD. Mr. President, I am pleased that the Senate has seen fit to pay tribute to our space program by passing Senate Joint Resolution 140.

I am especially grateful to the distinguished chairman of the Banking and Currency Committee, and to the leadership for clearing this legislation so promptly.

In introducing Senate Joint Resolution 140, I sought to commemorate our lunar landing as a turning point in the history of mankind, for the flight of Apollo 11 was perhaps the greatest technological event ever witnessed by man.

It was demonstrable proof of what this Nation can accomplish when it sets a goal and initiates a total commitment to reach it.

The astronauts of this mission performed flawlessly. Yet their great contribution would never have been possible without the efforts of those astronauts who preceded them.

In passing Senate Joint Resolution 140, the Senate honors these gallant, dedicated, and courageous men who blazed the trail from the earth to the moon.

I hope the House of Representatives will join the Senate in taking prompt and favorable action on this joint resolution.

Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–33), explaining the purposes of the joint resolution.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

GENERAL STATEMENT

This joint resolution would provide for the striking of medals in honor of the American astronauts who have flown a vehicle in outer space.

Under the joint resolution, the President is authorized to present in the name of the people of the United States and in the name of the Congress to each American astronaut, or if the astronaut is deceased, his widow, who has flown a vehicle in outer space under the Mercury, Gemini, or Apollo space program, a gold medal with suitable emblems, devices, and inscriptions to be determined by the National Aeronautics and Space Administration, subject to the approval of the Secretary of the Treasury. The Secretary shall cause such medals to be struck and furnished to the President.

The joint resolution also provides that the Secretary of the Treasury shall strike and furnish to the National Aeronautics and Space Administration not more than 500,000 duplicate copies of such medals in bronze. No medals shall be made after December 31, 1971.

The Secretary of the Treasury shall cause the bronze medals to be struck at not less than the estimated cost of manufacture, including labor, materials, dies, use of machinery, and other expenses.

The joint resolution includes an authorization for the appropriation of not more than $20,000 to cover the cost of the gold medals. The joint resolution also authorizes the National Aeronautics and Space Administration to sell the bronze medals at a premium, to be determined by the administration, to cover the cost of minting the bronze medals and also to cover the costs of the gold medals.

AMENDMENTS TO THE JOINT RESOLUTION

1. The joint resolution, as amended, permits gold medals to be issued to the widows of deceased astronauts.

2. The joint resolution, as amended, provides an authorization of $20,000 to pay the initial costs of striking the dies and other costs of the gold medals. This cost will be recouped from sale of the bronze medals.

TOCKS ISLAND DAM-DELAWARE RIVER BASIN HYDROELECTRIC POWER DEVELOPMENT

The Senate proceeded to consider the bill (S. 2678) to amend section 203 of the Flood Control Act of 1962 to provide for optimum development at Tocks Island Dam and Reservoir project.

Mr. COOPER. Mr. President, this bill has been on the calendar for some days, for I asked that it be carried over so that I could speak on it briefly. I may say that I probably will be asking for additional time, because I do not believe I can complete my remarks in 3 minutes. I will summarize the statement I have prepared, and ask unanimous consent that my full statement be printed in the RECORD at the conclusion of my remarks.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. COOPER. S. 2678 has been reported to the Senate by the Committee on Public Works, of which I am a member. It is a bill to amend section 203 of the Flood Control Act of 1962 to provide for optimum development at Tocks Island Dam and Reservoir project. The bill was reported favorably by the committee, and all members of the committee voted to report it, with one exception. I voted against the bill. I wish to give my reasons for doing so.

I will first give a brief description of the Tocks Island Reservoir project. The Tocks Island Reservoir was authorized by the Congress in 1962 as part of the comprehensive plan of development for the Delaware River Basin. It is the largest project in that plan, and is justified by the Corps of Engineers as the "key project" in the development of the water resources of the Delaware River Basin. It would be located on that portion of the Delaware River which divides Pennsylvania from New Jersey and lower New York State, about 5 miles upstream from the Delaware Water Gap—an area designated also as a national recreation area to be administered by the Department of the Interior.

A dam 160 feet high and 3,200 feet long would create a 12,500-acre lake expected to attract millions of visitors annually—for the primary benefit of the reservoir is now recreation. Draining an area of 3,827 square miles, the reservoir would control half the Delaware River Basin runoff above Trenton, N.J. Estimated cost of the reservoir is $214 million. Of that amount, approximately $8.6 million has been obligated, and $4 million is requested in the budget for fiscal 1970. This issue is now before the Committee on Appropriations.

The funds appropriated have been used for engineering and design, which is about half done, and for initial land acquisition. For example, 85 percent of the funds requested this year are for land acquisition, toward the total land and relocation cost now estimated at $83 million. Construction has not begun; work on the outlet tunnel is scheduled to begin in July 1971.

The multipurpose Tocks Island project as presently authorized includes recreation, water supply, flood control, and power benefits, in that order. It is interesting to note that the cost of this project has more than doubled since 1962, as cited in the committee report and my individual views made a part of that report, and that now the chief purpose which enters into the cost-benefit ratio is recreation, which accounts for just over half the annual benefit of $22.8 million.

As originally proposed and presently authorized, the Tocks Island project provides for a conventional powerplant to be built by the Corps of Engineers, having two turbine driven generators of 35,000 kilowatts each and dependable capacity of 38,000 kilowatts "firm power," at a cost of $29 million, reimbursable to the Federal Government from the sale of power.

S. 2678 would modify the 1962 authorization "to permit use of the head and water releases of Tocks Island Reservoir" as part of a much larger pumped storage hydroelectric power project proposed at that site by a group of private utilities. The private utilities proposed to secure a license from the Federal Power Commission which would permit them to build a pumped storage type of power development, using also the water flows from the Tocks Island Reservoir. This pumped storage facility would develop approximately 1,300,000 kilowatts, about 30 times the amount of power that would be developed if the conventional type of power facility now authorized were to be built by the Corps of Engineers. I want to say, in all fairness, that this may be a more economical way of developing the power resource at the site than the proposal of the Corps of Engineers authorized by the Congress, and of course it would provide a much larger quantity of power.

I voted against this proposal for several reasons, and I will try to develop them.

First, there were adequate hearings and very thorough consideration in executive session by the Committee on Public Works. Yet, I cannot escape my conclusion that we deviated somewhat from the best procedures of the Committee on Public Works and of Congress. As the Tocks Island Reservoir was originally proposed, and as a project beginning authorization by the Congress, we had the benefit of very comprehensive reports by the Corps of Engineers, including the specific comments of all affected agencies, and the opportunity to hear in detail the findings and recommendations of the Corps of Engineers and other agencies. The bill now before the Senate was not introduced in the Senate, and in effect we were developing a bill in the committee, a kind of private bill, to permit a group of utilities to go before the Federal Power Commission and say, "We have a blessing from the Congress to secure and develop the power at the Tocks Island Reservoir." I do not believe that is a good procedure.

Second, as originally conceived, the power that was to be developed at this reservoir was to be available to rural electric cooperatives, municipalities, and other public bodies on a preferential basis. As proposed by the utilities, they opposed providing any of this power, from a project built at a cost of $214 million of taxpayers' money, being made available to municipalities and cooperatives.

The Senator from Maine (Mr. MUSKIE) offered an amendment in committee, which I joined in and supported, to insist that if this bill is approved at least these private utilities shall provide the cooperatives and public bodies the amount of power that would have been developed under the presently authorized plan, and at no greater cost—about 38,000 kilowatts from the 1,300,000 kilowatts that the private utilities will produce. They opposed even this small concession to public power, but the Public Works Committee did support and agree

to the amendment proposed by the Senator from Maine.

Another issue developed involving conservation values around Kittatinny Mountain, on the New Jersey side of the reservoir and within the national recreation area, on top of which the utilities intend to construct the upper pool of the pumped storage project. There is a small lake there, said to be of unique beauty, known as Sunfish Pond and presumably developed during the glacial period. At first, the utilities had proposed using Sunfish Pond itself as the upper pool of the pumped storage project, and little consideration was given to protecting the lake. But after protests by conservation groups and local residents, and through the interest expressed by Senator CASE and others, that plan was abandoned and the Delaware River Basin Commission and the utilities developed a plan to save Sunfish Pond, which I believe has now been deeded back to the State of New Jersey. We were able to secure in committee amendments, incorporated in section 2 of the bill, which would require the Federal Power Commission, in acting upon the application of these utilities, to take into account the question of conservation, and to include as a condition of any license requirements to protect the recreation and conservation values of Sunfish Pond, and for minimum disruption of the natural environment.

Mr. President, I raise my fourth point now and I shall be brief. I have found during my experience on the Committee on Public Works that the private utilities of this country oppose every public power project. I do not speak against the interests, the legitimate interests, of the private utilities because we need them to develop necessary electrical energy in this country—and they do produce over 80 percent of that energy. Nevertheless, every time a proposal comes before the Congress to develop a public power project, and many of them are needed, the entire group of utility companies in the United States join in opposing such projects.

I simply raise this question. Tocks Island is a public project with an estimated cost of $214 million. When the $26 million estimated construction cost for conventional power is deducted, there still remains $188 million of taxpayers' money which will be used to build this giant project. Now, the utility companies, which oppose every public power project, are very willing to come along and build upon and use an appropriation of at least $189 million. In my judgment, the cost to build this facility could be $250 million before it is completed. The utility pumped storage generating facility could be a very lucrative facility for them, in my opinion, and certainly at rather modest remuneration to the Federal Government.

The Federal Government would receive not less than $1 million a year under the terms written into the bill by the committee, presumably for the period of the license, which would be for 50 years. Under one formula, or computation of hypothetical alternatives, the payment might reach $2 million.

Mr. President, I repeat the reasons for my opposition to S. 2678: First, because this procedure seems to give this group of private utilities a blessing as they go before the Federal Power Commission to apply for a license, seeking approval of their project; second, because of their obstinacy, even on a small amount of power for public use; third, because we found it necessary to write into the bill measures which would try to protect the interests of conservation; fourth, I raise a question—and I hope to give consideration to it in the future—about the payment of $1 million a year from power revenue or perhaps even $2 million a year as proper remuneration to the Federal Government for use of the facilities of the entire project, the great dam, and the reservoir costing the taxpayers at this moment an estimated $188 million.

I believe that in the future we should look at these matters more carefully. I would say, in commendation of our chairman, the Senator from West Virginia (Mr. RANDOLPH), that full consideration was given to this matter, following hearings, by the committee. However, I do repeat that in the future we should examine with the greatest care proposals of private utilities, which oppose all Federal power projects and yet are willing to use for their own business interests the facilities built by the taxpayers.

Mr. President, I shall vote against the bill.

STATEMENT OF SENATOR COOPER ON S. 2678

The Tocks Island Reservoir was authorized by the Congress in 1962 as part of the comprehensive plan of development for the Delaware River Basin. It is the largest project in that plan, and is justified by the Corps of Engineers as the "key project" in the development of the water resources of the Delaware River Basin. It would be located on that portion of the Delaware River which divides Pennsylvania from New Jersey below the New York line, about 5 miles upstream from the Delaware Water Gap—an area designated also as a National Recreation Area to be administered by the Department of the Interior.

A dam 160 feet high and 3200 feet long would create a 12,500-acre lake expected to attract millions of visitors annually—for the primary benefit of the reservoir is now recreation. Draining an area of 3,827 square miles, the reservoir would control half the Delaware River Basin runoff above Trenton, New Jersey. Estimated cost of the reservoir is $214 million. Of that amount, approximately $8.6 million has been obligated, and $4.0 million is requested in the budget for fiscal 1970. The funds have been used for engineering and design, which is about half done, and for initial land acquisition. For example, 85 percent of the funds requested this year are for land acquisition, toward the total land and relocation cost now estimated at $83 million. Construction has not begun; work on the outlet tunnel is scheduled to begin in July 1971.

The multipurpose Tocks Island project as presently authorized includes recreation, water supply, flood control, and power benefits, in that order. The power plant would contain two turbine-driven generators of 35,000 kilowatt capacity each. Operating from a 95-foot head, or elevation of water impounded by the dam, this authorized conventional power development would have an annual benefit of $2,094,000, and its cost of $29 million would be reimbursable to the Federal Government. Like all public power, it would be available of course on a preference basis to cooperatives, municipal systems and other public bodies, at rates sufficient to repay its cost, including maintenance costs and interest on the Federal investment.

Senate bill 2678 would modify the 1962 authorization "to permit use of the head and water releases of Tocks Island Reservoir" as part of a much larger pumped storage hydroelectric power project proposed at that site by a group of private utilities. The utility pumped storage plan would use the Federal reservoir as its lower pool, construct an upper pool on top of Kittatinny Mountain within the National Recreation Area near Sunfish Pond, and could generate 1.3 million kilowatts—a very large capacity—through daily pumping from the Federal reservoir to the diked impoundment on the mountain, with releases either back to the reservoir or through the turbines between the dam and the river below. In the latter case, the drop from the main reservoir level through the so-called "tandem turbines" to the river below the dam would constitute "use of the head and water releases" of the public project which the bill would authorize to the private utilities.

I point out here that the bill S. 2678 would authorize a single applicant and no other to develop the pumped storage power resource adjacent to, connected to, and using water from, the Tocks Island dam being built with public funds. That is, in the language of the bill at the top of page 2, the "applicant presently seeking approval to undertake such development before the Delaware River Basin Commission"; namely, Public Service Electric & Gas Co., Jersey Central Power & Light Co., and New Jersey Power & Light Co., which are jointly held and represented and referred to by themselves and others as the New Jersey electric utility companies.

The report on which the Congress based its authorization found (1) "pumped-storage power facilities at this site suitable for development as either a Federal or non-Federal project," (2) that such a project would decrease the cost of other functions of the Tocks Island project, and (3) that analysis of benefits and costs show that pumped storage power would probably be feasible as either a Federal or non-Federal venture. Pumped storage was not authorized in 1962, however, and the present bill does not authorize Federal development of pumped storage in the event the New Jersey utilities do not obtain a license or decide not to proceed, nor does it even authorize pumped storage development by any other group.

The Committee held hearings on this subject on March 18 and 19. In general, the hearings dealt principally with conservation issues raised by the pumped-storage proposal, including the preservation of Sunfish Pond. As I understand the testimony of the conservation groups and local residents, they still oppose the pumped storage plan even though Sunfish Pond itself will be preserved and has subsequently been returned to the State of New Jersey.

Later, the full Committee met in executive session on April 15, May 15, May 26, May 27 and June 19, and explored much more exhaustively the effect on costs and benefits of the proposal, and the position of the rural electric cooperatives and municipal systems entitled to preference in the distribution of public power from the presently authorized conventional Federal power plant. During this time, the Committee modified, amended, and I am sure improved the proposal before it, then in the form of a "Confidential Committee Print." The bill introduced on July 22, together with the Committee Report on S. 2678, is a result of those long and intensive discussions, following specific instructions for additional information. In retrospect, it might have been better to have held hearings on the specific language of a bill, receiving the testimony of the Corps of Engineers, Department of the Interior, Federal

Power Commission and others on that specific language, and making available the comparative cost-benefit data developed by the Committee inquiry to municipals, cooperatives, conservationists and others, including the principal proponents such as the New Jersey utilities and the Delaware River Basin Commission. But I am satisfied that the proposal was not early recognized as so complex or controversial, and that the Committee indeed gave it very thorough attention.

It has been stated that the effect of the bill is to amend existing law to permit the New Jersey utilities to apply to the Federal Power Commission for a license to construct and operate hydroelectric facilities at the Tocks Island project. At that time, the FPC will request comment from appropriate Federal agencies, including the Corps of Engineers. The Corps has testified that a definitive finding must await development of more detailed plans and careful analysis of costs and benefits, and that submission of making such a comparison and definitive finding. The Corps stated similarly before the Senate Appropriations Subcommittee that the private power company plans were not firmed up in sufficient detail to permit an evaluation of the merits.

In endorsing the general proposal of the New Jersey utilities, the Executive Director of the Delaware River Basin Commission testified that the Commission's amendment of its comprehensive plan did *not* constitute an action on the actual detailed proposal of the utilities, which it had not received. The Federal member of the Commission, then Secretary Udall, had filed a non-concurrence on the same grounds of insufficient information and lack of a detailed plan.

If this bill should be adopted by the Congress, the record should be clear that specific appraisals must be made on the basis of facts not yet at hand. But I am concerned that the action of the Committee, and of the Congress if the bill passes, will be interpreted or represented as an approval of pumped storage power development at Tocks Island by the New Jersey utilities, rather than authorization to make application to the FPC which, with all other concerned agencies, must then make a judgment in the public interest on the facts developed and on the merits.

The bill S. 2678 does include amendments to the original proposal which are significant and important.

First, it provides that the charge payable by the utilities for use of the Tocks Island project shall not be less than $1 million annually. Information developed during Committee consideration indicated a net annual power benefit to the utilities of $4,316,567, so that under FPC practice the annual payment to the Federal government might be $2.15 million for 50 years—but that is based on the Susquehanna alternative, later cast in doubt.

Second, section 2 of the bill provides, at my suggestion, that the Secretary of the Interior, who has responsibility through the National Park Service for the Delaware Water Gap National Recreation Area, shall insure that planning and construction of any pumped storage project shall not impair the recreation and conservation values of Sunfish Pond, and shall be accomplished with minimum disruption of the natural environment. It provides further that any license issued by the FPC shall include conditions considered necessary by the Secretary to accomplish this purpose.

Third, section 6 of the bill, while not including the time limitations and study of optimum power development suggested by the Corps, does provide protection to the United States for costs incurred in anticipation of pumped storage developed.

Fourth, and highly important, the amendment offered by Senator Muskie in which I joined, incorporated in section 3 of the bill, requires that there be reserved to the preference customers entitled to public power from the project as now authorized, an equivalent bloc of power and energy at a cost no greater than would have been available to them from the Federal power plant. In a letter to me dated 14 April 1969, the Corps cites the Department of the Interior estimate of that cost at 5.5 mills per kilowatt hour, compared to payments now by REA preference customers in the area of 8.5 to 9.7 mills.

While I believe in the maximum development for public purposes of Federal projects—in this case public power from pumped storage if that is the best development of Tocks Island—the Muskie-Cooper amendment at least preserves for cooperatives and municipal systems the power to which they are entitled by the 1962 authorization of the Congress. In effect it reserves for them the power benefits from reservoir, as these benefits would have been developed by the conventional Federal plant. And since the utilities claim their plan will be much more efficient, and in any event will generate 20 or 30 times as much power, this condition should impose no great hardship on them. Without the amendment, this power benefit from the Federal dam itself, as distinguished from pumped storage alone, would be turned over to the private utilities for sale at their market rates.

Section 3 of the bill specifies also that the Delaware River Basin Commission be considered a preference customer—as it would be if determined to be a "public body" for the purposes of Section 5, the preference provision of the Flood Control Act of 1944. The Secretary of the Interior would allocate among the preference customers, including the Commission, the relatively small bloc of reserved power, and the Delaware River Basin Commission has submitted an impressive list of power requirements. The Commission would not, of course, sell or distribute power, nor thereby provide any "yardstick" by which public power generally encourages more economical rates for consumers.

I am sure the Delaware River Basin Commission does good work, and it is a pioneer in its field. So I pointed out that it has, in addition, another avenue to economical power for its needs. The March 1, 1961, Agreement of Exchange between the State of New Jersey and the New Jersey Power and Light Company included provision for the company to transfer water, at the replacement cost of pumping energy, needed for public water supply by the State. After the Delaware River Basin Commission came into existence, taking over responsibility for water supply in the States it serves, the New Jersey utilities suggested, in connection with their Tocks Island pumped storage application, that if the State of New Jersey would assign to the Commission its contractual rights to have the utilities supply transmountain pumping, and assuming the utilities would have available the power and energy from the head of the dam and the downstream releases (as provided in S. 2678), the utilities would make available to the Commission 20 megawatts of dependable power and 281.5 million annual kwh on an *incremental* cost basis. This arrangement is referred to in the January 12, 1966, statement of the utilities proposing pumped storage to the DRBC, in their statement at the August 17, 1967, hearing before the DRBC, and last May 8 before the Senate Subcommittee on Public Works Appropriations, even more clearly than during the hearings of our Committee.

I point out, and it should remain clear, that this power "on very favorable terms" or at "only the modest incremental cost thereof" as the utilities have stated, arises from the obligation of the utilities under their 1961 contract with the State of New Jersey, which can be assigned to the DRBC. It does not represent, and apparently never represented, preference power to cooperatives and other public bodies entitled under the 1944 Act to power from the authorized Federal plant.

That the offer to the DRBC of power at its incremental cost—which I understand may be on the order of 3 or 4 mills—grew from the 1961 agreement was made clear by the drafts of the bill first considered by the Committee, which specifically provided that the power and energy to be made available on "favorable terms" to the Delaware River Basin Commission would be considered power and energy provided pursuant to the agreement of March 1, 1961. The bill before the Senate contains no such provisions. I assume that the contractual rights of the State of New Jersey, and the opportunity for the DRBC to secure in this way very low cost power, are preserved.

I make this point because there has been some confusion about it—perhaps not intentional—and because it seems to me that under Section 3 of the bill, power at an estimated cost of 5.5 mills could be allocated to rural electric cooperatives and nearby municipal systems, and that in addition the Delaware River Basin Commission could secure power at 3 or 4 mills from an assignment by the State of New Jersey of its rights under the 1961 agreement, as proposed by the utilities.

I hope all these elements—the increased cost of Tocks Island, its justification based now primarily on recreation benefits, the number of families to be displaced by the project and by the National Recretation Area, the conservation values offended by the pumped storage plan, the position of rural electric and municipal preference customers, the need of the DRBC for low-cost power, the effect of private pumped storage development on costs and benefits, and the proper charge for use of the reservoir by private utilities—will be considered by the House Committee, and if the bill passes, by the Federal Power Commission, the Secretary of the Army, and the Secretary of the Interior.

I have opposed the bill because it appeared at first, and may still represent, an effort by the private utilities to secure de-authorization of the public power portion of a Federal project—one of the very few ever authorized in the Northeast high electric cost area. I opposed it as an effort, to "take over the most profitable part of this multiple-purpose project while allowing the taxpayers to finance flood control and other non-reimbursable features."

During my service in the Senate over a period of more than 20 years, I have observed that the power companies oppose all public power projects—I think without exception. The private utilities attack, fight, and attempt to delay all Federal projects that include public development of hydroelectric power resources—they do so at every step. That is their right. But in this case—and it is rare in the Northeast as my friends from Maine know so well—the Congress has authorized a project that includes a very modest amount of public power.

The original proposal of the utilities for pumped storage would have de-authorized that public power, and the present proposal may result in the same net effect—if there is long delay or if no power is allocated under section 3 to cooperatives. At best, and with the significant improvements included in the Committee bill, the power company plan uses a Federal installation, one to be constructed at large public cost, as the necessary base for what is conceded to be a highly efficient and presumably very profitable generation plant of massive capacity. The site has been called ideal for pumped storage hydro-generation of peaking power. It is also located in the heart of the Delaware Gap National Recreation Area. Obviously there are conflicting values to be resolved. But if the remaining conservation issues are to be laid aside, if the site is ideal for pumped storage generation and peaking

power is in keen demand, if the Tocks Island reservoir itself remains feasible and, together with the recreation area, is worth its cost in public funds and in the removal of thousands of families, I would favor public development of the entire project—pumped storage and all—with the benefits accruing to the public from public power, water supply, recreation and flood control.

I do not believe in dividing these great public works projects so that private companies have a free ride—or if not a free ride return to the government only half the net benefit they derive from use of the Federal project, as calculated under some formula for an alternative which they consider practicable. I do not consider the electric utilities necessarily more efficient than the Army and our rural electric cooperatives. I think it has been established, in Kentucky and elsewhere, and again in the TVA area, that they are not.

I have opposed this bill because I suspect it could result in a windfall to the utilities which have pressed for it so long and expertly, and which are its chief sponsors, together with the Delaware River Basin Commission for whom the utilities made their original plan very attractive.

It is for these reasons that I voted against the bill in the Committee, and vote against it today.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. SCOTT. Mr. President, I appreciate the concern of the Senator. I am very glad he is not opposed to the bill.

Mr. COOPER. I am opposing it. I recognize however, that it will pass; everyone else on committee voted for it. I shall vote against the bill, as I did in the committee.

Mr. SCOTT. I am very glad the Senator is expressing his opposition, but that he is good enough to recognize that the action of the committee was overriding.

I want to say that my concern about Tocks Island and the Delaware Valley recreation area is very great. It has represented many years of work by Members of Congress in both bodies.

I do support and urge favorable action on the bill.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-328), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of this legislation is to modify the congressional authorization for the Tocks Island Dam and Reservoir, to be located in the Delaware River, between Pennsylvania and New Jersey, to clarify the authority of appropriate Government agencies to consider an application providing for the use of Tocks Island project water releases as part of a proposed comprehensive pumped storage hydroelectric power development by certain New Jersey electric companies.

The existing Tocks Island authorization provides for use of those releases by a conventional Federal powerplant. The modification clarifies the authority of the licensing agencies to consider a proposal that such releases be used by New Jersey companies, instead, as part of a comprehensive pumped storage development.

ANALYSIS BY SECTIONS

Section 1.—Amends the provisions of the Flood Control Act of October 23, 1962, Public Law 87-874, relating to the Tocks Island Dam and Reservoir, Delaware River Basin, to permit the head and water releases of that project to be utilized as part of a comprehensive pumped-storage hydroelectric power project by certain New Jersey electric companies having an application now pending before the Delaware River Basin Commission. Language in this section makes the use of such releases as part of the aforesaid proposal subject to the provisions of this act, the Delaware River Basin Compact and the Federal Power Act. In the event the DRBC and the FPC license the combination power proposal, this section provides that the annual payment required by section 10(e) of the Federal Power Act to be made for the use of Government property at Tocks Island shall be not less than $1 million. Exact amount of such annual payment will be determined by the Federal Power Commission.

Section 2.—This section effectively prohibits use of Sunfish Pond, a small pond atop Kittatinny Mountain, as an upper reservoir of the comprehensive pumped-storage project. It incorporates by reference those provisions of the Delaware River Basin Commission amendment of its comprehensive plan for the Delaware River Basin which provide that Sunfish Pond shall not be so used and its recreation values not significantly impaired, that construction of the alternate upper reservoir be accomplished with minimum disruption of the natural environment, that the project penstocks, powerhouse and transmission lines extending therefrom on the western slope and top of Kittatinny Ridge be underground, and the area restored and landscaped.

Section 3.—This section provides that power equivalent to that which would have been available to preference customers from the presently authorized Federal conventional plant, if built, will be made available to them by the licensee. The Delaware River Basin Commission is considered a preference customer for this purpose. The Secretary of the Interior is to allocate the equivalent of such power among such preference customers on an equitable basis.

Section 4.—This section directs the licensee to furnish power to the United States free of cost for operation and maintenance of the Tocks Island Dam.

Section 5.—This section requires the Tocks Island project and, if built, the companies' proposed combination power development both to be constructed in a manner that will not preclude Government installation of the authorized conventional powerplant at any time.

Section 6.—Pending a decision as to the development of the hydroelectric features of the project, and in order that there will be no delay in the prosecution of the Tocks Island project, the Corps of Engineers will proceed with planning and construction of the project so as to permit either Federal or company development of the conventional power potential. This section provides that the companies and the Government shall enter an agreement or agreements as necessary providing that, in the event a license is issued to the companies for combined power development, the companies shall pay the cost incurred by the United States to preserve the suitability of Tocks Island Dam for installation of both the combined power development and the authorized powerplant; and that in the event a license is not issued for the combined power development, the companies shall pay the cost incurred by the United States to preserve the suitability of Tocks Island Dam for installation of the combined power development. The section further provides that in the event the companies and the Government fail to reach timely agreement regarding the amount of such payment to be made by the companies, the amount shall be set by the Secretary of the Army subject to review by the Federal Power Commission.

GENERAL STATEMENT—TOCKS ISLAND DAM

The Tocks Island Dam and Reservoir is the key project in the comprehensive plan for the development of the water resources of the Delaware River Basin, authorized by the Flood Control Act of 1962. It is the largest project in the comprehensive plan and the only mainstem dam on the Delaware. The damsite is located at the downstream end of Tocks Island in the Delaware River about 5 miles upstream from the Delaware Water Gap and about 7 miles northeast of Stroudsburg. The dam will rise 160 feet about the river bed, be 3,200 feet long and contain about 9 million cubic yards of earth and rock. A spillway 383 feet wide will be cut in the New Jersey abutment. The project will serve four authorized purposes of flood control, water supply, recreation and power.

Tocks Island Reservoir, with a drainage area of 3,827 square miles, will control virtually half the Delaware River Basin runoff above Trenton, N.J. There is an urgent need for relief from flood damage at important centers such as Easton, Reigelsville, New Hope, and Yardley, Pa., and Belvedere, Phillipsburg, Trenton, and Burlington, N.J. Operating in conjunction with other projects in the basin plan, the reservoir would have reduced the stage of the August 1955 flood at Trenton by about 7.3 feet.

Combined with the remaining authorized Delaware River Basin projects, long-term storage provided by the Tocks Island Reservoir will meet the basin water supply needs to the year 2000. It is expected to satisfy the immediate water needs of the Trenton, N.J., Philadelphia, Pa., and Wilmington, Del., areas. Reservoir storage capacity will also be used to augment low flows in the Delaware River.

The 12,500-acre lake to be created by the project and development of its directly related recreation facilities will accommodate an initial estimate of 4.2 million visitors annually. There is an existing demand for the recreation facilities at this time. Ultimate attendance for directly related project recreation, estimated at 9.6 million visitors annually, will be accommodated by future incremental development of facilities.

The conventional power capacity authorized by the 1962 act consists of 46,000 kilowatts (20,000 kilowatts dependable, the rest available only part of the time), and average annual energy of a little under 300 million kilowatt-hours, based on certain river-flow ranges. Later studies by the corps indicate that available water may be released from the dam at higher rates over shorter periods of time, without requiring downstream reregulation, thus permitting a larger installed capacity. The current design thus calls for an installed conventional capacity of 70,000 kilowatts (38,000 kilowatts dependable on the basis of short-term peaking operation, and the rest interruptible), with an average annual generation of a little over 300 million kilowatt-hours.

The direct economic impact of the project will be important. Recreation development will stimulate business related to tourism and recreation. Improved water supply and stream quality will better the economic climate for industrial development. Pike and Monroe Counties, Pa., bordering the west side of the reservoir, are in the Appalachia region and will receive economic benefits during and after construction of the project.

The cost of this needed, highly important water resource development has increased from an estimated $90 million at the time of authorization to an estimated $214 million in 1968, excluding interest during construction.

REFERRAL OF POWER DEVELOPMENT MATTER TO PUBLIC WORKS COMMITTEES

The surveys and investigations staff of the Committee on Appropriations, House of Representatives, recently prepared a report on

the complexities and problems associated with the Tocks Island project for the use of that committee. Based upon the findings of this investigation, that committee in its report on the fiscal year 1969 Public Works Appropriation bill (H. Rept. 1549, 90th Cong.), stated that one of the issues requiring resolution before the Tocks Island project plans and economics can be finalized concerns use of the project water releases as part of a proposed comprehensive pumped storage development by the New Jersey companies, instead of for the authorized conventional Federal powerplant. In addition, the Senate Committee on Appropriations in its report on that bill (S. Rept. 1405) urged an early review by the legislative committees and such amendment in the original Tocks Island authorization as may be deemed appropriate.

NEW JERSEY COMPANY PROPOSAL

For several years three New Jersey electric companies (Public Service Electric & Gas Co., Jersey Central Power & Light Co., New Jersey Power & Light Co.) have had an application before the Delaware River Basin Commission for expansion of their existing Kittatinny Ridge-Yards Creek pumped storage project. Kittatinny Ridge, in New Jersey, stands between Yards Creek below on the east and the Delaware River, including Tocks Island, below on the west.

The proposal set forth in the pending application before the DRBC calls for combining the Kittatinny Ridge-Delaware River pumped storage potential and the water releases of Tocks Island Dam in a single comprehensive pumped storage development of 1.3 million kilowatts. The design permits discharges through the company-proposed underground powerhouse adjacent to the dam to be made either back into Tocks Island Reservoir or downstream as the flow requirements of the river and the Tocks Island project require. The specific facilities attached to the pumped storage project works which would utilize the so-called conventional releases of the dam, consist of certain additional conduits and valves and three small turbines attached to the main shafts of three of the five, large pumped storage turbines. These additional, attached facilities, which would produce essentially the same power and energy as the authorized conventional powerplant, can be installed in such manner as not to preclude later installation of the authorized conventional plant and use by it, instead, of the conventional releases.

Due to certain opposition to the use of Sunfish Pond on Kittatinny Ridge as one of the upper pools of the pumped storage development, the Delaware River Basin Commission last year amended the provisions of the comprehensive plan for the Delaware Basin which relate to Tocks Island to prohibit use of Sunfish Pond for pumped storage purposes. By that amendment the DRBC also provided that, subject to the enactment of appropriate legislation, as here, the multipurpose concept of the Tocks Island project permits combined development of its available conventional and pumped storage hydroelectric power potential as proposed by the companies. Each of the four Delaware River Basin States unanimously approved the amendment; the Federal member of the five-man DRBC filed a formal exception in the interest of preserving maximum freedom by Federal agencies to consider the combination power development matter further. The committee received no unfavorable comment on the company proposal from any of the agencies, however.

The record of the committee's hearings shows that the company proposal is decidedly attractive and deserving of detailed consideration by the licensing authorities of the DRBC and the FPC. In this connection the corps testified to the committee:

"Based on data available in 1966, the Corps of Engineers made a preliminary comparison of the relative merits of the alternative plans of power development.

This early comparison indicated a definite advantage, from the standpoint of first cost, in favor of the utilities power plan, and that the modified plan could likely offer a more optimum development of the power potential of the site. * * *

In addition, non-Federal construction of power facilities at the project would be contingent on issuance of a license by the Federal Power Commission. The coordinating procedure followed in processing a license application through the Federal Power Commission would afford an appropriate means of making such a comparison and definitive finding. Under this procedure, the Federal Power Commission would submit the plan of the power companies to the Corps of Engineers and other Federal agencies for review prior to the issuance of a license."

As noted in the sectional analysis, the committee has taken particular care to insure that the company proposal will preserve Sunfish Pond. The record shows the company, instead, will construct a single additional pumped storage upper reservoir immediately adjacent to the existing Yards Creek Upper Reservoir on Kittatinny Ridge. Early this month the companies donated Sunfish Pond and 68 acres of its surrounding woodlands to the State of New Jersey, free of charge.

PUBLIC HEARINGS

The Subcommittee on Flood Control-Rivers and Harbors, held 2 days of public hearings, March 18 and 19, 1969, at which the views of 15 expert witnesses representing both Federal and non-Federal interests testified as to the desirability of modifying the existing project provisions as they relate to hydroelectric power development. Favorable testimony was received from Hon. Richard J. Hughes, Governor of the State of New Jersey, representing that State as well as the Governors of the States of Delaware, Pennsylvania, and New York, all of whom are members of the Delaware River Basin Commission. A statement was received from Hon. Harrison A. Williams, Jr., urging that the committee favorably report to the Senate legislation which would permit the combined power development proposed by the New Jersey companies and permit the Tocks Island project to proceed to construction.

Favorable testimony was also received from Hon. John P. Saylor, House of Representatives, who urged modification of the Tocks Island authorization to permit the New Jersey companies' combination power development since it would result in a material contribution to the economic integrity of both the Tocks Island project and the Delaware Water Gap National Recreation Area, which is so dependent upon Tocks Island. In addition, favorable testimony was received from the Corps of Engineers, the Department of the Interior, the executive director of the Delaware River Basin Commission, the New Jersey electric companies, the New Jersey State AFL–CIO, the New Jersey Manufacturers Association, and associations interested in the development of the Delaware River Basin. Favorable testimony was also received from the former Director of the National Park Service, Mr. Conrad L. Wirth, who made personal inspections of the area to be developed and concluded that the pumped-storage feature of the Tocks Island project can be developed in a manner that is consistent with and does not significantly impair the public recreation and scenic features of the adjacent area.

The Lenni Lenape League, a group of local outdoorsmen, informed the subcommittee that its main purpose was the preservation of Sunfish Pond and that it opposed any pumped-storage at Tocks Island. Opposition to the pumped-storage was also expressed by the conservation chairman of a north New Jersey group of the Sierra Club. New Jersey State Senator Wayne Dumont opposed use of Sunfish Pond.

Testimony was received from the Pennsylvania Municipal Utilities Association and the Sussex County, N.J. Rural Electric Cooperative, urging that provision be made to insure that an amount of power equivalent to the output of the Federal conventional plant be reserved for marketing to the preference customers in the general vicinity of Tocks Island.

In addition to verbal testimony, statements were received from a number of individuals and associations expressing their views on the matter. These statements were made a part of the published proceedings.

COST TO THE UNITED STATES IF LEGISLATION IS ENACTED

While precise data are not available at this time for the comprehensive pumped-storage development, present estimates indicate that a substantial savings will be realized by the Federal Government if the so-called conventional releases of Tocks Island Dam are developed as part of the comprehensive pumped storage project by private industry. Figures furnished the committee staff by the Corps of Engineers indicate that the Federal first cost of construction of Tocks Island Dam with the authorized conventional powerplant is $214 million, and $188 million without it, both excluding the Federal cost of interest during construction. If the conventional power potential of Tocks Island is developed by private industry, the Federal Government will realize an initial savings in construction cost of $26 million, which represents the presently-estimated construction cost of the authorized conventional powerplant, excluding the cost of interest during construction. In addition the bill provides that the company licensees will make annual payments to the United States for use of the Federal project in an amount not less $1 million annually. The exact amount of such payments will be determined by the Federal Power Commission after construction of the power facilities.

The effect on the Federal cost of Tocks Island through installation of privately financed power facilities is tabulated below:

[In millions]

Total estimated Federal construction cost of project with conventional power	$214.0
Savings in construction cost through substitution of privately financed power development:	
Cost of Federal project with power	214.0
Cost of Federal project without power	188.0
Total	26.0
Federal cost of project without authorized power	188.0
Less total annual payments to be made by companies for use of Government dam ($1,000,000×50 years)	[1] 50.0
Total	138.0
Less reimbursement for water supply	[2] 54.0
Net Federal cost of Tocks Island development	84.0

[1] Contribution to be made by companies for use of Government facilities is based on an assured payment of $50,000,000, as provided for in section 1 of bill. Actual assessment, to be made by Federal Power Commission when project is completed, may result in a greater contribution.

[2] Water supply cost allocation made on the basis of estimated Federal cost of $214,000,000.

COMMITTEE VIEWS AND RECOMMENDATIONS

The committee has given serious consideration to the proposition of permitting New

Jersey companies to develop the conventional power potential at Tocks Island, subject to the approval of the Delaware River Basin Commission and the Federal Power Commission. As noted, the estimated cost of this highly important water resource project has increased from about $90 million at the time of authorization to $214 million in 1968; available data show the company proposal would make a more efficient, more economic use of the so-called conventional releases than the authorized conventional plant, and would permit a sizable reduction in the presently estimated net Federal cost of Tocks Island.

The committee has taken particular care to insure that Sunfish Pond will be preserved. The prohibition against its use and the associated safeguards provided by the bill are expressly designed for this purpose. They make it clear that, however attractive the company comprehensive pumped storage development may be, Sunfish Pond shall not be used for pumped storage purposes. This should facilitate detailed consideration of the company application by the licensing agencies.

The committee wishes to make it clear that the existing authorization for the conventional Federal hydroelectric plant remains intact: Nothing in this bill is to be construed as deauthorizing it. The company facilities and the authorized Federal plant cannot use the so-called conventional releases at the same time, of course. In the event the licensing agencies conclude the so-called conventional releases should not be developed by the companies, or in the event they are developed by the companies but at some future date Congress should conclude that the power potential of those releases should nonetheless be developed by the Government, installation of the authorized Federal power facilities could proceed subject to the appropriation of funds.

The Governors of the four Delaware River Basin States urged that the equivalent of the authorized conventional plant's potential output be made available to the Delaware River Basin Commission for pumping water for municipal water supply, pollution abatement and related purposes. The committee has made that equivalent available to all preference customers in the marketing area and has directed that the DRBC shall be treated as a preference customer for purposes of this act. The Secretary of the Interior is designated to make an equitable distribution of the energy reserved for preference customers.

The Tocks Island project will be highly instrumental in alleviating drought conditions that have plagued the Delaware River Basin in recent years. In addition, it will protect the area from devastating floods and will provide water-based recreation for nearly 10 million visitors annually, in a region where it is estimated nearly 50 million persons reside. However, the cost of this badly needed project has escalated seriously since it was authorized in 1962. There is need for reducing the large Federal expenditure this project requires in order to go forward. There is also need for producing electric power for a large heavily industrialized region. As mentioned elsewhere in this report, net Federal expenditures for construction of this project can be reduced by about $76 million by means of the company proposal. In view of these considerations, the committee recommends enactment of this legislation.

The VICE PRESIDENT. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and the third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

S. 2678

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the project for comprehensive development of the Delaware River Basin, as authorized substantially in accordance with the recommendations of the Chief of Engineers in House Document Numbered 522, 87th Congress, by section 203 of the Flood Control Act of 1962 (76 Stat. 1182), is hereby modified to permit use of the head and water releases of Tocks Island Reservoir as an incident to a pump storage hydroelectric power development threat by applicant presently seeking approval to undertake such development before the Delaware River Basin Commission, subject to the provisions of this Act and the pertinent provisions of the Delaware River Basin Compact and the Federal Power Act, including section 10(e) (16 U.S.C. 803 (e)) providing for payment of annual charges to the United States: *Provided,* That the annual charge payable by applicant for use of the Tocks Island project by the aforesaid pumped storage development including use of project head and water releases shall be not less than $1 million.

SEC. 2. The Secretary of the Interior shall insure that the planning and construction of the aforesaid pumped-storage project shall be undertaken in accordance with the conditions and requirements relating to Sunfish Pond and Kittatinny Mountain set forth in paragraph numbered (3)(A) of Resolution Numbered 68–12 adopted October 28, 1968, by the Delaware River Basin Commission: *Provided,* That the Federal Power Commission shall adopt, as part of any license to construct, operate, or maintain the aforesaid pumped-storage project, those requirements and conditions determined by the Secretary of the Interior to be necessary to insure conformance with the provisions of paragraph (3) (A) of such resolution: *Provided further,* That in no event shall the upper pool of the applicant's proposed pumped-storage project be located on land other than that owned by applicant on April 15, 1969.

SEC. 3. Any license issued by the Federal Power Commission subject to the provisions of this Act shall be conditioned upon the licensee delivering power and energy in an amount not less than, and at a cost not greater than that which would have been delivered from installation of power facilities heretofore authorized, to all preference customers eligible to purchase power from such heretofore authorized facilities: *Provided,* That for the purposes of this Act the Delaware River Basin Commission will be considered a preference customer. The Secretary of the Interior is hereby authorized to allocate such power as may be available under this section on an equitable basis among such preference customers.

SEC. 4. Power and energy shall be made available by any licensee to the United States free of cost for operation and maintenance of Tocks Island Dam.

SEC. 5. The Tocks Island project and the aforesaid pumped-storage development shall be constructed in such a manner as not to preclude installation at any time of power facilities heretofore authorized at Tocks Island Dam and use of its head and water releases for power purposes by the United States.

SEC. 6. In carrying out the purposes of this Act, the Secretary of the Army and the applicant shall enter into an agreement providing for the payment by the applicant to the United States of such economic costs as may be incurred by the United States in the design, construction, and operation of the Tocks Island Dam necessary to preserve its suitability for the aforesaid pumped-storage development by applicant and power facilities heretofore authorized. In the event a license is not issued for the aforesaid pumped-storage development and the United States constructs the heretofore authorized power facilities, the costs incurred by the United States to preserve the suitability of the project for the installation of such authorized power facilities will be borne by the United States. In the event of failure to reach timely agreement, the Secretary of the Army shall determine the payment to be made to the United States, and the applicant shall be liable therefor: *Provided,* That such determination shall be subject to review by the Federal Power Commission.

EFFECT OF THE SURTAX ON THE STATE OF OREGON

Mr. PACKWOOD. Mr. President, I should like to speak for a moment about the effect of the surtax on my State of Oregon, whatever the situation may be in the next 2 days as we consider its extension.

I thought that yesterday, or the day before, we had reached some kind of agreement at least on extension of the surtax and, hopefully, that some kind of tax reform could be passed.

I speak with a certain degree of fear for my own State because each time we suffer an increase in inflation, it may give the country a cold but it gives my State of Oregon pneumonia. Oregon is heavily dependent upon the lumber industry, and lumber, of course, is directly dependent upon the homebuilding industry.

We saw 1.7 million homes projected for construction at the start of this year, and we see now those projections reduced to 1.5 million. In all likelihood, they will be reduced even further as we witness the slowdown in building.

We sit here in the Senate, as the House considers sending us a worthwhile bill, and argue about whether we will extend the surtax until November, or argue whether we will hold up passage of the surtax and the reforms in that bill until we have another tax reform bill to go with it.

I am tired of Oregon's being a pawn in this political chess game. I am tired of my State's having to suffer because some of the leaders in the Democratic Party have decided that the time has come to pass tax reform and the time has come now.

Mr. President, the Democrats have had control of the Senate for the past 14 to 15 years. There is no reason why tax reform cannot be passed today, tomorrow, or next week, if that is the wish of the Democratic majority.

They have an added advantage this year in that they have the pledge of the Republican minority leadership and the pledge of President Nixon that tax reform is urgent and should be passed.

There is no need for, and no conceivable reason for, the passage of the surtax to be held up while we are waiting to debate tax reform. There can be only one reason——

The PRESIDING OFFICER (Mr. ALLOTT in the chair). The time of the Senator from Oregon has expired.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senator from Oregon may proceed for an additional 5 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PACKWOOD. Mr. President, there can be no reason, so far as I can assess it, for the wish of the Democratic majority to hold up passage of the surtax on the pretext of passing tax reform, unless their real reason is merely to kill the surtax altogether.

President Nixon has made a valiant effort in terms of cutting Federal expenditures to bring in a budgetary surplus, at least under present accounting methods, as of the end of the last fiscal year and has projected a larger one next year, if the surtax can pass. That is what we will have to have in order to stem inflation.

I know of very few Members in the Senate, myself included, who are opposed to tax reform. I can conceive of no reason why a meaningful tax reform package is not going to be passed this year unless the Democratic majority does not want it to pass this year.

However, that is no reason and it should not be involved in the attempt to dampen the fires of inflation by passage of the surtax, after the Democratic majority made the offer to extend the surtax until November 30.

Last night, President Nixon, by telephone, rejected that offer. That offer was reported in the Washington Post this morning in an article entitled "Nixon Firm on Surtax Extension," written by Frank C. Porter, which I ask unanimous consent to have printed in the RECORD.

Mr. President, I yield the floor.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NIXON FIRM ON SURTAX EXTENSION

(By Frank C. Porter)

President Nixon flatly rejected last night a Democratic offer to extend the surtax through Nov. 30. In doing so, he overruled his chief lieutenant in the Senate, Minority Leader Everett M. Dirksen of Illinois.

He also indicated he plans to take his case to the American people—presumably on television—when he returns from his world tour Monday.

Mr. Nixon's decision, relayed through Vice President Agnew, climaxed a hectic day on Capitol Hill during which it appeared at one point that the impasse over the controversial surtax might be broken.

This came when Dirksen went before the Senate Republican Policy Committee to urge acceptance of a new Democratic offer as the best that could be done under the circumstances.

The Democratic leadership proposed earlier in the day an immediate vote yesterday afternoon on a five-month extension of the surcharge as an amendment to a House-passed bill on unemployment compensation.

Dirksen was unable to obtain approval of the full GOP leadership and he avoided either rejection or acceptance of the compromise when he took to the Senate floor later. Even so it appeared that the Republicans were moving in the direction of accommodation when Congress shut down for the day.

All that changed and the stalemate appeared more hopeless than ever when Agnew issued a statement late last night charging that the Democratic strategy "invites still higher living costs, continued record-high interest rates, and a weakened dollar abroad."

The proposal to extend the surtax only through Nov. 30 "is unacceptable to the Administration," said Agnew.

The Vice President had conferred by radiotelephone earlier with the President, then in Thailand.

He said Mr. Nixon "is deeply concerned by the inability of the Senate to act and the injury this threatens to every citizen."

He accused the Senate Democratic Policy Committee of applying a "pocket veto" on a House-passed one-year extension of the surtax by refusing to call it up for floor action.

The Administration has been insisting that only a full year's extension of the income-tax surcharge will have sufficient impact to curb inflation psychology and convince the Nation and the world that the Government means business in its battle to halt the price spiral.

But Majority Leader Mike Mansfield of Montana and the Democratic Policy Committee took the position that citizen unrest over tax inequities demands that comprehensive tax reform be considered simultaneously with the surtax extension. To pass the surtax first, they have argued, would take all the impetus out of the drive for reform.

Last Thursday, however, they offered an "accommodation whereby the surtax would be extended through Nov. 30 and Senate Finance Committee Democrats pledged to report out tax reform by Oct. 31. The surtax then could be extended the remaining seven months through June 30.

This the Republican leadership would not buy, although they gave no formal answer—until the Vice President's blast last night.

The surtax died June 30 but the Congress continued present withholding rates another month in expectation of its retroactive renewal. Those rates are now expected to fall back to pre-surtax levels at midnight Thursday.

Yesterday the House Rules Committee cleared a further 15-day extension for House action today.

But a noon meeting of the Senate Democratic Policy Committee and Finance Committee Democrats agreed unanimously that the further 15-day extension "would not meet the problem of surtax extension. Rather it would serve only to postpone a decision and create an unnecessary pall of uncertainty."

Meanwhile, the hard-driving House Ways and Means Committee formally voted a long list of tentative reforms ranging from a tightening of capital gains taxes to a revision of rules on charitable deductions. Chairman Wilbur D. Mills said he hopes to complete the comprehensive reform package Thursday and expects a House vote a week later.

This is part of a stratagem to break the Senate deadlock. Mills testified before the Rules Committee yesterday that early House passage would send the reform bill to the Senate in time for action before the Aug. 13 recess.

There even were suggestions that the Senate could tack the reform bill onto the House-passed surtax extension, thus satisfying the Democratic leadership's insistence that both bills be considered simultaneously. But this was considered unlikely since the Senate would almost certainly want to put the reform bill through lengthy Finance Committee hearings.

Those present reported that Dirksen ran into considerable rank-and-file opposition within the Republican Policy Committee when he sought support for the Democratic compromise.

Obviously disappointed, Dirksen later told reporters that "when you can't get a whole loaf, you get as much bread as you can."

Sen. John J. Williams (R-Del.), ranking Finance Committee Republican who initiated the original surtax legislation last year, gave qualified support to the Democratic compromise. Last week he had firmly opposed it.

Williams even agreed to withdraw a controversial amendment he had offered to the unemployment compensation bill so that it wouldn't impede passage of the temporary surtax extension.

Agnew had broken off a Western speaking tour and hurried back to Washington yesterday to enter the behind-the-scenes negotiations at the Senate.

The following is his statement in full after his long-distance conversation with Mr. Nixon:

"The refusal of the Democratic Policy Committee to let the Senate vote on a full year's extension of the surtax and outright repeal of the investment credit invites still higher living costs, continued record-high interest rates, and a weakened dollar abroad.

"Through a parliamentary device, the Policy Committee is in effect applying a 'pocket veto' to the legislation. Senators, not members of the Committee, are being denied an opportunity to vote on this vital issue.

"The Policy Committee's proposal to extend the surtax only through Nov. 30 is unacceptable to the Administration. It would raise grave doubts as to the determination of this Government to stop the rising prices that are undermining the earnings and savings of every American. Simple extension of the surcharge through November would also leave hanging the important matter of repealing the investment credit and removing poverty level citizens from the tax rolls.

"The Policy Committee's procedure in effect rules out the possibility of open debate on this issue.

"The Administration welcomes open debate on both proposals—that of the Policy Committee and the Administration's proposal, which has been passed by the House of Representatives and duly reported to the Senate by the Finance Committee.

"I have been in communication with the President on all of these developments. He is deeply concerned by the inability of the Senate, to act, and the injury this threatens to every citizen.

"He intends to discuss these matters frankly and fully with the American people upon his return on Monday."

TRANSACTION OF ROUTINE MORNING BUSINESS TOMORROW

Mr. BYRD of West Virginia. Mr. President, the CONGRESSIONAL RECORD of July 29, 1969, does not show that the period for the transaction of routine morning business for tomorrow, Thursday, is to be limited to 30 minutes.

However, the unanimous-consent request was made and granted. It is my fault that it does not so appear in the RECORD. But it does so appear in the Journal.

I just wished to clarify the reason why it does not show in the CONGRESSIONAL RECORD, and I repeat that it is my fault.

The PRESIDING OFFICER. The Chair is informed that it does so show in the Journal.

Mr. BYRD of West Virginia. Yes. So, Mr. President, the period for the transaction of routine morning business on tomorrow is limited to 30 minutes, but if Members wish to extend the time, they can do so by unanimous consent.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that

the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

UNFORTUNATELY, AMERICAN MILITARY POWER SUSTAINS DICTATOR FRANCO'S REGIME

Mr. YOUNG of Ohio. Mr. President, we hear a great deal about the power of the military-industrial complex. Also, more and more we are learning of the unparalleled arrogance of some of our generals. Those patriots who drafted the Constitution of our country thought they had provided that in the United States civilian authority would always be supreme over military authority. We should not permit militarists to run unbridled.

While it may not be known generally to Americans, the facts are we maintain three major Air Force bases, a major naval base, and 19 minor military and naval installations in Spain. More than 10,000 American servicemen are permanently stationed at those bases.

It seems that our generals and admirals at the major bases in Spain have demonstrated a feeling of kinship and admiration for Generalissimo Franco, the dictator of that unhappy country.

Spanish military officers are regularly brought to the United States for training and some American officers attend the Spanish military college. In addition, in recent years a series of joint exercises have been undertaken. A number of them are designed to coordinate Spanish-American air defense and antisubmarine warfare capabilities—efforts that have some logic in the context of joint defense of the bases.

Now, without any authority whatever from any civilian officials in Washington, American military maneuvers have been held in Spain, termed "Pathfinder Express I" and, more recently, "Pathfinder Express II." These maneuvers bring together ground forces of the two countries in a manner that portrays a joint effort against insurgent armed forces in Spain proper. Such maneuvers must, of course, have been conducted under authority of the military command in Europe. It is stated that twice in the past 2 years our forces in Spain have conducted major exercises and maneuvers to practice crushing a theoretical uprising to replace Generalissimo Franco and send him into exile. As far as I know, none of our generals at NATO or in Spain have any authority whatever to conduct exercises with the Armed Forces of our country in Spain for the purpose of preparing to assist the Fascist dictator, Franco, to smash any future uprising of the Spanish people against his regime.

Just recently a directive has been issued from our State Department that such practices are prohibited in the future. Americans should be informed of just what is the commitment our State Department and our military leaders have made to Franco and whether or not there is any congressional authority claimed for such commitment.

It was unfortunate that recently without entering into any treaty with the Spanish Government, officials of our State Department and Defense Department simply gave dictator Franco weapons of war which cost American taxpayers $50 million. This, to buy an extension of leases on our submarine base at Rota and of our air bases near Madrid.

Unfortunately, Franco has been sustained in power by the presence in Spain of American Armed Forces during recent years. Now, that support apparently is demonstrated to be an all-out commitment designed to show oppressed Spanish civilians that it is useless for them to seek to overthrow the government of dictator Franco as his Fascist regime has the backing of our Armed Forces.

Dictator Franco's regime is an affront to liberty-loving people the world over. There should be a thorough investigation of the recent exercises of our Armed Forces in Spain termed "Pathfinder Express I and II." We must not tolerate our generals in the Pentagon, in NATO, in Spain, or anywhere else in the world influencing or making U.S. foreign policies in accord with their whims and idiosyncrasies.

ORDER OF BUSINESS

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent to proceed for 5 minutes on another matter.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

LET US REMAIN NEUTRAL IN THE CONFLICT BETWEEN COMMUNIST CHINA AND THE SOVIET UNION—LET US SEEK NUCLEAR ARMAMENT LIMITATION TREATY WITH THE SOVIETS

Mr. YOUNG of Ohio. Mr. President, bitter fighting is being waged along the 6,500-mile common border between Communist China and the Soviet Union. To date some hundreds of Chinese soldiers and civilians have been killed and wounded, and also some Russian soldiers. It may be that this is an added reason for Soviet Foreign Minister Gromyko's recent friendly speech toward our country, proposing immediate negotiations for arms limitation. Also in recent days Soviet newspapers have lavishly praised our landing men on the moon.

I call to your attention also the fact the our late, great President, John F. Kennedy, and his ambsassador, Averell Harriman, achieved a limited nuclear test ban treaty with the Soviet Union, banning altogether the testing of nuclear weapons on the ground, on water, or in the atmosphere, permitting only limited nuclear tests underground. The Soviet Union and the United States have both complied with the provisions of this treaty which our late, great President said was the first step in the long journey toward permanent peace.

It is evident that the two great Communist powers are dangerously close to an all-out war. Some Sino-Soviet specialists say that war between these two Communist powers is not only near but inescapable. Already, Peking officials have ordered emergency storage of foodstuffs.

It is apparent that Gromyko and other leaders of the Kremlin are seeking to make sure that they do not have to face a cold war with NATO countries in Europe and at the same time a hot war on their eastern frontier with Red China.

Now is the time for a conference with leaders of the Soviet Union. Let us hope that it is a summit conference. Furthermore, President Nixon would do well to have that truly great American and patient negotiator, Averell Harriman, assisting him. It must be made crystal clear to chiefs of state the world over that the Government of the United States seeks to undertake without delay a cutback and really an end to any nuclear arms race between the two great nuclear powers.

In addition, leaders of the Nixon administration must convince the Chinese Communists and also the Kremlin leaders that the United States is not about to become allied with Russia in its quarrel with Peking. The United States must not step into this conflict. Calm, cool, and persistent neutrality is the only sane course. If these two mammoth and powerful Communist nations, China and the Soviet Union, continue hostilities which have been accelerating in recent months, we must not permit either side to have any cause to believe that our Nation will side with either nation. Also, that neither has or will have America's blessing and goodwill in the fighting they are waging and in a possible war waged against each other.

At this time, without doubt, the Soviet Union is stronger militarily than Communist China, which probably has been weakened by Chairman Mao Tse-tung's cultural revolution. Furthermore, at this time the Soviet Union has powerful offensive and defensive nuclear weapons comparable to, though considerably weaker than, the nuclear arsenal of the United States. Communist China has but a crude nuclear capacity.

It must be the announced policy of the U.S. Government that our Nation would be happy to have a so-called détente with the Soviet Union, but that such a situation of diplomatic friendship between the two great powers is entirely unrelated to any Sino-Soviet conflict.

It should be comforting to the rank and file of Americans that the leaders of the Soviet Union have not seemed disturbed at all over the fact that administration leaders in the Senate have been denouncing the Soviet Union and urging deployment of ABM's to overcome the very limited missile deployment of the Soviet Union around Moscow.

Incidentally, this is a good period in the history of the world for American men and women in government and out of government to keep in mind that throughout World War II the Soviet Union was our ally and friend. Americans should remember that in World War II, Hitler, without any provocation whatever, hurled his supposed supermen in a huge invasion of the vast territory of the Soviet Union. This sudden attack was without any declaration of war. The Russians fought back valiantly. Over a period of many months much of the territory of the Soviet Union in eastern Europe was conquered by the Nazis. Its cities were mercilessly bombed

by the German Luftwaffe. In World War II Americans should remember that 10,500,000 Russian soldiers and airmen were killed in combat by Hitler's soldiers or died of wounds. In that same period Hitler's forces killed 20 million Russian civilian men, women, and children, and exterminated in gas chambers, 1,050,000 Russian Jews.

President Nixon should withdraw his ABM proposal to deploy Safeguard missiles and seek talks relating to limiting nuclear missiles. Foreign Minister Gromkyo stated:

> We have noticed President Nixon's statement that after a period of confrontation, the era of negotiations has arrived.

In view of that fact he explicitly stated:

> We favor the good development of relations with the United States.

Our official and immediate response should be to seek a meeting between representatives of our two countries, the only two great nuclear powers, to confer together on the details of a treaty regarding nuclear missile limitation. Now the opportunity seems at hand to achieve an understanding with the leaders of the Kremlin for a nuclear arms limitation. Mr. President, we should grasp it.

A defeat of the ABM proposal by the Senate will be helpful to attain that end and to advance the hope of a treaty to limit deployment of nuclear weapons.

ORDER OF BUSINESS

Mr. CHURCH. Mr. President, I ask unanimous consent to proceed for 5 minutes.

The PRESIDING OFFICER (Mr. SAXBE in the chair). Is there objection? Without objection, it is so ordered.

U.S. ARMS AID: MORE INCRIMINATING EVIDENCE

Mr. CHURCH. Mr. President, today, I am heartened by the initial success of the Organization of American States in its efforts to end the war between El Salvador and Honduras. If the agreement by El Salvador to withdraw its troops from neighboring Honduras is carried out, it will certainly be a credit to both nations; most of all, it will be a credit to the OAS.

In this instance, also, the diplomatic role of the United States has been exemplary. We did not intervene; we stayed in the background; we supported the efforts of the OAS.

For the sake of the future of the OAS as a force in the hemisphere, it was most urgent that its peacemaking efforts succeed. Without this result, other Latin American countries might have been encouraged to follow the warlike example of Honduras and El Salvador. Also, one of the arguments used for years to hold down Latin American spending on armaments has been that the OAS would not permit a war between two Latin American states. This argument remains intact.

For the moment, it is more important to end the war than to assign responsibility for beginning it. Doubtless there were provocations on both sides. I do not think we should let the matter pass, however, without examining the contributory role of U.S. military promotional programs in both countries.

From the end of World War II through the fiscal year of 1968, the United States furnished military assistance—including grants from excess stocks—of $6.4 million to El Salvador and $8.2 million to Honduras. This included military training of one kind or another to 832 Salvadoran and 1,348 Honduran citizens. Among those trained was one Fidel Sanchez Hernandez, who happens now to be a general and the President of El Salvador.

In addition, we maintain inflated military missions in both countries. For reasons which escape me, the Defense Department conceals the size of these missions by classifying the information. Possibly this is because the Pentagon seeks to avoid criticism for padding the personnel.

I am not suggesting that the guns we supplied, or the military training we gave these two small countries caused the Salvadoran-Honduran war; feeling on both sides has run so high that the war might well have occurred anyway. However, I am saying that our military training and grants-in-aid made it easier for both sides to fight the war, each using weapons acquired from us and techniques learned from us. Although the diplomatic role of the United States has been exemplary since the war began, this does not conceal the mistaken character of the U.S. military role prior to the outbreak of the fighting.

In the Defense Department presentation of the military assistance bill currently pending before Congress, military aid to both El Salvador, and Honduras is justified in identical terms:

> The military assistance program for El Salvador (Honduras) seeks to promote the increased involvement of the Armed Forces in civic action activities, while encouraging the development and maintenance only of those military forces and equipment essential to the legitimate needs of the country. U.S. assistance encourages regional cooperation of El Salvadoran [Honduran] security forces with those of other Central American nations, especially through the Central American Defense Council.

I doubt that any of us would describe the border war between Honduras and El Salvador as "essential to the legitimate needs" of either country. Nor, do I suppose, would anyone suggest that the conflict represented laudable "civic action" or an acceptable form of "regional cooperation."

All of this, Mr. President, is just another example of how our military assistance program keeps involving us unnecessarily in troubles abroad. It is used against us by increasing numbers of Latin Americans who see it as a prop for armies that stand guard over the status quo, while diverting themselves occasionally with Gilbert-and-Sullivanesque border escapades. Within our own Government, the military aid program has acquired a momentum of its own which is quite unrelated to the reasons officially set forth in justification of it.

The real reasons for the program are not "civic action" or Central American "regional cooperation." These are excuses. The real reasons are bureaucratic inertia, the desire of the Pentagon to have an outlet for its surplus or obsolescent armament, and the fact that the program provides a good many cushy assignments for officers who regard these Latin American berths as plush duty.

I believe it is time to stop our military grant-in-aid programs throughout Latin America. It is time to bring our military missions home. I intend to offer amendments to this end when the Foreign Relations Committee marks up the foreign aid bill.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, is there further morning business?

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent that I may proceed for 5 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXTENSION OF THE SURTAX

Mr. YOUNG of Ohio. Mr. President, I noted a headline in the Washington Post of yesterday regarding the expiration of the 10-percent surtax.

The article states that the White House hopes to extend the income tax surtax another year, but that this alleged keystone of the war on inflation has encountered fresh frustrations.

One of the frustrations mentioned was that the surprisingly large Federal surplus, $3.1 billion, in the fiscal year just ended, against estimates of only $900 million 2 months ago, was seen as taking some of the edge off administration arguments for the surtax.

Mr. President, when the 10-percent surtax was proposed by President Johnson as a step against inflation, I spoke in the Senate against the imposition of that tax on a tax. More than a year ago, when that proposal came to a vote, I voted against the surtax. I considered it an atrocious tax to impose on top of the tax burden already imposed upon Americans.

What happened after the 10-percent surtax that was to end inflation became the law of the land?

In the year since the 10-percent surtax became law, we have had greater and more uncontrolled inflation in our country than ever before.

Taxes of State and local governments are already too high and too oppressive. On top of that, the Federal income taxes paid by average American families with incomes ranging from $3,300 a year to $14,000 and $15,000 a year are

already very burdensome. To me it seemed then, and it seems now, that to impose an additional surtax, a tax on top of a tax, against already heavily burdened American individuals and corporations was just too much. It violates every sound principle of just taxation, one of which is that taxes should be levied according to ability to pay.

Mr. President, I assert that on fiscal matters I am a conservative.

I assert that the urgent need at this time and over the years that I have been a Member of the Senate is and has been to cut unnecessary Government spending, to put an end to duplication and waste in Federal spending and to eliminate the fantastically expensive boondoggles which have afflicted us. As an example, I cite the useless civil defense program which has cost our taxpayers about $2 billion. No citizen is better protected because of it. As the Presiding Officer knows, despite the fact that there is violence in the streets in my home city of Cleveland, some seven policemen are assigned entirely to civil defense work. They are sitting around and waiting for the bomb to drop. They are going to schoolhouses and lecturing on civil defense matters. This is just one example of the many expensive boondoggles which waste billions of dollars of taxpayers' money.

Mr. President, it is essential that Congress should enact during this session substantial income tax reform legislation. We should try to equalize our tax system. We should not even consider continuing to impose the obnoxious 10-percent surtax unless we at the same time close tax loopholes and institute genuine tax reforms.

I give some good reasons for that. Due to tax loopholes such as the depletion allowance and the creation of tax-exempt foundations by the ultrarich, it is possible for them to evade taxes. These are just two of the notorious loopholes that we must eliminate.

In 1967, it is astonishing to narrate, 21 men and women in the United States with incomes exceeding $1 million paid no income tax whatsoever. Thirty-five men and women with incomes exceeding $500,000 and 150 individuals with income exceeding $200,000 paid no income tax whatever at a time when the small corporations in every State of the Union paid heavy taxes on their net profits and at a time when families with incomes of from $3,300 a year to $15,000 a year bore a very heavy income tax burden.

We must ease the tax burden now imposed on low- and moderate-income families.

Mr. President, President Nixon's proposal to continue the 10-percent surtax should not be considered unless it is made part of a wide-ranging tax proposal to effectively close tax loopholes.

The personal income tax exemption must also be increased from the present $600, which at the time it was created really amounted to something. Because of the inflation since that time, the present exemption is almost meaningless. It should be increased from $600 to $1,000 a year.

Private tax-exempt foundations should be subjected to some small income tax on net investments. This would bring in additional billions of dollars. We must have broad ranging tax reform all along the line so that the ultrawealthy of this country cannot, by means of buying turnpike and municipal bonds and other securities which are entirely tax exempt, evade paying their just share of the taxes.

Mr. President, it seems to me that we must not extend this atrocious 10-percent tax on a tax unless it is accompanied by wide-ranging and real tax reform.

THE ABM SYSTEM

Mr. MURPHY. Mr. President, in the past several days, I have asked to have printed in the RECORD editorials published in California newspapers which have expressed outspoken support for President's Nixon's Safeguard anti-ballistic-missile system. Now the Santa Monica Evening Outlook and the Sacramento Union have joined such distinguished newspapers as the Los Angeles Times and San Diego Union in endorsing this proposal.

The Outlook concludes its editorial, entitled "Fear Fatal to U.S. Survival" by saying that "it is essential for the survival of any nation that its people show they have the will and the means to fight back—especially the will."

The Sacramento Union asks:

What happens in the world when the power and authority of the United States is dissipated, or when we abandon our commitments?

I ask unanimous consent that these editorials, from the July 19 Evening Outlook and July 14 Sacramento Union, be printed at this point in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

FEAR FATAL TO U.S. SURVIVAL

Among all the arguments for and against an ABM system of nuclear defense, one seems to us unanswerable and beyond debate. It is the fear-of-nuclear-war psychosis which will gain an apparent victory if the ABM proposal is voted down.

This fear psychosis was well described in a recent letter to the editor by Veronica Andrews of Santa Monica, who wrote: "Most people . . . equate nuclear attack with death and have no faith in retaliation. Nuclear war means the end. The remote possibility of survival holds no attraction for them in view of the desolate after-effects of nuclear war.

"War on any basis is undesirable. Nuclear war is unthinkable. As a means of resolving human conflict war is old-fashioned and remains the mode for lack of a better way. We shall not find that way by preparing to repulse nuclear attack. No matter how realistic nuclear war may seem to the Pentagon . . . it is all 'Alice in Horrorland' to the rest of us."

We would point out that if this nation is to be ruled by such fearful thinking, we shall be ready victims of the first threat of nuclear blackmail by our enemies.

Nuclear war is not "unthinkable" to the leaders of Soviet Russia and Red China. In the Cuban missile crisis of October 1962, the Russians promised to withdraw their offensive missiles from Cuba because they feared our nuclear power which then was greater than theirs. Since then they have given top priority to increasing their nuclear armament and have constructed an advanced missile defense system to protect Moscow and other vital centers.

Defense Secretary Melvin Laird, who is not an alarmist, has warned that at the present rates of arms spending by both countries, Russia in a few years will possess a decided margin of nuclear superiority over us.

It is equally clear that nuclear war is not unthinkable to the leaders of Red China. They have achieved a nuclear capability in less time than was thought possible, and Mao has indoctrinated his followers with the belief that war must be the final means of Communist world victory, and that China could win a nuclear war, because she could afford much greater human losses than any other nation.

We may discount these Chinese boasts and wishfully believe that the Kremlin wants nuclear war no more than we do. But the grave fact is that the Russian leadership has not ruled out, as we have done, the possibility of an overwhelming, surprise nuclear attack paralyzing an enemy nation and forcing it to surrender within 24 hours.

If the Kremlin sees that American defeatism has prevented us from creating even a modest and partial defense system against enemy attack, we think it more than possible that we shall be subjected sooner or later to nuclear blackmail.

As recently as last August the Kremlin, after much dissembling, used force to crush Czechoslovakia—and followed this up with new threats against West Germany. If the Kremlin thought the American people would surrender to a mere threat of nuclear war, it would be strongly tempted to test this belief in Europe, the Near East or the Caribbean.

Our best hope of averting a nuclear confrontation lies in persuading the Russians that we are psychologically prepared to meet it—that we would not surrender but would instantly use all our means of nuclear retaliation.

For this reason we think an affirmative vote on the ABM system is very important to the future security of the United States. Granted that this partial defense system will not provide us with security in the event of a nuclear attack, it will do much to convince the Russians that we would not be bluffed into surrender by any threats they could make.

It is essential for the survival of any nation that its people show they have the will and the means to fight back—especially the will.

SURRENDER WON'T BUY PEACE FOR THE UNITED STATES

The debate in the United States Senate on the anti-ballistic missile issue is more than an argument over its practicality or even its necessity.

Winston Churchill once remarked that he had not become the queen's first minister only to preside over the liquidation of the British Empire.

He meant, we believe, that he would not willingly allow England to surrender its role in the world. But a Socialist Labor Party later took over. The Socialists hurried to disarm Britain's soldiers and retire her fleets and pull back from her advance positions on the rims of Western civilization.

As a result, England's days of greatness seem to be behind her. She survives in an uncertain world largely because of the power of the United States.

Now are the echoes of England's retreat sounding through the chamber of the United States Senate?

Senators rise to declaim that their country can no longer afford the luxury of an

optimum defense, that we do not have the ability nor the stamina to fulfill the international obligations that circumstances has brought us, and that we will have to place our faith more in the good will of our enemies than in guns.

Perhaps it is time for people to ask themselves whether our energy and our purpose have run their course. We cannot believe that they have.

But we have almost half of 100 senators who are opposed, in varying intensities, to installing an additional system of defense against the growing power of Communist missiles.

No one can guarantee that an ABM system will be as effective as the great majority of our scientists expect. But that is not the issue—the issue is whether we are going to make the effort to maintain the United States as a superior power.

England chose not to do so.

The liberal-left contends that reduction of our military strength will have the effect of making war more remote, and thus transform man into a necessarily more peaceful being.

But all we have to do is look around our own cities. Lift the restraints of law and order and you have rioting in the streets and rebellion on the campuses.

What happens in the world when the power and authority of the United States is dissipated, or when we abandon our commitments?

Winston Churchill was a man ahead of his time. When Neville Chamberlain, as prime minister of England, attempted to buy peace with appeasement instead of strength, Churchill said of him that he had a choice between war and dishonor, and that he chose dishonor and got war.

Can the United States buy peace with surrender? All history tells us differently.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, is there further morning business?

The PRESIDING OFFICER (Mr. ALLEN in the chair). Is there further morning business?

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. GOLDWATER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GOLDWATER. Mr. President, I ask unanimous consent that I may proceed for 8 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ABM DEBATE—PARITY OR SUPERIORITY

Mr. GOLDWATER. Mr. President, it is my desire today to direct my remarks to the portions of the funding bill dealing with a Safeguard ABM system and the arguments which have been raised by its opponents.

It seems to me that the opposition to President Nixon's recommendation for a Safeguard ABM system to protect this Nation's deterrent capabilities are as follows:

First. That the deployment of a Safeguard ABM system would be ineffective against a possible enemy attack and consequently would be a complete waste of taxpayers' money which could better go for badly needed domestic projects.

Second. That the approval of the Safeguard system would set off a new round in the nuclear arms race with the Soviet Union and, thereby, greatly endanger the overall peace of the world.

Third. That the development of a Safeguard system would endanger the chances for the successful negotiations of an arms limitations treaty with the Soviet Union.

Mr. President, I intend to deal with each of these arguments and show that they are ill-conceived and in some instances mutually self-defeating.

To begin with, Mr. President, I believe the arguments for and against Safeguard as a feasible and workable system for the defense of our nuclear deterrent capabilities are equally persuasive. However, the question arises as to whether those who believe that we could not develop an adequate system can be given credibility inasmuch as these same arguments were raised by some of the same people in connection with America's development of the H bomb. We were told at the time the H bomb was first proposed to President Truman that the bomb would cost too much and probably would not work. But we went ahead anyway and both arguments proved to be wrong.

At the same time, let me state as strongly as I possibly can that the possibility of failure has never in our history stopped Americans from going ahead with projects that they felt to be desirable and essential. In this instance the project is one which the President of the United States, our Commander in Chief, tells us is essential to the defense of 200 million Americans as well as to our strategic interests as a nation and as a leader of the free world. I, for one, have enough faith is our Yankee "know-how," if you will, and in the ability of our scientific and industrial communities to believe that we can develop a system which will do the job.

Now, Mr. President, that brings me to point number two in the list of arguments against development of Safeguard, Strangely enough, the same people who tell us that the President's ABM system will be ineffective and will not work, are the same people who tell us that the mere approval of such a system by the Senate will so frighten the Soviet Union that it will immediately escalate the arms race.

In this connection, let me point out that we are not, in this instance, racing the Soviet Union; we are trying to catch up with the Soviet Union in a move they made on the defensive side of the nuclear power balance 5 years ago when they began the development, production and deployment of the massive, three-stage Galosh ABM system around the major Russian cities.

If our attempt to erect a very rudimentary type of missile defense to protect our retaliatory power is interpreted by the Soviets as an unfriendly act or as an act requiring an acceleration of the arms race, then we are left with only one conclusion: That the Soviet Union will never be satisfied with mere nuclear parity; but will always insist on nuclear superiority.

Although the establishment of a nuclear parity was obviously a goal of the McNamara regime in the Defense Establishment, it stands to reason that no parity of any kind exists in the area of missile defense. If the critics of ABM are seriously interested in parity, why are not they arguing for the development of Amercan systems whch can match those already in existence by the Soviet Union?

One of the great fallacies in the whole argument which says that the establishment of nuclear parity between the super powers will become a stabilizing influence which can reduce world tensions is that it overlooks the fact that the Soviets are not interested in parity, nor stability, nor in the reduction of world tensions. The Soviet Union, rather is interested in nuclear superiority, a nonbalance of power in its own favor and world tensions of its own manufacture in places of its own choosing.

There can be no doubt that this is the Soviet goal. They do not even attempt to hide it. They have told us time and time again and they have shown us time and time again that their objective is world domination, not world stability.

My esteemed colleague from Washington, Senator JACKSON, has presented us with a brilliant and sobering picture of our Soviet adversary. He has made it abundantly clear that we can never reach sound judgments on questions of national defense unless we understand what our Soviet adversary is up to. And he has shown us that Russia is today ruled by men who are the first generation of rulers who are the products of a Stalin system of repression and terror. He warns that the repressive measures employed to intimidate, frighten, and stifle expressions of dissent within the Soviet-bloc nations approach those used in the 1930's and 1940's.

Mr. President, our failure thus far to match the Russians in the matter of an ABM system, has done nothing to reduce the Soviet thrust for newer and heavier armaments. Five years have passed since the Russians first began their ABM system. If they were to be convinced that our failure to go ahead with one of our own was an earnest intention to stabilize the arms race, why have they moved ahead in every other area of military armament. I suggest that the Russians could care less whether we develop a defensive system so far as their own move for arms superiority is successful.

Our failure to keep an up-to-date navy and to develop a fleet of nuclear powered ships certainly has not led them to overlook this element of the arms race. Instead, Russia today is building the most powerful, far-cruising navy the world has ever seen. While we sit on our hands, they are developing fleets which are now challenging us in the Mediterranean, the Baltic, the Atlantic, and the Pacific. Before long, according to expert opinion, there will not be one waterway left in the world where American strength is not only challenged but overwhelmed.

In other words, Mr. President, some of the ABM opponents seem to be trying to sell this Nation on a lopsided program of

disarmament in the naive belief that the Soviets will follow suit.

The argument that approval of the Safeguard system would endanger the chances for successful negotiations with the Soviet Union on arms limitations is ridiculous on its face. Who among us would believe that an honorable, lasting agreement could be reached with a superpower which builds a powerful missile defense system around its major cities and then objects to our building a skeleton system around our deterrent capabilities.

If the Russians are this touchy, Mr. President, you can bet the negotiations would be foredoomed at the start.

But let us, for the sake of argument, assume that the Soviets would enter into an honorable attempt to reach an agreement which would make it unnecessary for the United States to go ahead with a missile defense. It would require, of course, a promise on the part of the Russians to dismantle their own version of the ABM so it would be unnecessary for us to build one.

And I think we can certainly count on Russia's long, historical preoccupation with the whole idea of defending the homeland to make such a concession on their part entirely unlikely.

In this connection, of course, we have to remember that the Russians stand in fear of Communist China as well as the United States. It is unlikely that they will dismantle their ABM system merely because we do not have one—unless some assurance could be attained from China. This, too, is extremely unlikely.

So I submit, Mr. President, I can find no validity in any one or in any part of the major arguments advanced by the opponents of the ABM system.

I reject completely the idea that we would be unable to build a workable system.

I reject entirely the thesis that if we attempt to catch up with the Russians in the area of nuclear defense we will, in some strange way, precipitate a new dimension in the international arms race. The Soviets have been off and running for years, and its about time we think about catching up—especially in the field of nuclear defense.

And I firmly believe that if our attempts to erect a skeleton ABM system will destroy the possibility of negotiations with the Soviets, the negotiations were not worth thinking about in the first place.

In conclusion, Mr. President, I think that we are smack up against a real problem affecting the safety of the American people. I do not think we can afford the luxury of any wishful thinking or any attempt to invest our Soviet adversaries with any particular noble intentions. We have no sound, lashing agreement looking toward a reduction of arms and world peace. But we do have a possible adversary who is moving ahead full tilt in an effort to build the most powerful military system ever devised. We can only ignore this reality at our extreme peril.

I, for one, do not want to be part of any Senate decision which will prevent our Commander in Chief from taking every step he believes is necessary to protect and defend our people, our Nation and our form of government.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following letters, which were referred as indicated:

REPORT OF THE DIRECTOR OF SELECTIVE SERVICE

A letter from the Director, Selective Service System, transmitting, pursuant to law, a report on the operations of the selective service during the period from July 1, 1968, to December 31, 1968 (with an accompanying report); to the Committee on Armed Services.

REPORTS OF COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on a survey of progress in implementing the planning-programing-budgeting system in executive agencies, dated July 29, 1969 (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the need for improvement in the receipt and storage of militray supplies and equipment, Department of Defense, dated July 30, 1969 (with an accompanying report); to the Committee on Government Operations.

DISPOSITION OF EXECUTIVE PAPERS

A letter from the Archivist of the United States, transmitting, pursuant to law, a list of papers and documents on the files of several departments and agencies of the Government which are not needed in the conduct of business and have no permanent value or historical interest and requesting action looking to their disposition (with accompanying papers); to the Committee on the Disposition of Papers in the Executive Departments.

The VICE PRESIDENT appointed Mr. MCGEE and Mr. FONG members of the committee on the art of the Senate.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

A memorial of the Legislature of the State of Florida; to the Committee on Interior and Insular Affairs:

"HOUSE MEMORIAL 2219

"A memorial to the Congress of the United States requesting that the land mass named Cape Kennedy be redesignated as Cape Canaveral, its historic name

"Whereas, the name 'Cape Canaveral,' as applied to the land mass and not the government facility, has had historic association for the people of Florida and the United States for several hundred years, and

"Whereas, the people of Florida applaud the renaming of the United States Missile Test Center in memory of President John F. Kennedy who was a pioneer in the American space effort, and

"Whereas, it is appropriate that the Cape itself be known by its historic and familiar name of Cape Canaveral: Now, therefore, be it

"Resolved by the Legislature of the State of Florida, That the Congress of the United States is hereby requested to provide that Cape Kennedy, Florida, be again designated as Cape Canaveral, the historic name of the Cape; be it further

"Resolved, That copies of this memorial be dispatched to the President of the United States, to the President of the United States Senate, to the Speaker of the United States House of Representatives, and to each member of the Florida delegation to the Congress of the United States.

"Filed in Office Secretary of State July 3, 1969.

"TOM ADAMS,
"Secretary of State."

Resolutions adopted by the General Federation of Women's Clubs, Washington, D.C., supporting the Government in its effort to prevent Communist aggression, and urging its member clubs to continue their support of Radio Free Europe; to the Committee on Foreign Relations.

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. NELSON:

S. 2729. A bill to amend the Federal Food, Drug, and Cosmetic Act to provide for the establishment of a national drug testing and evaluation center, and for other purposes; to the Committee on Labor and Public Welfare.

(The remarks of Mr. NELSON when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. BURDICK:

S. 2730. A bill for the relief of Winnie C. Saunders; to the Committee on the Judiciary.

By Mr. MAGNUSON (by request):

S. 2731. A bill to provide for the protection, alteration, reconstruction, relocation, or replacement of highway and railroad bridges, trestles and other structures, over the Columbia River, the Snake River, or their navigable tributaries; to the Committee on Public Works.

(The remarks of Mr. MAGNUSON when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. RIBICOFF:

S. 2732. A bill for the relief of Carmen Soto Velasquez; and

S. 2733. A bill for the relief of Edna May Pitkin; to the Committee on the Judiciary.

By Mr. RIBICOFF (for himself, Mr. DODD, Mr. JAVITS, and Mr. GOODELL):

S. 2734. A bill granting the consent of Congress to the Connecticut-New York railroad passenger transportation compact; to the Committee on the Judiciary.

(The remarks of Mr. RIBICOFF when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. MCGEE (for himself and Mr. HANSEN):

S. 2735. A bill to provide for the conveyance of certain public lands in Wyoming to the occupants of the land; to the Committee on Interior and Insular Affairs.

By Mr. STEVENS:

S. 2736. A bill to amend the Internal Revenue Code of 1954 to permit certain employees to establish qualified pension plans for themselves in the same manner as if they were self-employed; to the Committee on Finance.

(The remarks of Mr. STEVENS when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. STEVENS (for himself and Mr. GRAVEL):

S. 2737. A bill to authorize an increase in the average cost of dwelling units in certain federally assisted housing in Alaska; to the Committee on Banking and Currency.

S. 2738. A bill to amend the Interstate Commerce Act and to extend regulation under the Interstate Commerce Act to carriers not previously regulated under this Act; to the Committee on Commerce.

(The remarks of Mr. STEVENS when he introduced the bills appear later in the RECORD under the appropriate heading.)

S. 2729—INTRODUCTION OF A BILL ESTABLISHING A NATIONAL DRUG TESTING CENTER

Mr. NELSON. Mr. President, I am today introducing a bill to amend the Federal Food, Drug, and Cosmetic Act to provide for the establishment of a National Drug Testing and Evaluation Center which shall be operated and maintained as a part of the Food and Drug Administration subject to the supervision and control of the Secretary of Health, Education, and Welfare. Significant provisions of the bill are as follows:

First. The Secretary of the Department of Health, Education, and Welfare shall be responsible for conducting all tests for investigations on new drugs submitted to him for approval in order to determine whether such new drugs should be approved for commercial distribution, and shall be responsible for conducting tests or investigations on drugs which have been approved to determine whether or not approval of such drugs should be withdrawn.

Second. Although the center will do some testing itself, the Secretary will be authorized to contract out such studies to qualified individuals, organizations or institutions and it shall be his responsibility to insure that the testing or investigation of any drug is conducted by experts qualified by scientific training and experience to investigate the safety and effectiveness of drugs.

Third. The sponsor of any drug submitted to the Secretary for testing and investigation shall, upon request, be provided with a report every 60 days on the results of the testing or investigation of such drug.

Fourth. The sponsor of any new drug submitted to the Secretary for testing or investigation shall be liable for the expenses incurred, including a proportionate share of the cost of staffing, maintaining and equipping the Center.

Fifth. A fund is established which shall be available to the Secretary for the purpose of establishing the National Drug Testing and Evaluation Center, for the purpose of furnishing initial working capital, and for other specified purposes.

Sixth. Nothing in the bill prohibits the sponsor of any drug from conducting tests or investigations on such drug in accordance with other provisions of the Food and Drug Act.

Seventh. Procedural safeguards are provided to protect the legitimate interests of industry as well as the public.

Mr. President, I ask unanimous consent that the full text of the bill be printed at this point in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2729) to amend the Federal Food, Drug, and Cosmetic Act to provide for the establishment of a National Drug Testing and Evaluation Center, introduced by Mr. NELSON, was received, read twice by its title, referred to the Committee on Labor and Public Welfare, and ordered to be printed in the RECORD, as follows:

S. 2729

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "National Drug Testing and Evaluation Act of 1969".

SEC. 2. The testing of drugs by manufacturers prior to the approval of such drugs for commercial distribution has resulted in lengthy delays because of poor quality studies used in conducting the necessary tests on such drugs. Abbreviated studies, ineptly designed protocols, and deficiencies in clinical investigations are some of the reasons which prevent new drugs from being approved for general use by the Department of Health, Education, and Welfare. Many of these new drugs may be extremely useful and even lifesaving compounds which should be made available to the public as quickly as possible consistent with proper testing and evaluation. Procedures under present law require that any drug manufacturer which wishes to market a new drug must sponsor studies sufficient to establish that such drug is safe and efficacious for its intended uses. Advance approval by the Secretary of Health, Education, and Welfare of the nature and design of these studies is not required, with the result that mistakes and oversights frequently occur necessitating further testing and additional costs. Much of the testing by drug manufacturers under present procedures involve similar or identical compounds and consequently is often duplicative and wasteful. In addition, deliberate falsification of test results on new drugs has occurred in this vital area of health protection. The Congress, therefore, finds and declares (1) that the Federal Government should assume responsibility for the necessary testing of drugs and determine whether such drugs meet the requirements for approval for commercial distribution, and (2) that drug manufacturers, which will be relieved of the burden and expense of such testing, should bear the expense incurred by the Secretary of Health, Education, and Welfare in conducting such tests, including the expense of establishing and maintaining a National Drug Testing and Evaluation Center where most of such testing would be conducted by the Secretary of Health, Education, and Welfare.

SEC. 3. Chapter V of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 351–360b) is amended by adding at the end thereof a new section as follows:

"TESTING OF DRUGS; ESTABLISHMENT OF NATIONAL DRUG TESTING AND EVALUATION CENTER

"SEC. 513. (a) The Secretary shall be responsible for conducting all tests or investigations on new drugs submitted to him for approval under sections 505 and 512 of this Act for the purpose of determining whether or not such new drugs should be approved for commercial distribution, and shall be responsible for conducting tests or investigations on drugs which have been approved under such sections in order to determine whether or not approval of such drug should be withdrawn pursuant to section 505(e) or 512(e), as the case may be.

"(b) Whenever the Secretary receives an application from any person for approval of a new drug pursuant to section 505 or 512 of this Act, he shall, as soon as practicable provide for the necessary testing or investigation of such drug by the Center established pursuant to subsection (c) or by any qualified individual, organization, or institution which the Secretary may engage to conduct such testing or investigation. It shall be the responsibility of the Secretary to insure that the testing or investigation of any drug is conducted by experts qualified by scientific training and experience to investigate the safety and effectiveness of drugs.

"(c) The Secretary is hereby authorized to establish, staff, equip, and maintain a National Drug Testing and Evaluation Center (hereinafter referred to as the 'Center') for the purpose of testing and investigating drugs for which approval is required pursuant to sections 505 and 512 of this Act. The Center shall be operated and maintained as a part of the Food and Drug Administration, subject to the supervision and control of the Secretary.

"(d) In any case in which the Secretary determines that a period of more than one year is necessary to develop the necessary data to support or deny approval of any drug, for which approval has been requested under section 505 or 512, he shall notify the applicant to that effect and indicate the amount of additional time needed for such purpose. If the applicant objects to the extension of time proposed by the Secretary he may file an objection thereto with the Secretary within thirty days after the date of notification to him by the Secretary, and the question of whether an extension of time should be granted and the period of such extension shall be submitted to a Drug Testing Review Panel provided for under subsection (g) of this section.

"(e) The sponsor of any drug submitted to the Secretary for testing and investigation shall, upon request, be provided with a report every 60 days on the results of the testing or investigation of such drug. Such report shall disclose the pertinent facts relating to the testing or investigation of the drug, including the procedures being used in such testing or investigating. If the sponsor objects to the manner, scope, or procedures used by the Secretary in testing or investigating the drug, he may notify the Secretary of his objections and request that the matter be submitted to a Drug Testing Review Panel provided for under subsection (g) of this section. The review panel shall resolve any such matter raised by the sponsor.

"(f) Whenever a drug has been submitted to the Secretary by a sponsor for approval pursuant to section 505 or 512, the sponsor shall make available such amounts of the drug as the Secretary determines is necessary for adequate testing and investigation; but in any case in which the sponsor of the drug believes that the quantity of the drug requested by the Secretary is excessive, the sponsor may request that the question be decided by a Drug Testing Review Panel appointed under subsection (g) of this Act. Notwithstanding any other provision of this Act, the Secretary is authorized, pursuant to such rules and regulations as he may prescribe, to permit the shipment of any drug for testing or investigation under this section.

"(g) (1) Whenever the sponsor of a drug, which is being tested or investigated by the Secretary under this section, requests that a matter to which the sponsor objects under subsection (d), (e), or (f) of this section be submitted to a Drug Testing Review Panel, the Secretary shall provide for the prompt review of such matter by such a panel.

"(2) A Drug Testing Review Panel shall be composed of three members, one to be selected by the Secretary, one by the sponsor, and the third to be selected by the first two. In the event the member selected by the Secretary and the member selected by the sponsor are unable to agree on a third member within fifteen days after their selection, the President shall select the third member of the panel.

"(3) Any matter submitted to a panel appointed under this subsection shall be decided by the panel within thirty days after such matter was submitted. The panel shall base its decision on the evidence presented by both parties. A decision by the panel shall be made on the record in accordance with procedures of due process prescribed under chapter 5 of title 5, United States Code. A decision of the panel in any controversy submitted to it pursuant to subsection (d), (e), or (f) of this section shall be final and the Secretary and the sponsor shall be bound by such decision.

"(h) The testing or evaluation of any drug shall be terminated as promptly as

practicable by the Secretary upon receipt by him of a written request from the sponsor of such drug to discontinue such testing or investigation; and the sponsor shall cease to be liable for the payment of any charges for any testing or investigation of such drug conducted after the effective date of the termination request. The Secretary shall prescribe by regulations the procedure for terminating the testing or investigation of any drug and the effective date for any such termination; but in no event shall the sponsor of a drug being tested or investigated under this section be liable for the costs of any tests or investigation conducted more than ten days after a request to terminate the testing or investigation of such drug has been received by the Secretary.

"(i)(1) The sponsor of any new drug submitted to the Secretary for testing or investigation under this section shall be liable for the expenses incurred in carrying out such testing or investigation, including a proportionate share of the cost of staffing, maintaining, and equipping the Center. The Secretary shall prescribe by regulation the manner in which charges shall be made for the testing or investigation of any drug.

"(2) If any amount of the charges for testing or investigating a drug under this section is unpaid after the due date, as prescribed by regulations, interest shall accrue thereon at the rate of 6 per centum per annum. Past due charges and interest thereon shall be recoverable by civil action brought in the name of the United States in the appropriate district court of the United States.

"(j)(1) There is hereby created a National Drug Testing Evaluation Center Fund (hereinafter referred to as the 'Fund') which shall be available to the Secretary without fiscal-year limitation as a separate fund for the purpose of establishing a National Drug Testing Evaluation Center for the testing, studying, and investigation of drugs pursuant to this section and for the payment of the testing and investigation of drugs carried out by qualified individuals, organizations, and institutions engaged by the Secretary for such purpose.

"(2) The Fund shall consist of appropriations made pursuant to this subsection and all amounts received by the Secretary under this section as charges and interest.

"(3) All expenses incurred by the Secretary in carrying out this section, including refunds of overpayments for charges prescribed pursuant to this section, shall be paid from the Fund, subject to such limitations, if any, as may be provided in appropriation Acts.

"(4) For the purpose of furnishing initial working capital for the Fund and from time to time, if necessary, supplying additional working capital pending collection of charges under this section, there are authorized to be appropriated to the Fund, without fiscal-year limitation, such sums as may be necessary; and such sums shall, at such time or times as the Secretary determines, be repayable to the Treasury from charges collected under this section. There is also authorized to be appropriated such sums as from time to time may be needed to conduct tests and investigations on drugs which have been approved under section 505 or 512 of this Act.

"(k) In administering the provisions of this section, the Secretary is authorized to utilize the services and facilities of any agency of the Federal Government and of any other agency, institution, organization, or person in accordance with appropriate agreements, and to pay therefor either in advance or by way of reimbursement as may be agreed upon

"(l) A request for termination of the testing or investigation of any drug by the sponsor of such drug prior to one year from the date such drug was submitted to the Secretary for testing shall constitute sufficient basis for the denial of an application for approval under section 505 or 512 of this Act.

"(m) Nothing in this section shall be construed as prohibiting the sponsor of any drug from conducting tests or investigations on such drug in accordance with other provisions of this Act."

Sec. 4. (a) Subsection (b) of section 505 of the Federal Food, Drug, and Cosmetic Act, as amended (21 U.S.C. 355(b)), is amended by striking out clause (1), and by redesignating clauses (2) through (6) as clauses (1) through (5), respectively.

(b) Subsection (c) of such section 505 (21 U.S.C. 355(c)) is amended by striking out "Within one hundred and eighty days", and inserting in lieu thereof the following: "Subject to the provisions of section 513 of this Act, within one year".

(c) The first sentence of subsection (d) of such section (21 U.S.C. 355(d)) is amended to read as follows: "If the Secretary finds, after due notice to the applicant in accordance with subsection (c) and giving him an opportunity for a hearing in accordance with such subsection, that (1) the results of the tests conducted pursuant to section 513 show that such drug is unsafe for use under the conditions prescribed, recommended, or suggested in the proposed labeling, or do not show that such drug is safe for use under such conditions; (2) the methods used in, and the facilities and controls used for, the manufacturers, processing, and packing of such drug and inadequate to preserve its identity, strength, quality, and purity; (3) the information submitted to him by the applicant as part of the application was insufficient to permit the Secretary to accomplish all the tests necessary to determine whether such drug is safe for use under such conditions; (4) evaluated on the basis of tests conducted under section 513 and all information submitted to him by the applicant, there is a lack of substantial evidence that the drug will have the effect it purports or is represented to have under the conditions of use prescribed, recommended, or suggested in the proposed labeling thereof; or (5) based on a fair evaluation of all material facts, such labeling is false or misleading in any particular; he shall issue an order refusing to approve the application.".

(d) The second sentence of subsection (d) of such section is amended by striking out "clauses (1) through (6)" and inserting in lieu thereof "clauses (1) through (5)".

SEC. 5. (a) Subsection (b) of section 512 of the Federal Food, Drug, and Cosmetic Act, as amended (21 U.S.C. 360b (b)), is amended by striking out clause (1), and by redesignating clauses (2) through (8) as clauses (1) through (7), respectively.

(b) Subsection (c) of such section (21 U.S.C. 360b (c)) is amended by striking out "Within one hundred and eighty days" and inserting in lieu thereof the following: "Subject to the provisions of section 513 of this Act, within one year".

(c) Paragraph (1) of subsection (d) of such section (21 U.S.C. 360b (d) (1)) is amended to read as follows:

"(1) If the Secretary finds, after due notice to the applicant in accordance with subsection (c) and giving him an opportunity for a hearing, in accordance with said subsection that—

"(A) the results of the tests conducted pursuant to section 513 show that such drug is unsafe for use under the conditions prescribed, recommended, or suggested in the proposed labeling thereof, or do not show that such drug is safe for use under such conditions;

"(B) the methods used in, and the facilities and controls used for, the manufacture, processing, and packing of such drug are inadequate to preserve its identity, strength, quality, and purity;

"(C) the information submitted to him by the applicant as part of the application was insufficient to permit the Secretary to accomplish all the tests necessary to determine whether such drug is safe for use under such conditions;

"(D) evaluated on the basis of tests conducted under section 513 and all information submitted to him by the applicant, there is a lack of substantial evidence that the drug will have the effect it purports or is represented to have under the conditions of use prescribed, recommended, or suggested in the proposed labeling thereof;

"(E) upon the basis of the tests conducted pursuant to section 513, and upon the basis of information submitted to him as part of the application and any other information before him with respect to the drug, the tolerance limitation proposed, if any, exceeds that reasonably required to accomplish the physical or other technical effect for which the drug is intended;

"(F) based on a fair evaluation of all material facts, such labeling is false or misleading in any particular; or

"(G) such drug induces cancer when ingested by man or animal or, after tests which are appropriate for the evaluation of the safety of such drug, induces cancer in man or animal, except that the foregoing provisions of this subparagraph shall not apply with respect to such drug if the Secretary finds that, under the conditions of use specified in proposed labeling and reasonably certain to be followed in practice (i) such drug will not adversely affect the animals for which it is intended, and (ii) no residue of such drug will be found (by methods of examination prescribed or approved, by the Secretary by regulations which regulations shall not be subject to subsections (c), (d), and (h)), in any edible portion of such animals after slaughter or in any food yielded by or derived from the living animal;

he shall issue an order refusing to approve the application. If, after such notice and opportunity for hearing, the Secretary finds that subparagraphs (A) through (G) do not apply, he shall issue an order approving the application."

(d) Paragraph (3) of subsection (d) of such section is amended by striking out ", including field investigation,".

(e) The first sentence of subsection (e)(1) of such section is amended by striking out "subparagraph (H)" in subparagraph (B), and inserting in lieu thereof "subparagraph (G)".

Sec. 6. This Act shall become effective two years after the date of enactment, but to the extent that facilities and funds are available, the Secretary of Health, Education, and Welfare, shall conduct tests and investigations on new drugs submitted to him for approval under sections 505 and 512 of the Federal Food, Drug, and Cosmetic Act, as amended, prior to the effective date of this Act.

Mr. NELSON. Mr. President, in the Bulletin of the Atomic Scientists for January 1969, there appears an article by Dr. William O'Brien, associate professor of preventive and internal medicine at the University of Virginia, entitled "Drug Testing: Is Time Running Out?" The answer is clearly "yes," as reflected by Dr. O'Brien's article which is confirmed by the testimony of the expert medical authorities who have appeared before the Senate Small Business Committee's Monopoly Subcommittee in its study of the drug industry.

According to Dr. O'Brien:

Over the past 30 years, this country has experienced several major therapeutic disasters. Many patients were needlessly killed or badly injured by indiscriminate use of certain new drugs. It is said that this is a price we must pay for progress. If a good scientist examined the records of these dis-

asters, he would have to conclude that if testing were conducted in a totally impartial, highly scientific manner, all of these catastrophes could have been avoided. But the Pollyannas of the drug industry assure us that new disasters are impossible.

A few Cassandras, however, prophesy even worse calamities. Pharmaceutical companies are producing new and highly toxic compounds at a startling rate and the number of new drugs being introduced for clinical testing is rapidly increasing.

Dr. O'Brien also points out that evaluations of these drugs are not getting any better:

In 1960, McMahon and Daniel, reporting in the Canadian Medical Association Journal, found only five percent of published trials met even the crudest scientific standards. The trials I reviewed in 1967 were not any better.

Although the FDA is charged with the grave responsibility of assuring that the drugs permitted to be marketed are both safe and efficacious, the decisions they make are based upon the evidence submitted to them by the very companies which seek to market the drug. As the law reads at present, the Food and Drug Administration determines the safety and efficacy of a drug solely on the basis of information supplied by the drug company making the application. The pitfalls inherent in this arrangement are many.

The dangers involved in the dependence on drug firms to perform, direct or arrange for the testing of drugs in which they have a financial interest is obvious. Since drug firms are anxious to get new drugs on the market and to increase their sales volume there is an inevitable tendency—no matter how conscientious the firm—to emphasize the positive features and deemphasize the negative. Many of the people they engage to do their testing are equally anxious to secure additional contracts for drug testing. FDA has found that the accuracy and objectivity of some of these drug testers leaves much to be desired.

A physician who turns in unfavorable reports on the drugs he is testing may not have his contract renewed. The simple fact is, that in case after case, some firms have been guilty of misrepresenting, distorting and even withholding information developed in their testing of drugs which might in any way be detrimental to their application to market them. Injury and deaths have resulted from such actions.

In the testing of the drug MER/29, for example, toxicological data was altered by officials of the Richardson-Merrill Co. to prevent the FDA from getting a true picture of the drug's dangers. For this the firm was convicted in a criminal case, with officials getting suspended sentences.

Again, in connection with the thalidomide case now going on in Europe, evidence was developed that even though two witnesses had supplied information raising serious doubts about the use of this drug, their findings were ignored and this resulted in great tragedy for thousands of families with deformed babies.

Still more, the subcommittee's hearings record shows that in the testing of the drug, Dornwall, manufactured by Wallace & Tiernan, the company "knowingly and willfully concealed material information and submitted false and fictitious statements in writing and orally to the FDA." Unfortunately some people died as a result of taking this drug, as noted in a letter dated June 5, 1961, to the then Attorney General of the United States from Dr. Herbert Ley, who was at that time Director of the FDA's Bureau of Medicine. I will quote from this letter: "in which they—the company—knowingly and willfully concealed material facts from the Food and Drug Administration, to wit, medical evidence that Dornwall was the causative agent of a severe and often fatal blood dyscrasia—disorder—in man."

The firm pleaded nolo contendere and was found guilty.

The drug, Flexin, a product of McNeill Laboratories—a subsidiary of Johnson & Johnson—is another example of a "company knowingly and willfully concealing information in making its application to the FDA." Again, some people died of hepatitis which they contracted as a result of taking this drug. In a letter dated April 20, 1964, to the then Attorney General of the United States from Mr. William W. Goodrich, Assistant General Counsel, Food and Drug Division, the following information is contained:

The firm (McNeill Laboratories) had been informed of 50 cases of Flexin-related liver damage including 11 deaths.

All of these situations, Mr. President, are due to withholding of vital information from the U.S. Government by some of the members of the drug industry in their efforts to get new drugs on the market. In many of these cases the firms involved were convicted in criminal cases brought by the Government against them, but because the firms were allowed to plead nolo contendere there was no trial with attendant publicity.

Both the past and present Commissioners of the Food and Drug Administration have expressed their dissatisfaction with the way in which drugs are being tested at present.

In a speech before the Pharmaceutical Manufacturers Association as long ago as 1966, Dr. James L. Goddard, then Commissioner of the Food and Drug Administration said:

I have been shocked at the materials that come in. . . . In addition to the problem of quality, there is the problem of dishonesty in the Investigational New Drug stage. . . . I will admit there are gray areas in the IND situation.

But the conscious withholding of unfavorable animals or clinical data is not a gray-area matter.

The deliberate choice of clinical investigators known to be more concerned about industry friendships than in developing good data is not a gray-area matter.

The planting in journals of articles that begin to commercialize what is still an Investigational New Drug is not a gray-area matter.

These actions run counter to the law and the ethics governing the drug industry.

The present Commissioner of Food and Drug Administration, Dr. Herbert Ley, says very frankly that we have not yet seen the degree of improvement in the quality of clinical data from drug testing which we must have. In a speech before the Educational Conference of the Food and Drug Law Institute last December, Dr. Ley disclosed that out of 406 drug marketing applications received by the FDA in 1967, only 59 were approved.

He said:

More than half suffered from deficiencies in clinical studies and inadequacies in efficacy data and many were so low in quality as to be not approvable.

When Dr. Ley appeared before the committee on May 27 of this year, he further amplified his views by saying:

The major problem in industry submissions to FDA is still the poor quality of both the basic data and the summaries. The most important single step that industry can take to speed up the processing of new drug applications by FDA—and to improve the chance for new drug approval—would be to ensure that the data presented in support of efficacy is true to the statutory requirement of well-controlled studies.

Mr. President, the frequent use of potent drugs to treat disease demands better methods and more safeguards. It is crystal clear that the prevention of dangerous drug reactions begins with the evaluation of the drug. It is equally clear that there is imperative and urgent need for a better system for the testing of drugs prior to their approval for marketing. Steps must be taken to reduce the possibility of bias to a minimum. One way or another, testing of drugs should be done by specialists who have no direct relationship with the manufacturer, who cannot benefit financially from the results, who are not motivated even subconsciously by the desire to get anything but the truth. We must remove the responsibility for testing drugs from the applicant who has a financial interest in the drug, as well as from those who are paid directly by the company to evaluate it. This responsibility must be placed with an evaluating group which has no interest at all in whether or not the drug gets into the market other than the interest of the public.

FDA has made some strides in its efforts to correct the inadequacies of the present system of drug testing, but it has a long way to go.

There has not been sufficient support from organized medicine for correcting these inadequacies and the Government must therefore step in to protect the American people. For this reason I have today introduced this bill to establish an evaluation and testing center for drugs.

Mr. President, I ask unanimous consent that Dr. O'Brien's article as well as an article by Mr. Morton Mintz on this subject entitled "The Immunization of Drug Testers," which appeared in the Washington Post of January 9, 1969, and the previously mentioned article from the Bulletin of the Atomic Scientists be placed in the RECORD at this point.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Post, Jan. 9, 1969]

THE IMMUNIZATION OF DRUG TESTERS

(By Morton Mintz)

The quality of testing of prescription drugs is one of those problems whose complexities elude the grasp of most of us but whose im-

plications are of life and death importance. For if poor testing is allowed to conceal from a physician that a medicine is useless, inferior of even positively harmful, it is not the doctor but the patient (or hundreds, thousands or even millions of patients) who may be exposed to needless exploitation, delay in obtaining effective therapy and even injury or death.

Periodically something happens to make the problem surface. There were, for example, congressional investigations by the late Sen. Estes Kefauver, Rep. L. H. Fountain and former Sen. Hubert H. Humphrey. Some testing was "superb," Humphrey once said. He found other instances of outright fraud. But much more often, he said, "mediocre and substandard testing was . . . conducted on good, bad, or indifferent drugs."

Humphrey's inquiry ended in 1964, when he ran for Vice President. Then, just three years ago, a tired industry-oriented Food and Drug Administration got a new Commissioner with a rock 'em, sock 'em style. A mere 11 weeks after Dr. James L. Goddard was sworn in he told the Pharmaceutical Manufacturers Association that he was "shocked at the quality" of much of the test data PMA members had submitted to the agency. "The hand of the amateur is evident too often for my comfort," he said.

Last July 1, Dr. Herbert L. Ley Jr. succeeded Dr. Goddard. Dr. Ley's style is anything but rock 'em, sock 'em. For five months he made no public speeches at all. But when he did, last Dec. 3, he, too, focused on unsatisfactory testing of drugs.

"I must tell you frankly that we have not seen the degree of improvement in the quality of clinical data from drug investigations that we would like," Dr. Ley told an educational conference sponsored by the FDA and the Food and Drug Law Institute.

He documented his point with a capsule review of the 406 drug-marketing applications received by the agency in the fiscal year ended last June 30, Only 59 were approved—about one-fifth as many as were so low in quality as to be "not approvable." Of the rejected applications, Dr. Ley said, more than half "suffered from deficiencies in clinical studies and inadequacies in efficacy data."

"I intend to give this matter renewed attention . . . and possibly call upon experts outside the agency as well to see if we cannot find means to correct existing shortcomings," he said.

As if to underscore his point, the FDA soon thereafter disclosed that it intends to halt the sale of six antibiotic-containing combination drugs for which investigation showed there was little if any scientific evidence of efficacy—but which nonetheless were widely advertised and, over the years, prescribed for millions of patients.

Two days after Dr. Ley spoke, support came from an unexpected quarter. In the Dec. 5 *Medical Tribune*, spokesmen for two major pharmaceutical houses were reported to have made a joint statement in Geneva, Switzerland, that despite improvement in recent years, "the vast bulk of clinical work with new drugs that is published is of abysmally low quality."

This fact often is held against the drug industry, Drs. H. Bloch of CIBA, Ltd., in Basel and G. E. Paget of Smith Kline & French Laboratories, Ltd., acknowledged at a meeting sponsored by the Council for International Organizations of Medical Sciences in cooperation with the World Health Organization and the United Nations Educational, Scientific and Cultural Organization. But, the two doctors said, "it is as much to industry's disadvantage as to medicine's that this situation exists. This unsatisfactory state of affairs does not come about because industry seeks third-rate investigators to carry out these [drug testing] trials in the hope that they will thereby obtain an unreasonably favorable outcome . . . It arises because of the dearth of investigative facilities and first-class investigators throughout the world." As they saw it, the answer lies in "a complete revolution in the attitude of medical schools and teaching hospitals to the clinical investigation of drugs and the training of investigators."

Their advice is not out of proportion to the seriousness of the problem. But alone it is not enough. The Government might well look upon the training of drug investigators as a public health necessity and pay the bill. Apart from that, as witnesses have told the continuing drug hearings led by Sen. Gaylord Nelson, steps must be taken to eliminate the possibility of bias in testing. As it is, manufacturers commission testing. Those who do it know what company is paying the bill, whether a gift to a favored medical school may somehow be in the balance, whether there will be such forms of ego massage as honorariums for speaking at a conference in a distant city, whether a favorable result will cause a rise on the stock market from which personal advantage may be derived.

One way or another, testing should be done by specialists who do *not* know the identity of the manufacturer, who *cannot* benefit financially from the result, who are *not* motivated even subconsciously by a desire to get anything but the truth. If war is too important to be left to the generals, so is drug testing too important to be left to manufacturers and to investigators who have not been immunized against possible bias.

[From the Bulletin of the Atomic Scientists, January 1969]

DRUG TESTING: IS TIME RUNNING OUT

(By William M. O'Brien)

(NOTE.—Dr. O'Brien, who is associate professor of preventive and internal medicine at the University of Virginia, Charlottesville, discusses the hazard of drug testing in the diseased human being. He contends that the FDA should be strengthened by improving its scientific status and upgrading the quality of its scientists; that drug testing should be taken out of the hands of the pharmaceutical industry, which he criticizes for showing unwarranted optimism about drugs.)

The vast majority of physicians feel that the best way to test drugs is to use the "art of medicine"—every doctor should be allowed to try out a new drug and see how it works, and the doctors' testimonial should be sufficient evidence. After all, shouldn't a drug be tested and judged just as it is used—by the physician in his office?

A second approach considers medicine to be a science and not an art, and demands rigorous experiments in drug testing. Since the course of most diseases is highly variable, a control period is essential. Testing a new drug implies a comparison with a standard established remedy or, if there is no evidence that drugs in any way benefit the disease being studied, a comparison with an inert dummy medication, usually referred to as a placebo. The drug and placebo treatments are randomly assigned to comparable patients and, to avoid any possible bias, the physician evaluating the response and the patient are unaware of which medications are active. The second approach is rarely used. Most clinicians are skeptical of controlled trials, and particularly distrust the final statistical analysis which is required to insure that the investigator has not been misled by chance or deceived by natural fluctuations in disease activity. Drug companies prefer the first approach; uncontrolled trials are easier, and the resulting testimonials are apt to be favorable. A famous physician once remarked: "Drug trials can be divided into two groups; enthusiastic trial with no controls and controlled trials with no enthusiasm."

The uncontrolled trial—the "art" of testing new drugs—is, however, full of logical traps. Caring for disease is depressing, and both physician and patient may become wildly enthusiastic about new remedies. Sir William Osler is reputed to have remarked: "We must use drugs quickly before they lose their power to heal." A new drug is introduced, has its fling, and then is discovered to be of little value or comes to be associated with severe toxic reactions. This pattern has repeated itself over and over again.

FLIPPING THE COIN

Another trap concerns the widely used technique of placebo substitution. Consider a disease with a highly variable course. Let us suppose that a patient has just experienced a severe exacerbation of disease activity. The physician, confronted with a patient who is doing poorly, decides to start a promising new drug. He gradually increases the dose of the drug, and eventually the patient has a remission of the disease process. Now the physician substitutes an inert dummy medication, a placebo, and the patient soon gets worse. He repeats the process several times, and each time obtains a verdict in favor of the drug. But has the favorable effect been due to the drug, or is it due to the cyclical nature of the disease? This is the same fallacy as a coin-flipping game with the rules which require that if it's heads I win; but if it's tails, you don't win, we flip again. Under these circumstances, it is hardly a fair game; if the game goes on for a number of coin tosses, the chances of your winning becomes virtually nil. Placebo substitution is an example of just such a logical fallacy, since the physician can decide to substitute the dummy whenever he wishes. The rules of the game must be determined before the game begins, not during the play.

In a recent congressional hearing on the adequacy of drug testing, when the fallacy in the placebo substitution technique was pointed out, a vice president in charge of research at one of the largest drug companies defended it: "To imply that these clinical investigators purposely chose to institute placebo at the point in the patient's disease when the patient is about to experience an exasperation of his illness, is sheer nonsense, and is a reflection on the scientific integrity of the observer and also on his moral character." Most physicians would agree, and would still prefer the "art" approach, in spite of this and many other fallacies in the use of these uncontrolled techniques.

A final problem in the art of drug testing revolves around payment for the tests. The companies must have favorable reports in order to market new products. If a physician constantly produced scientifically sound but unfavorable reports, would he continue to receive support from the drug industry? My experience would indicate that he would not. If a physician consistently produced favorable testimonials, would he receive generous support? One physician is known to have received considerably more than $32,000 for results of drug tests praising new remedies over a two-year period. The Food and Drug Administration (FDA) later produced evidence that these trials involved gross fraud and the physician was convicted in Federal Court. This is hardly an isolated example. Marketing of the pain killer Norgesic was based on tainted data, and numerous other instances could be cited. One wag suggested a second way to classify tests: "Drug trials can be divided into two groups: fraud and gross fraud."

DRUG PROMOTION

I am a specialist in rheumatic diseases, and through my career I have watched the development of a series of new drugs for the treatment of rheumatoid arthritis. I, and many other rheumatologists, have considerable doubt that any drug is really effective in arresting the course of rheumatoid arthritis, so surely our first concern should be *primum non nocere:* first not to injure the patient. Often it seems, however, that for the long-suffering arthritic the purported cure is worse than the disease.

Early in my career, corticosteroids were being widely acclaimed. Unfortunately, they cause a variety of severe and even fatal side reactions including psychoses, peptic ulcers, osteoporosis, fractures, cataracts, diabetes, and so forth. Another great hope was phenylbutazone, which was moderately effective, but which unfortunately caused peptic ulcers, and even worse caused severe depression of the bone marrow and occasionally resulted in leukemia. Next was chloroquine, which was relatively weak, but seemed almost free of side effects.

Unfortunately, after a few years of therapy, some patients became totally blind. Then came indomethacin, another rather weak drug, which had numerous serious side effects. More recently dimethylsulfoxide (DMSO) was proposed as a panacea. This drug probably has no effect at all, but acts as a classical counter irritant. When rubbed on the skin, it causes redness, scaling, burning, and pain—the skin hurts so badly that the patient forgets his arthritis. Some patients developed ocular changes, and a few died of shock after receiving DMSO; human use of the drug is now prohibited. Today, we are beginning the era of the immuno-suppressives, which can cause total depression of the blood-forming elements in the bone marrow. These are the most dangerous agents ever used in treating rheumatoid arthritis, and we can only wait to see what will result.

THE INDOMETHACIN STORY

Indomethacin is a good example of how a drug is tested and promoted. The drug was developed at the research laboratories of Merck, Sharpe and Dohme, and the basic studies represented careful pharmaceutical research. By 1964, extensive clinical testing of the drug was underway. The only requirement of present U.S. law is that a drug be safe and effective as labeled. Advertising is legally defined as labeling. By June 1965, the FDA felt that the drug met these requirements and that it was relatively safe if used as labeled, so they allowed the drug to be marketed.

Merck immediately embarked on an ambitious advertising campaign. By early 1966, most medical journals contained eight-page color advertisements with headlines stating that indomethacin was "the most promising antirheumatic agent that has been made available for clinical investigation since the introduction of cortisone." Many physicians might misinterpret this statement as meaning the drug could be used in any rheumatic disease. In fact, it has been tested and approved in only four specific diseases. The advertisements also stated in large type that the drug "extends the margin of safety in long-term management of arthritic disorders." Again, this implied that the drug was safer than other drugs and it could be used in any form of arthritis. Unfortunately, it did not specify what indomethacin was safer than.

The advertisements also contained four testimonial statements by eminent practitioners, two of which stated indomethacin was "the drug of choice," implying this drug in comparisons had been found more effective than other drugs when in fact such comparisons had not been made. One physician claimed that he had found the drug "extremely helpful in over 500 patients." Later, FDA officials indicated Merck's own records revealed the physician had never treated anywhere near 500 patients. The claim was also made that the drug did not increase susceptibility to infection. They omitted mentioning that these claims were based on experiments in a few rats with a system involving bacterial endotoxins, evidence which certainly could not be projected to claim that all infections in human beings would behave in a similar fashion. In fact, the drug increases human susceptibility to infection. Further, the advertisements stated periodic blood counts were not necessary, implying that the drug did not depress the bone marrow: the drug is known to cause total fatal marrow depression.

The direct promotion of the drug to physicians seemed even more distorted than the advertising. One regional sales manager instructed detail men under his supervision: "It is obvious that Indocin will work in that whole host of crocks and cruds which every general practitioner . . . sees everyday in his practice." (The drug is too toxic for routine use in minor complaints, and the "crocks and cruds" indicates considerable contempt for the public.) Further, the salesmen were told to play down side effects.

A SEMANTIC PROBLEM

In the summer of 1966, officials of the FDA demanded that Merck drastically alter its advertising. Officials felt that the advertising did not contain sufficient information on toxicity and overstated the usefulness of the drug, particularly in implying that it could be safely used in any form of rheumatic disease or arthritis. Merck complied for a brief period, but in November 1966 the firm began an even more objectionable campaign, resulting in a second crackdown, and a request by the FDA to the Justice Department that the company be criminally prosecuted for the November advertisements. At the Senate hearings on indomethacin, the president of Merck and Company pleaded:

"Language is not a perfect method of communication, and it may well be that words and phrases that we used in the belief that they mean one thing may have been interpreted by some physicians to mean something else. Such are the complexities of semantics."

This company's advertising converted the legally approved labeling of "Indocin itself may cause peptic ulceration . . ." unto "Ulceration of the stomach . . . has been reported." The difference is hardly semantic, since the second statement implies doubt as to causality, while the first does not. Even worse "semantic" difficulties were arising over the use of the drug in children.

In late 1964, the FDA had recommended to Merck that the prescribing directions for the drug state that this drug should not be used in children. No experiences in children had accumulated and children often react differently to drugs than do adults. Unfortunately, in the prescribing directions issued with the drug, this warning was altered to read "not recommended for use in children," rather than an absolute prohibition. In the fine print in the advertising, this was further changed to "Safety in pediatric age groups . . . has not been established," implying that the drug was safe in children, but little experience had accumulated as yet.

This language was, indeed, not a perfect method of communication, and physicians did use the drug in children. By July 15, 1966, the FDA had learned of sudden deaths due to overwhelming infection in several children receiving indomethacin. The officials requested that Merck immediately warn all American physicians by letter against the use of this drug in children. In addition, the FDA required that the labeling include additional warnings, contraindications, and clear indications of adverse reaction and precautions.

By November 1966, the Canadian Food and Drug Directorate became increasingly concerned about deaths in children. Rather than rely on the company to warn physicians, the Directorate sent letters directly to every Canadian physician, stating:

"Several deaths have been reported in children with severe forms of rheumatoid arthritis, dermatomyositis, and rheumatic fever who were receiving indomethacin. Some of these children succumbed to an intercurrent infection, the severity of which may have gone unrecognized during treatment. The exact relationship to indomethacin was difficult to determine in these reports. However we recommend that indomethacin should not be used in children until the results of further studies become available."

A PILL PER ILL

In early 1967, further disquieting news appeared. Previous evidence of the effectiveness of indomethacin had been based almost solely on testimonials by physicians and much of this information had never been fully published in reputable scientific journals. In early 1967, for independent, careful, double-blind trials were published in leading medical journals. In these trials two groups were used, one receiving indomethacin and another receiving some contrast medication (either a standard drug such as aspirin or an inert dummy). Neither the physician nor the patients knew which capsules were active. All four of these independent scientific trials (none of which relied on art or clinical opinion) failed to show that indomethacin had any more potency than simple aspirin. The trials could not substantiate any of the claims made in previous reports, which had indicated that 60 per cent of patients had improved.

The company declared some of these trials were totally invalid and in later testimony urged that drugs be evaluated in an uncontrolled fashion by physicians who were expert in the treatment of rheumatic diseases. While no one could question that many of the company-sponsored physicians were expert clinicians, the question of whether they were performing scientific experiments remains unresolved. The company also implied in later testimony that the controlled trial is something new in medicine. An excellent controlled trial was performed in 1747 on board the British warship *Salsbury* by Dr. James Lind. Twelve seamen with scurvy were divided into six groups of two. He tried different therapeutic regimens on the similar groups and found that only the two sailors who received citrus fruits were cured. The technique of controlled experimentation is hardly anything new in either science or medicine and the issues in drug testing really boil down to art versus science and testimonials of "experts" versus numerical evidence.

Certainly the public desperately hopes that the medical profession will provide a pill for every ill. The public realizes that pharmaceuticals are important and represent a potential cure for any disease. But the public is also coming to realize that they may be killed by drugs, and particularly, that they may receive new and untested drugs without even being informed of the potential dangers. Even worse, the physician himself may be unaware of the potential dangers of the drug. The medical profession responds that every physician should use new drugs and get acquainted with them and that it is only in this way that the public will receive instant benefit from latest advances. Doctors certainly like to try the newest remedies. About one third of American thalidomide babies were born to wives of physicians who had received free samples of the drug.

SPEND $900 MILLION ON ADS

The average physician's utilization of drugs is at best disturbing. In a study of 408 cases of bone marrow depression due to chloramphenicol, of which one half resulted in death, the drug was prescribed for a valid reason in only six per cent of the cases, and was given for common colds in 12 per cent. The drug industry spends about $3,500 per physician on salesmen who personally "detail" the doctor on the latest breakthroughs. A total of $900 million is spent on advertising, about three times the amount spent on medical education. And the advertising is successful. A recent survey of drugs dispensed by the mail order drug service of the American Association of Retired Persons revealed that Peritrate, an expensive, long-acting dilator of the coronary arteries, was the most commonly prescribed drug in old persons. This is indeed a triumph for the hard sell Madison Avenue campaign which modestly

billed the drug as "life sustaining," for several careful scientific trials have shown the drug has no pharmacologic effects of any kind on coronary artery disease. Of the 12 top drugs prescribed for these retired persons, two were expensive substitutes for aspirin, and four were expensive substitutes for phenobarbital. The use by physicians of fancy, dangerous, and expensive substitutes for old standard remedies undoubtedly contributes to the staggering costs of medical care.

In a survey of 1,014 consecutive medical admissions at Yale University's teaching hospital, 10.3 per cent of patients had a drug reaction; in 1.4 per cent the reaction threatened the patient's life; and in 0.4 per cent the patient died as a result of the reaction. A similar survey at Johns Hopkins of 714 medical patients revealed 17.1 per cent had reactions and 1.55 per cent were fatal. Even if only one-tenth of one per cent of all hospital admissions died of drug reactions, the deaths would approach 29,000 per year. Deaths due to drugs would be a major public health problem comparable in importance to infectious disease, cancer of the breast, and nephritis as a cause of mortality. I would be the first to admit we have no idea what the magnitude of the problem is, but I would violently disagree that no problem exists.

Physicians are not legally required to report drug reactions to the FDA. In fact, it is to their advantage not to report reactions since it might involve them in a possible lawsuit on the part of the injured patient. Just what percentage of drug reactions are not actually reported is unknown, but most informed sources feel that it is less than one per cent. Lowinger recently reported in Science magazine that only 10 of 26 reports on drug safety which he had submitted to 19 pharmaceutical manufacturers had ever been forwarded to the FDA. He further stated that 14 companies which failed to submit toxicity reports included some of the largest and most scientifically capable pharmaceutical houses. We do not know the extent to which adverse reactions to drugs are a problem in American society, and probably we will never know since the physician and the drug company both attempt to conceal evidence of toxicity.

NATIONAL TESTING POLICIES

The medical profession has generally felt that the practitioner should be allowed to use any drug in any way he sees fit. Attempts to control his use of drugs or to prevent him from using new compounds would be interpreted as an infringement of his basic right to practice medicine and to prescribe in a way in which he sees fit. The FDA does not actually prevent doctors from experimenting with new drugs, but does request the physician to register with the agency, keep accurate records, and that either he or his sponsor promptly informs the agency of adverse reactions. The American Medical Association, which receives over half its income from drug industry advertising, has not been vigorous, in fact not even feeble, in demanding careful clinical testing, honest advertising, or the control of highly toxic drugs.

The pharmaceutical industry itself has demanded a hands-off attitude and has vigorously fought every attempt at any inquiry into drug testing or drug toxicity and has opposed all legislation aimed at controlling drugs in any way. It has done little to police itself and undoubtedly will do little in the future. The industry has established warm and cordial relationships with, and donates funds to, medical organizations. In return, the pharmaceutical industry has an undue influence over the policies of these organizations.

America's great disease-oriented foundations, that rely on public contributions to study cancer, heart disease, arthritis, and so forth, have not made any major attempt to protect the public against drug reactions. This is perhaps understandable, since most of the fund-raising abilities of these organizations is based on promising the public a cure, usually by drugs, and scary stories about toxic reactions to drugs will hardly help fund raising. Furthermore, these foundations have strong ties with the drug industry.

The nation's medical schools are too poor financially to do much to promote either better trials or good postgraduate education on the use of drugs. The faculty of medical schools probably represents the only major source of physicians with the talent and skill required to scientifically test and evaluate new drugs. Contrary to what most people believe, the drug industry is not pumping money into medical schools to support research on drugs. During 1965–66 the medical schools' total expenditures for sponsored research was $375 million. Of this, they received $3 million from nongovernment sources for unrestricted research. If one assumed half of this came from the drug industry, this would amount to about one half of one percent of the total research budget of the schools. The widely publicized Pharmaceutical Manufacturer's Association Foundation, which devotes itself to the "betterment of public health," had awarded only $55,000 in faculty development awards in clinical pharmacology up to the end of 1967. A few companies—notably Burroughs Welcome—provide excellent faculty fellowships, but these are few and far between—about 20 in the entire country. Considering the numbers of MDs and PhDs which the drug industry consumes annually, they may actually make no net contribution and may even represent a drain on the resources of the schools.

NIH SUPPORT

The only substantial source of support for good testing and research on drugs comes from the National Institutes of Health (NIH). The total expenditures for support of research on drugs are about $50 million, of which $3.5 million is specifically earmarked for drug testing. This amount, less than five percent of the total NIH budget, is hardly enough to support all the work that needs to be done. Because of the difficulties in obtaining funds for clinical pharmacology, most departments have drifted to where the money is: basic molecular biology. The result has been good, but medical pharmacology has become lopsided. Most departments are headed by molecular biologists, and emphasize basic research. Only two or three real departments of clinical pharmacology are to be found in the entire country. The bright young clinical investigator finds support difficult to obtain for testing drugs, and tends to gravitate into other areas where funding is easier to obtain.

Unfortunately, many medical school investigators whose research programs are funded by NIH also receive personal honoraria from the drug industry. While federal funds are paid only to the medical school and can be used as prescribed in strict budgets, the industry funds may be received as personal income outside the framework of medical school salary scales. Some of these investigators seem far more concerned about the welfare of the pharmaceutical industry than they do about the tax-paying public, even though the public actually provides most of their support. The industry has every right to pay their consultants as they see fit, but publicly-supported investigators should not be permitted to be involved in serious conflict of interest.

The FDA is the only real organization solely devoted to protecting the American public. This agency is the stepchild of two great drug catastrophes: the Food, Drug and Cosmetic Act of 1938 was passed as a result of the elixir of sulfanilamide catastrophe in which 108 children died, and the 1962 Harris-Kefauver amendments were enacted because of the thalidomide catastrophe. The powers of this agency are limited by law and the officials are subject to political pressure. If anyone in the medical profession wishes to criticize or belittle the FDA, he can find an immediate audience in almost any medical journal and his efforts will bring him rich rewards from the pharmaceutical industry. Claims are continually being made that the agency is interfering with research and depriving the public of life-saving drugs. The truth, more likely than not, is that the agency has prevented doctors from poisoning patients with some new, expensive drug of questionable merit.

This agency has a long way to go. Under Commissioner James Goddard many improvements came about. Officials gradually began to insist on better quality trials, and a crackdown on false advertising was begun. Although Goddard was overly frank, and the drug industry capitalized by both misquoting him and exploiting his candor, the public owes him a great debt for improving the Administration. There is every expectation that his succesor, Dr. Herbert Ley, will continue to serve the public interest, and see that the FDA becomes even more effective in its mission.

FUTURE THERAPEUTIC CATASTROPHES

Over the past 30 years, this country has experienced several major therapeutic disasters. Many patients were needlessly killed or badly injured by indiscriminate use of cetrain new drugs. It is said that this is a price we must pay for progress. If a good scientist examined the records of these disasters, he would have to conclude that if testing were conducted in a totally impartial, highly scientific manner, all of these catastrophes could have been avoided. But the Pollyannas of the drug industry assure us that new disasters are impossible.

A few Cassandras, however, prophesy even worse calamities. Pharmaceutical companies are producing new and highly toxic compounds at a startling rate and the number of new drugs being introduced for clinical testing is rapidly increasing. What are the possibilities of another major drug disaster? Dr. H. Friedman, in a letter to Science magazine, stated:

"Let us assume that a drug (such as a combination psychic energizer and diuretic) with no known side effects is aggressively promoted and very widely used throughout North America and Europe. Some 16 years after its adoption, the first hints of unexpected side effects begin to appear and several more years are required before they are confirmed. All children born to mothers using this drug during the first three months of pregnancy (effective as it is for morning sickness) are found to be sterile. The use of the drug for 20 years has affected the larger proportion of an entire generation so that populations of countries affected will drop sharply for several decades and require several additional decades to recover if given the opportunity.

"The effects of thalidomide were relatively easy to discover and limit, but how readily can we detect more subtle effects in time to prevent the possibility of a history-changing catastrophe? In contrast to such a situation, the individual tragedies attributed to past and present drugs would seem rather tolerable."

All the elements for vast future catastrophes are present: lots of new, highly toxic drugs, sloppy and dishonest testing, and hard-sell, dishonest advertising campaigns, to which the average doctor is highly susceptible.

WHAT CAN BE DONE?

I think we can expect little stimulus for correcting the inadequacies of our present system from organized medicine. Physicians' organizations and our disease-oriented foundations have been sweethearts and finan-

cial dependents of the drug industry too long to desire any effective change: drug testing must be cleaned up.

Tests are not getting any better. In 1960, McMahon and Daniel, reporting in the Canadian Medical Association Journal, found only five per cent of published trials met even the crudest scientific standards. The trials I reviewed in 1967 were not any better. The doctrine that other parts of medicine are science, but that drug testing is a mystic art which can be performed by only uncontrolled dabblings of so-called experienced clinicians is a sham. Further, it is ethically unacceptable to subject human beings to dangerous drugs unless the experiments are scientifically excellent. The FDA has made some feeble beginnings, but society must demand that only scientific experiments which produce meaningful numerical results be acceptable. Drug testing should be taken completely out of the hands of the pharmaceutical industry. They have repeatedly been guilty of irresponsible optimism about drugs, and their use of paid testimonials is a shallow substitute for good scientific trials.

The distorted Madison Avenue approach used in the promotion and advertising of drugs must be completely eliminated. How can society, which spends only $250 million on medical education, idly stand by and watch the drug industry spend $900 million annually on the post-graduate miseducation of physicians? The public eventually foots not only the bill for the advertising, but also the bill for the new, dangerous, fancy substitutes for the old established remedies. The annual $5 billion drug bill could easily be reduced by $2 billion. Claims that advertising is necessary, and that promotional efforts serve a useful purpose are a joke. The physicist would hardly think of announcing the discovery of a new particle by an aggressive advertising campaign. Why can't physicians get information on new drugs from scientific journals? This is exactly the manner in which they learn about the latest observations on complications of pneumonia, or electrocardiographic changes in heart block.

New legislation is needed. The present laws require only that a drug be safe and effective as labeled. A drug must meet no pressing need, and a more toxic substitute for a standard drug can be marketed. The penalties for violations of the present laws should be increased. Convictions for serious fraud in advertising may carry only a maximum penalty of $1,000 under the present legislation. The penalties are so trivial and prosecution so infrequent, that huge settlements in personal liability suits resulting from drug injuries have a much greater influence on controlling the drug companies' advertising than does federal legislation. A lawsuit to attempt to collect damage for a death is a very poor substitute for preventing the death.

A STRONGER FDA

NIH should surely expand its work in clinical pharmacology, making every effort to upgrade it as a precise science. But simply providing more support is not enough. The public must be assured that investigators who receive public grants are loyal to the public cause, and are not involved in any financial conflicts of interest.

The FDA likewise should be further strengthened. FDA officers receive a constant diet of abuse and rarely if ever congratulation for the vital public service they perform. All of us have a role to perform in refuting frequent unfounded attacks on officials of this agency. At the same time, every scientist should in any way possible prod the FDA to improve its scientific status and the quality of its staff.

Scientists must urge the public not to accept excuses for drug catastrophies or for excessive medical costs due to drugs. The scientist must particularly guard against the jargon games used by the pharmaceutical industry in obscuring any problem. Endless demands for proof positive, suggestions for long-term studies, and frightening announcements that any action will destroy the entire pharmaceutical industry are all part of this game. Dr. I. D. J. Bross, in *Science*, has particularly warned against the fallacies:

"The only way to close the credibility gap is for the spokesmen for science to speak plainly, honestly, and bluntly—without minimizing mistakes, evading responsibility, rewriting history, or otherwise trying to cover up unpleasant facts. Language games in technical jargons have long been a favorite academic sport, but this is too dangerous a game to play when human lives and well-being are at stake."

Finally, the physicist or other scientist who is totally removed from the sphere of medicine and drugs should not ignore this area. Obviously the medical profession itself has been remiss in demanding the highest ethical and quality standards. Nowhere is the American public more exposed to the fruits of good scientific research than when it benefits from drugs which are useful in combatting disease. Likewise, the public is never more conscious of bad scientific research than when it is the victim of a therapeutic catastrophe. We must all face the unpleasant fact that adverse reactions to drugs are major public problems. Surely all scientists should do everything possible in their public roles to see that the quality of scientific research in drug testing is upgraded, and that the public interest is always first.

Mr. NELSON. Mr. President, in his article Mr. Mintz states:

The quality of testing of prescription drugs is one . . . whose implications are of life and death importance. For if poor testing is allowed to conceal from a physician that a medicine is useless, inferior or even positively harmful, it is not the doctor but the patient (or hundreds, thousands, or even millions of patients) who may be exposed to needless exploitation, delay in obtaining effective therapy and even injury or death.

An outstanding story by Walter Rugaber in yesterday's New York Times presents evidence that the drug testing problem in this Nation is even more serious than we on the committee had been led to believe over the long hours of testimony on the subject over the past 2 years.

I ask unanimous consent to have this article placed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRISON DRUG AND PLASMA PROJECTS LEAVE FATAL TRAIL

(By Walter Rugaber)

WASHINGTON, July 28.—The Federal Government has watched without interference while many people sickened and some died in an extended series of drug tests and blood plasma projects.

The profits generated by these activities have gone to an enterprising contractor for the nation's biggest pharmaceutical manufacturers.

The immediate damage has been done in the penitentiary systems of three states. Hundreds of inmates in voluntary programs have been stricken with illness and serious disease. An undetermined number of the victims have died.

In a broader sense, countless millions of American consumers have been involved.

Potentially fatal new compounds have been tested on prisoners with little or no direct medical observation of the results.

Prisoners failed to swallow pills, failed to report serious reactions to those they did swallow, and failed to receive careful laboratory tests.

These studies have generated data that have in turn been used to justify the sale of drugs at prescription counters across the country.

This forbidding trail has been marked out by an Oklahoma-born physician named Austin R. Stough and corporations in which he owns a substantial interest. Despite his importance in two vital fields, he is practically unregulated in either.

As a general practitioner who reports no formal training or education in pharmacology, he is said to have conducted between 25 per cent and 50 per cent of the initial drug tests in the United States.

The 59-year-old doctor, whose companies have been blamed for the repeated use of dangerous methods and inadequate equipment, is estimated to have produced the plasma for about a fourth of an important byproduct that is widely used to protect people exposed to infectious diseases.

These prison-based enterprises have regularly incurred local disfavor. Dr. Stough was evicted from one prison by the Oklahoma authorities in 1964. He was forced out of an Arkansas prison by officials there in 1967. One of his corporations is now under orders to close down prison operations in Alabama.

But Dr. Stough (rhymes with HOW) is said to retain financial interests in some private blood banks in Birmingham and Dallas, and he is known to be seeking connections with prison systems in new areas.

He can do so freely. He has incurred no penalties, and dissatisfaction with his performance in one state has not prevented a repetition of it in another.

The Federal Government and the pharmaceutical industry—the two forces with enough broad power to compel safe practices from state to state—have maintained a general indifference at every turn.

Several agencies within the Department of Health, Education and Welfare have known the details of Dr. Stough's plasma collections and drug tests for years. They have not curtailed them.

Some officials in Washington have attributed their inaction to gaps in the law and in the regulations under which they work, and a shortage of specific Federal standards is occasionally apparent.

But critics in Congress and elsewhere have blamed bureaucratic inertia and timidity for the failure to regulate drug and plasma operations, and a lapse in enforcement is also occasionally apparent.

For example, the Food and Drug Administration employs only a single physician to conduct field investigations of all the studies underway in the United States, and the agency's inquiries rarely go behind the dry scientific data.

METHODS CALLED DANGEROUS

The Division of Biologics Standards, a unit of the National Institutes of Health that is responsible for the regulation of blood products, recently asserted that the safety of plasma donors was not its concern.

Several major pharmaceutical manufacturers have recognized that some of the methods employed by Dr. Stough were extremely dangerous. They continued to support him with large sums of money.

An executive of Cutter Laboratories once acknowledged, for instance, that gross contamination was apparent in the areas where the largest blood plasma operations were conducted. The rooms were "sloppy," he observed.

When a Government doctor asked why Cutter continued to reward such an enterprise with hundreds of thousands of dollars' worth of business, the executive explained that the Stough group enjoyed crucial "contacts" with well placed officials.

FEES AND PARTNERS

These contacts involved, among other things, the payment of sizable retainers to influential lawyer-legislators and the establishment of "partnerships" for a number of prison physicians who remained on the public payrolls.

With neither Government nor industry intruding, with most of their records held in secret, with officials passing the problem on to someone else, Dr. Stough prospered at his work throughout the nineteen-sixties.

He has generally declined to talk with local newspapermen about the controversies involving him. And he recently refused to grant an interview with a reporter for The Times.

"We've taken the position of no comment," Dr. Stough said during a recent telephone conversation with a reporter who had asked to see him. "I don't think we're interested in airing anything in the newspaper."

"We think some people have made a mistake," he remarked, referring to the medical observers, editorial writers and state officials who have assailed him. But, he added, "I'm not looking for revenge on anybody."

Efforts to photograph Dr. Stough were unsuccessful, and an extensive search of newspaper files and other sources turned up the pictures of the physician.

STARTED IN OKLAHOMA

Dr. Stough graduated from the University of Tennessee Medical College, spent a one-year internship in Oklahoma City, and opened a private practice in McAlester, site of the Oklahoma State Penitentiary, late in 1937.

He soon began to serve, on a part-time basis, as the prison physician. With direct access to more than 2,000 inmates, his drug tests began to grow extensively. In the meantime, he started a new endeavor.

On March 25, 1962, the inmates at McAlester began lining up to participate in a medical procedure called plasma-pheresis. Under it, a unit of whole blood is drawn and the plasma, a fluid that makes up about 55 per cent of the blood, is taken out.

The remaining cells are reinjected. That was the critical step on Sept. 19, 1962, when one of Dr. Stough's technicians processed an inmate named Tommy Lee Knott, 47, an illiterate prisoner with a long criminal record.

Knott's blood type was O-positive, but he subsequently charged in a lawsuit that after the plasma had been drawn off, the technician pumped another man's cells, which happened to be A-negative back into his veins.

ORGANS DIAGNOSED

Unfortunately for Knott, his liver, lungs, brain, kidneys and other organs were injured, his nervous system underwent shock, and his weight dropped 58 pounds in 17 days.

In suing Dr. Stough and two associates for $270,000 in damages, Knott also reported that the incompatible blood had caused a double hernia, permanent secondary anemia and a 10 per cent reduction in life expectancy.

The defendants managed to settle out of court for $2,000 after Knott, who had been removed from the penitentiary for treatment, went off on a crime spree that landed him in a small town jail.

Only three months after this inauspicious episode, Dr. Stough embarked on an ambitious expansion effort. The financial rewards inherent in his initial plasma-pheresis program would now be greatly multiplied.

He brought his plasma operation to Kilby Prison, a drab institution near Montgomery, Ala., in December, 1962, and in the following year he began drawing blood in two more of the state's prisons, Draper and Atmore.

In October, 1963, he started a plasma program at the Cummins Farm, a sprawling unit of the Arkansas state penitentiary that was quietly going through an era of general brutality and neglect.

PROTEINS EXTRACTED

Plasma itself can be used in the treatment of shock, but it also contains a number of proteins, including gamma globulin, that can be extracted and employed to counteract a variety of medical difficulties.

The gamma globulin from most donors contains enough antibodies against such diseases as measles and hepatitis to be effective when it is reinjected into a person who has been exposed to those diseases.

This is not the case, however, with diseases such as mumps, whooping cough, tetanus and smallpox. Groups of donors receive vaccinations to build up the antibodies in the gamma globulin intended to treat these illnesses.

The result is known as hyperimmune gamma globulin, and much of the plasma Dr. Stough extracted was used by manufacturers to produce this serum. It can be a hazardous process.

Dr. Stough demonstrated this immediately upon his arrival in Arkansas. Andrew Buddy Crawford, a 45-year-old inmate at the Cummins Farm, received the first in a series of whooping cough shots on Nov. 23, 1963.

DIED AFTER 8TH SHOT

More amounts of the vaccine were injected weekly for a time, and on March 7, 1964, after a two-month lapse, Crawford received his eighth shot. He became ill about a week afterward.

Crawford died slowly and in very painful fashion, and three Little Rock physicians, who reported the process with the lack of patients' names often encountered in medical journals, said it was probably the result of the repeated vaccinations.

It was left to The Pine Bluff (Ark.) Commercial to report, only last January, that the man who died on June 13, 1964, was Andrew Buddy Crawford, and that the program involved was directed by Austin R. Stough.

As a measure of his grip on the market at about this time, a Government source calculated that Dr. Stough's plasma would produce 193,970 cubic centimeters of hyperimmune gamma globulin solution monthly.

Since only about 800,000 cubic centimeters of this type of plasma product were distributed each month throughout the United States, Dr. Stough's output was the source of practically a fourth of the entire national supply.

OTHER PRISONS EYED

"With demand exceeding supply," a Government doctor wrote of the boom, "inquiries were made in other states concerning the possibility of opening plasmapheresis centers in other . . . prisons."

A certain style had developed. In Oklahoma, Dr. Stough himself was the prison physician. The salary of $13,200 a year was inconsequential by his standards, but the standing it gave him within the prison was invaluable.

So, in Alabama, he awarded Dr. Irl R. Long, the senior prison physician, a financial interest in the program. Until a few weeks ago, Dr. Long simultaneously received a salary of $942 a month from the state.

A committee of the Alabama Medical Association remarked in a report issued earlier this year that "this unconscionable situation, regardless of reason, should never have been permitted to come into existence."

The prison physician in Arkansas, Dr. Gwyn Atnip, was paid $20,000 a year for his work in the plasma program there. As a desperately needed doctor among the inmates, he received $8,000 annually from the state.

GOT POLITICAL AID

Dr. Stough also lined up political support outside the prisons, a tactic that demonstrated its importance when members of the Oklahoma Legislature began to ask whether his penitentiary operations were sanctioned by law.

One of Dr. Stough's most vehement opponents was Gene Stipe, then a State Senator. But early in 1963 Senator Stipe changed sides and successfully pushed a bill that firmly established the physician's standing in the prison.

Later it was discovered that at about the time this change of direction occurred and the saving law was enacted, Mr. Stipe, a lawyer, began to receive a $1,000-a-month retainer from the concern headed by Dr. Stough.

A spokesman for the organization asserted that the money was for legal services only. Mr. Stipe agreed. Henry Bellmon, then Governor, expressed displeasure but noted that the state had no applicable conflict-of-interest law.

The political nature of the matter was usually most apparent when Dr. Stough moved to enter the penitentiary system in a new state. His drive on the major prison at Reidsville, Ga., was an example of the technique.

CHECKED WITH CENTER

Dr. Joseph Arrendale, the institution's medical director, one day telephoned Dr. Ronald F. Johnson, then on the staff of the National Communicable Disease Center in Atlanta.

Dr. Johnson had followed Dr. Stough's plasmapheresis operations for some time, and Dr. Arrendale wanted advice. In a memorandum of the conversation, Dr. Johnson reported as follows:

"It was clear that Dr. Arrendale did not favor [a plasma program]. However, he felt that Dr. Stough might be 'bringing political pressures to bear through the state legislature' which could clear the way for such a program."

The Georgia campaign ultimately failed, and a similar move on the state prison at Parchman, Miss., was also turned back. But by then Dr. Stough had encountered serious difficulties in his existing programs.

The five prisons in which he was operating by the end of 1963 all were drastically in need of operating funds, and all exhibited obvious signs of longstanding general neglect.

NO RECORDS

The factors pertinent to Dr. Stough's activities included a lack of medical attention (it bordered on the nonexistent in Arkansas), an absence of records, and an atmosphere of isolation and secrecy.

Still, Dr. Stough's trail remains vivid at each significant turn, and its progress behind the high walls of Kilby Prison serves to illustrate the type of infection that was spread through four other institutions.

By April, 1963, five months after Dr. Stough had opened his plasmapheresis center at Kilby, the incidence of viral hepatitis, an often fatal disease of the liver, was climbing sharply.

From none or one or two cases a month, the disease now rose to more than 20 in a single period. Moreover, the outbreaks held generally firm between 10 and 15 a month through the following November.

The rates then soared again. There were 29 cases in December, 22 in January, 1964, 23 in February, 27 in March, and 27 in April. A tenth of the prison population had been admitted to the Kilby hospital.

Joe Willie Tifton, 46, died on March 18. Emzie B. Hasty, 42, died on April 14. Charlie C. Chandler Jr., 31 died on April 16. David McCloud, 27, died on May 22. Each death was attributed to infectious hepatitis.

Little bits and pieces then began to leak to the outside world. A penciled note from one inmate said, "They're dropping like flies out here."

But a prison spokesman said:

"The doctors are quite confident that there is no connection between the plasma program and the cause of hepatitis and jaundice."

Dr. Stough's partner, Dr. Long, spoke as the senior prison physician.

"That same program is being carried on at Draper and Atmore," he declared, "and there have been no cases reported there."

This assurance was published in The Montgomery Advertiser on May 24.

INMATES AFFLICTED

Actually, the records show that by the end of May, at the time he spoke, 37 inmates had been hospitalized at Atmore and six sent to the infirmary at Draper, all with the same symptoms.

It was not then mandatory in Alabama to report hepatitis cases to the public health authorities, and in that respect Dr. Long overlooked not only the cases at Atmore and Draper but also those at Kilby.

Dr. Ira Myers, the state's public health officer, told the National Communicable Disease Center as late as June 5 that an epidemic "apparently" was under way in the prisons. There was, he said, "no direct confirmation."

The exact number of hepatitis cases in the five prisons was never established and is never likely to be. Too many medical histories vanished, too many were never completed, and too many were improperly kept by "inmate doctors."

Some 544 cases were firmly established, and that conservative figure is the one most often used. But the communicable disease center records also contain estimates of more than 800 and evidence that the figure could run to more than 1,000.

The number of deaths is similarly undetermined. In addition to at least the four in Alabama, there were reports of at least one in Arkansas and at least one in Oklahoma.

The dimensions of the disease were more clearly and precisely stated in sets of percentages, or "attack rates," that measured the incidence of hepatitis among those who gave plasma and those who did not.

At Kilby, for example, 28 per cent of the men who participated in Dr. Stough's program came down with the disease. For those who did not take part, the rate was only 1 per cent.

The rate for participants in one of the barracks at Kilby was 39.1 per cent. At the four other centers, the illness struck between 20 per cent and 26 per cent of the donors and from 0.9 per cent to 1.8 per cent of the nondonors.

FIRST ALLIED TO JAUNDICE

The Federal investigators, reflecting scientific caution, initially referred to the prison cases as "illnesses associated with jaundice." A number of their records employed this phrase.

Jaundice means a yellowish skin, and while it is a symptom of hepatitis its presence is not conclusive. After extensive testing and study, however, the Government doctors concluded:

"The illnesses seen in these prisons seemed to be indistinguishable with viral hepatitis. It is not felt that any serious question of the nature of the illnesses need be entertained."

Hepatitis is a threat in every blood and plasma program, but the careful use of properly designed equipment can reduce the danger virtually to zero. Dr. Stough managed a double play: technique and apparatus both were cited in the epidemics.

The details are complicated, but the general picture drawn by the experts was reflected by K. T. Kimball, an executive of Fenwal Laboratories who had observed some of the plasma operations and who reported to Dr. Johnson of the Atlanta center, according to a written memorandum, as follows:

"Mr. Kimball directed the conversation to the general level of care exercised by Dr. Stough's technicians. He felt that collection of large amounts of plasma in a rapid operation using equipment of simpler design that Dr. Stough approved might easily lend itself to a high level of contamination of technicians' hands and surfaces of tables, equipment, and the actual bags and tubing used in the procedure.

"He felt that contamination of these objects by the plasma of all donors could have occurred, and that absence of strict medical supervision could easily have led to short cuts in and inadequacies of sterile technique."

SAYS HE WAS "APPALLED"

This was equally apparent to Byron Emery, an official of Cutter Laboratories who also visited some of Dr. Stough's operations and who also talked with Dr. Johnson. Another Federal memorandum reported:

"Mr. Emery stated that when he visited Alabama in April, 1964, he was 'appalled at the situation' he found. He said the plasmapheresis rooms were 'sloppy' and that gross contamination of the rooms with donors' plasma was evident.

"Mr. Emery stated that [Dr. Stough and an associate] . . . could not be trusted to carefully supervise such a plasmapheresis program.

"I then asked Mr. Emery why Cutter did not choose to operate such plasmapheresis programs by themselves without using Dr. Stough's group as an intermediate company . . .

"Mr. Emery replied that Dr. Stough had contacts at the prison and it was through him the permission was obtained from the prison officials to operate the program."

REMAINED BIG CUSTOMER

Cutter nevertheless remained one of Dr. Stough's biggest customers.

Alabama shut down the plasmapheresis centers in the middle of the epidemics and blocked Dr. Stough's efforts to start them up again. Oklahoma had taken over the plasma and drug-testing programs almost simultaneously just before the Federal investigation.

In Arkansas, where he had never tested drugs, Dr. Stough was permitted to continue his plasma operations for three years before a quasi-public foundation successfully replaced him.

And although the Alabama authorities had stopped the traffic in plasma, they permitted him to continue his drug tests without interruption The enterprise was quickly stepped up

A pharmaceutical manufacturer generally develops a new product in the laboratory, tests it on animals, and then notifies the Food and Drug Administration that a three-phase tryout on human beings is ready to begin.

Phase one is in many ways the most delicate step of the three because it is designed to establish basic factors such as toxicity, safe-dosage rates, metabolism, absorption, and elimination.

Because of their critical nature, the first-phase tests are usually carried out on healthy subjects. The drug is tried on people who suffer from the target disease only after the phase one hurdle is cleared.

Phase two involves limited administration of the drug to "carefully supervised patients," and phase three embraces "extensive clinical trials" that can include studies by doctors in private practice.

COMPANY JUDGES DOCTOR

The Food and Drug Administration is responsible for * * * the advance from phase to phase. The role of the individual manufacturer is substantial, however.

It is basically the company, for example, that judges a doctor's qualifications as a drug investigator, chooses him to do the job, directs the testing, assembles the results and pays the fee.

Healthy prisoners who by definition exist in closely controlled circumstances are perfect for phase one studies, and Dr. Stough remained in heavy demand by pharmaceutical concerns.

The Food and Drug Administration, citing regulations of the Department of Health, Education and Welfare, refused requests by The Times to examine its records on Dr. Stough.

A spokesman for the agency said, however, that since 1963 the physician has carried out some 130 investigational studies for 37 drug companies. Other types of tests and work by an associate involved 45 additional programs.

The F.D.A. declined to disclose the names of the drugs that Dr. Stough examined or the names of the companies for which he worked. Some of the information has been obtained from other sources, however.

BIG COMPANIES

The companies included the Wyeth Laboratories Division of American Home Products Corporation; the Lederle Laboratories Division of American Cyanamid Company; the Bristol-Myers Company; the E. R. Squibb & Sons Division of Squibb Beech-Nut Inc.; the Merck, Sharp & Dohme Division of Merck & Co. and the Upjohn Company. These concerns, according to the current directory published by Fortune Magazine, are among the 300 largest corporations in the United States.

An investigation of Dr. Stough's work for these and other concerns began earlier this year after Harold E. Martin, editor and publisher of The Montgomery Advertiser, wrote a series of highly critical stories about the drug studies.

The State Board of Corrections asked the Alabama Medical Association to name a committee of inquiry, and Dr. Tinsley R. Harrison of Birmingham, a nationally known cardiologist, was selected as chairman.

Even when the committee dealt with the welfare of the inmates its investigation inevitably raised broader issues, for Dr. Stough's "findings" became data and the data helped to justify public sale.

The medical association investigators concluded not only that Dr. Stough's work had been "bluntly unacceptable" but also that as one result, "the validity of the drug trials themselves must occasionally be seriously in doubt."

Because of the Food and Drug Administration's refusal to permit an inspection of its files, it is impossible to determine conclusively whether Dr. Stough ever reported unfavorably on the drugs he was paid to test.

However, he has published a number of scientific articles on his findings, and a review of those cited in the comprehensive Cumulated Index Medicus since 1960 discloses not a single critical appraisal.

It was learned from independent sources that one of the drugs Dr. Stough had tested was Indocin, a best-selling product of Merck, Sharp & Dohme that is used in the treatment of rheumatoid arthritis.

Dr. Stough's findings on Indocin are unavailable, but it went on the market after largely favorable data had been generated by company-paid investigators, and the subsequent controversy points up the broad significance of testing.

Indocin was assailed * * * the Senate Subcommittee on Monopoly. Contrary to findings of the initial data, witnesses said, careful tests had found the drug no more effective than aspirin, and it produced serious effects as well.

A careful medical examination in advance of a drug test is regarded as essential to insure that the prisoners involved do not show signs of subtle disabilities that would make the study invalid.

A member of Dr. Harrison's committee recalled during an interview that one day he and another investigator turned up at Kilby Prison to discover that 80 inmates had been examined for a new program in just four hours.

Since that meant an examination every three minutes, the investigators asked to see

the records. None were found on the premises—not for a single prisoner. The records that existed were said to be at Dr. Stough's headquarters.

The committee noted in its report that prisoners about to embark on a new test had "received a rapid explanation of the purpose" that left "considerable variation in the understanding of what had been said."

NO DOCTOR PRESENT

The committee continued:

"All this had seemingly been done by technicians with no physician being present as far as could be determined. Two of the four prisoners who were interviewed indicated that they had never been examined by a physician while they were in the prison although they had been on several drug trials."

The fundamental purpose of a drug test is to spot any adverse effect and report it. There were breakdowns in Dr. Stough's operation, and Dr. Harrison's committee cited a number of examples.

First, it encountered a Mr. Howell, "a man with very little previous medical training whose experience before entering his present position had been that of a venereal disease inspector."

"It was stated with pride by this individual who functions as hospital director, that he himself was able to deal with nine out of every 10 patients who came to him so that the doctor was not bothered."

A number of qualified medical sources said that that without a physician regularly on hand to look over the inmates who took drugs, it would have been "totally impossible" to gauge reactions.

PRISONER FEES VARIED

Dr. Harrison's committee took up the question of fees paid by Dr. Stough to inmates who participated in drug tests. These varied widely, but a man could usually make at least $1 a day for taking a series of pills.

This was big money for people who otherwise received only 50 cents every three weeks for incidental spending, and it created what one investigator called "a built-in negative feedback."

Prisoners often covered up severe reactions in order to keep on with the tests, and several told The Montgomery Advertiser that they shammed taking pills and later spit them out. The medical group said of one inmate:

"He had hung on to the end [of a test] although he had been feeling very ill and had not complained of this illness because it would have meant his losing the pay which he was hoping to receive for his participation."

One conscientious experimenter who has gone deeply into the question of fees believes that a prospective subject should be offered no more than two or three times the amount he would receive without taking part.

NUREMBERG CODE CITED

The medical investigators underlined the importance of the fees and inadequate explanations of the tests by attaching to their report the Nuremberg Code, developed after the concentration camp excesses of Nazi doctors.

The code calls for "free power of choice" and holds that a subject "should have sufficient knowledge and comprehension of the elements of the subject matter involved as to enable him to make an understanding and enlightened decision."

The Alabama committee also inspected Dr. Stough's laboratory. Its role in analysis samples taken from the inmates was especially important since the direct medical observation was rated low.

In one instance the group found an error of about 40 per cent in the control agent against which laboratory samples from about 20 prisoners were being measured. The investigators said:

"This was pointed out to the laboratory director and he excused it [on grounds that the committee rejected]. His attitude to us was unacceptable and reflected poor technique."

The operation "probably compares favorably with many small hospital laboratories in Alabama," the group concluded. But it "lacks the better qualified personnel and more careful quality control seen in better run laboratories."

The committee reported that on top of the other problems, both Dr. Stough and Dr. Long had "limited training in basic pharmacology." The available biographical information shows they had no formal education in the field at all.

"You might say they have had a lot of on-the-job training and background," one clinical pharmacologist said. "But this is a weak argument. Nowadays, with the sophistication of modern drugs, you need more than this."

Last May, after the State Board of Corrections had a look at the committee's report, Dr. Stough received another eviction notice and started to close down the drug studies in Alabama.

Thus, Dr. Stough suffered another setback. As before, a state saved its prisons from any further trouble. But as usual, the Federal authorities and the pharmaceutical companies remained silent.

ONLY ONE PHYSICIAN

The single physician employed by the Food and Drug Administration to investigate drugs tests throughout the United States has visited Dr. Stough's operations twice, an agency spokesman said.

Some citizens tend to think of the agency as an eternally vigilant organization, and in his dealings with local officials and newspapermen Dr. Stough has turned this misapprehension to advantage.

"They [F.D.A. officials] love to close people down," he said in the brief telephone conversation in which he refused to grant an interview. "So if I was off-color, they'd be on me like a hawk."

"That's one of the reasons the [Alabama Corrections] Board wasn't concerned," explained Frank Lee, the state's commissioner. "We knew they [F.D.A. officials] came in here and looked into the operation."

Dr. Herbert L. Ley Jr., the F.D.A. Commissioner, branded Dr. Stough's assertion "a non sequitur."

The Food and Drug Administration's lone medical inspector is alert to "flagrant" dishonesty, and there have been men who tested drugs on nonexistent people and who produced imaginary results.

But an inspection is limited mostly to checking data that have been submitted to the sponsoring drug company to insure that it agrees with data sent to the agency. There is little or no effort to look behind the figures.

"Our responsibility is not the direct supervision of the [drug] investigators," Dr. Ley said in an interview. "Our responsibility is to evaluate the data that come in to us. We can't be omnipotent or omniscient."

While the agency has never found occasion to reprimand Dr. Stough, its inspector, Dr. Alan B. Lisook, did make some "suggestions" earlier this year about "the lack of medical supervision of patients."

NOT ENOUGH SUPERVISION

"We told him we thought there should be more supervision," Dr. Lisook said, "and he admitted there was not as much as he would like because of the volume of drugs being tested."

This was virtually an acknowledgment by Dr. Stough that more tests had been undertaken than could be adequately overseen, but the F.D.A. did not require change.

The agency "frowns" on insufficient supervision, Dr. Ley said, but under present policies there are no specific minimum standards. In the gray area that results, frowning is about the limit.

Since between 25 per cent and 50 per cent of the phase one studies have been concentrated in Dr. Stough's hands, Dr. Ley was asked whether volume alone—quality aside—concerned his agency.

"It's a red flag, there's no question about that," he replied. But the commissioner explained that neither law nor regulation permitted the agency to force a cutback in the number of studies assigned to a single man.

There is no step short of outright disqualification for obvious misconduct, Dr. Ley said. That is an action the F.D.A. has taken no more than a dozen times in its history.

SHORTAGE CHARGED

The drug companies contend there is a shortage of investigators, and Dr. Ley said that while he believed there were enough to study the "really new drugs," he wanted to avoid charges that the agency blocked progress.

"It's harder to get a driver's license in the United States than it is to get fatal drugs." complained Dr. William M. O'Brien, an associate professor of preventive and internal medicine at the University of Virginia. He added:

"To get a driver's license you have to take tests, show you know how to drive, and so on. For drugs, you just walk in the door and say, 'I'm an M.D. I want to test drugs.' It's fantastic. It's unbelievable."

It is difficult to measure the precise sums of money that the pharmaceutical industry has poured into Dr. Stough's operations, but a number of reliable clues are available.

Operating within at least nine separate corporations, the major one of which is Southern Food and Drug Reserach, Inc., Dr. Stough has a gross income in a good year probably approaching $1-milion.

SMALL OVERHEAD

He has not carried a high overhead. His net income in Alabama in 1967 was nearly $300,000 (on a $500,000 gross), and his profit before taxes in Arkansas in 1966 was about $150,000.

The Alabama Medical Association's committee treated the drug manufacturers with circumspection in its report, suggesting that the companies could hardly police the state's prisons.

But it pointed out that the makers, as well as the Food and Drug Administration, had engaged in monitoring of the drug tests that might have been "too superficial and too remote to provide maximum safety."

The committee also found that in sponsoring Dr. Stough's tests the drug concerns had given "tacit approval" to his research. In this, it reported, the companies had "demonstrated some lack of discretion."

"Our companies are usually pretty careful about who they have doing phase one work," said Dr. C. Joseph Stetler, president of the Pharmaceutical Manufacturers Association. "They aren't interested in guys who aren't doing a first-class job."

Mr. Stetler said that some concerns might make more rigorous over-all studies of potential investigations than others and that in some instances the day-to-day supervision "gets to be seemingly routine."

DOUBTS NEED FOR BARS

Heavy demand for phase one work may also be a factor in quality, Dr. Stetler added. But he said he was not sure the Government should restrict an investigator's work for high volume if the "end product" was satisfactory.

Each of the pharmaceutical companies that could be identified as having retained Dr. Stough was asked to comment on his drug testing, and each defended the validity of the data he submitted.

For example, Merck, Sharp & Dohme said in a prepared statement that Dr. Stough's "facilities, staff, volunteer group, and prior experience were particularly suited" for the studies it required.

The physician has conducted 14 projects for the concern since January, 1968, and, the company's statement concluded, "in our

opinion the studies were properly conducted and the data provided have been sound."

Merck, Sharp & Dohme asserted that practically all of the studies carried out by Dr. Stough had been "extensively studied and clinically used" by others and that some of the drugs had already been approved for marketing.

LACK OF CRITICISM

A spokesman for Lederle Laboratories pointed out that Dr. Stough's testing operations at the Oklahoma State Penitentiary had not been criticized publicly by qualified medical observers.

Wyeth Laboratories said it had retained Dr. Stough for only a single study. The company said he was hired in 1964 to test an experimental drug that was never placed on the market and has not been used since.

One company official, who asked not to be identified, remarked: "How he [Dr. Stough] operated, how he had his machinery set up—they didn't even know at the prisons."

To ship blood products in interstate commerce requires a license from the Division of Biologics Standards, and when a manufacturer obtains one he must face and continue to face regular inspections.

DOCTOR NOT LICENSED

Dr. Stough does not have and never has had a license from the division. Under the so-called "short supply provision" of the agency's regulations, a licensed company can pick up the scarce plasma at Dr. Stough's door and ship it to its laboratories without violation.

Serious things can happen if the slightest thing goes wrong once the plasma reaches the hands of a licensed company. Nothing can happen, so far as the standards division is concerned, if everything goes wrong before that time.

Dr. Stough incurred no Federal disfavor for the hepatitis epidemic in three states because the disease apparently was routinely killed out in the manufacturing process that turned his plasma into gamma globulin.

"The conclusion that we came to was that the quality of the product was not affected," recalled Dr. Roderick Murray, the division's director, "and therefore we had no backing to tell them (the companies) not to use plasma that came from Stough."

INVITATION REJECTED

This is felt so keenly at the division that Dr. John Ashworth, then an agency official, refused an invitation from Dr. Johnson just to go and look at a plasmapheresis operation.

"He said that his appearance at the plasmapheresis center would not be consistent with the policy of D.B.S.," Dr. Johnson wrote, because the policy did not include "direct supervision or policing of the actual procedures."

"Any time that we've attempted to write into the regulations elements that are designed to protect the donor," Dr. Murray said, "this has been disallowed because there's no statutory authority."

What about the communicable disease center, which traced the hepatitis epidemic directly to Dr. Stough's programs? That agency, a spokesman said, is only a consultant to the states. Enforcement is up to the state authorities.

The question thus is put to the Alabama public health officer, Dr. Myers. He answers that the State Health Department has "no specific jurisdiction in the prisons."

S. 2731—INTRODUCTION OF A BILL RELATING TO HIGHWAY AND RAILROAD BRIDGES OVER THE COLUMBIA RIVER, THE SNAKE RIVER, OR THEIR NAVIGABLE TRIBUTARIES

Mr. MAGNUSON. Mr. President, I introduce, by request, a bill to compensate the owners of bridges on the Columbia and Snake Rivers for modifications to such bridges which are made necessary by Federal river projects. Under present law, when a Federal dam raises the water level so as to flood the footings and towers of a bridge which are located in the bed of the river, the cost to the bridge owner of altering the bridge is not compensable by the Government, even though the work is made necessary solely as a result of the Federal project, even though the bridge is not an obstruction to navigation, and even though there is no benefit to the bridge owner from the project.

Under the Truman-Hobbs Act of 1940, if the bridge is an obstruction to navigation, the Government pays a portion of the cost of modification; but that act does not apply if the bridge is nonobstructive. Furthermore, the Truman-Hobbs Act is not prospective in application, so if the bridge is nonobstructive before the dam is built, but will become so when the pool is raised, the Government does not share in the cost of alterations done while the water is low, but it would share in the much greater expense of altering the bridge under deepwater conditions.

This bill would permit reimbursement even though the bridge is nonobstructive or if the bridge would become obstructive because of the raised water level. It would appear to follow the pattern established by Congress in the act of November 21, 1941, as amended last year by Public Law 90–524, which deals with bridges affected by the Tennessee Valley Authority. I believe that serious consideration should be given to taking similar action with respect to bridges on the Columbia-Snake River system.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2731) to provide for the protection, alteration, reconstruction, relocation, or replacement of highway and railroad bridges, trestles and other structures, over the Columbia River, the Snake River, or their navigable tributaries, introduced by Mr. MAGNUSON, by request, was received, read twice by its title, and referred to the Committee on Commerce.

S. 2734—INTRODUCTION OF A BILL GRANTING THE CONSENT OF CONGRESS TO THE CONNECTICUT-NEW YORK RAILROAD PASSENGER TRANSPORTATION COMPACT

Mr. RIBICOFF. Mr. President, I introduce, for appropriate reference, a bill authorizing congressional ratification of an interstate compact between the States of Connecticut and New York.

This joint effort of Connecticut and New York is an integral element in preserving and improving the railroad services between the two States.

Connecticut and New York have agreed in principle on a plan to revitalize operations of the Penn Central's commuter services. This plan would permit the two States to receive Federal money to modernize facilities and purchase urgently needed railroad equipment. The agreement is in the form of an interstate compact which under the Constitution must be ratified by the U.S. Congress.

The railroad lines of the Penn Central's New Haven division are a vital passenger and commercial artery. If service should ever cease on these lines, thousands of commuters would be without transportation and New England industry would be seriously crippled.

Today, Connecticut and New York State commuters are suffering the burdens of deplorable traveling conditions. Many must stand daily in dirty, crowded aisles on decrepit passenger cars. Equipment, which receives inadequate maintenance, is often unworkable, causing late departures and arrivals.

Today, Connecticut and New York State freight shippers are suffering the burdens of delayed freight service as years of patchwork minimum maintenance on railroad tracks, signals, and electrical overhead wires cause unrepairable failures.

Therefore, I ask Congress to ratify a compact between the States of Connecticut and New York so that these States will be able to help provide new equipment and facilities necessary to end delay, disrepair, and disappointment, and keep this vital artery running and providing service.

If this compact is approved, the States of Connecticut and New York will be able to put into action an $80 million modernization program on the New Haven's line: $36 million will be spent for new cars; $16 million will be spent to rehabilitate existing cars; $9 million will be spent to modernize stations; $13 million to rehabilitate the electrical system and replace the old Cos Cob power station; and $6 million to modernize and improve rights-of-way including signal systems and installation of maintenance facilities.

Mr. President, I urge favorable Senate consideration of this legislation and, I am pleased to announce that Senators DODD, JAVITS, and GOODELL have joined in sponsoring this bill.

I ask unanimous consent that the bill be printed in full at this point in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2734) granting the consent of Congress to the Connecticut-New York Railroad Passenger Transportation Compact, introduced by Mr. Ribicoff, for himself and other Senators, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

S. 2734

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the consent of Congress is hereby given to the Connecticut-New York Railroad Passenger Transportation Compact in substantially the following form:

"CONNECTICUT-NEW YORK RAILROAD PASSENGER TRANSPORTATION COMPACT

"ARTICLE I

"For the purpose of continuing and improving the railroad passenger service of the New York, New Haven and Hartford Railroad (and its successors) between the city of New Haven in the state of Connecticut and the city of New York in the state of New York, including branch lines which are tributary to the main line of that railroad between

the said cities; Metropolitan Transportation Authority, a governmental corporation of the state of New York, and Connecticut Transportation Authority, an agency of the state of Connecticut, acting individually, but in cooperation with each other, or as co-venturers where they deem it advisable and practical, are hereby authorized to do the following where permissible under the enabling laws of their respective states:

"(a) To acquire through eminent domain proceedings, or by gift, purchase, lease or otherwise, the ownership interest in or the right to the use of all those assets of the said railroad (or of any successor in interest to such assets), be they real property, personal property or a combination of the two (including rights arising out of contract, franchise or otherwise), which are or may reasonably be expected to become necessary, convenient or desirable for the continuation or improvement of such service;

"(b) to repair and rehabilitate such assets, or to acquire by gift, purchase, lease or otherwise, such new or additional assets and rights as they deem necessary, convenient or desirable for such continuation or improvement;

"(c) to dispose of any such assets, new and additional assets and rights, or of the right to the use of the same, by conveyance, lease or otherwise (including, without limitation, the grant of trackage rights) when and to the extent that they are not needed for such service by the said agencies; and to abandon or discontinue portions of such service when advisable; and/or

"(d) to operate such service, or to contract for the operation of the whole or any part of such service by others.

"To accomplish the foregoing objectives, the said agencies are authorized, individually and jointly, to apply for aid, federal, state or local, to supplement those funds appropriated or otherwise made available to them under the laws of the party states.

"ARTICLE II

"The provisions of this compact shall be construed liberally to effectuate the purposes thereof. Amendments and supplements to this compact to implement the purposes thereof may be adopted by concurrent legislation of the party states.

"ARTICLE III

"This compact shall be of no force and effect unless and until the Congress of the United States of America, on or before December thirty-first, nineteen hundred sixty-nine, has consented thereto."

SEC. 2. The right to alter, amend, or repeal this Act is expressly reserved.

S. 2736—INTRODUCTION OF A BILL TO EXTEND THE KEOGH PLAN TO ALL EMPLOYEES IN AMERICA

Mr. STEVENS. Mr. President, today I am introducing a bill to amend the Internal Revenue Code to provide incentives for private individuals who are neither self-employed nor employed by an employer, either corporate or noncorporate, who provides his employees with a retirement plan. The incentive this bill would provide would be in the form of a tax incentive. The tax incentive in the plan I am proposing actually brings about an equity in the present law for persons who neither have tax-free moneys placed into a retirement fund by their employers for them nor have the option of placing a certain portion of their earnings into a pension plan without paying taxes on those moneys. This bill is a logical extension of the Keogh plan sponsored by former Congressman Keogh, of New York, and will equalize the tax treatment of income set aside for retirement by persons not now qualified for such tax treatment and income set aside for retirement by those who participate in either corporate or self-employed plans.

According to an article in the April 1968 issue of the Social Security Bulletin, private pension and deferred profit sharing plans covered 27.6 million workers as of the end of 1967. Using the average number of workers in private employment during 1967 as a standard—54.4 million—this means some 30.8 million employees do not have any private pension coverage. It should be pointed out that 80 percent of those covered were in manufacturing, transportation, public utilities, and mining, and coverage is generally found in the case of employees of the larger employers. By contrast, a relatively small proportion of employees were protected by pension plans in the trade and service industries at least partly because of such factors as the smaller size of the business involved and the higher rate of turnover.

This bill would particularly benefit employees in my home State of Alaska. Alaska is a growing frontier area in which small business does the major share of employing. In addition, employment in Alaska is seasonal and in many cases is of marginal return to the employer and hence he cannot afford to provide pension plans and hire people at the same time. I feel that it is unfair to residents of my State not to extend the kind of tax treatment enjoyed by employees of larger employers in the rest of the country. In addition, this plan would allow lower income employees, both in Alaska and the rest of the country, to enjoy the same tax treatment that is now enjoyed by more well-to-do employees.

It is the case that the availablity of pension coverage with tax benefits becomes more probable as the individual needs it less and less and almost nonexistent for those for whom a pension plan would do the most good. I introduce this bill in hopes that its passage will extend the benefits of tax sheltered retirement plans to those who can least afford to pay taxes on money they set aside for their senior years. It is the individual who works long hours at low pay and who has the most difficulty saving for the future, and it is this very group that does not have access to the same kinds of advantages that individuals in the moderately well-to-do sectors of our economy do in saving for retirement. I offer this bill in hopes that we can end these inequities.

Under the plan as I propose it any individual who wishes to participate may set up a retirement savings plan with any financial institution subject to the approval of the Secretary of the Treasury or he may purchase retirement plan bonds from the Treasury Department as now qualified individuals are presently doing.

Mr. President, I ask unanimous consent that the bill be printed at this point in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2736) to amend the Internal Revenue Code of 1954 to permit certain employees to establish qualified pension plans for themselves in the same manner as if they were self-employed, introduced by Mr. STEVENS, was received, read twice by its title, referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

S. 2736

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 401 of the Internal Revenue Code of 1954 (relating to qualified pension, profit sharing, and stock bonus plans) is amended by redesignating subsection (j) as (k), and by inserting after subsection (i) the following new subsection:

"(j) Certain Employees—

"(1) General rule.—An individual who is not covered under a plan of any employer which meets the requirements of subsection (a) and, if applicable, subsection (d), may elect (at such time, in such manner, and subject to such conditions as the Secretary or his delegate shall prescribe by regulations) to become entitled to the benefits provided by this part to the same extent as if he were a self-employed individual.

"(2) Effect of election.—For purposes of applying the provisions of this part to an individual who makes an election under paragraph (1), such individual shall be treated—

"(A) as an employee within the meaning of subsection (c) (1), as owning the entire interest in an unincorporated trade or business, and as his own employer, and

"(B) as receiving earned income in an amount equal to the compensation paid to him by the employer described in paragraph (1) (A).

"(3) Regulations.—The Secretary or his delegate shall prescribe such regulations as may be necessary to carry out the purposes of this subsection."

(b) The amendments made by subsection (a) shall apply to taxable years beginning after the date of the enactment of this Act.

S. 2737—INTRODUCTION OF A BILL TO RAISE REMOTE HOUSING LEGISLATIVE PER UNIT DWELLING COST FROM $7,500 TO $10,500

Mr. STEVENS. Mr. President, today I am introducing for myself and Senator GRAVEL a bill which will allow a vitally important housing program for the Alaska remote villages to continue its implementation with a revised and realistic per dwelling unit legislative cost ceiling, a ceiling which will reflect today's cost of materials and not the cost of such materials in 1966 upon which the present legislative ceiling is based. The program I speak of is the Alaska remote housing program. It was enacted in 1966 and received its initial appropriation of funds in fiscal year 1969.

This highly important housing program to our Alaskan natives is based on the principle of maximum owner participation in construction of the homes to aid in keeping the costs at a minimum, maximum use of local materials, and a combination of grants and loans to recipients based on their ability to pay for their homes. It is funded through the Department of Housing and Urban Development with primary responsibility for implementation residing with the Alaska Housing Authority.

The original act of 1966 set an aver-

age cost ceiling of $7,500 per unit dwelling. This covers the cost of materials, freight, and that small amount of labor which is paid for—approximately 3 percent. This amount is an incredibly low cost for a home, and, we believe, speaks strongly for the program's goal of involving the homeowner and local materials in the building process so that as many homes as possible may be constructed in rural Alaska under this program.

However, as we are all so fully aware, costs have accelerated immensely since 1966, and today we face the situation where this average cost per unit dwelling must be revised upward if we are to maintain the quality of homes originally envisioned in the act. The executive director of the Alaska State Housing Authority has been concerned and expressed the need for such a revision in the authorizing legislation to my office.

At this point, I wish to add to the RECORD a quote from correspondence I have received from him on this matter and, following that, a table developed by the Alaska State Housing Authority showing the cost comparison of a home in 1966 and then in 1969 under this program.

As you well know, prices have changed measurably since the original calculations were made for the cost of the homes in the Remote Housing Program. Although Section 1004 became law in November, 1966, funding was not provided until October, 1968. The homes are constructed using a high percentage of lumber products, and these products have received the greatest amount of increase over the last two and one half years as indicated on the attached cost comparison breakdown. Additionally, it was anticipated when the program was in its formulative stage that no electrical facilities or plumbing facilities would be included. With the possibility of electrification in the immediate future through the activities of the Alaska Village Electric Cooperative, Inc., we are now providing interior electrical wiring. If prices permit we will be providing plumbing fixtures. For comparison purposes our breakdown has been prepared on the premise that these items would have been supplied in the beginning, and a straight-across-the-board increase in prices has been shown. The result is a total of 40% increase in overall costs making $7,500 of materials in the November, 1966, market cost $10,475 as of March, 1969. These figures were checked closely with the information that the Department of Housing and Urban Development has in Washington and coincided almost exactly with theirs.

COST COMPARISON OF REMOTE HOUSING

Item	Percent of House	November 1966 cost	March 1969 cost	Percent of increase
Lumber	62.0	$4,637	$7,348	58.47
Tools	.5	40	44	10.00
Plumbing	5.6	420	462	10.00
Electrical	1.4	105	116	10.00
Stove	4.5	350	385	10.00
Freight	23.0	1,723	1,895	10.00
Labor	3.0	225	225	0
Total	100.0	7,500	10,475	40.00

We feel that it is imperative that a revision to this $7,500 average cost ceiling per dwelling be made to reflect today's increased cost of materials. If the homes constructed in this program are to adequately serve the housing needs of rural Alaskans, such a revision to $10,500 is clearly called for in the authorizing legislation.

Mr. President, I ask unanimous consent that the text of this bill be printed in the RECORD immediately after my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2737) to authorize an increase in the average cost of dwelling units in certain federally assisted housing in Alaska, introduced by Mr. STEVENS (for himself and Mr. GRAVEL), was received, read twice by its title, referred to the Committee on Banking and Currency, and ordered to be printed in the RECORD, as follows:

S. 2737

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 1004(a) of the Demonstration Cities and Metropolitan Development Act of 1966 is amended by striking out "$7,500" and inserting in lieu thereof "$10,500".

S. 2738—INTRODUCTION OF ALASKA WATER CARRIERS ACT

Mr. STEVENS. Mr. President, I have today introduced the Alaska Water Carriers Act, which should substantially benefit the people of the State of Alaska.

Confusion presently exists in the regulation of water carriers serving Alaska because both the Federal Maritime Commission and the Interstate Commerce Commission exercise jurisdiction over certain carriers, or certain types of carriage performed by the same carriers.

At the time Alaska was admitted to the Union, Congress decided that established procedures for the regulation of water carriers should not be disturbed without further study. One result of such further study was the enactment of Public Law 87-595, which conferred jurisdiction on the Interstate Commerce Commission, under certain circumstances.

In the past decade confusion has persisted and grown. Despite two recent court of appeals decisions, the fact remains that dual regulation continues to confuse Alaska's waterborne transportation industry.

The Alaska Water Carriers Act eliminates the problem of dual regulation, and recognizes the two court of appeals decisions which substantially reduced the jurisdiction of the Federal Maritime Commission over the great majority of the ocean trade to Alaska, which it previously regulated.

With the passage of the Alaska Water Carriers Act five specific goals would be accomplished.

First. The regulation of Alaska's waterborne interstate traffic would become identical to the regulation of such traffic between the 48 contiguous States.

Second. The shippers of Alaska would have one commission clearly established as the regulating agency for all surface transportation—truck, bus, rail, or water—as is the case in the 48 States, thus greatly simplifying procedures for the shippers of Alaska.

Third. Since water carriers would be certificated under part III of the Interstate Commerce Act, Alaska's citizens would have assurance that any carrier would provide service and assume responsibilities as required by the act—otherwise the carrier would risk suspension or revocation of his certificate. Fly-by-night operators could not endanger the public welfare.

Fourth. The establishment of through routes and joint rates between all modes of carriage—including air—would be simplified and encouraged.

Fifth. The Federal regulatory system based on statutes, regulations, and decisions which has developed with the cooperation of the States since passage of the Interstate Commerce Act in 1887 would apply to Alaska's interstate commerce, as it does to traffic between the 48 contiguous States—and Alaska would have made another important step toward full partnership with other States.

I ask unanimous consent that the text of the Alaska Water Carriers Act be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2738) to amend the Interstate Commerce Act and to extend regulation under the Interstate Commerce Act to carriers not previously regulated under this act, introduced by Mr. STEVENS (for himself and Mr. GRAVEL), was received, read twice by its title, referred to the Committee on Commerce, and ordered to be printed in the RECORD, as follows:

S. 2738

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Alaska Water Carriers Act of 1969".

STATEMENT OF PURPOSE AND TRANSFER OF FUNCTIONS

SEC. 2(a) All transportation of persons and property by water between places in the State of Alaska and places in other states of the United States or the District of Columbia shall be subject to the provisions of the Interstate Commerce Act, 49 U.S. Code, sections 1 et seq., as amended, and as it hereafter may be amended, including Part III thereof, notwithstanding any other laws or provisions of law including, without limiting the generality hereof, the Shipping Act, 1916, 39 Stat. 728, as amended, and the Intercoastal Shipping Act, 1933, 47 Stat. 1425, as amended. It is the intent and purpose hereof to make the regulation of the transportation of persons and property by water to and from places in the State of Alaska subject to the Interstate Commerce Act in the same manner and to the full extent that transportation of persons or property by water to and from places in other states of the United States now or hereafter may be regulated by or subject to the provisions of the Interstate Commerce Act. All functions of any Department, Commission, Agency, Board or Bureau with respect to such transportation by water to and from places in the State of Alaska, except as otherwise provided in this Act, are hereby transferred to the Interstate Commerce Commission.

(b) Subsection (a) of this section shall not be construed to repeal any of the following provisions:

(1) Section 205 of the Merchant Marine Act, 1936 (46 U.S.C. 1115), as amended, or

any provision of law providing penalties for violations of such Section 205.

(2) The third sentence of Section 2 of the Intercoastal Shipping Act, 1933, as amended (46 U.S.C. 844), as extended by Section 5 of such Act, or any provision of law providing penalties for violations of such Section 2.

(3) The provisions of the Shipping Act, 1916, as amended, insofar as such Act provides for the regulation of persons included within the term "other persons subject to this Act", as defined in such Act, but this reservation shall not include persons who do not operate vessels but who have been held to be water common carriers under that Act or the Intercoastal Shipping Act, 1933, as amended, regardless as to whether such persons are water common carriers subject to part 111 of the International Commerce Act or freight forwarders under Part IV of that Act.

(4) Sections 27 and 28 of the Merchant Marine Act, 1920 (46 U.S.C. 883, 884).

(5) The provisions of Section 15 of the Shipping Act, 1916, as amended (46 U.S.C. 800), so as to prevent any water carrier subject to the provisions of the Interstate Commerce Act from entering into any agreement under the provisions of such Section 15 with respect to transportation not subject to the provisions of the Interstate Commerce Act in which such carrier may be engaged.

(6) Any law of navigations, the admiralty jurisdiction of the courts of the United States, liabilities of vessels and their owners for loss or damage, or laws respecting seamen, or any other maritime law, regulation, or custom not in conflict with the provisions of the Interstate Commerce Act.

TRANSFER OF RECORDS AND DOCUMENTS: EXISTING ORDERS, REGULATIONS, CONTRACTS, ETC.; PENDING PROCEEDINGS; "GRANDFATHER" RIGHTS UNDER INTERSTATE COMMERCE ACT

SEC. 3 (a) Except to the extent that they are required by the Federal Maritime Commission in connection with its continued jurisdiction, all files, reports, records, tariff schedules, contracts, agreements, and other documents in the possession of the Federal Maritime Commission relating to the regulation of transportation by water between places in Alaska and other places in the United States and between places in Alaska, and carriers engaged in such transportation, shall be transferred to the Interstate Commerce Commission. To the extent that such records and documents are retained by the Federal Maritime Commission, copies thereof shall be furnished to the Commission upon request.

(b) Notwithstanding Section 301(a), all orders, rules, regulations, tariffs, contracts, or agreements in effect at the time this section takes effect, pertaining to transportation by water between places in Alaska and other places in the United States and between places in Alaska, to the extent they were issued, authorized, approved, entered into or filed pursuant to authority of the Federal Maritime Commission or under any provision of law repealed by Section 301, shall continue in force and effect until lawfully changed by act of the parties involved or until changed, modified, or set aside by action of the Interstate Commerce Commission.

(c) Any proceeding, hearing, or investigation commenced or pending before the Federal Maritime Commission at the time this section takes effect, to the extent that it relates to rates, fares, charges, classifications and tariffs and regulations and practices relating thereto, pursuant to any provision of law repealed by this Act, shall be continued or otherwise acted upon by the Interstate Commerce Commission as though such proceeding, hearing, or investigation had been instituted under the provisions of the Interstate Commerce Act.

(d) Any judicial proceeding pending on the date this section takes effect, and arising under any provision of law repealed by the provisions of Section 301, shall be continued, heard and determined in the same manner and with the same effect as if such provision had not been repealed; except that in the case of any such proceeding to which the Federal Maritime Commission is a party, the court, upon motion or supplemental petition, may direct that the Interstate Commerce Commission be substituted for the Federal Maritime Commission as a party to the proceeding or made an additional party thereto.

(e) If any provision of this title or the application thereof to any person, or commerce, or circumstance is held invalid, the remainder of this title and the application of such provision to other persons, commerce, or circumstances shall not be affected thereby.

AMENDMENTS TO SECTION 306 OF INTERSTATE COMMERCE ACT WITH RESPECT TO TRANSFER AND FILING OF TARIFFS, AND SCHEDULES OF CERTAIN WATER CARRIERS

SEC. 4 (a) Section 306(a) of the Interstate Commerce Act, as amended (49 U.S.C. 906 (a)), is amended by striking out the period at the end thereof and inserting a colon and the following: *"Provided,* That tariffs (or copies thereof) of common carriers by water containing rates, fares, charges, classifications, rules, regulations, and practices for the transportation in interstate or foreign commerce of passengers or property between places in Alaska and between places in Alaska and other places in the United States in effect and on file with the Federal Maritime Commission on the date this proviso takes effect, pursuant to the requirements of the Shipping Act, 1916, as amended, or the Intercoastal Shipping Act, 1933, as amended, shall be transferred to the Commission and shall be deemed to be filed with the Commission as of such date pursuant to the requirements of this part. Tariffs showing all other rates, fares, charges, classifications, rules, regulations, and practices for transportation by water common carriers between places in Alaska and other places in the United States, and between places in Alaska, made subject to this part by virtue of the enactment of the Alaska Water Carriers Act of 1969, shall be filed as provided in this part not later than one hundred and eighty days after the date on which this amendment takes effect."

(b) Section 306(e) of the Interstate Commerce Act, as amended (49 U.S.C. 909(e)), is amended by adding at the end thereof the following new sentence: "Schedules showing the minimum rates, charges, rules, regulations, or practices for transportation by water contract carriers between places in the United States and places in Alaska, and between places in Alaska over the high seas, made subject to this part by virtue of the enactment of the Alaskan Interstate Commerce Act, shall be filed as provided in this part not later than one hundred and eighty days after the date on which this sentence takes effect."

AMENDMENTS TO SECTION 309 OF INTERSTATE COMMERCE ACT WITH RESPECT TO "GRANDFATHER" RIGHTS OF CERTAIN WATER CARRIERS

SEC. 5. (a) Section 309(a) of the Interstate Commerce Act, as amended (49 U.S.C. 909(a)), is amended by inserting "(1)" after "Sec. 309(a)" and by adding at the end thereof the following new paragraph:

"(2) Subject to the provisions of Section 310, if any person (or his predecessor in interest) was in operation on the date on which this paragraph takes effect as a common carrier by water, in interstate or foreign commerce, between ports in Alaska and other ports in the United States, or between ports in Alaska over the high seas, and has so operated since that time (or if engaged in furnishing seasonal service only, was engaged in such operations in the year 1968 during the season ordinarily covered by its operations, and such operations have not been discontinued), except in either instance as to interruptions of service over which such person or his predecessor in interest had no control, a certificate shall be issued authorizing such operations, without further proceedings, if application for such certificate is made as provided herein on or before July 1, 1970. Pending the filing and determination of any such application, the continuance of such operations without a certficate shall be lawful. Applications for certificates under this paragraph shall be filed with the Commission in writing, and in such form, contain such information, and be accompanied by proof of service upon such interested parties as the Commission shall requre."

(b) Section 309(f) of the Interstate Commerce Act, as amended (49 U.S.C. 909(f)), is amended by inserting "(1)" after "(f)" and by adding at the end thereof the following paragraph:

"(2) Subject to the provisions of Section 310, if any person (or his predecessor in interest) was in operation on the date on which this paragraph takes effect as a contract carrier by water, in interstate or foreign commerce, between ports in Alaska and other ports in the United States, or between ports in Alaska over the high seas, and has so operated since that time (or if engaged in furnishing seasonal service only, was engaged in such operations in the year 1968 during the season ordinarily covered by its operations, and such operations have not been discontinued), except in either instance as to interruptions of service over which such person or his predecessor in interest had no control, a permit shall be issued authorizing such operations, without further proceedings, if application for such permit is made as provided herein on or before July 1, 1970. Pending the filing and determination of any such application, the continuance of such operations without a permit shall be lawful. Applications for permits under this paragraph shall be filed with the Commission in writing, and in such form, contain such information, and be accompanied by proof of service upon such interested parties as the Commission shall require."

AMENDMENTS TO PART IV OF INTERSTATE COMMERCE ACT, WITH RESPECT TO PERSONS, HERETOFORE REGULATED AS WATER CARRIERS, WHO WILL BE SUBJECT TO SUCH PART IV

SEC. 6. (a) Section 405(a) of the Interstate Commerce Act, as amended (49 U.S.C. 1005(a)), is amended by inserting "(1)" after "Sec. 405(a)" and by adding at the end thereof the following paragraph:

"(2) Tariffs (or copies thereof) containing rates, charges, classifications, rules, regulations, and practices for the transportation of property in interstate or foreign commerce by water between places in Alaska and other places in the United States, or between places in Alaska, filed with the Federal Maritime Commission pursuant to the Shipping Act, 1916, as amended, or the Intercoastal Shipping Act, 1933, as amended, by persons whose operations are those of a common carrier by water under the mentioned Acts, but whose operations are those of a freight forwarder under this part, in effect on the date this paragraph takes effect, shall be transferred to the Commission and shall be deemed to be filed with the Commission pursuant to the requirements of the Interstate Commerce Act as of the date on which this paragraph takes effect."

(b) Section 410(a) of the Interstate Commerce Act, as amended (49 U.S.C. 1010(a)), is amended by inserting "(1)" after "Sec. 410(a)" and by adding at the end thereof the following paragraph:

"(2) If any person (or his predecessor in interest) whose operations were those of a common carrier by water under the Shipping Act, 1916, as amended, or the Intercoastal

Shipping Act, 1933, as amended, but whose operations are those of a freight forwarder under this part, as in effect on the date this paragraph takes effect, was in operation in interstate commerce, on such date, between places in Alaska and other places in the United States, or between places in Alaska over the high seas, and has so operated since that time (or if engaged in furnishing seasonal service only, was engaged in such operations in the year 1968, during the season ordinarily covered by its operations, and such operations have not been discontinued) except in either instance as to interruptions of service over which such person or his predecessor in interest had no control, a permit shall be issued authorizing such operations as a freight forwarder without further proceedings, if application for such permit is made as provided herein on or before July 1, 1970. Pending the filing and determination of any such application the continuance of such operations without a permit shall be lawful. Applications for permits under this paragraph shall be filed with the Commission, in writing, and in such form, contain such information, and be accompanied by proof of service upon such interested parties as the Commission shall require."

Sec. 7. All provisions of law inconsistent with this Alaska Water Carriers Act of 1969 are hereby repealed.

ADDITIONAL COSPONSORS OF BILLS

S. 2355

Mr. ALLEN. Mr. President, on behalf of the Senator from North Dakota (Mr. BURDICK), I ask unanimous consent that, at the next printing, the name of the Senator from Alaska (Mr. GRAVEL) be added as a cosponsor of S. 2355, to establish an advisory commission to make a study and report with respect to freight rates for farm products.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2470

Mr. SCOTT. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from New Jersey (Mr. WILLIAMS), the Senator from Montana (Mr. METCALF), and the Senator from Idaho (Mr. CHURCH) be added as cosponsors of S. 2470, to amend the Food Stamp Act of 1964 to authorize elderly persons to exchange food stamps under certain circumstances for meals prepared and served by private nonprofit organizations, and for other purposes.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2683

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from New Jersey (Mr. CASE) be added as a cosponsor of S. 2683, to deny an income tax deduction for a charitable contribution by a public official of his collection of letters and other papers, and to limit the tax benefits of other gifts to charity of certain property which has appreciated in value.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR STAR PRINT OF S. 2360 AND ADDITION OF COSPONSOR

Mr. GOLDWATER. Mr. President, I have learned that a printing error was made in the original print of the bill which I introduced recently for myself and 24 other Senators to further protect the Grand Canyon in Arizona. In order to make a technical change in the text of this legislation which will correct the error, I ask unanimous consent that there be a star print made of S. 2360, a bill to enlarge the boundaries of the Grand Canyon National Park in the State of Arizona. Also, I ask unanimous consent that, at the next printing of such bill, the name of the Senator from Tennessee (Mr. BAKER) be added as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL COSPONSOR OF A CONCURRENT RESOLUTION

SENATE CONCURRENT RESOLUTION 32

Mr. ALLOTT. Mr. President, I ask unanimous consent that, at the next printing the name of the Senator from North Dakota (Mr. BURDICK) be added as a cosponsor of Senate Concurrent Resolution 32 providing for the Secretary of Transportation to make an investment of potential rail transportation over existing lines and rights-of-way for passenger and mail transportation in the United States.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE RESOLUTION 228—RESOLUTION EXPRESSING THE SENSE OF THE SENATE THAT THE PRESIDENT SHOULD RESUBMIT THE GENEVA PROTOCOL TO THE SENATE FOR ADVICE AND CONSENT

Mr. HARTKE (for himself, Mr. PELL, Mr. GRAVEL, Mr. YOUNG of Ohio, Mr. RANDOLPH, Mr. COOK, Mr. RIBICOFF, Mr. PROXMIRE, Mr. HART, Mr. INOUYE, Mr. PERCY, Mr. PACKWOOD, Mr. HARRIS, Mr. MUSKIE, Mr. MONDALE, Mr. BAYH, Mr. MCCARTHY, Mr. WILLIAMS of New Jersey, Mr. TYDINGS, Mr. HUGHES, Mr. CRANSTON, Mr. NELSON, Mr. BURDICK, and Mr. METCALF) submitted a resolution (S. Res. 228) expressing the sense of the Senate that the President of the United States should resubmit the Geneva Protocol to the Senate for advice and consent, which was referred to the Committee on Foreign Relations.

(The remarks of Mr. HARTKE when he submitted the resolution appear later in the RECORD under the appropriate heading.)

COLLECTION OF FEDERAL UNEMPLOYMENT TAX IN QUARTERLY INSTALLMENTS DURING EACH TAXABLE YEAR—AMENDMENTS

AMENDMENT NO. 109

Mr. LONG proposed amendments to the bill (H.R. 9951) to provide for the collection of the Federal unemployment tax in quarterly installments during each taxable year; to make status of employer depend on employment during preceding as well as current taxable year; to exclude from the computation of the excess the balance in the employment security administration account as of the close of fiscal years 1970 through 1972; to raise the limitation on the amount authorized to be made available for expenditure out of the employment security administration account by the amounts so excluded; and for other purposes, which were ordered to be printed.

(The remarks of Mr. LONG when he proposed the amendment appear later in the RECORD under the appropriate heading.)

HIGH COMMISSIONER EDWARD E. JOHNSTON ADDRESSES CONGRESS OF MICRONESIA

Mr. FONG. Mr. President, on July 15, Mr. Edward E. Johnston, the new High Commissioner of the Trust Territory of the Pacific Islands, delivered his first state of the territory message before a joint session of the Congress of Micronesia, the territory's highest legislative body.

Mr. Johnston was appointed to his post by President Nixon, his nomination was confirmed by the Senate, and he was sworn into office on May 1 this year.

In the short time since then, he has quickly assumed his many duties in the United Nations trust area of 94,000 people who live on 2,100 islands spread over 3 million square miles of the Western Pacific.

As administering authority of the far-flung territory, the United States has the responsibility of promoting the well-being of the Micronesian population. As the top American official on the scene, the High Commissioner has a key role in this responsibility.

In his address to the Congress of Micronesia, Mr. Johnston voices his determination to initiate and carry out a new era of progress in the trust territory. This new page of history, he says, was turned when, on May 4 this year, Secretary of the Interior Walter J. Hickel visited Micronesia accompanied by Mrs. Elizabeth P. Farrington, Director, Office of Territories, and other members of his staff. A new program was launched then to drastically accelerate the rate of progress in Micronesia.

Those who have followed U.S. administration of the trust territory are aware that the rate of progress in the past has not been as rapid as it could and should have been.

Mr. Johnston's message reviews this progress, then points the way to faster progress ahead. He particularly wants the Micronesians to have a more active and important role in the government of the islands.

A long-time resident of Hawaii prior to his appointment as High Commissioner, Mr. Johnston draws upon his experience and observations in the 50th State to offer helpful suggestions. For example, on the recurring question of "progress versus culture," he advises that it is not necessary for Micronesians to reject either progress in Western ways or their own cultural identity. Like Hawaii's people of many ethnic backgrounds, the people of Micronesia can accept and benefit from the advances in science, health, and education without having to deny their traditional culture.

Mr. Johnston's leadership is crucial at this time when the Congress of Micro-

nesia is considering the vital question of the future political status of the trust territory.

Mr. Johnston assures Micronesian leaders:

The United States is proud to be associated with Micronesia and we definitely desire to enter with you into a lasting and permanent partnership. . . . We have invited representatives of the (Micronesian) Congress, accompanied by members of the High Commissioner's staff, to visit Washington immediately after the conclusion of this current session, to assist in drafting the specific legislation to implement such partnership.

I congratulate Mr. Johnston for his encouraging, forthright address and wish him well in meeting the challenging tasks ahead.

I ask unanimous consent that the text of his address be printed in the RECORD.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

STATE OF THE TERRITORY MESSAGE,
JULY 15, 1969

(By Edward E. Johnston, High Commissioner, Trust Territory of the Pacific Islands)

Mr. Speaker, Mr. President, Mr. Chief Justice, distinguished guests, ladies and gentlemen:

For several months now, I have been looking forward to this occasion. Today is not only the first time that I have had the honor of addressing a legislative body in the role of Chief Executive, but it is my first opportunity to officially present my views on the future of the Trust Territory of the Pacific Islands to the members of this distinguished Congress and to the people of Micronesia.

In the short time in which I have held office, I have learned among other things, that the High Commissioner, in the course of performing his duties, must travel a great deal. One of the most important trips each year is for the purpose of reporting to the Trusteeship Council of the United Nations. I am pleased to inform you that our recent appearance before the Trusteeship Council was, in general, very favorably received and a great deal of the credit for this accomplishment should be given to the excellent representation provided by the two distinguished Special Advisors from this Congress, Senator Olympio Borja and Representative Chutomu Nimwes.

Before we leave the subject of travel, I would make two additional points. One, that in all my travels I shall have in mind a single objective—to constantly promote the welfare and progress of Micronesia—and, two, I will publicly acknowledge the outstanding performance of our Deputy High Commissioner, the Honorable Peter T. Coleman, during my recent absence from the Territory for an extended period of time. As I mentioned at his swearing-in ceremony, I am sure that the Deputy High Commissioner and I will continue to work closely as a team, and that both of us, along with our cabinet and staff, will maintain constant contact with the leadership of the Congress of Micronesia.

The first two and a half months of our new administration have certainly been crowded with important events. As we reported to the United Nations, a new era in the history of the Trust Territory began on May 4, 1969, when Secretary of the Interior Walter J. Hickel, visited Micronesia accompanied by Mrs. Farrington and other members of his staff. As of that moment, a new program was launched to drastically accelerate the rate of progress in the Trust Territory, a program which will have the full cooperation of other departments of the United States government, as well as the two Houses of the United States Congress. To assist us in carrying out this program, we are pleased to have with us today Mr. Edgar Kaiser, Jr., representing Secretary Hickel, and the members of a top-level team of experts, headed by Dr. Paul Cook, who are assisting us in obtaining proper funding to carry our program forward.

July 4th to 12th, 1969, was certainly a historic period for all of Micronesia. The first MicrOlympics accomplished, in a manner even exceeding the predictions of the most optimistic, its dual goals of training our Trust Territory athletes for competition in many events and bringing together for the first time, in a non-political non-governmental fashion, the people of all six Districts of Micronesia. The Congress of Micronesia is certainly to be commended for its foresight in providing funds for the MicrOlympics, and I am sure that the Members of the Congress would join with me in thanking the Olympic Committee, the Peace Corps, the citizens of our friendly neighboring island of Guam, and the Armed Forces of the United States, for their excellent team work in making this occasion so successful.

Let us now for a moment attempt to briefly summarize the progress which has been made since the first session of this Congress last January. One of the keynotes of this new Administration is to repeatedly increase the involvement of Micronesians in the Administrative Branch of their government and to tackle and, eventually solve the problems of a government operated on three different pay scales. Our eventual goal, of course, is equal pay for equal qualifications and equal work. Toward this end, a high-level position has been created and staffed for the sole purpose of training and upgrading our Micronesian personnel. We will soon add to our staff a highly-qualified Personnel Administrator with considerable experience in personnel management and the integration of pay scales. The fiscal year 1970 budget currently before the United States Congress includes approximately $750,000 for a pay raise for our Micronesian employees, and though we are now operating under a "continuing resolution" rather than an approved budget, I shall leave no stone unturned to make this well-deserved increase effective at the earliest possible moment.

Great strides have been made in the field of automatic data processing, and more will be made during the coming fiscal year.

The Executive Branch of the government has assisted in every way possible in the work of the Government Organization Committee of this Congress. We are looking forward to receiving their report in the near future so that we may work together with the Members of the Congress to make possible a further decentralization of many Trust Territory government activities and, at the same time, make possible more effective and realistic staff operations to guide and assist the District Administrators in carrying out their mission.

A milestone in the field of education will be reached in September with the opening of our Micronesian Occupational Center in Palau. Significantly, this Center will be staffed by five Americans and nineteen Micronesians, and we are sure it will play an important and continuing role in the education of our young people.

Our scholarship program has been reorganized to broaden opportunity and use scholarship funds more efficiently. The need for more counseling services, especially at the high school level, has been recognized and this activity has been increased. Efforts are underway to secure grants from the Ford Foundation, the National Science Foundation, and other sources to develop materials and programs in all areas of our school curriculum.

In the important area of health services, the Trust Territory is now a full member of the Public Health Service, Region 9, from which it is receiving funds for a new mental health program, a new and much augmented maternal and child care program, and new activities in the field of sanitation. We have also joined the Regional Medical Program, with offices in Hawaii, through which we are now planning a program for the early detection of cancer in women, and a program for better training and supervision of health aides. The National Communicable Disease Center in Atlanta, Georgia, is developing a team of experts and will concern itself with prevention and control of epidemics throughout the Trust Territory.

A major development in the field of health services, which will eventually be of great importance, was the selection of a Health Council of eighteen members, all Micronesians, and a majority of whom are not in the field of medicine. At policy level, and in full cooperation with the Administration, they have become very active in formulating with us our plans and guidelines. The Council is currently preparing recommendations regarding the feasibility of private practice in medicine and dentistry in the Trust Territory, and a report on plans to bring better health services to our outlying islands. In keeping with our program of Micronesian involvement in key positions, all six District Directors of Health Services are Micronesians, along with two physicians who will shortly be appointed Assistant Commissioners for Health Services, and the Directors of both the Division of Dentistry and the Division of Environmental Health.

Under the direction of our Commissioner for Public Affairs, a political education program has been initiated in cooperation with the Congress of Micronesia and the Department of Education. Our Micronesian News Service Bureau and our media program have been strengthened by a Trust Territory media conference held just a few months ago. Our efforts are continuing to make the Public Information Office and the Radio Broadcast Center even more responsive to the current needs of the people of Micronesia, and by the end of fiscal year 1970 our radio stations will reach 97% of our total population.

Our Commissioner for Public Affairs and his staff have worked in close cooperation with representatives of the Commander in Chief, Pacific, to institute a program involving Military Civic Action Teams in each of our districts. These teams will work with local residents to complete vitally needed construction projects, and the first two teams are now operating in the Truk and Ponape Districts.

During the past year we started over $25 million worth of capital improvement projects. This amount is greater than that of any previous year. Some of the major facilities that will be provided are:

The Micronesian Occupational Center in Koror;

The District Hospital on Moen;

The first phase of the new harbor for Ponape;

The improved Trust Territory-wide communications system;

The water and sewer systems for Saipan; and

Improvements to the power systems in Saipan, Moen and Koror.

In the past, your involvement in the formulation of the capital improvement program may not have been as comprehensive as you may have desired. With the impetus and support given to the Joint Budget Committee of the Congress of Micronesia by Secretary Hickel's statement during his visit to Saipan in May, and as a result of the intensive efforts of your Joint Budget Committee during the past two months, your views, recommendation and priorities will be given full consideration in the development of the annual budget for the Trust Territory.

In the coming years, we shall continue to provide needed capital improvements in the various districts. You will have a greater involvement than in the past in determining

what should be provided and in what priority.

For many years one of our greatest bottlenecks to Micronesian progress has been the lack of adequate facilities to communicate quickly and easily with the rest of the world—and even from district to district. I had hoped to report to you today that our long-needed phone link to Guam had been completed. Present indicators are, I am pleased to report, that it will be completed before the Third Session of the Congress adjourns in August, and all of our districts will be connected in one new, modern system by September 1970. I have asked for weekly reports of progress through this Session and monthly reports thereafter.

As I stand here before this Joint Session of the Third Congress of Micronesia, I am compelled to reflect that there is really very much that we, both Americans and Micronesians, have accomplished during the past few years. But, I am sure we are all in agreement that much has not been done and must be done as rapidly as possible. It is in our Department of Resources and Development that we seem to have centered those areas which represent our most perplexing and, yet, most challenging problems.

Our Transportation Division must be augmented by additional personnel and equipment. Toward this end we are in the process of recruiting such personnel, and six LCU's to be used as administrative vessels within each of our districts, will shortly be delivered to us through the cooperation of the Department of Defense and the TTPI representative, Commander in Chief, Pacific.

Our Economic Development Division is seeking to provide more expertise at the district level in each of our districts to develop our marine resources, agriculture, tourism, retail and wholesale trade, and other means of making our economy increasing less dependent upon government spending and government employment. Toward this end, Secretary Hickel has pledged to seek from the United States Congress an increase in the funding of our Economic Development Loan Fund to $5 million. Within the next few weeks Air Micronesia will begin construction of the first of six first-class hotels, and has already aided the Trust Territory immeasurably in the promotion of tourism as a growing part of our economy.

In 1935 the Japanese Government Administrator, when his nation held the Trust Territory under a League of Nations mandate, made the following comment: "Among the administrative problems concerning officials of the mandate, none has proved more complex or more delicate than the control of land." Almost thirty-five years later a member of the High Commissioner's staff stated that land "is the single most important item and by far the most sensitive issue that exists today in Micronesia." This certainly does not indicate any great progress in solving Micronesia's land problems. In fact, Representative Nimwes, in his opening remarks to the United Nations Trusteeship Council last month, pointed out that "Not one Certificate of Title has been issued and not one lot has been officially registered." We cannot escape either the seriousness or the magnitude of this problem, but this Administration has given itself a goal of being well on the way toward completion of land registration throughout the Trust Territory not later than June 30, 1970. In this respect, we have been pledged the cooperation of several departments of the United States Government and will certainly be calling upon the Congress of Micronesia for advice and assistance from time to time. However, in this area we must ask for the consideration and understanding of every citizen of Micronesia as we attempt to solve in one year a highly complex problem which has not been solved by any previous administration under four separate governments.

Of great concern to many of our people, particularly in the Marianas and Palau Districts, is the settlement of war damage and post secure damage claims. This, too, is a priority item on the agenda of the new administration, and I am pleased to inform this Congress officially that on April 18, 1969, the Governments of the United States and Japan, joined in an *ex gratia* agreement namely, one which does not involve questions of legal liability, to contribute $10 million to the inhabitants of the Trust Territory of the Pacific Islands, in view of the enormous wartime suffering which was their lot. It is the firm intention of this Administration to proceed as rapidly as possible to resolve the problem of post secure claims so that payment of these can be integrated with the distribution of the $10 million *ex gratia* war damage payment. The Post Secure Claims Office is now preparing recommendations on the establishment of a tribunal or commission to adjudicate claims for post secure damage in the Trust Territory, which should be completed sometime this month. Our Attorney General's office is also in the process of drafting proposed legislation for the appropriation of funds by the United States Congress to settle these claims.

Also, under the direction of our Attorney General, work has commenced on the new Trust Territory Code authorized by Public Law 4–17. It is anticipated that a complete manuscript will be presented to the Congress of Micronesia by July, 1970.

This brief summary has, in the interest of time, covered only highlights of the current state of the Trust Territory of the Pacific Islands. It is my intention to subsequently present to the Congress of Micronesia a more specific message on the Trust Territory budget, on government organization and, possibly, on other important subjects. I am also looking forward to a series of regularly scheduled breakfast meetings with the leadership of the Congress during the balance of this Session.

While I am afforded the opportunity to officially address this Congress for the first time, I should like to take a few more minutes to present some basic thoughts and principles which will guide my Administration as your High Commissioner. Although it is my understanding that this Congress will consider specific legislation designed to increase the revenues from local taxation, we will still be faced with the fact that for at least the next few years the major funding for the operation of our government will come from the United States Congress. In this respect, members of my staff and I have been assured on several recent occasions of the wholehearted cooperation of both the United States Senate and the United States House of Representatives in properly funding our many new programs for the economic and political development of Micronesia.

Our friends in Washington have told us that one of our drawbacks in the past has been an apparent unwillingness to let them know how much we really need, to accomplish the many things that must be done throughout the three million square miles of the Trust Territory. Let me assure you that this Administration intends to make abundantly clear to all concerned, exactly what we need in each area to accomplish our goals; and although we realize that in many areas priorities must be set within realistic budget limitations, it seems to me that the time has come for us to declare to all concerned that we will no longer establish "selective priorities" in those areas which concern the health, safety and, possibly, the very lives of the Micronesian people. If we need six fire trucks, or twelve ambulances, or ten police cars, or fifty fully-equipped dispensaries, we must leave no doubt in anyone's mind that we need these items simultaneously and not spread over a period of several years. In other words, we do not wish to make the terrifying decision as to which of our citizens shall have their lives properly protected and prolonged, and which ones shall have to wait several more years for the same facilities and services.

It should be clear to all concerned, from what has been said to this point, that this Administration is dedicated to the future progress of Micronesia. Over the next few years we shall be constructing roads, hospitals, schools, air fields, water and sewage systems, and other vitally needed public improvements as rapidly as possible. At the same time, we will stimulate the private sector to erect hotels, shops and stores, and other business facilities and installations. But, let us, at the same time, pledge to ourselves that building the future must not be allowed to destroy the heritage of the past. Steps are already being taken to preserve historic sites, to build museums and to make them available for the education and inspiration of our own people, as well as to provide information on our historic past to visitors from abroad. I, for one, refuse to be convinced that progress necessarily destroys culture. The United States of America is possibly the only great nation in the world where, on the same evening in the same city block, one might find an Irish wake, a Polish wedding, and a Jewish Bar Mitzvah occurring simultaneously. Each of these groups has joined in building America, yet none has completely separated itself from the heritage and customs of its past.

As you know, I lived for the past quarter century in the only area of the United States which went through the successive governmental stages of a Monarchy, a Republic, a Territory and, finally, the Fiftieth State of the United States of America. Certainly, no one can deny that Hawaii has made progress during each stage of this transition. Yet, here, again, the various ethnic groups which have built Hawaii have tenaciously held on to their native cultures. Each year the citizens of Hawaii and visitors alike enjoy equally the Hawaiian Aloha Week, the Japanese Cherry Blossom Festival, the Chinese Narcissus Festival and the Philippine Fiesta. In fact, our friends in Hawaii have one island, Niihau, whose citizens still live completely in the old Hawaiian tradition. Largely by their own choosing, they do without many of the comforts of modern living, but they are guaranteed the basic services essential to their health, education and welfare by their State Government.

Within a few short hours, three Americans will begin a mission designed to land them on the surface of the moon, and the mission seems to have every chance of success. It will be watched by the whole world, including Micronesia, and it occurred to me a few days ago that in this age of such tremendous scientific progress, I cannot for one minute accept the thought expressed by some who tend to think negatively, that there are two classes of people in the world—Micronesians and all the others. I refuse to believe that the people of Micronesia would voluntarily reject the advances in science, health and education which are so eagerly sought by all the rest of the world. And I am equally unwilling to accept the thought expressed by some that to enjoy these benefits Micronesians must forget or deny the cultural background which has made them one of the finest groups of people on this earth.

Bearing these principles and these thoughts in mind, we come now to the final and most important item to which we must address ourselves today—the future political status of the Trust Territory of the Pacific Islands. The Joint Future Political Status Commission of this Congress has worked long and diligently to prepare a report which will soon be submitted to the Congress and which, after debate and adoption, will express the views and desires of you gentlemen who so ably represent the people of Micronesia.

Just a few weeks ago, the Vice President of your Senate, the Honorable Olympio Borja, in his remarks to the United Nations

Trusteeship Council, said: "The United States, as the administrating authority, has not defined its aspirations, wishes or views with respect to the future political status of Micronesia." And he urged the United States to express its position so that an exchange of views might take place. To answer his request, let me make it abundantly clear to this honorable body today (and I am sure I speak for President Nixon, Secretary Hickel, and many others throughout America)—the United States is proud to be associated with Micronesia and we definitely desire to enter with you into a lasting and permanent partnership. We are prepared and anxious, from this moment forth, to discuss with this Congress, as the elected representatives of the Micronesian people, the exact nature which this partnership should take. We have invited Representatives of the Congress, accompanied by members of the High Commissioner's staff, to visit Washington immediately after the conclusion of this current session, to assist in drafting the specific legislation to implement such a partnership.

May I again express my appreciation to this Congress for inviting me to address you today. I am sure that my family and I will enjoy life in Micronesia and look forward to being a part of this growing area for many years to come.

During the Presidential campaign in 1968, a young lady named Vickie Cole, in the small town of Deshler, Ohio, carried a sign which gave President Richard Nixon the theme for his Administration, which began on January 21st this year. It has occurred to me many times in these past few weeks that this theme is particularly adaptable to our situation in the Trust Territory of the Pacific Islands. So, I would conclude this message to the distinguished Members of the Third Congress of Micronesia with the hope that you would agree with me that our task and our challenge in these coming months and years is to lead Micronesia "Forward Together."

PRESERVATION OF NATURAL RESOURCES

Mr. JACKSON. Mr. President, as Americans have increasingly become aware of the importance of conservation, it is our hope that private industry has begun to accept a greater responsibility to insure the preservation of some of our Nation's natural resources. Evidence that this is happening has been supplied by the Georgia Pacific Corp., which today donated a $6 million stand of prime redwood timber to the Nature Conservancy. This nonprofit organization, long noted for its efforts in conservation, expressed its thanks for Georgia Pacific's farsighted approach to one of America's growing problems. It is noted that the gift may represent the largest ever made by an American business firm for conservation purposes. This type of approach is indeed welcome by all Americans, and it is my hope that this concern will continue to grow to the benefit of all.

I ask unanimous consent to have printed in the RECORD a release by the Nature Conservancy describing this gift.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

GEORGIA PACIFIC DONATES $6 MILLION PRIME REDWOOD STAND TO THE NATURE CONSERVANCY

WASHINGTON, D.C.—The Nature Conservancy, of Washington, D.C., announced today the donation by Georgia Pacific Corporation, one of the nation's largest forest products companies, of a $6-million stand of prime redwood located on the Van Duzen River in Northern California.

The gift, which the Conservancy termed one of the largest in the history of the American conservation movement, embraces two redwood groves totalling 390 acres situated 12 miles southeast of Fortuna, California.

A brief, noontime ceremony was held today (Wednesday, July 30) at the site, attended by Georgia Pacific, The Nature Conservancy, Save-the-Redwoods League, and state park officials. Robert B. Pamplin, Portland, Oregon, chairman and president of Georgia Pacific, gave the deed to the property to Thomas W. Richards, of Washington, D.C., president of The Nature Conservancy, who symbolically handed it to William Penn Mott, chief of the California State Park System, which will administer the park.

Richards, as president of The Nature Conservancy, a national, non-profit organization formed to acquire and protect outstanding natural areas, praised the company saying, "This public-spirited gift is a tribute to the conservation awareness of Georgia Pacific officials. This marks a significant breakthrough for the conservation movement. This gift represents what may be the largest ever made by an American business firm for conservation purposes. Georgia Pacific, with the contribution, sets an example for America's resource-based industries. We are grateful to them and hope that other industries will follow their lead."

Included in the gift are some 206 acres of old growth redwood, classified triple 0, which signifies the oldest and best timber. Many of the trees are between 400 and 800 years old and a number are 15 or more feet in diameter. The volume of timber in the stand runs between 300,000 and 400,000 board feet per acre; the total amount of top grade redwood is enough to build houses for over a million people. The remaining land includes young growth redwoods and river bar and meadowlands.

Pamplin remarked, in making the gift, that "we have always recognized the need for recreational use of forest lands. We maintain several dozen beautiful parks in our western timber ownership for the use of the public." Earlier he noted that the company strongly believes 'in the multiple use of timber and timber lands. We believe this renewable resource can—and must—serve many masters."

Also present at the ceremony was Dr. Ralph W. Chaney, president of the Save-the-Redwoods League, the organization which has pioneered the conservation of California's redwood groves. Chaney expressed delight with the gift, noting that the "countless people who seek the tranquil beauty of the redwood region will be able to enjoy this park year after year."

The gift tract includes two groves and a connecting strip of land. The groves will be named after Pamplin and Owen R. Cheatham, founder of Georgia Pacific. The land has been held for park use since the turn of the century, first by the Hammond Lumber Company, and for the past 14 years by their successors, the Georgia Pacific Corporation. In the westernmost grove, there is an open recreational area and a swimming hole.

Administration of the new park will be from the nearby Grizzly Creek Redwood State Park.

OPPOSITION TO CUTBACKS AT FRANKFORD ARSENAL

Mr. SCOTT. Mr. President, since 1816 the Frankford Arsenal in Philadelphia has secured our Nation's defense needs. Frankford Arsenal is a key installation in the research and development program of the Army Materiel Command.

For more than 3 months my distinguished colleague from Pennsylvania, Mr. SCHWEIKER, and I have opposed the Defense Department's announced plan to uproot thousands of Philadelphia-area families by transferring the research and development activities at Frankford Arsenal to other scattered installations. We have demonstrated that the proposed transfers would waste taxpayers' money, weaken national security, and strike a severe blow at the economy of southeastern Pennsylvania.

An article published in this morning's Philadelphia Inquirer points to another danger involved in the Army's plan. There is a real danger that the United States could become dependent on foreign countries for vital defense materiel. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Philadelphia (Pa.) Inquirer, July 30, 1969]

ARSENAL LOSS RAISES FEARS

(By Clifford Linedecker)

Removal of the research and development division from the Frankford Arsenal could lead to American dependence on other countries for evolvement and manufacture of military armament, it was predicted here Tuesday.

The U.S. will be looking to such countries as Japan, Belgium, Germany and France for its arms, warned Kenneth L. Lyons, president of the National Association of Government Employees, "if Congress ever makes the tragic mistake of permitting destruction of our Frankfort Arsenal.

SERIOUS LOSS

Lyons appeared with S. Harry Galfand, director of commerce and city representative; and Thomas W. Langford Jr., regional economist and research associate of the Regional Science Research Institute, at a luncheon meeting of the Poor Richard Club.

The proposed cutback at the 110-acre facility at Tacony and Bridge sts., warned Lyons, would not represent a gain for any other arsenal, and would be a loss for the country.

DEFENSE BLUNDERS

"It would be an end to research and development on these weapons, at a time when our Army, Navy, Marines and Air Force need them most," Lyons said.

Lyons charged that a cutback at the arsenal would continue an "insane" pattern of Defense Department blunders in the last few years that has already seriously affected the quality and production of small arms.

Defense Department errors and meddling, he said, have resulted in situations where "half of our weapons wouldn't work" if our armed forces had been attacked in Europe.

He pointed to the often-criticized M-16 rifle in Vietnam, as another example of Defense Department blundering. "There have already been 142 modifications," he said, "and anytime one of our men can grab an enemy AK (NFLR) they prefer to use that."

Lyons contended that only 4 percent of the arsenal team of highly skilled workers in research and development are prepared to relocate if the division is moved.

"It would be almost an impossibility to recruit the scientists and technicians who would be needed to make research and development work elsewhere," he declared.

ANTIAMMUNITION REGISTRATION BILL

Mr. SCOTT. Mr. President, I want to announce my firm support of the bill introduced yesterday by the Senator

from Utah (Mr. BENNETT) to amend a major part of the ammunition registration section of the gun control law of 1968.

This bill is almost identical to the Bennett-Scott bill introduced earlier this year which was later withdrawn for parliamentary reasons. I am delighted to join with Senator BENNETT in this new bill.

The Treasury Department has interpreted the ammunition registration provisions of last year's gun bill in such a way that it does not conform to the intent of Congress. Our bill would exempt from this burdensome registration procedure the kind of ammunition most commonly used by legitimate sportsmen.

I urge Congress to act on the bill before the hunting season opens this fall, to prevent confusion and unnecessary hardships on thousands of legitimate hunters and sportsmen in Pennsylvania and throughout the country.

The purpose of the Gun Control Act of 1968 was to help to prevent crime and acts of violence. It was not intended to restrict or harass sportsmen. But in fact, law-abiding citizens are suffering unnecessary inconveniences and burdens because of the interpretation of the act by the Treasury Department.

Our new bill makes it clear that Congress does not intend for sportsmen to be treated as criminals.

On the other hand, criminals who misuse firearms to commit felonies should receive prompt and severe sentences. I have cosponsored and testified in favor of the bill by Senator MIKE MANSFIELD (S. 849) to provide tougher mandatory sentences when guns are used in committing Federal felonies. Of the 20 robberies which were reported in yesterday's Washington Post, 12 were committed by criminals with guns. Tragedy was averted in one case only because the weapon misfired when the trigger was pulled.

The Mansfield bill will assure that criminals who threaten society with firearms will receive strict sentences.

I have joined in sponsoring both bills because I believe we must distinguish between the law-abiding sportsman who has a legitimate right to carry a firearm, and the criminals in our society who misuse guns and terrorize our citizens.

FUTURE NATIONAL GOALS

Mr. BURDICK. Mr. President, the staggering success of our Apollo 11 moon shot has, quite properly I think, raised the question, "Where do we go from here?" The answer to this question will chart our future for many years to come.

Dave Dyke, editorial director of the North Dakota Broadcasting Co., has kindly furnished me a copy of a recent KX network editorial on the subject. I commend KX for raising these questions. I know I look forward to having the suggested answers.

Mr. President, I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHERE DO WE GO FROM HERE?

Our moonwalking astronauts are safely home, so now might be a good time to examine where we go from here with regard to our national emphasis. The space scientists have proven their point with the moon landing, now possibly we need to establish some new national goals toward which the United States can devote its resources of time, talent, and money.

In this land of plenty, it is increasingly evident there is a real problem of poverty. As our citizens live longer lives we see growing problems for the aging. We are still faced with the challenge of conquering many of the diseases that plague mankind, and man has yet to learn to live in peace with his fellowmen. Any one or more of these problems could be a proper target for a major national effort, similar to our recent space effort.

We feel the American people would give full support to any such worthwhile new national project, but the voice of American people should be heard in the setting of any such priority of effort. This means the American citizen must speak up, must speak out, to let his opinion be heard.

The management of this station would urge every concerned citizen to write or otherwise contact their congressman or senator—or the president, to let these national leaders and decision makers know what you feel should be the next target among the several problems that face our nation and our world. You tell them how you want your tax dollars spent.

CAN THE INFANTS SURVIVE?

Mr. INOUYE. Mr. President, I recently had occasion to read a provocative article published in the June 1969 edition of the Bulletin of Atomic Scientists. It is an article written by an eminent radiologist, Dr. Ernest Sternglass, a member of the Department of Radiology and Division of Radiation Health, University of Pittsburgh. Dr. Sternglass has discovered new data that indicates the potentially catastrophic consequences of a nuclear attack not only on the immediate victims but also on the living and unborn, upon whom must rest the hopes for the regeneration of mankind. The evidence that Dr. Sternglass has gathered illustrates that one of the effects of a large-scale use of nuclear weapons will be the poisoning of genetic material with the danger of the extinction of mankind.

As a layman, I do not feel competent to comment authoritatively on Dr. Sternglass' thesis. Nevertheless, I feel that his findings do add a new dimension to the debate currently raging over the deployment of the anti-ballistic-missile system. If in fact his data is accurate, we may discover that we, the ostensible victors in a nuclear exchange, may have been doomed by the reckless actions of the Soviets and the system which was to have saved us from destruction.

I ask permission to have Dr. Sternglass' thesis printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAN THE INFANTS SURVIVE?

(By Ernest J. Sternglass)

(NOTE.—Discussion of chances of recovery from a major nuclear war becomes meaningless, charges physicist Ernest Sternglass, when the children of the nation that launched the strike would die before reaching maturity. Dr. Sternglass's comment is based on data he presented in the April "Bulletin." Dr. Sternglass is a member of the Department of Radiology and Division of Radiation Health, University of Pittsburgh.)

F. J. Dyson's "Case for Missile Defense" (April "Bulletin"), although obviously based on a deeply felt moral revulsion against nuclear war and a sincere desire to minimize its apocalyptic consequences, nevertheless rests on a fundamental fallacy as to the nature of nuclear weapons which has until now been widely accepted in the absence of any serious evidence to the contrary.

This basic fallacy, which vitiates all four of the points in favor of defensive missiles made by Dyson, is to regard nuclear weapons as basically nothing more than large explosive devices or fire-bombs accompanied by a flash of radiation, whose effect may be more or less judged by the local destruction they produce on the targets at which they are aimed, with relatively minor long-range radiation effects on distant populations or succeeding generations that pale in comparison with the immediate effects.

However, the mounting evidence for unexpectedly serious biological effects produced by low dose-rate fallout radiation on the reproductive system and the developing human embryo outlined in the April "Bulletin" makes it clear that the more important aspect of the large-scale use of nuclear weapons in warfare as far as mankind as a whole is concerned would be their action as a subtle new form of biological poison that could lead to the extinction of nations through their action on the genetic material.

The reproductive cells and the developing early embryo can apparently be seriously damaged by ingested or inhaled quantities of Sr-90 some tens to hundreds of times smaller than those needed to produce leukemia or bone cancer in the mature adult. Thus the situation can arise whereby many cities and their existing populations might survive a nuclear war as a result of ABM systems combined with shelters, only to have the society come to an end as the infants born to the survivors die in their first year of life.

We find ourselves confronted with the utterly new situation in which, contrary to all our past thinking, even targets that are either not attacked, or are protected by an anti-ballistic missile system, can be destroyed if these "targets" are people. Dyson's point that "if you are sitting in a city which is not attacked, the defense has worked" therefore becomes specious: the population might indeed have been saved, only to see the end of the very society which they sought to preserve as the newborne die one by one before reaching maturity as a result of the inhaled and ingested radioactive fallout quickly distributed throughout the atmosphere.

It is therefore clear that in the light of the long-range worldwide biological effect of nuclear weapons, all past calculations as to casualties, "loss-exchange ratios" and chances of recovery from a major nuclear war in the presence or absence of anti-missile systems or shelters becomes utterly and completely meaningless. In fact, even the threat of a massive first strike by one major power against another loses all credibility when the resulting release of fission products into the world's atmosphere would be sufficient to insure that the children of the nation that launched this strike would die before reaching maturity.

And yet this is precisely what the existing data on infant mortality as a result of the very limited peace-time testing of nuclear weapons show: The U.S. infant mortality reached about twice the normally expected value by the time the test-ban came into effect in 1963, in a manner directly correlated with the amount of Strontium-90 in the milk and infant bone. This means that close to one out of 100 children born died

before reaching age one as a result of the release of some 200 megatons' worth of fission energy or some 20 million curies of Strontium-90 in remote test-sites and at high altitudes above the atmosphere. Since a first strike, in order to have any chance at all of being effective, would have to involve some tens of thousands of megatons, detonated close to the ground, probably in the form of biologically more effective small multiple warheads carried by MIRVs (multiple independent re-entry vehicles), it is clear what the effect of such a massive release of long-lived fission products into the circulating air-currents of the atmosphere would be, regardless of where the bombs were aimed or where on the ground or above the atmosphere they would detonate.

And since ABM systems, whether effective or not, force an escalation of the number of offensive warheads, not to speak of the additional multi-megaton warheads in the three-to-five anti-missiles needed for each incoming warhead to achieve interception, the net result of their installation would be to seal the doom of mankind ever so much more firmly if the now unstabilized deterrent should ever fail.

The ethical and moral considerations that moved Dr. Dyson to opt for more defensive rather than offensive missiles must therefore be extended to the broader question: Does any nation have the right to destroy the lives of innocent children in countries throughout the world in a vain effort to insure the survival of its own particular ideology and way of life, by weapons that release an indiscriminately-acting, long-lasting biological poison into the world's atmosphere?

COMMENT ON STERNGLASS THESIS

I welcome this chance to call attention to Ernest Sternglass's article, "Infant Mortality and Nuclear Tests," in the April "Bulletin." I urge everybody to read it. Compared with the issues which Sternglass has raised, my arguments about missile defense are quite insignificant. Sternglass displays evidence that the effect of fallout in killing babies is about a hundred times greater than has been generally supposed. The evidence is not sufficient to prove that Sternglass is right. The essential point is that Sternglass may be right. The margin of uncertainty in the effects of worldwide fallout is so large that we have no justification for dismissing Sternglass's numbers as fantastic.

If Sternglass's numbers are right, as I believe they well may be, then he has a good argument against missile defense. I have used the same argument myself in an article against bomb-shelters ("Thoughts on Bomb-Shelters," March 1962 "Bulletin"). Only I think the argument applies even more strongly against offensive forces of the size that we have now deployed. Our most urgent objective should be to get rid of the B-52 force which still carries the bulk of our deliverable megatons. Let us hope that Sternglass's argument may impel both sides in the forthcoming Soviet-American discussions to consider some drastic reduction of offensive force-levels.

So far as defense is concerned, the logic of Sternglass's numbers makes it highly desirable to develop a system using non-nuclear interceptors. We do not have a non-nuclear defense ready for deployment now, but I consider the chances good that we could develop one if we tried hard enough. In the long run, I believe a non-nuclear defense would be politically stabilizing and would facilitate the reduction of nuclear forces to levels which would not endanger the survival of mankind.

FREEMAN J. DYSON,
Institute for Advanced Study, Princeton, N.J.

APOLLO 11: MISSION ACCOMPLISHED

Mr. GOODELL. Mr. President, 8 years ago we set our national sights on a lunar landing and the safe return of our astronauts back home.

Now we have accomplished this mission.

As a nation, we are justly proud of the human spirit, the superb mastery of technology and the truly national effort which have combined to propel the community of man to the moon.

Astronauts Neil Armstrong, Edwin Aldrin, and Michael Collins—after the successful completion of their historic exploration of the moon—have returned home. Americans and the people of the world have welcomed them and have commended them on their remarkable feat and outstanding bravery.

Now, while attention focuses on the health safety of the astronauts; while we are hopefully awaiting the end of their quarantine period; while we wonder what new knowledge will come from the photographs taken; while we await discoveries from the study of lunar rocks and soil brought back to earth; while we are suspended in hope and wonder over the unknown, Apollo 11 is remembered for many things which are already known.

Indelibly marked on our memory of Apollo 11 is the courage of our astronauts; the teamwork at mission control; the encouragement given by President Nixon as he spoke to the astronauts on the moon of "the greatest moment of our time," a moment when all of the people on this earth are truly one—in pride and in prayer.

In our memory also is Apollo's message to future moon visitors:

Here men from planet Earth first set foot upon the moon, July 1969, A.D. We came in peace for all mankind.

With this in mind, we wonder now about future visitors to the moon, and the frequency of visits. We wonder about interplanetary exploration and we know that Mars is man's next step. The Mariner Mars program is well under way. With the Mariner flybys scheduled for this week and next, we can expect photographic closeups of Mars. Television viewers now knowing what it feels like to walk on the moon, will also know what it feels like in a spaceship homing in on Mars.

Mr. President, on various occasions I have expressed my views on post-Apollo space programs. I have urged that NASA give top priority to application of space-related knowledge to the needs of people here on earth.

This does not mean to suggest that we turn our backs on further space exploration. What it does mean is that we avoid a crash-effort approach to future space exploration and that we guard against the tremendous drain on resources which such crash efforts entail. We can, and I think we should, digest what we have learned from the lunar landing. We should proceed with more moon exploration at an even, steadied pace rather than at a hectic and hurried one. We should proceed with unmanned exploration of planets and do so with international cooperative effort. This, I think, should be our approach to future space programs rather than the crash-effort approach which would thrust our astronauts on Mars by the 1980's which scientists say is technically possible. Alongside of what is technically possible for future space feats, I think we simply must view our space goals in the context of the immediate need to improve life here on earth.

Spinoffs from space achievements can be helpful to life here on earth. Some byproducts have already begun to influence our lives and hold hopes for the future. I am particularly interested in the potential of space developed fortified foods in meeting the problem of malnutrition in this country and throughout the world. Health needs may be met with medical innovations resulting from space related research. Space scientists have discovered a metal called "vitallium" which is now under study at Cornell Medical Center for potential use in making artificial human joints. Consumer needs may also be met in a variety of ways. Among the consumer byproducts of the space age which already exist is a $2 blanket that can reflect radar signals and can be used to rescue lost hunters or stricken yachtsmen.

Mr. President, we must act now to encourage civilian applications of space-related knowledge. Such useful byproducts for our people and the people of the world whether in health, safety, housing, communication or transportation needs, must not be bypassed. Rather, space technology utilization must be pressed to the forefront in our deliberations on future space program planning.

Man first stepped on the moon with the words:

That's one small step for man; one great leap for mankind.

Future space steps are now focal points of discussion. NASA Administrator, Thomas Paine, has said:

I think the significance of the trip is indeed that mankind is going to establish places of abode outside of his home planet, the Earth.

While lunar and planetary communities may be very long-range extrapolations from present technology; while steps toward these ends may be just plain engineering good sense; while today we reflect on these possibilities, I am particularly struck by the thought expressed in a New York Times editorial of July 30, entitled "Evolution Into Space," which reads:

It will take years, decades, perhaps centuries, for man to colonize even the moon, but that is the end inherent in Armstrong's first step on extraterrestial soil. Serious and hard-headed scientists envision, even in the not remote future, lunar communities capable of growing into domed cities subsisting on hydroponically grown food, of developing the moon's resources, and eventually of acquiring a breathable atmosphere and a soil capable of being farmed. What with the dire threats of population explosion at best and nuclear explosion at worst, the human race, as Sir Bernard Lovell warns, may find itself sometime in the 21st century "having to consider how best to insure the survival of the species."

Mr. President, I think it is time for more good commonsense here on earth. We need to direct our energies toward achieving more livable cities; toward eliminating hunger at home; toward preventing the dire forecast of world mass starvation in the 1980's; toward acquiring a breathable and safe environment here at home; and toward stemming the escalated arms race with its vast destruction potential and doomsday capability.

All of these things remain to be done. I am hopeful that these more earthly feats will not be overlooked as we chart our course further into space.

THE PESTICIDE PERIL—XXXV

Mr. NELSON. Mr. President, in May of this year a special Committee on Persistent Pesticides of the National Academy of Sciences issued the results of its 2-year study on the growing controversy over the use of pesticides. According to an editorial published in the July 1969, issue of Audubon, the magazine published by the National Audubon Society:

> The report illustrates the characteristics, difficult, and dangerous conflicts of interest that beset our new technoscientific civilization.

Although the report recognizes that "worldwide environmental contamination by DDT is serious" and that general use of DDT will continue until the Government imposes controls, the Academy still failed to recommend a ban on DDT.

A clue to this apparent contradiction between the findings of the study and the recommendations—or lack of recommendations—of the Academy might lie in the backgrounds of the 11-member Committee. Eight, including the chairman, had close commitments to the agricultural community; two represented the chemical industry; while only two had orientation in ecological problems. Of the more than 80 witnesses appearing before the Committee, only 19 could be considered as being ecologically oriented.

As the editorial clearly pointed out:

> The majority, therefore, came to this assignment with the self-assurance that chemical pesticides are "good" since they have helped increase agricultural production.

It is apparent that the effect of persistent pesticides on the ecological balance within our environment was not uppermost on the minds of most of the committee members and its witnesses.

As the Audubon Society puts it so well:

> We have a right to expect more from the National Academy of Sciences—at least the recognition that given our contemporary illiteracy in ecology, this twenty-year pesticide controversy will not yield to concensus.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE ACADEMY OF SCIENCES LAYS ANOTHER THIN-SHELLED EGG

In November 1966, the U.S. Department of Agriculture asked those scentific advisors to the nation, the National Academy of Sciences/National Research Council, to appoint a special Committee on Persistent Pesticides to help review the rising challenge to the use of these chemicals mounted by conservationists and a growing segment of the scientific community. The eleven-member committee heard testimony from more than 80 witnesses and issued a report on May 27th, 1969.

The report illustrates the characteristic, difficult, and dangerous conflicts of interest that beset our new technoscientific civilization. It recognizes that controlling the long-lived residues of DDT and other similar chemicals in the world environment will require regulation by all nations. It also recognizes that DDT has had an unfair economic advantage over other more acceptable insecticides, and that worldwide environmental contamination by DDT is serious, but that unless (and until) governmental regulations eliminate the present advantage of cheapness that makes DDT so popular, it will continue in general use.

Despite this, the committee, speaking for the National Academy of Sciences, failed to recommend a ban on DDT!

In 1963 another special committee of the academy failed utterly to come to grips with the problem of persistent pesticide contamination, and the academy's staff recognized the failure. Why did it fail again?

A thorough analysis of the false philosophical assumptions that beset the academy and all of us may be necessary to answer this question fully, but it may suffice to suggest here that too many of the tools and techniques we have so proudly and naively developed are simply beyond our current ability to use wisely. The technologist has become the sorcerer's apprentice! Chemists, engineers, and economists, who make most of the decisions to loose these inventions on the landscape, are unfortunately the least qualified to judge their possible effects.

The academy's Committee on Persistent Pesticides should have been an ecological board, since the pest control problem and pesticide pollution are both ecological problems. But only two of the eleven members were so oriented. Eight others, including the chairman, had backgrounds and philosophical commitments close to the agricultural community; two were from the chemical industry. Even though all these men were highly qualified and respected specialists, most of them were ecologically incompetent.

The majority, therefore, came to this assignment with the self-assurance that chemical pesticides are "good" since they have helped increase agricultural production; this too is "good" because our growing population requires it. The "problem" they were asked to analyze simply called for examining present pesticide use policy to see where it might be *perfected* to minimize formerly unrecognized conflicts, and to assure the public that its interests are being well taken care of by experts, both those on the committee, others in the academy, and all those thousands of experts who have implemented the vast technical programs of modern agriculture.

This is a case where we suffer from the democratic notion that majority opinion is right per se, with "public relations" substituting for education. This stumbling block is evident in the makeup of the persons interviewed by the committee: nineteen more or less ecologically oriented witnesses were exactly counterbalanced by nineteen industry spokesmen whose job has been to produce and sell the technology that has gotten us into trouble. The other testimony came from three people in food processing, fourteen in public health (as yet an unecological field), and twenty-eight from agriculture, men who planned and directed our commitment to DDT!

This report does mark at least one important advance. Though its recommendations are altogether vacuous, it does recognize the damning evidence—but carefully buries it deep in the text, where few will read it. More research is called for, of course, which is always a good way to put off action; in this Age of Science, research is like absolution to medieval man. If we stopped poisoning we could research more important things, and save life too, perhaps more than we know.

The other reliable roadblock to restrictive action is to insist, as this report does, that there are yet no satisfactory alternatives to DDT. It does not specify what it is that cannot be controlled by other means, or how important it is to control at all. Confront any man and he will be against sin—until the next time he wants to sin. And so we are now all, perforce, against pollution—except when it is profitable to pollute, whether with pesticides, oil, or what have you.

We have a right to expect more from the National Academy of Sciences—at least the recognition that given our contemporary illiteracy in ecology, this twenty-year pesticide controversy will not yield to consensus. Someone has to lead, to educate, to hold the mirror up to man.

WHERE RESPONSIBILITY LIES

Mr. HATFIELD. Mr. President, as common as the human tendency to pass the blame for wrongs is the human proclivity to pass the buck for the curing of ills. Such is often the case among the private and public sectors of our Nation.

Jack Sugg, president of the Associated Oregon Industries, recently brought this problem to light as it relates to the relationship between private business and Government regulation.

In his compelling commentary in the July issue of News Digest, Mr. Sugg reiterated the free enterprise approach to problems of and with industry and the practical approach to Government's role—as other than the cure-all and end-all of the problems of business and consumers.

It is with encouragement and with admiration for Mr. Sugg's appraisal of where responsibility lies that I ask unanimous consent that "We, Not They" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE, NOT THEY

(By Jack Sugg)

It seems popular these days to look to government at all levels to remedy problems or dissatisfactions of the people. Government is the "they" in "They should do something," and the oft-sighed "There ought to be a law" wishes that "they" would act.

Most measures aimed at so-called consumer protection follow such lines of reasoning. Though contrary to the basis of our free market economy, they represent a limp-wristed desire of many people to substitute distrust and regulation of business for free choice and individual moxie.

It's always refreshing, therefore, to see examples of business constructively policing itself. Such an instance is found in "The Right Thing to Do," a comprehensive code of ethics recently endorsed by the National Association of Direct Selling Companies and the National Better Business Bureau, Inc. Sub-titled "A Credo of Business Responsibility," the prinicples apply to direct selling, verbal representations and advertising of commodities or services sold at people's homes or other places not on the premises of the supplier or seller. Faithful compliance, say the sponsors, "will increase public confidence in the direct selling industry and thereby help to protect the consumer and legitimate business from unfair and deceptive practices.

Listed under 16 headings, the standards

demand accuracy, bona fide offers with adequate supplies to back them up, truthful advertising illustrations, and that customers receive copies of completed contracts and written orders or receipts showing the name and address and the seller. Contract cancellation is called for in case of fraud, misrepresentation or undue influence.

Guarantees must be explained fully as to scope, limitations and conditions, according to the code. Customers should be told whether price savings are compared to previous prices or to prices of other sellers, and when a contract may be sold or assigned to a financial institution.

The standards discourage use of "list" prices, "lifetime" guarantees, "free offer" gimmicks, superlative claims unless backed by fact. They urge that multi-level sales plans conform to existing law and avoid exaggerated earnings possibilities, and that salesmen refrain from attacking competitors or disparaging their products. And they prohibit pre-ticketing items with phony "original" prices, deceptive offers, chain referral selling, asking persons to sign blank contracts, and using false or misleading advertising in recruiting salespeople.

Such ethical standards, of course, always have been used by successful salesmen, for their success has depended upon goodwill and repeat customers. Despite popular sentiment that a vague government "they" should do something, the fact remains that a responsible free choice, free market system is the consumer's best watchdog.

"We" in business must preserve the trust that makes this a fact.

TRAILS EASY WAY TO EXPLORE AMERICA

Mr. JACKSON. Mr. President, the National Park Service of the Department of the Interior on July 13 issued a press release pointing out that increasing numbers of Americans are following land and water trails this summer.

Many of these trails are really automobile routes that follow in the footsteps of the pioneers or explorers, thus providing an easy way of exploring history. One of these, for instance, is the Lewis and Clark Trail—1,000 miles of good roads from St. Louis, Mo. to Fort Clatsop on the Pacific Ocean.

There are also waterway trails that can be followed utilizing transportation ranging from houseboats to canoes.

And there are wilderness trails, such as those designated in the National Trails System which the 90th Congress established only last year.

The details of this expanding outdoor recreation opportunity is best told by the National Park Service, Mr. President, and I ask unanimous consent that its press release be printed in the RECORD.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

LAND AND WATER TRAILS EASY WAY TO EXPLORE AMERICA

Many Americans are taking to the trails this summer.

This doesn't mean they're necessarily following a winding footpath through the forest, but that they've discovered the scores of land and water trails that are available for vacationers.

Whether by houseboat or canoe, on foot or in an automobile following a regional trail can be a great experience for the whole family.

One of the easiest ways of exploring history, and enjoying outdoor recreation at the same time, is by following one of the many regional automobile trails crisscrossing the country. These are modern highways specifically designated to follow a historic or scenic route and, generally, marked with an identifying symbol. They're designed for moderately high speed automobile traffic, not foot travel.

The Dixieland Trail, with a distinctive marker of a silhouetted Southern belle, takes you through the famous Bluegrass state of Kentucky into areas of Tennessee and North Carolina and the panoramic countrysides of South Carolina and Georgia.

The Lewis and Clark Trail winds over 1,000 miles of good roads from St. Louis, Missouri to Fort Clatsop on the Pacific Ocean. You can be a Modern explorer on this trail that passes through 11 states, closely paralleling the original route. This is a great trip for historical sightseeing, but there are many recreational opportunities along the way and cities such as Kansas City and Portland are included.

The Old West Trail steers you through the five states of Nebraska, North and South Dakota, Montana and Wyoming. Along this advanturesome route, you can visit historic museums, stop at an Indian pow-wow, or camp out for a few days of hiking, fishing, hunting, or mountain climbing.

The Hiawatha Pioneer Trail travels through Iowa, Illinois, Wisconsin and Minnesota. You'll have a chance to sample the history, agriculture, culture and recreation of America's mid-west region along this trail.

The Ozark Frontier Trail is a memorable loop from St. Louis across Missouri and Kansas, down into Oklahoma and east to Arkansas.

The Lincoln Heritage Trail, starting in Illinois and continuing into Indiana and north central Kentucky encompasses many highlights of the boyhood and career of your 16th president.

New England's Heritage Trail begins in Norwalk, Connecticut, and meanders through the six northeastern states. Early American history will mean more to you when you've stopped at such places as Mystic Seaport with its Waterfront Village, and Cape Cod, famous for its quaint fishing villages and beautiful seashore. There's even a Freedom Trail Walking Tour of Boston available on this route.

To make sure you don't miss important local points of interest, many states and even some cities have inaugurated their own automobile trail systems. The George Washington Trail, for instance, takes you through the coastal section of South Carolina; The Charter Oak Trail begins at Hartford and continues through the state of Connecticut; the Liberty Trail covers the five southeastern counties of Pennsylvania and includes a ride on a scenic railroad along the way; and the Hill Country Trail is one of ten new automobile trails in Texas.

For more information on any of these state or regional trails, write to the tourist office of the state you'd like to visit and ask for their free brochures on automobile tours of their areas. Tourist directors are located in the state capitals.

Regional trails aren't limited to land, however. If you'd like to vacation on water, there are many river and stream trails that provide great fishing, swimming, and boating fun. Houseboats are available for rent in many parts of the country and canoe or float trips are possible, also. Check your state Travel Office or Game and Fish Department for established rental agencies.

Following a trail into the wilderness can be an exciting experience too, but it needn't be a difficult one. Several organizations have set up guided trips into remote regions in various parts of the country.

The Wilderness Society, for instance, offers 45 expeditions this year, including 14 horseback pack trips, 16 walking trips, nine backpacking expeditions, three waterway trips, two ski outings and an Alaska tundra trek. The trips are planned to take into account the inexperienced wilderness travelers as well as the seasoned outdoor enthusiasts. Local outfitters provide most of the equipment and make complete arrangements from the time you arrive at the starting point until the trip is over. You don't have to be a member to take part.

For a listing of available expeditions and fact sheets on the individual trips, write The Wilderness Society, 5850 Jewell Avenue, Denver, Colorado 80222.

Other organizations that promote hiking and outdoor tours are the Appalachian Mountain Club, 5 Joy Street, Boston, Massachusetts 02108; the American Forestry Association, 919 17th Street, N.W., Washington, D.C. 20006; and the Sierra Club, P.O. Box 3471, Rincon Annex, San Francisco, California 94120. For information on hiking and biking trips, contact the local branch of the American Youth Hostels, or the national headquarters at 535 West End Avenue, New York, New York 10024.

One of the most famous regional trails in the country is the Appalachian National Scenic Trail—a beautiful hiking trail that extends 2,000 miles from Maine to Georgia. The route, marked by an identifying symbol can be picked up at any place and you can hike for as little or as long as you'd like. If you're planning an extended hike, you should write for the guidebooks and maps to The Appalachian Trail Conference, 1718 N Street, N.W., Washington, D.C. 20036. Prices are nominal.

Whether you want to canoe in Wisconsin, drive through Maine, hike through North Carolina, backpack in Colorado, or fish in Oregon, regional trails will make traveling easier for you. Look for the identifying marker on whatever route you're following. You'll find it will add greatly to your enjoyment of the countryside, and, probably, lead you to some sights you might have missed.

CONCLUSION OF MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, is there further morning business?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of the unfinished business.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Chair recognizes the Senator from Oregon.

Mr. HATFIELD. Mr. President, on March 14 the President announced his decision to deploy the Safeguard antiballistic-missile system. At that time, the administration gave three reasons justifying its need:

1. Protection of our land-based retaliatory forces against a direct attack by the Soviet Union;

2. Defense of the American people against the kind of nuclear attack which Communist China is likely to be able to mount within a decade;

3. Protection against the possibility of accidental attacks from any source.

Originally, the proponents of this system seemed to give greatest emphasis to the possible threat posed to our deterrent forces by the Soviet SS–9 missile development. But, many have effectively questioned whether the Soviets have either the intention or the capability to develop a first-strike force. Such questioning appears to have had an impact of those supporting the ABM. Now, the first-strike threat seems to be given less emphasis and the role of Safeguard in protecting our population against an accidental missile launch and a Chinese attack have been given greater attention.

I would like to discuss all three aspects of this issue: first, alternatives to Safeguard for the purpose of assuring the viability of our deterrent; second, the Chinese threat; and third, the role of Safeguard in protecting against accidents.

Let me emphasize that the ABM advocates have presented no plausible evidence that the Soviets have the ability or intention to deploy strategic forces which could threaten the viability of our deterrent. A Soviet commitment to achieve meaningful strategic superiority over the entire array of our massive deterrent force would be the most costly, unrealistic, and misguided strategic decision they could make; and I believe they know this to be the case. But, even if prudence counsels one to accept the administration's dubious assertions that the Soviets are seeking a first-strike capability, the proposed Safeguard system seems to be a wholly inappropriate response. Alternatives to Safeguard exist which are less costly and more reliable. Most important, they can be implemented far more rapidly, thus allowing us to determine whether the Soviets are interested in reaching arms control agreements or in pursuing the arms race.

Thus, additional missiles might be deployed. Our land-based missiles might be placed in silos with greater resistance to the effects of a nuclear detonation. Bombers might be more widely dispersed and placed on air alert. A greater fraction of the Navy might be assigned the role of protecting our Polaris submarines. We might place Polaris missiles on the surface ships in a fashion which had only recently been advocated for the multilateral force and claimed as being strategically effective. We could even consider phasing out the supposedly vulnerable Minutemen while adding to the highly invulnerable Polaris submarine fleet.

The very great advantage of these alternatives is that no action is required now. We would be permitted time to gather definitive, certain evidence concerning Soviet intentions. We would avoid committing ourselves to a system of questionable reliability and great cost built as a response to an unproven highly speculative assertion. We would, at least, have attempted to forestall the expansion of the arms race which is quite certain to result from the Safeguard's deployment—deployment, which in conjunction with our MIRV program, could appear to the Soviets as an attempt by us to develop a first-strike capability against them.

The first alternative to Safeguard, procurement of additional missiles, is said by the administration to be provocative. My answer is that we can wait until 1971 before making a procurement decision. In the interim we can assess efforts to achieve arms control agreements and observe the trend of Soviet missile procurement.

Dr. Herbert York has testified that Minuteman missiles can be deployed on 2 years' notice. Therefore, if in 1971 we make the decision to deploy Minuteman, even at the 1962 rate of one missile per day, we could have approximately 700 additional missiles, with 2,100 warheads operational by 1975.

If we decided to wait beyond 1971 to determine whether a threat were going to materialize in 1975, we could, at a much later time, implement a substantial airborne alert. Also, we could degrade any emergency threat to our Polaris submarines on very short notice by assigning a greater fraction of our surface fleet to their protection. Further, we can embark upon an intensive program to make our present land-based missiles less vulnerable to attack by constructing silos with more blast resistance. This would certainly be nonprovocative.

Therefore, even if one grants the administration's underlying presupposition that the Soviets are developing a first-strike strategy, there are responses other than Safeguard which better protect our security, which are far more economical, and which pose no danger to the progress of the forthcoming arms control efforts.

The administration also claims Safeguard is required to protect us against an irrational attack by the Chinese. This justification for the Safeguard system reveals how our ignorance, emotional bias, and lack of understanding of the Chinese prohibit truly responsible strategic planning. Gripped with the picture of millions of Chinese dutifully reciting incantations from the little red book that seem ludicrous to our analytical Western minds, we are quick to conclude that the Chinese are "irrational." Possibly possessing 20 to 30 ICBM's by the mid-1970's, they might launch them against us, we are told, knowing full well of our assured ability to destroy their country. The full force of our retaliatory power would leave no societal life there worth mentioning. It has been estimated that a mere 10 percent of our bomber force, for instance, could destroy 200 million Chinese. Yet, we are told that the Chinese would invite total retaliation since they seem to be thinking and acting in ways that are so unfamiliar and puzzling to us.

Even if one were to accept the administration's psychological diagnosis of the Chinese, the case for Safeguard is still not convincing. If the Chinese did possess such suicidal tendencies and were willing to inflict damage upon us, regardless of the cost to themselves, they would probably be able to do so whether we had an ABM or not. It is possible that the Chinese will have developed penetration aids for their ICBM's which would be effective in exhausting a portion of the area defense component of our ABM, allowing for some of their missiles to reach our cities. Furthermore, means other than missiles could be utilized for delivering nuclear bombs to several of our urban areas—means requiring much less sophisticated technology.

But, the central issue is that our "irrational", suicidal characterization of the Chinese is not justified. It is true that the Chinese are gripped by an ideology and idolatry that seem totally alien to our own patterns of thought. But all man has the instinct of self-preservation, including the Chinese. They understand the meaning of deterrence, and that is our only truly reliable defense against them—just as the administration admits it to be our only defense against the Soviets.

In all candor, the proposed ABM system will be viewed by the Chinese as our attempt to preserve our option of using nuclear weapons against them at will, without a fear of any successful retaliation. This is a first-strike capability, and the Safeguard is an attempt to maintain it against the Chinese. Whether this would in fact be a strategic certainty seems highly doubtful, as I have indicated. But the Chinese, spurred by their tendency to interpret all our actions as provocative and threatening, will conclude that the ABM is an attempt to preserve our undeterred ability to destroy them whenever we believed we were justified in doing so. This development would confirm in their eyes our belligerent, aggressive power and desire for dominance. Safeguard will deepen the tension, suspicion, and hostility between our country and China, denying the credibility of any overtures we may make for new patterns in our relations.

I reiterate that if the Chinese were suicidal they would be able to cause great destruction in the United States in spite of any defensive systems we deployed. Our devastating deterrent force is our protection against the Chi-

nese; it is reliable, for it recognizes the Chinese will not willingly seek their complete destruction.

Moreover, if we believe ABM is vital to our security will not the Japanese, or other Asian nations, believe they too should have ABM systems? Such other nations might legitimately feel they were more threatened than we. If they become convinced of the desirability of their own ABM's, I venture to say that our attempt to prevent the spread of nuclear weapons is doomed—with predictably dire consequences.

Finally, I would like to consider the role of Safeguard in providing protection against accidents. First, I believe it is important to recognize that a system which offers protection against accidents must cover the entire country. It is virtually the same system which the previous administration called Sentinel. It is phase 2 of the system now called Safeguard. It is a system whose cost will be far in excess of $10 billion. But if phase 2 deployment is required for protection against Chinese and accidental attack, how does Safeguard offer, in Mr. Laird's words, "added incentive for productive arms control talks?" Is the implication that in the absence of successful talks, we might go beyond phase 2 to build a heavy ABM system? Or is it that we recognize that even phase 2, in conjunction with our MIRV's, threaten the Soviet second-strike capability? Do they consider the claimed protection against a Chinese and accidental attack really a pretext for defense of populations against the current Soviet forces? The record is ambiguous as to whether the administration would agree and stop deployment of the total system as part of an arms control agreement with the Soviets.

I would emphasize that an accidental missile launch is exceedingly unlikely. We are assured that one of our missiles could not be launched by accident and there is no reason to believe that other nuclear powers will be less careful.

Nevertheless, we should consider the kinds of accidents which could conceivably occur. First, there is the category wherein a single missile is accidentally fired. If this missile did not have penetration aids which allowed it to defeat the Safeguard system, if the system were in a sufficient state of readiness, and if Safeguard performed according to design, then the accidentally launched missile might very well be destroyed in flight. I, however, do not believe that there is sufficient probability of an accident of this type and that all—and I emphasize all—conditions for successful interception would be fulfilled to warrant deployment.

But even if the ABM would protect us against a single missile launched by accident, it is extremely unlikely to provide protection against other types of accidents. Suppose, for instance, many missiles were launched through a failure of the control system. Since the administration admits that Safeguard is not designed to protect our population centers against complex attacks, it is apparent that such a multimissile accident would penetrate the defense.

It is clear, then, that if we begin to construe unlikely accidents against which Safeguard might afford possible protection, we can also construe other equally implausible situations in which Safeguard would leave us defenseless.

Moreover, the likelihood of an accident is certainly related to the level of armaments. Since Safeguard is almost certain to stimulate the arms race, its mere existence will heighten the probability of an accident. The most effective way to safeguard against accidents then, is to limit the growth of the arms race.

Furthermore, we could work for an agreement to share information on safety procedures with other nuclear powers. Why would it not be possible, for instance, for all nuclear powers to install detonating devices which would prematurely destroy any missile in the event of accidental launch?

Should we construct the Safeguard system at a minimum cost of $10 billion to provide highly questionable protection against a very limited number of improbable accidents? Or should we protect against all possible accidents by immediately implementing even more reliable precautions that could prevent them? The latter course would provide far greater safety for only a minute fraction of Safeguard's expense.

The thin shield required for protection against accidents is much like the Sentinel. Besides the cost being potentially enormous, our relations with China, as I explained, would be further strained, and our arms race with the Soviets would be provoked. Therefore, this final justification also fails to compel my support of the system.

Every Senator who has spoken in this debate has made clear his commitment to safeguarding our national security. We all share in this pledge. But what is the meaning of this much-used term? What are the qualities that make us truly secure? From where are the threats that may jeopardize our security?

Throughout our postwar history, the apostles of national security planning constantly have alerted us to potential threats emanating from outside our borders. Turmoil, uprisings, and rebellions throughout the world often are interpreted as direct threats to the security of our country. Our Nation has equipped itself with the idelogoy and armed capacity to intervene in such conflict situations. This has required the devotion of a growing, excessive portion of our budget to defense expenditures, prohibiting sufficient funds, and resources for use to meet our domestic needs. Thus, conditions at home have deteriorated. Now we witness turmoil, uprisings, and rebellions in our own land. Obsessed with fighting revolutions in distant countries, we have spawned a revolution inside our own shores.

The turbulent events destroying the sinew of our Nation are far more direct and grave threats to our security than the remote contingencies in foreign lands that never cease to alarm our national security bureaucracy.

Threats to our internal security can be met only with a policy of "sufficiency"—that is, devoting a sufficient portion of our resources to meet the underlying causes of our social unrest, ferment, and alienation.

We face a revolutionary situation in our land. The question is whether this revolution will be channeled into peaceful avenues of constructive change or whether it will assume a more violent character. That, in my judgment, is of greatest relevance to the security and welfare of our Nation.

It is tragic that we define our security in exclusive terms of military protection, believing that building more weapons of destruction is the only way to insure our safety.

The late President Eisenhower once said:

> Every addition to defense expenditures does not automatically increase military security. Because security is based upon moral and economic strength, as well as military strength, a point can be reached at which additional funds for arms, far from bolstering security, may weaken it.

Where are we placing our trust? The temptation is to believe that our armies are the ultimate guarantee of our livelihood, both as individuals and as a nation. Disruptive threats, many believe, must be quelled only through armed force, whether at home or abroad. Yet, it is this exclusive trust in the instrumentality of armed force that often deepens the tensions of conflict and leads to further violence.

The Old Testament Prophet Hosea spoke with profound insight into precisely this problem thousands of years ago. Speaking to the people of Israel he warned:

> Because you have trusted in your chariots and the multitude of your warriors, therefore, shall a tumult arise among your people.

Those prophetic words have the same relevance to our people today. Excessive, exclusive trust in the instrumentalities of war leads us to war.

Our attitudes, beliefs, and faith, then, have a direct effect on our actions, as well as those of our potential adversaries. We must realize that our interpretation of intentions and future events is a primary force that actually shapes those events. Particularly in military and strategic matters, when speculative, prejudiced, and unfounded prophecies become the basis for our policies and actions, they can cause a reaction from the opponent that fulfills our predictions or creates further strategic tensions.

Let me illustrate. When the Soviets first began to build their limited ABM system, it was claimed they were commencing a major sophisticated effort to protect their population against attack In response, we began deployment of our MIRV system. Since then, the Soviet ABM has not continued as expected and even former Secretary of Defense Clark Clifford questioned its significance in his posture statement of last January. But, nevertheless, our MIRV has still progressed. This will certainly produce a Soviet response as another step in the arms race.

If we choose to believe the worst about the Soviet intention, and conclude they are commencing on a first-strike strategy, our proposed ABM will only motivate the Soviets to further increase their missile production. Secretary Laird could then cite this as proof for the accuracy of his apocalyptic predictions.

Likewise, if we conclude that the Chi-

nese are irrational and erect our ABM in part to preserve our first-strike capability against them, they will see proof of our assertive dominance and continue with their unmitigated rhetorical hostility. And, we will say we were right about them after all.

In Vietnam, when General Wheeler counsels that the month lull is not a peace sign from the North, but only preparation for further offensives, we may then continue with our maximum military pressure. When the enemy finally does respond to such intransigence on the battlefield with renewed operations, General Wheeler will say he was right.

Thus, our mere interpretation of the world actually shapes the world. Overpredicting and overreacting in national security affairs actually can erode, rather than further protect our security. Believing the most dire, threatening, and apocalyptic interpretation of events, and then overreacting to such fateful perceptions is not simply "erring on the side of strength." It is erring on the side of cataclysm.

There was a time when contemplating and planning matters of nuclear strategy was called "thinking about the unthinkable, As we are forced to indulge in the discussions of "overkill" and to calculate the number of millions of deaths it would take to cripple another nation, the actual horror—the unbelievable tragedy and holocaust that would result from a nuclear exchange—these somehow are no longer so vivid in our consciousness. In the process we can easily lose respect for the sacred worth of every individual human life. Today, the likelihood of peace may actually be increased by simply thinking and planning for it more.

Only a few days ago mankind lifted himself off his global home. As man stepped down onto a new world, we all experienced the wonder of stepping out from the confines of our planet.

With the universe now before us, perhaps we can gain a truer understanding of our earthly condition; perhaps we can realize our finitude, comprehend how provincial our perspective has been, and gain a new vision of what kind of world we should create.

What does one see when he looks back upon this earth from a quarter million miles away? Our world appears as a blue, tranquil sphere gliding peacefully through space.

But on the planet, 500 million people live in a state of constant hunger. Ten thousand die each day from starvation—not because the planet lacks sufficient food, but because all its inhabitants cannot partake in the plentiful food-producing capacity.

As the inhabitants of that planet increase at such rapid rates, the disparity grows between a few, living in one part of the globe, who have most of the food, wealth, and knowledge, and the many, living in another part, who suffer escalating hunger, poverty, and ignorance.

Yet, those who live on this beautiful blue sphere suspended in the universe have produced the means to destroy all human life. They have created what equals 15 tons of TNT for every living person. And, what is more, the privileged segments of those who live there keep increasing their ability to annihilate all humanity several times over.

That is the vision of our world from outside ourselves. It is, perhaps, even akin to the way our Creator sees us.

There have been those, including Secretary Laird, who have suggested that our success in placing a man on the moon is somehow further reason for proceeding with the ABM. I believe quite the opposite.

For the first time in his history, man has left his globe and now can see better than ever before the folly of his failure on earth.

As our Nation led in freeing man from his confinement, it can also now lead in freeing man from his fear.

To that end, we must reject the sterile, senseless search for security that relies only on technically innovative weapons systems as symbolized by the ABM.

We must discard the idea that security results from devoting ever-increasing portions of our resources to perfecting weapons of destruction while the deprivation and suffering of the majority of mankind continues to escalate.

It is the time to build a world that will serve man's needs rather than threaten his life. That, fundamentally, is the issue before us, and that is why I take my stand in opposition to the ABM.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. HATFIELD. I am happy to yield to the Senator from New York.

Mr. JAVITS. I was not privileged to hear all of the Senator's address, but I have been briefed on it by the Senator from Kentucky (Mr. COOPER), who has been here all the while. I did hear the concluding portion of it, and I appreciate very much the support which the Senator is giving to this side of the debate, considering his longstanding and very intelligent participation in these matters of armaments and arms control, and his very well known deep feeling for the future of our planet in terms of the encouragement of life rather than death.

I should like to ask the Senator a question which the general tone of his address inspires in me.

There is often an effort made to try to characterize those on this side of the ABM debate, either expressly or by implication, as "unilateral disarmers": people who would naively relinquish the power which our own technology and our own resources give us, in some blind trust that the Kremlin's leaders will "see the light" and join us in freeing man from the dreadful overweening fear of the destructive power of the atom and hydrogen bombs.

I ask the Senator—since he is probably as likely as anyone on this side of the aisle to be subjected to that charge—two questions:

First, is this approach postulated upon any such theory as I have articulated, as the devil's advocate, so to speak?

Second, what does the Senator desire to accomplish with respect to the security of the United States, in adhering to his opposition to the Safeguard ABM request?

Let us, for the moment, lay aside the idealistic conception of freeing man, and let us be just as hardheaded as the pro-ABM'ers. I ask the Senator to tell me what he, as the Senator from Oregon, thinks he is doing in terms of enhancing the security of our country by the position he takes.

Mr. HATFIELD. Mr. President, in response to the questions of the distinguished Senator from New York: First, I do not predicate my comments upon a belief in unilateral disarmament. I do not support that proposition. I have no sympathy for the basis upon which unilateral disarmament is advocated.

Second, as far as what are the hard and cold facts of dealing with reality rather than theory, philosophy, or idealism, I would say, first, again based upon the very eloquent words of President Eisenhower, that we have to look to assess the total strength of this Nation—I mean the real strength of this Nation, as made up of its people.

Any nation's ultimate strength is in its people, not necessarily in its arms. I do not ask for abandonment of arms, nor do I ask for abandonment of continued research on the ABM. All I ask is for better balance, and recognition that the true strength of America is measured by the strength of its people: their physical strength, their moral strength, and their economic strength.

When I see the number of people who have become increasingly disenchanted with the so-called American system, because they have not been permitted into the mainstream of American life, perhaps due somewhat to their own deficiencies, but to other forces as well, I say this is weakening the very heart and the very future of this country.

I would like to see a better balance. I do not call for the abandonment of any of the research projects. In fact, as the Senator knows, I headed a committee to study the whole program of military spending. We recommended, in our report, the continuation of funds requested for research and development. I support that, as to both the ABM and other weapons systems. But as the Senator from New York knows, because I have heard him say it many times, when we make a commitment to expend the people's resources in the name of security or any other name, we ought to have compelling and overwhelming evidence that there is going to be a return on that investment.

We have had experience with other weapons systems and specific items of military spending, where we have gone to great expenditures, and then have had to abandon them, because there had not been sufficient research to establish their merit or guarantee their production effectiveness.

These are the things I am asking for, and I think they are the things most of those on this side of the question have asked for: Not abandonment, but balance in terms of our resources, and recognition that America's true strength, real defense, and real security must be based upon healthy people—healthy because they have the necessary protein in their food, and because their medical needs are met; because they have adequate housing and adequate opportunities for education and jobs.

That is the kind of strength we are seeking to build in asking for a delay in actual deployment of the ABM and a

further guarantee of its actual effectiveness through continued research and development.

Mr. JAVITS. One further question. I would assume that the Senator feels able to take this position because he is convinced that we are, in relation to the Soviet Union, in apposition of sufficient deterrent strength so that the time required to fully explore the possibilities of negotiation to freeze this arms race where it is, is available to us without material jeopardy to our security.

Mr. HATFIELD. I would agree with that, and would add the further point that we have, according to the Defense Department's figures, 4,200 deliverable warheads. This places us in a ratio of three to four times that of the deliverable warheads of the Soviet Union, and in a superior position to that extent.

We hear about the need to go to the conference table to discuss arms limitations with strength, and from a powerful position. I say that we have that position now. We have diversity, with our Polaris submarines, our intercontinental bombers, and our other nuclear weapons in Europe. We have that kind of superiority now. We have the ability to deal from strength. We are not endangering our national security.

I fought in World War II, as many other people have fought. I am not a pacifist. I believe in the role of the military. I am willing to see our military used as it should be used, to defend our Nation. But what I am saying is that there is a point at which we should seek to find balance in meeting our other needs on the domestic front, the needs of our people. I think we have reached that place in our spending policies at this time.

I did not need to recite the well-known statistics that, when President Eisenhower left office, our national defense budget was at $40 billion, and it is now approaching $80 billion.

We hear terms that are not defined, as the Senator from New York knows, such as "adequacy" or "sufficiency." What do they mean by that? We have not heard those terms clearly defined, and until we do, I am not persuaded that this additional expenditure and commitment at this time is one we should make.

Mr. GOLDWATER. Mr. President, may I ask a question for clarification? The Senator from Oregon has correctly quoted the size of the military budget, and correctly compared it with the budget in the year President Eisenhower left office. But if we take the slightly over $30 billion that the Vietnam war is costing us—which is not an Eisenhower war—from that figure, we are actually spending less than we have spent since World War II on the military.

The figure of $78.5 billion roughly is occasioned by $2.6 billion a month plus the $44 billion or $45 billion we have to spend for housekeeping.

Mr. HATFIELD. That is a very good point that the Senator makes. I would respond by saying that the very fact we are in Vietnam has been used in many instances as an argument in support of the escalation of our military spending and new, additional weapons, even if we were to end the war in Vietnam today.

There is a shopping list in the Pentagon, with which I am sure the Senator from Arizona is quite familiar, of new weapons that are being held in reserve as far as funds are concerned that would far exceed $30 billion.

It is not purely a question of the $80 billion. I think that our whole policy of military spending is in question here. I think there is no question that once the war ended, we would find the Pentagon coming forth with a number of requests that they have been holding back on until the war was concluded.

Mr. GOLDWATER. Mr. President, the inventory of the military, because of the war in Vietnam, is very sadly depleted. We are looking at a loss of 6,000 aircraft that some day we will have to decide whether we will replace.

Frankly, if we can reduce the Armed Forces by 1 million men as a result of ending the war in Vietnam, we are looking at a saving of $10 billion.

I say as a member of the Armed Services Committee that there will be tremendous savings, savings in the nature of $20 billion or $25 billion for quite a few years after the war in Vietnam ends.

I think the Senator should feel quite pleased with the efforts of the Armed Services Committee this year in that they have already cut $2 billion off the already reduced budget we received from President Nixon.

I feel quite confident that we can cut more from the budget in fields that we have not even discussed as yet.

Mr. HATFIELD. I am very grateful to the Senator from Arizona for this effort. I think it is a step in the right direction. At the same time we are not jeopardizing our security as far as military spending is concerned.

I do feel, however, that the ABM in question here would encourage and have an effect on other expenditures in our military budget, making it very difficult for the Armed Services Committee or other committees to make cuts even if the war in Vietnam were to end.

I think we are committing ourselves down the road to something far more than the budget for this year or for next year, once we embark upon the deployment of the ABM at this time.

Mr. JAVITS. Mr. President, I would not wish to abort that branch of the discussion except to point out that I think one of the big issues at stake in the ABM debate is the determination of many Members of the Senate to really interest themselves in substantive evaluation of our whole defense and security posture.

I join with the Senator from Oregon in saying to the Senator from Arizona that we, of course, appreciate the common purpose of the members of the Armed Services Committee. We add to that an additional purpose, that each of us intends to perform his own responsibility in a way in which we have not performed it before, by coming to an individual and independent judgment, uninhibited but impressed by the recommendations of our military authorities as to what is really proper, not just desirable, for the security of our Nation in terms of weapons systems and of the pattern of organization and deployment.

Mr. President, I should like to ask the Senator one other question on which it occurs to me he might have an interesting view.

The opponents of the ABM are told: "What do you fellows really beat your breasts about? The President has asked for Safeguard. He must want to succeed in the SALT negotiations—the negotiations for the limitation of nuclear armament—as much as any Senator wishes who is alined with the Senator from Kentucky (Mr. COOPER), the Senator from Michigan (Mr. HART), the Senator from Oregon (Mr. HATFIELD), and I. That is one side of the negotiations. So, if the President says he wants the Safeguard and he wants to succeed as much as any Senators do in respect of the negotiations, then he must know what he is doing. And why not give it to him?"

Then, they point to the Russians and they say, "The Russians have made it very clear that they are not going to refrain from negotiating because we deploy Safeguard. They will go right ahead with the negotiations. Indeed, for all we know, they might even revive the Golash system or might move up their MIRV or MRV capability or accelerate work on their SS–9. And we are not going to refuse to negotiate on that ground. So, as long as everybody has his hand in the cookie jar with respect to increasing armaments, what are you fellows arguing about?"

I would greatly appreciate the view of the Senator on that matter, because I hold to one proposition that it is not just the leaders who will negotiate. It will be the whole world and the people of both countries that will be bringing their impact on them. And they may not appreciate themselves what agreement they are capable of coming to with that kind of pressure, rather than if they are left in the conventional pattern in which we deploy Safeguard and the Russians go ahead and do something else to keep pace with us.

Can the Senator comment on that point?

Mr. HATFIELD. Mr. President, I think the Senator from New York has certainly raised a very pertinent question.

I would say in reference to the second part of the question that the Senator is actually posing a question as to whether America should lead or react.

We have great problems in the world, and they are problems in need of solution. I feel that the United States has been, you might call it, on the defensive and reacting on many of these issues rather than analyzing them and trying to do what is best for our Nation and for what we consider to be the cause, the ideals and principles we are committed to. Then, with respect to that leadership which may not be easy to define or find within the present environment, but which is what all humanity is calling for because there is tremendous need, we could stay in the same cookie jar, as the Senator remarks, and out-produce the Russians or some other country on arms. However, at what point do we come to the realization that here are these millions of people who are hungry and in

need, and recognize history tells us that revolutions are not born out of passion for bloodletting, but are born out of impatience with injustice and misery?

We can either take the leadership in trying to get at the causes of these great international differences—injustice, poverty, and ignorance—or kid ourselves and say that we will only deal with the results of these forces and use force to suppress or quell or control.

It is a question of leadership or reaction.

I think the United States has to take the leadership. Second, there is a question of how we put the priorities with respect to our production. We have the resources to double our arms production. However, in so doing, we have to realize that we are neglecting the other areas of needs, to which I referred earlier—housing, education, food, medicine, and so forth—and that, in the long run, by producing more guns we are weakening America by not producing more houses, schools, and hospitals.

I prefer to think that the leaders are contributing far more to our general security and to the security of the world when we show this leadership—a leadership of inspiration and new priorities.

On the second part of the Senator's question as to President Nixon, the Senator knows that I am not a mindreader. I do not know how to respond to the question except to say that I believe the President of the United States is a very sincere man. I think he is totally and without reservation committed to his position on the basis of sincerity. But I also believe that people can be sincerely wrong, and I take the position on the ABM question that the President is wrong. We might say, "Doesn't he have more expertise and more great authorities on these military needs than we in Congress?" But the Senator from New York has been in the Senate a sufficient number of years to have seen instances in which administrations and the Pentagon and agencies of the Government, as well as Congresses, have been wrong. We are still elected by the people to make judgments and evaluations and to weigh evidence.

I think one of the great things out of this ABM debate is the very thing the Senator from New York has pointed out—that we have brought ourselves to the point where we are personally responsible to make independent, individual judgments on these military expenditures. I think the weight of the evidence that I have heard in the debate and have read in the military committee reports, and from those who serve on the military committees, indicates that there is sufficient doubt; and when we consider the vote, which was very close in the two major committees that have been dealing with this subject, I do not believe all the expertise is on one side.

Mr. JAVITS. Finally, does the Senator feel himself any less a loyal Republican because he opposes the ABM than if he favored it? And does not the Senator feel that it is just as much the duty of a loyal member of his party to keep the President from making a mistake as it is to support him in what he wishes to do?

Mr. HATFIELD. To my very good friend I would say, having known the Senator for many years, he would join me in saying that I am concerned about being a loyal American and doing the things which I believe are far more important to my country as a whole than necessarily just to my party; but there does not necessarily have to be a conflict.

In this instance, I feel a staunch and strong loyalty to both my country and to my party in taking this position. Furthermore, I would base it upon the outstanding example of the President of the United States, Mr. Nixon, when he was Vice President of the United States during the Eisenhower administration. The Senator will recall that there were instances when Mr. Nixon, as the Vice President felt, through his own convictions and judgments, that he had to take issue and was on the other side of a question with the President of the United States, with whom he was a more intimate associate than we, as Members of the Senate, are with the executive branch.

So I think there is ample evidence in the great annuals of American history to show that there can be loyalty to party, loyalty to country—which is more important—and still have differences of opinion within as well as between the parties.

Mr. JAVITS. I thank my colleague. I think he has answered in a manner which all of us know to be highly characteristic of him throughout his service to the people of his State and to the Nation.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. HATFIELD. I yield.

Mr. COOPER. Mr. President, it has been said by some proponents of the ABM in the last week that the debate is valueless, that all of us are repeating old arguments. But I should like to say, for all of us who have heard the Senator from Oregon today, that he has made a most valuable contribution to this debate. His analysis of the main elements of this complex issue, and his appeal to the Senate and to the country to use their gift of reason to come to a judgment—a judgment that must be made by the Congress and the people.

The Senator has pointed out correctly, and as clearly as anyone else has, that the central purpose of those who oppose deployment is to determine if it is possible to reach an agreement with the Soviet Union, either formally or tacitly, which will limit and control the arms race rather than expand it.

Is that not the chief purpose of those who oppose the decision to deploy at this time?

Mr. HATFIELD. The Senator is correct.

Mr. COOPER. In a very informed way, one which I believe is unanswerable, the Senator also has shown that in the event we are not able to reach an agreement and the Soviet Union continues to build and to deploy weapons which might threaten our security, there is ample time for us to take countermeasures to protect this country. I do not believe the Senator can be answered in the arguments he has made. The best intelligence this country has obtained, supports his analysis.

The Senator from Oregon quoted President Eisenhower. I recall that President Eisenhower spoke, in one of his speeches, about the necessity to control nuclear weapons. "We should never cease in this attempt," he said. It was in a speech delivered in a radio address on May 25, 1960. President Eisenhower then said, and it is applicable today:

> All of us know that, whether started deliberately or accidentally global war would leave civilization in a shambles. This is as true of the Soviet System as of all others. In a nuclear war there can be no victors—only losers. Even despots recognize this. Mr. Khrushchev stated last week that he well realizes that general nuclear war would bring catastrophe for both sides. Recognition of this mutual destruction capability is the basic reality of our present relations. Most assuredly, however, this does not mean that we shall ever give up trying to build a more safe and hopeful reality—a better foundation for our common relations.

The substance of his whole statement was that we were not doomed to inevitably and inexorably bring about our own destruction and the destruction of life and civilization. Rather that reason could prevail. That is the position that we who oppose the development of the ABM at this time have taken.

I think one of the great contributions the Senator from Oregon has made today has been to call the attention of the Senate and of the country to the higher purpose at this moment in history—to see if, in reason, in a rational way, we can find the means to halt and to control this oppressive and dangerous nuclear arms race. We have now an opportunity to resist unfounded fears and unreasoned beliefs that we have to build more and more nuclear weapons systems to protect ourselves, when in fact they are not now necessary nor would they add to our security.

Mr. HATFIELD. Mr. President, I thank the Senators from New York, Kentucky, and Arizona for this colloquy.

I yield the floor.

The PRESIDING OFFICER (Mr. HOLLINGS in the chair). What is the pleasure of the Senate?

Mr. MONTOYA. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MONTOYA. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ABM: EFFECTIVE DETERRENCE OR BILLIONS FOR INSECURITY?

Mr. MONTOYA. Mr. President, I have heard the observations made by the Senator from Oregon, and I have heard him articulate his position on this very vital issue. I express my congratulations to him for the viewpoints upon which he has expounded and which he has so ably conveyed to the Senate.

We are debating this very important issue in the Senate, and we have had testimony presented as well as expert opinion on both sides of the matter. At the outset, I wish to say that I do not question the motives of the proponents or the opponents, because I believe they are sincere individuals who are trying to convey their true viewpoints and are trying to do things, in their espousal or their opposition, in the way which will best serve the interests of the country in their opinion, as the case may be.

Mr. President, today I wish to offer my comments on the decision of the administration to deploy the Safeguard anti-ballistic-missile system (ABM). In the past few weeks I have listened to and read the testimony of many of my colleagues in the Senate, read numerous articles, studied several scientific papers, both pro and con, on the subject of whether or not to deploy an ABM system.

Never before has a Pentagon budget request been so carefully scrutinized. During my lifetime and for the first time in the history of the nuclear age the heretofore "untouchable" military budget, bearing the label of "national security," has been seriously questioned.

My colleague, the Senator from Missouri (Mr. SYMINGTON) has pointed out that more than $23 billion in Government expenditures have gone for missile systems development that quickly became obsolete, and in many instances were never even operative. Thus, our past failure to carefully examine and evaluate defense spending has permitted an incredibly large amount of taxpayers money to be wasted.

Mr. President, I believe we are witnessing the beginnings of a new era of congressional responsibility. Whatever the vote on the ABM, the debates and testimony of the past weeks have renewed the prerogatives vested in us by our Founding Fathers. In the future our very grave constitutional responsibilities as guardians of the taxpayer's money must be exercised, in this instance by and a careful review of all budget requests for defense programs should be conducted. No longer can we afford the luxury of a dole to our Pentagon strategists. I do want to make it very clear that I am not suggesting we lower the importance of defense spending for our national security. On the contrary, in this age of the nuclear warhead, it becomes even more important to protect the American people from attack by seeking the counsel and advice of scientists and diplomats. To this end we should continue to support research programs designed to shed additional light on sophisticated weapons systems capabilities. Only in this manner can we decide wisely.

Because of the advent of the nuclear age, however, a new dimension has been added to our strategy of defense. And this is that beyond a certain point in our arms buildup additional military expenditures for sound military defense purposes may not necessarily improve our national security posture. Instead, it may create a serious escalation in the arms race and place America in the tragic and paradoxical position of increasing the uncertainty of the balance of nuclear power in the world. Arms control talks between the Soviet Union and the United States depend largely upon the ability of nations to calculate the missile strength of the other. By deploying the ABM and provoking the Soviets into developing their own multiple independently targeted reentry vehicle—MIRV—we will only increase uncertainty—further provoking each side to develop more and more missiles, and thereby creating an endless and dangerous world military instability that can only heighten the future prospects for a nuclear holocaust.

Much has been said in the Congress recently about the Pentagon's principal reasons for wanting to deploy the Safeguard system. I would like to recount briefly the Pentagon's reasons and offer some of my own thoughts on why I believe the ABM system should not be deployed.

The Pentagon has said there are three principal reasons for deploying the Safeguard. They are as follows:

First, to protect land-based deterrent forces—ICBM's and strategic bombers—from a Soviet first strike.

Second, to protect the entire United States against a possible Chinese attack.

Third, to protect the entire United States from the accidental or irrational launching of a small number of nuclear warheads by any nation.

The Pentagon has also indicated what the ABM is not supposed to accomplish.

First, it is not to provoke the Soviet Union into reacting, and thereby escalating the arms race.

Second, it is not intended to undermine in any manner our chances of reaching an agreement with the Soviet Union on arms control and limitation.

Third, it is not a defense for American cities against an all-out attack, for this is beyond our present technological capabilities.

Let us examine first what defense officials say the ABM will not do. As I have said previously, any increase in our missile program will create an uncertainty about the balance of nuclear power and will certainly provoke an escalation in the arms race. A key factor controlling the arms race is the knowledge held by the countries concerned that there is in fact a balance. The statement by the Defense Department that ABM will not undermine the chances of an arms control agreement is nonsense. How can one negotiate for arms control while at the same time promoting the deployment of additional missiles? Could we expect the Soviet Union to respond favorably to an arms control proposal? The answer is "No."

Another contention by the Defense Department—that the ABM is not to be a defense of our cities—has some very serious implications. If the Russians and/or Chinese chose to attack us they would go after our major cities, and not the Minuteman sites the Pentagon wants to protect in Montana and North Dakota. Even if all the proposed ABM sites were deployed as proposed they would still not be able to protect our major population centers. Knowledgeable scientists contend that it would be a relatively easy matter to decoy the Spartan missiles and render them ineffective against a nuclear attack. Sprint, the other major component of ABM, would not protect adequately the population because the proposed sites are entirely outside their range. To me this evidence suggests the critical lack of defense capability—and therefore ABM as a deterrent.

There are those proponents of ABM who contend that the system is designed to guard against a first strike threat by the Soviet Union. This position is highly questionable.

First, the national intelligence estimate—a consensus view of the intelligence community—is that the Soviets are not planning for a first-strike capability. Second, the Soviets know they do not have the capacity to destroy our retaliatory ICBM's. Even if the U.S.S.R. did launch a massive first strike it is inconceivable that we would rely solely on the Sprint defense to protect the Minuteman missile sites. Secretary Laird said the ABM was needed in the event of a surprise attack when the President of the United States did not have sufficient time to order a retaliatory attack. It is very hard to believe our present retaliation system is so slow that we would allow 100 or 1,000 Russian nuclear warheads to land on U.S. soil before clearing the Minuteman silos.

The third major reason for the Pentagon's desire to deploy the ABM system is to guard against accidental or irrational nuclear attacks. I believe the possibilities of this occurring are unfortunately very real. However, the deployment of ABM for this reason is open to several serious questions. First, any Soviet attack at the United States would be suicidal on their part. Our retaliation would so annihilate the Soviet Union or any nation that only an all-out effort by an enemy nation would be a more likely reality. If, however, there was an irrational small attack, the only city potentially protected by Sprint would be Washington, D.C. The Spartan, dubious in capability at best, would not be the primary protection in the event a missile was launched toward a U.S. city by accident.

A critical question in the debate over deployment of the ABM system is whether the proposed system will in fact work. Will the ABM disarm or render ineffective enemy missiles? The last five science advisers to the President and the President's Science Advisory Committee have raised very serious doubts as to ABM's ability to do what its supporters say it can do. The questions they raise are still unanswered. Also, most scientists concede we could render any Soviet ABM system ineffective. If that is true, it is reasonable to assume that the Soviets and eventually the Chinese would develop similar countermeasures to our ABM system. That would leave the United States with a billion dollar boondoggle of the most tragic proportions, an even larger defense budget, an escalated arms race, and millions of disenchanted American citizens.

Mr. FULBRIGHT. Mr. President, will the Senator from New Mexico yield at that point?

Mr. MONTOYA. I am happy to yield to the Senator from Arkansas.

Mr. FULBRIGHT. First, I congratulate the Senator on a most perceptive statement. I was not intending to interrupt until that paragraph, which I think emphasizes a point which many of us who are opposed to the ABM have not been, perhaps, so alert to make as the Senator is making it, when he says how ineffective it is and even if we build it, it would merely leave us with a billion-dollar boondoggle.

I have heard all the testimony before our committee by some of the best scientists we have. They do not say that in peacetime conditions, under laboratory conditions, where there is no war, that we could not make a system work that would shoot down a missile which was anticipated coming, in any case, under ideal conditions. I think we can make it. Thus, it makes it difficult to say that we cannot make a system that will cut a missile down.

However, under wartime conditions, unexpectedly, where a missile would come in unexpectedly and we would not know where it could come from, or when, or whether there would be a precursory explosion, or whether there would be any attempt to jam the radars, under those conditions, I think that the Senator is absolutely correct. There is very little evidence that this would work under those circumstances. So, when I said that I do not think they would work without proper qualifications, I was immediately attacked by some of our colleagues who said that if we can go to the moon, we can build an ABM system. I think we could build an ABM system that would function under the conditions of going to the moon—that is, with no opposition; no opposition other than from nature herself. But the Senator is quite right, a very important point is that it cannot be made, I do not believe, to work, under the circumstances which we anticipate.

One other point I will say to the Senator is that we are having, this afternoon, at 4:30, a hearing in the Committee on Foreign Relations—a briefing, I should say, in which a movie made by the General Electric Co. will be shown to prove how easy it is to overcome an ABM system with MIRV's. I invite the Senator to come, if he has time.

Mr. MONTOYA. I will be looking forward to doing that.

Mr. FULBRIGHT. It will, I believe, support what the Senator is saying here. I believe that the Senator has presented very concisely and very persuasively the most significant aspects of this problem.

Mr. MONTOYA. I thank the Senator from Arkansas.

Mr. LONG. Mr. President, will the Senator from New Mexico yield?

Mr. MONTOYA. I am happy to yield to the Senator from Louisiana.

Mr. LONG. May I ask the Senator this: What difference does it make whether an ABM can overcome a MIRV, or the MIRV overcome an ABM if we do not have either one and the enemy has both? If we feel that way, we would never have had a hydrogen bomb, we would never have had the atom bomb, or the ABM, or a MIRV. All we would have now would be the bow and arrow.

I ask the Senator, What difference does it make whether MIRV can overcome the ABM or the ABM can overcome the MIRV? What the Senator is saying, in effect, is that he wants us to be absolutely defenseless; that there will be no war because we will not be able to fight. So why not send a message to the Soviet Union and say, "Come and take our country in peace. Not a shot will be fired to defend it." That is the logical conclusion to such an argument.

Mr. MONTOYA. My answer to the statement just made by my good friend from Louisiana is——

Mr. LONG. Is the Senator for the MIRV?

Mr. MONTOYA. I might state to the Senator from Louisiana that I do not think there is one Senator in this body who is against providing an adequate defense to promote the security of this country. Most of those who oppose the ABM feel that we should be meditative in our research and our development and not plunge into an expenditure of billions of dollars, such as expenditures which have been made on other parallel missile situations, which have been rendered obsolescent or useless. I think that is the main thrust of the opposition in this particular debate, that we should proceed methodically with adequate research and planning, geared toward coming out with an ABM system that will protect us. If it is resolved that it will not protect us adequately to justify the investment in such a system, then we can abort our progress in that particular field and go into something else.

Mr. LONG. Let me answer the Senator. Let us see if I can understand his position. We must have either a MIRV or the ABM if we are going to wage war successfully against what they have. He says if we can defend ourselves against what they have, we still would not be able to defend ourselves against something they might develop. As I understand it, the Senator is against defending ourselves against what they do have or will have in the future. If I understand the Senator's position, he is saying he is against defending ourselves against what they have even now.

Is the Senator in favor of developing something so that we can destroy them if they decide to destroy us?

Is the Senator in favor of having no defense, just leaving us to their mercy?

Mr. MONTOYA. I think that I have made——

Mr. LONG. Not to me.

Mr. MONTOYA. I think that I have made my position clear to the Senator, that the main thrust of the opposition is that we should provide the funding for continued research and development but not for deployment until we are in a position to know that we can adequately safeguard the security of this Nation.

Mr. LONG. May I say this: If we proceeded on that basis, we would never have had an atomic bomb, we would never have had a supersonic bomber, or a bomber that could break the sound barrier, either because many people did not think it would work or for fear that it might be objectionable to a potential aggressor.

I served in World War II, the Senator from New Mexico did also. With some of the guns we were given we could not hit anything at first. After we had been shooting for a while, we improved so that we could hit the targets—airplanes—pretty well, after we had learned how to use them.

Is the Senator in favor of unilateral disarmament? Is the Senator in favor of giving everything away, so that we cannot win? Is that the Senator's program?

Mr. MONTOYA. I should like to answer that question by asking the Senator another one: Does not the Senator know about all the missiles which have become obsolete in the past? I recall another ABM system, in 1956, the Nike-Zeus——

Mr. LONG. That has certainly not become obsolete.

Mr. MONTOYA. Yes, it has.

Mr. LONG. My answer to the Senator is that it has not become obsolete.

Mr. MONTOYA. After we spent $1½ billion on it.

Mr. LONG. I have in mind the latest missiles in use by both sides. The 1956 missiles were not obsolete in 1956 just as the 1969 missiles are not obsolete in 1969 altho they will probably be obsolete in 1989. By that time we should have something better, unless Congress refuses to provide it.

Someone said that the atomic tests rendered the defense impotent. That was probably because the transistors were subject to radiation. Today we have better transistors the ones we are using on ABM systems are to be far superior to the early ones. That is one reason why, after they had tried them out, we went to work to improve on them.

Put yourself in the position of developing a missile that can shoot down MIRV and by that time the Russians may have a MIRV.

Hopefully you should have by that time both a better defense missile and a better offense. As I understand it, the Senator wants to fix it up so that we cannot defend ourselves while they can defend themselves. Therefore, I presume the Senator is what I would call a pacifist in saying that we will do nothing to offend the Soviet Union because it might mean war.

Would the Senator agree with Mr. Goodwin's argument when he said the mistake President Kennedy made was to permit the Army to acquire the ability to fight a conventional war because had it not been for that, there would have been no war in Vietnam? The same man is against us acquiring the ability to fight any other kind of war. That is pacifist philosophy. Why does not the Senator take a white flag to Moscow and say, "Here we are boys. Come and take our country. There will be no resistance."

Mr. MONTOYA. Let me say to my good friend from Louisiana that I have served in Congress for 14 years, and I have voted for every appropriation that was geared to build up the security of this Nation. I have voted for materiel for our GI's in Vietnam and all over the world. I have done everything possible as a patriotic

American, and I certainly look with disfavor upon the Senator's trying to cast reflection upon my patriotism and what I have done to promote the security of this Nation.

Mr. LONG. What I would like to know is, Senator, what are you for? You tell us that we cannot defend ourselves against MIRV.

In fact, I think the Senator is saying we cannot defend ourselves against what they have now, and he is against defending ourselves against what they have now and even trying to defend ourselves against MIRV or building MIRV's so we strike back even if we cannot defend ourselves against an attack by them. What is the Senator for? Surrendering?

Mr. MONTOYA. Mr. President, I will continue with my statement. I think the Senator and I have had enough dialog to reveal our divergent viewpoints.

Mr. LONG. Or is the Senator in favor of giving it away, like foreign aid, without ever appropriating for defense?

The PRESIDING OFFICER. The Senator from New Mexico refuses to yield to the Senator from Louisiana.

Mr. MONTOYA. Mr. President, the basic issue is whether or not Safeguard is necessary to deter a massive Russian first strike at the United States. I believe the evidence shows conclusively the answer is "No." Our deterrence depends on the unquestioned ability to retaliate on a massive scale. We now have that ability.

Mr. LONG. Mr. President, will the Senator yield?

Mr. MONTOYA. I refuse to yield, Mr. President. Some 645 strategic bombers, 41 missile-launching submarines carrying a total of 656 weapons, and 1,054 land-based ICBM's are now part of our operational defense. Each one of these forces can inflict devastating damage on the Soviet Union or China. Approximately 22 of the 41 Polaris submarines are stationed in different parts of the world within striking distance of the U.S.S.R. Twenty-four hours a day, every day of the year the giant Strategic Air Command—SAC—bombers are on full alert, ready to take off on a moment's notice to defend our Nation. Day and night, long-range, early-warning radar systems scan the skies for the first indications of an enemy attack.

Why does not the Soviet Union attack us? The answer is because of a certain knowledge—deterrent knowledge—of the ability of the United States to inflict a fatal blow to their country. The Russians have this ability also, and hence the balance is there. The ABM system threatens to alter this balance drastically; it threatens to escalate the arms race to a point where we would be contributing to instability in the world instead of working toward arms control and world peace.

Any government or business endeavor costs money, and the ABM system is no exception. If the ABM deployment caused the expected Soviet military reaction—we would have to expand into an even more expensive, and heavier Safeguard system. The estimated $7 billion initial cost would run into the hundreds of billions of dollars. The prospects for even higher taxes and additional inflationary trends would be increased. Mr. President, this would be an unnecessary burden on the already overburdened taxpayer. Our dollar continues to lose its buying power, domestic social ills mount, and the poverty and hunger in America that so urgently requires our attenion will continue to be neglected—a pawn to the overblown defense budget. Eventually our own internal disorder and neglected domestic social ills will act as a measure of national insecurity.

Today a measure of our tax dollars should definitely be for defense; however, only when the defense programs planned show evidence that they will work and they will contribute to our national security, and not insecurity.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. MONTOYA. I yield.

Mr. FULBRIGHT. I do not like to interrupt the Senator too much, but I wish to refer to some comments that have been made. Neither the Senator from New Mexico, nor I, nor the Senator from Tennessee, nor any other Senator, is proposing anything like what the Senator from Louisiana suggests—unilateral disarmament, and so forth. The evidence is very clear that this country possesses today a substantially greater number of nuclear weapons and a substantially greater number of weapons that are necessary to destroy the Soviet Union completely, all of its major cities, and so forth.

The issues the Senator from Louisiana raised are not the issues at all, in my opinion. We have plenty of defense. This testimony comes from the Department of Defense, from the highest officials both in the military and in the intelligence community. So I think the comments of the Senator from Louisiana were completely irrelevant to the point the Senator from New Mexico is making.

I do not want to interrupt the Senator further, but I want to compliment him. I think he especially deserves a compliment because his State happens to be the State in which the development of some of our missiles have taken place. It is my understanding that the principal proving ground for the Sprint missile is in New Mexico, if I am informed correctly.

Mr. MONTOYA. That is correct.

Mr. FULBRIGHT. So the Senator, in my view, is not only exercising discriminating judgment in seeking to bring the great military establishment back under some degree of supervision by the civilian branch of government, more particularly the Senate; I think he has performed a great service to the Senate and to his people. I congratulate him on his political courage and on his discrimination in taking the position he has.

Mr. MONTOYA. I thank my good friend from Arkansas. May I state that I did not arrive at my position lightly. I attended many briefings at the Pentagon. I have read a great deal on the subject. I have read the testimony of others. I have read and listened to the scientists on both sides of the issue. I arrived at my decision because I felt that this is the position that I should take in good conscience.

Mr. FULBRIGHT. If the Senator will yield further, I am quite certain that is true. When the Senator, at the very beginning of his speech, stated that one of the principal issues in this debate and concerning the ABM is whether or not the Senate of the United States is capable of exercising a degree of supervision, a degree of examination and criticism of a military budget, I point out that it has not been done since I have been here on the floor of the Senate. I do not mean to criticize the committee. I am sure the committee has gone over that. But never before in 25 years—I believe the Senator from New Mexico has been here 12 years—have I ever seen a debate like this. I thank the Senator for the great service he has rendered.

Mr. MONTOYA. I would like to add further that because the Senate has decided to assert its right of deliberation and decide its prerogative of surveillance over national defense expenditures, the country is now well informed on this issue and it can support any judgment made by any Member of this body.

Mr. GORE. Mr. President, will the Senator yield?

Mr. MONTOYA. Yes, I yield to the Senator from Tennessee.

Mr. GORE. I have listened intently to the address of the distinguished Senator from New Mexico. In my opinion, he has delivered and is delivering one of the most learned addresses on this subject that this great debate has afforded in the Senate. He has demonstrated a degree of study and acquaintance with the basic problems and the scientific principles involved that few have shown. I wish to express my gratitude and my admiration for the speech and to him for having made it.

In the context of security and who is for the security of the country and who is for surrender—I regret the terms that have been introduced into the debate—to return to the question of security, is not the goal of every Senator, in the view of the junior Senator from New Mexico, the security of the United States?

Mr. MONTOYA. There is no question about that. As I stated at the beginning of my talk, I did not question the motives of Senators here who were on either side of the issue with respect to whether or not they were for or against the security of our Nation or for or against maintaining it. I believe every one of them is motivated in the same direction.

Mr. GORE. True; and those of us who sincerely reached the conclusion that the deployment of the ABM system as proposed would lessen rather than increase the security of our country are entitled to respect for our judgments.

Again with respect to security, is not the security which we seek the avoidance of nuclear war?

Mr. MONTOYA. That is the greatest security that we seek.

Mr. GORE. And with two nations, great and powerful as they are, each with the power to destroy the other several times over, is not the real security for us, as well as for them, avoidance of war; and if avoidance of war is the

goal, and our strategy in trying to avoid war is one of deterrence, is it not axiomatic that if ABM missiles were necessary to use to try to combat a nuclear attack upon the United States, then the strategy of deterrence itself would have failed, and the security that we seek in the avoidance of nuclear war would indeed have been breached? Does the Senator agree with that?

Mr. MONTOYA. Yes; I agree with the Senator from Tennessee on that point.

Mr. GORE. So if what we are really seeking here is a formula of security to avoid a nuclear war, then the question is, Will deployment of an antiballistic missile nuclear weapons system lessen or increase our security?

I submit that the real measure of security is avoidance of nuclear war, and that avoidance of nuclear war can best be achieved by an understanding between the United States and Russia on the limitation of the deployment and the use of nuclear weapons.

If that be true, then the question is, Will deployment of the ABM system make it easier to achieve such an understanding, or more difficult to achieve such an understanding?

I have reached the conclusion that it would make it more difficult; indeed, it might make an understanding impossible; and I think I am entitled to reach that conclusion without being accused of waving a white flag of surrender.

I thank the Senator. I recognize him as one of the patriots and one of the able men in the U.S. Senate. He is making a very learned address, to which respect is due and attention is directed.

Mr. MONTOYA. I thank the Senator from Tennessee.

Mr. STENNIS. Mr. President, is it convenient for the Senator to yield to me briefly on one point?

Mr. MONTOYA. I yield to the Senator from Mississippi.

Mr. STENNIS. I appreciate the Senator's yielding to me particularly at this time, because I have a pending matter, and I shall be quite brief.

If I may point it out, on page 1 of the Senator's talk, which I have before me, the Senator made the following reference:

> My colleague the Senator from Missouri (Mr. SYMINGTON) has pointed out that more than 23 billion dollars in government expenditures have gone for missile systems development that quickly became obsolete, and in many instances were never even operative. Thus, our past failure to carefully examine and evaluate Defense spending has permitted an incredibly large amount of taxpayers money to be wasted.

Mr. President, first a wish to say to the Senator that I think he has made a splendid presentation here on this subject matter, and that it is an important contribution to the debate. I know he is sincere, and I do not believe that anyone accuses the Senator from New Mexico, or any other Senator, of being otherwise.

Mr. MONTOYA. Mr. President, may I also say to my good friend from Mississippi that I have listened carefully to his many presentations on this subject, and I have nothing but great respect for him, even though we differ in viewpoint on this matter.

I wish to say that I do not question his motivation or his sincerity, because I know he is a sincere man and a conscientious man, and I respect his position on the vital issue before us.

Mr. STENNIS. I thank the Senator very much, and look forward to working with him in the future.

On this $23 billion item, I call to the attention of the Senator from New Mexico and other Senators that on July 2, just as soon as we got this bill written up, I undertook to answer 5 or 6 months of charges of various kinds that had been leveled against that same $23 billion, and, in a presentation to the Senate beginning on page 18190, I gave what might be called a speech—it is really a documentation—of all the major items that go to make up that $23 billion.

I respectfully call it to the Senator's attention, and hope that he will look at it, and, if I may, I shall just briefly refer to a few of these items that are alleged by some, though not the Senator from New Mexico, to have been waste, but alleged by him to be items that "quickly became obsolete and in many instances were never operative."

First, as to those that were never operative, there is a list on this page that I have already referred to of these various missiles, in which those that never became operative are listed first, and they total $4.1 billion. That list goes back as far as 1945, or perhaps earlier, on through the year 1965, and represents a large number of efforts to get missiles—many of them small missiles—that never did come through, so to speak. They never were perfected, due to various wrong starts or misconceptions of the proper starts.

Many of them, however, without going into details, became really the original, first generation of those that were later highly successful.

I refer to one here, the mobile Minuteman, charged here with $108.4 million. One principal sponsor of that item was none other than Dr. Wernher von Braun. I remember hearing his testimony about how our bombers put him out of business so many times in World War II, and he thought it made a very great difference. He had to keep on the run all the time. He wanted a mobile Minuteman. I think that is the first type that we envisioned and merely, in effect, authorized the research on; but it did not turn out that way. It developed in another direction, and the Minuteman became our first major solid fuel weapon. I hear a rumor every once in a while that they may want to go back and try to make it mobile again, but that was years and years ago that that decision was made.

I refer to another item. Here is the Skybolt. That was one thing that was quite hopeful at first, and it turned out that it got mixed up in some bad company, maybe, or they got into a hassle about it some way. Anyway, it was finally cancelled out, but we learned a great deal from it, and it has been displaced by other families of weapons now.

Now dropping down to the ones I consider to have been outstandingly successful, in this other list, we have the old Redstone. That was one of the most successful missiles we have ever had—not one of the larger ones, but when we were thrashing around, looking for something to try to put up a little Sputnik, when we were on the small end of things, it was this old Redstone missile that we finally turned to to put that little old pellet, more or less, in size, in orbit; and it was the standby, for a long time, as one of the most important missiles of the Army.

Here is the Polaris, listed as now no longer deployed, with an investment of $1.132 million. Waste? Let us see what its history is.

By the way, there was no missile system that was more unpromising, in the beginning, than the Polaris.

I remember going down to Florida because I had doubt and disbelief. When I looked over what they had then, I had more disbelief. It blossomed, however, into the most successful one we perhaps have ever had—Polaris I and Polaris II, the next generation.

We are now going into the Poseidon. We have these submarines on the seven seas, as the Senator knows, with those marvelous weapons. That goes with it. It is all based upon the basic concept of Polaris I. However, in some way that item got thrown in here and has been charged to waste. The Senator made reference to that.

Atlas D, E, and F cost $5 billion of that $23 billion the Senator mentioned.

The old Atlas stood there with all of its might and was the only thing we had for years to span that gap when we were threatened.

The Titan would still be our principal defense in this way had we not perfected the Poseidon and the Minuteman that we think are better. Even today, we still have the old Titan missile. The Titan I is listed here as being one of those that were of questionable value and is now no longer deployed.

I will not detain the Senator any more. I appreciate his yielding to me.

Here is a list of what I believe has a full explanation of all the major items on the list.

Mr. MONTOYA. Mr. President, I appreciate that the Senator from Mississippi has furnished me with that list. I failed to find the list heretofore. I did ask for a breakdown of the $23 billion, and I was unable to get it up to the last minute. However, as the Senator knows, I ascribed this $23 billion figure to the Senator from Missouri (Mr. SYMINGTON), who mentioned it on the floor.

Mr. STENNIS. I am not blaming the Senator.

Mr. MONTOYA. Mr. President, I should also like to add to the list, if the Senator does not have it on the list, the following reference with respect to the other missile development.

I mentioned a few minutes ago the development of an ABM system beginning in 1956 with the Nike-Zeus. This program terminated in 1965, after we had spent $1.4 billion.

Secretary McNamara said in 1967 that if the Nike-Zeus had been completed and deployed, it would have cost about $13 billion to $14 billion and that most of it would have been torn down and replaced by new missiles of the Nike X system long before it became operational.

The Nike X system was begun and was

modified as research and development progressed. That missile was replaced by Spartan. The investment cost in research and development, according to McNamara, would have amounted to $16 billion.

In 1966 Secretary McNamara estimated that it would be around $24 billion over a 5-year period. By 1969 the estimate was up to $40 billion.

Significantly, Secretary McNamara argued against its deployment because it could easily be rendered ineffective at that time in his opinion.

Mr. STENNIS. Mr. President, the $40 billion was an estimate. That was not an expenditure.

Mr. MONTOYA. The Senator is correct. I did say that.

Mr. STENNIS. There is a long history behind this effort by Soviet Russia and the United States of America. This has not been an easy, primrose path.

I remember that the old Nike program began with Ajax and Hercules. We are still using them. We finally went into the Zeus. However, that did not work out well. Therefore, it was dropped as such.

I would have added this explanation, but getting together the bill and the hearings kept all of us very busy. I wanted the matter to be fully researched.

May I refer to one other item. The Senator referred here, on page 2, to the question about the chances of arms control and the fact that the ABM is just nonsense, and he argued that it does not have a place here.

With all due deference to the Senator, I have come to the belief that perhaps the best hope against a nuclear war is for the Soviet Union and the United States of America both to have an effective weapon and for each to know that the other has it.

That will be the greatest achievement, I believe, in avoiding a nuclear war. And I am awfully concerned that if one ever starts, it will be too late.

Mr. MONTOYA. I think that is where an equal division of Senators occurs, on whether it would accomplish that objective.

Mr. STENNIS. I think that if we both had something that was effective and each knew the other had it, that would come close to stopping trouble.

Mr. MONTOYA. Mr. President, I believe, because of what I have said, that my position on the ABM is sound. I believe, however, that there should continue to be a vigorous and carefully planned research and development program to answer the many scientific and technological questions still unanswered about the ABM. The amendment offered by Senators COOPER and HART—S. 2546—and amended in a joint statement on July 23, 1969, offers a constructive alternative to deployment, and I intend to support their measure. Under this amendment none of the funds could be used for deployment of any component or element of the proposed Safeguard system at any proposed deployment site. There should be no premature and dangerous commitment to deploy antiballistic missiles, and we should pass legislation to insure that.

In summary, Mr. President, I will vote against the deployment of the ABM missile system, but intend to support continued scientific and technological research in this area.

Mr. HART. Mr. President, will the Senator yield?

Mr. MONTOYA. I yield.

Mr. HART. Mr. President, I rise simply to join the other Senators in thanking the Senator from New Mexico for the soundly reasoned comments he has voiced. I believe the Senator to be right.

I hope that none of us doubt the desire on the part of each of us to be right. And I am delighted that the Senator from New Mexico came to the conclusion he did.

Mr. MONTOYA. I thank the Senator from Michigan.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. MONTOYA. I yield.

Mr. MANSFIELD. Mr. President, I had an opportunity, thanks to the distinguished Senator from New Mexico, not only to hear part of the speech, but also to read it in its entirety.

I join with the distinguished chairman of the Committee on Armed Services, the senior Senator from Mississippi (Mr. STENNIS), and all others who have spoken on the floor this afternoon in commending the Senator from New Mexico for the thoughtfulness and the study and the detail into which he has gone to explain his position on this most important question. It is perhaps the most important question which may come before this particular Congress, because so much hinges on it in so many ways.

I have known the Senator since he served in the House of Representatives on the House Appropriations Committee and since he came to the Senate, where he now serves on the Committee on Appropriations and I believe on some committees which have to do with defense matters.

I wanted the Senator to know that I thought his speech was statesmanlike. I commend him for the care which went into it and assure him that it was a pleasure for me to listen to the Senator make arguments that I would have been honored to join him in making.

It was a statesmanlike speech. I commend the Senator.

Mr. LONG. Mr. President, will the Senator yield?

Mr. MONTOYA. I yield.

Mr. LONG. Mr. President, may I point out to my good friend, the Senator from New Mexico, that the point he makes about waste brings me back to something I heard when I first came to the Senate about 20 years ago.

At that time we were trying to defend ourselves against Russian agression. We were talking about whether we were satisfied that these expenditures to beef up our defense would be wise expenditures or would be wasteful.

As one military officer said to me at that time, "Senator, you ought to hope that every nickel you spend on the defense of this Nation will be wasted. You ought to hope you will never have to use any of those weapons to defend our country. You ought to hope that every cent of it will be wasted."

However, I cannot for the life of me see that we would be wise to rely in the future upon weapons that by that time will become obsolete, because they all become obsolete in time if better weapons are developed to save this country, when a competitor is developing better weapons and more sophisticated weapons which can totally destroy the weapons which are today modern weapons.

For that reason, I find myself believing that, in defense of a great nation such as this, we must be at least as good, and hopefully better, with the best of weapons, particularly when confronting countries that outnumber us by as much as 4 to 1 in population. They will proceed with the development of the most sophisticated weapons. There is no way to keep them from doing it.

It seems to me that the money spent on research would be wasted unless you are going to go ahead and build the weapons. Even when you build them, you never know how good they are until you have tried them, but for that matter neither will your adversary.

The Senator has used the illustration of our supreme achievement, putting a man on the moon. We put a man in space and then a man orbited the earth several times. We then put several men in space and they orbited the earth, and then we proved we could orbit and dock the orbiting missiles together.

After that, we proved that we could reach the moon, that we could orbit the moon, that we could put two vehicles up there, separate them, and bring them together again. So we proved everything before the final stage of landing and reentry from the moon.

I am certain the Senator saw the supreme achievement of this country, which is the pride of our generation. I think it is the finest technical achievement of our time. It was done step by step.

For the life of me, I cannot see how one could hope to improve on his way of doing business unless he first went into business. We have developed the capacity to build the best missiles, make supreme achievements to outcompete the other fellow. But if we do not begin to build missiles and to follow through with it and to prove that they will work, how can the Senator hope, by merely doing research on something and not building it, ever to be able to defend, when the other fellow not only is doing the research but also is building them and trying them out under field conditions? How can one go into business 20 years behind the other fellow and hope to overcome him on the day of going into business?

For example, trying to shoot down incoming missiles requires several things. First, it requires the electronics, it requires the missile, and it requires somebody who knows how to aim it. If he never has tried it, he will not be a very good shot. Compare that to a hunter shooting ducks. If he has never tried it before, he will not be a very good duck hunter.

You have to try it in order to find out where you fail and where you succeed. If you never build the thing, never put it into place, never begin to implement it and improve on it, how would you know whether you have achieved anything? How does one know he cannot succeed unless he tries it?

Mr. MONTOYA. I do not think the Cooper amendment discourages that.

Mr. LONG. The Senator says he would not put anything in place; he would not start building the defense. If an enemy knows you have no defense and he wants to attack you, he knows he can do that pretty much with impunity, because you have no defense. If you have a defense, at least he is taking a chance. Your defense might work and you are striving to improve it.

I have not followed the entire debate. Some of it was not very enlightening and some of it made a lot of good sense. I read a newspaper story the other day in which someone said that on an atomic test, for 800 miles the defenses would not work. I assume that would be because at that particular time we did not—at that time—have a transistor which could resist radioactivity. We have that now, so we have overcome it. That problem, I believe, has been solved. We will move on to the next problem.

Mr. MONTOYA. Is the Senator aware that under the Cooper amendment, research, development, and testing would be permitted?

Mr. LONG. I understand that, but the point is that there would not be anything with which to defend ourselves.

Mr. MONTOYA. The Cooper amendment really is designed to prevent deployment and prohibit the expenditure of money for hardware until the research, development, and testing indicate to Congress that it would be a sound investment.

Mr. LONG. To me, it would be like saying, "Please, mother, may I go out to swim?" and receiving the reply, "Yes, but don't go near the water."

If a man is coming at you with a loaded rifle and you have a beautiful rifle on the drawing board, what good are those blueprints going to do you when the other fellow is using a rifle on you?

I recall my own experiences—sometimes one is prejudiced by that—back in the days when we were trying to defend ourselves against enemy aircraft. We were very poor to begin with. After a while we got so that we were bringing a lot of them down. Suddenly our side developed a projectile that had a proximity fuse on it. At that time, our antiaircraft fire was absolutely brutal murder on the German airplanes. They had no chance.

One may develop something which leaves something to be desired, but we never can tell what day someone will come up with the final solution.

Let us compare it with what the North Vietnamese have done to our airplanes. When they first put their SAM missiles against our planes, they were very ineffectual. But as they used them and gained more experience and overcame the defects, they became very effective. That is what our planes will be competing with if they try to invade the Soviet Union—all the experience of Russian missiles employed against our planes, with Russian advisers, with North Vietnamese at the trigger. They are very effective, but they were not effective at first.

If you never build the hardware, it will never do you any good. Sometimes all you need is a few technical changes to make the thing work.

It seems to me that the Russians are a great deal ahead of us in missile defense. It is dangerous to permit them to get any further ahead unless one takes the view that some take—which the great White House adviser Richard Goodwin seems to have—that there will be no war if we are not able to defend ourselves. I do not think the Senator shares that view.

Mr. MONTOYA. I do not subscribe to that view, because in this case we have the Safeguard and the deterrent of having the SAC bombers on alert and the Polaris submarine with the Poseidon missile—we will have it—with the multiple warhead. I do not think Russia would ever risk sending an offensive missile to destroy our cities or to do harm to our landscape, for fear that our effective retaliation would be set in motion.

Mr. LONG. All these things become obsolete as the enemy improves his defense. It can be compared to any game, whether it is football, baseball, or anything else. As the other fellow improves his defense, your attack becomes ineffective unless you improve your attack. Any team or any army which can attack but cannot defend cannot win a war against an army which can do both effectively.

In view of that, for the life of me, I cannot see how we could hope, by failing to have a good missile defense, to advance this national interest.

I believe we have wasted a great deal of money in some instances. I once served on the Committee on Foreign Relations. Hearings against this missile are being developed by that committee. Having served on that committee, I must say that in the past we have spent a great deal of money and have given our resources away to foreign nations, without getting anything in return. Much of this was utter waste, and we have no hope of ever getting anything in return, except perhaps some good will. In many instances, the countries hate us now, despite all the money they have received from us. This country has been strong enough to defend itself and to remain at peace with all the major powers. Admittedly, we have had to contest our position with some of the minor powers.

But we have never had to fight a major war because they knew we were strong and we knew they were strong; we respected one another for what we were.

Mr. President, I think the Senator made a statesmanlike presentation but I hope he considers the feeling of some of us that we must defend our Nation effectively.

Mr. MONTOYA. Mr. President, I want the Senator from Louisiana to know that I thoroughly respect his position on this matter. I have never questioned his position and I have never questioned his motives. I stand on that.

Mr. LONG. Mr. President, the same compliment goes both ways. I thank the Senator.

Mr. MONTOYA. I yield the floor.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Bartlett, one of its reading clerks, announced that the House had passed a bill (H.R. 13080) to continue for an additional 15 days the existing rates of income tax withheld at source, in which it requested the concurrence of the Senate.

EXTENSION OF THE SURTAX

Mr. MANSFIELD addressed the Chair.

The PRESIDING OFFICER (Mr. GURNEY in the chair). The Senator from Montana is recognized.

Mr. MANSFIELD. Mr. President, what is the status of the bill from the House of Representatives which is at the desk?

The PRESIDING OFFICER. The message has just been received from the House of Representatives and is at the desk.

Mr. MANSFIELD. Mr. President, what is the next move?

The PRESIDING OFFICER. It can be referred or a Senator could ask that it be laid before the Senate for its first reading.

Mr. DIRKSEN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. DIRKSEN. Normally, Mr. President, we could have first reading; but after the second reading I think that would be the appropriate place to ask that it go on the calendar.

The PRESIDING OFFICER. The Chair can lay it before the Senate and have first reading under the rule, but a second reading has to be requested by the Senate.

Mr. MANSFIELD. Mr. President, has first reading been had?

The PRESIDING OFFICER. The Chair lays before the Senate a message from the House of Representatives, which the clerk will read.

The ASSISTANT LEGISLATIVE CLERK. A bill (H.R. 13080) to continue for an additional 15 days the existing rates of income tax withheld at source.

Mr. MANSFIELD. Mr. President, to keep the record straight, have we now had first reading?

The PRESIDING OFFICER. We have had first reading.

Mr. MANSFIELD. Mr. President, after discussing the matter with the Senator from Louisiana (Mr. LONG) and others, we would have no objection to having the bill placed on the calendar in the ordinary course of events rather than to delay action by endeavoring to refer it to the Committee on Finance, or by entering an objection which would force the measure to lay over for a day, which in turn would place it on the calendar tomorrow, but by the same token would not make it available for consideration until the next legislative day. That would take us beyond midnight tomorrow, the time at which the present surtax law expires.

The position of the Democratic Policy Committee and the Democratic members of the Committee on Finance has not changed one bit, but in an effort to further accommodate those who are so desirous that this matter be rushed into, we have decided that this would be the best way to face up to it.

Mr. DIRKSEN. Mr. President, to reserve all rights, I would normally, I think, interpose an objection after the second reading. Then, the bill would go to the calendar. But before I do so——

The PRESIDING OFFICER. It would have to wait until after——

Mr. DIRKSEN. That is correct. I understand.

The PRESIDING OFFICER. Does the Senator from Illinois ask for a second reading now?

Mr. DIRKSEN. I could ask for it, but I shall withhold now because I do wish to address an inquiry to the distinguished majority leader.

Normally, they had in mind that the bill go to the Committee on Finance for further consideration. In that event, it would have to be reported back. My whole hope was to have immediate consideration and if that were appropriate I could ask for immediate consideration of the proposal that is now before us. I would anticipate there might be objection, but if it is in order to make that request at the moment, I think I shall do so. I do not know whether that comes after the second reading or before.

The PRESIDING OFFICER. The Chair advises the Senator he could ask for second reading or he could ask unanimous consent that the bill be considered immediately.

Mr. DIRKSEN. I make the latter request.

Mr. MANSFIELD. I object.

The PRESIDING OFFICER. Objection is heard. Does the Senator from Illinois wish the bill to be read a second time?

Mr. DIRKSEN. Yes.

The PRESIDING OFFICER. The bill will be read the second time.

The ASSISTANT LEGISLATIVE CLERK. A bill (H.R. 13080) to continue for an additional 15 days the existing rates of income tax withheld at the source.

Mr. MANSFIELD. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. MANSFIELD. Mr. President, does this mean that the bill now goes on the calendar?

The PRESIDING OFFICER. If there is an objection to further proceedings then, yes, it would go on the calendar under the rule.

Mr. DIRKSEN. I would have to make that objection.

The PRESIDING OFFICER. Objection is heard. Under rule XIV, paragraph 4, the bill will be placed on the calendar.

Mr. MANSFIELD. Now, Mr. President, before that bill will become liable for action on the part of the Senate it would have to lay over 1 legislative day. Is that correct?

The PRESIDING OFFICER. The Senator is correct.

Mr. MANSFIELD. And that on tomorrow it does become liable for some action.

The PRESIDING OFFICER. It would be in order to take it up tomorrow.

Mr. MANSFIELD. Mr. President, in explanation to the Senate, may I say that even in the field of accommodation one can go too far, and that was the reason I had to most respectfully and reluctantly object to the unanimous-consent request of the distinguished Senator from Illinois.

Mr. DIRKSEN. I understand the position of the majority leader. At the same time I would like to make abundantly clear the problem that confronts us and the administration.

I thought I made it abundantly clear on yesterday, in pursuance of the memorandum that was submitted by the majority members of the Committee on Finance and the Majority Policy Committee that there would be acceptability of a 5-month extension of the surtax, provided the administration accepted and provided that the majority leadership accept it.

Last night some time after 8 o'clock the President was contacted in Asia. The telephone call was made by the Vice President. I was not privy to that conversation. Therefore, I do not know in what detail they discussed the matter. But in any event, on the basis of the President's reply a statement was made this morning to the effect that it was not acceptable to the President; and he had hoped that perhaps the Senate would proceed with H.R. 12290, presently on the calendar, which came out of the House on the 30th of June and which came out of the Committee on Finance of the Senate on July 17. That is the five-package bill, taking care of those at the impoverished levels, taking care of the excise taxes, the surtax, the investment tax credit, and I think one other item.

We have gone through that lesson book and we could very well call up H.R. 12290 and satisfy the administration by discussing and disposing of the bill, because that is quite consonant and quite in line with the request the administration made in its tax message to the Congress.

Now, today, by a 3-to-1 vote, the House of Representatives has passed the so-called 15-day extension. However, it deals only with the question of withholding rates and nothing more. Fifteen days takes it, roughly, about to the point of the agreed midsummer recess which begins on August 13. At that point, of course, the extension bill is then payable. From then on, the complications develop for industry, business, and for every other enterprise in the country.

I mentioned only a little while ago that not the least of the headaches, of course, will be in the case of employees on whom withholdings have been made where probably not enough was withheld, in which event, at the end of the calendar year, they would be owing a larger sum of money, provided the surtax was finally continued. That would be an unhappy state of affairs, and they would be grousing all over the place.

But I see a greater crisis and a greater danger, Mr. President, than all that. Those are probably the inconveniences of the moment. What frightens me a little, first, are the gyrations of the market which reflect not only domestic thinking but also the thinking abroad. We have a tendency to forget that there are $40 billion in money and in short-term securities mainly in the hands of European bankers. Our gold supply is only about $10 billion and there are $40 billion in obligations abroad. Every time the Chairman of the Federal Reserve Board, every time the Secretary of the Treasury in this and prior administrations went abroad and undertook to get a report, it was the same old story. Always and always those who were the stewards of the fiscal welfare of these countries on the other side of the Atlantic have constantly said to us, "Are you going to face up to your responsibility, or aren't you?"

Now that followed a policy of restraint and is causing us no undue difficulty up to this point; but if, on the other hand, they decide that this body in its entirety—and I have to include the House—will not face up to this problem in the terms and under the conditions prescribed by the administration, then what?

Suppose they undertake a massive liquidation. Who do we think will get hurt? We are going to get hurt. We shall be hurt in a great big way before we get through. That is what bothers me.

Thus, I had hoped that we could go along and probably extend that surtax a little longer.

I should observe that one objection I had to the November 30 cutoff date was merely that they tell me from a practical standpoint it does become too operable. I presume by that they mean the administrative difficulties that somehow ensue.

I pretend to be no expert in that field. I am content to rely upon the observations of others who have some knowledge of it as to whether it is really operable without undue inconvenience. They say, "No." I am content to abide by their judgment. That is the reason I took exception to it. I did say yesterday—and I was quoted correctly—that it was an old rule with me that if we cannot get a whole loaf of bread, then let us take whatever bread we can get because we cannot always be a chooser in this world.

Had this been extended to December 31, I think, because of the fiscal year indication as well as the calendar year indication, it would have been easier than it is now. But evidently at least there has been no indication that this will be done. Had an amendment been offered or had this proposal submitted by the joint Finance and Majority Policy Committees been offered, let us say, either as a substitute or as an amendment to the 15-day extension bill, we probably could have made something of it.

I think there is an inclination toward restraint here in not loading up the measure that came along with extraneous or even germane amendments, in the hope that action can be had. But there is no hint, there is no clue, that that will be the case.

I allude to only one other thing, that there has been such a passionate expression about tax reform—meaningful tax reform—comprehensive tax reform. I think it was a disposition to believe that it was one of those vague and nebulous things that was in the offing somewhere. I am advised now, this afternoon, that the tax reform bill will be filed in the House of Representatives this afternoon. It means that the Ways and Means Committee in that body have certainly been diligent. They are about 10 days ahead of their timetable.

In view of that fact, that tax reform is on the threshold, is there any reason now that we cannot accept these protestations in good faith and say, "All right. As gentlemen and as people who are addicted to reason, the tax reform bill is here?" Not in this body, but in the other body. It is on track. Why cannot we put this on track, consonant, of course, with what the administration asked for in the first place?

I have to point out one other thing, of course, that in the first memorandum from the joint majority committee, it was pointed out that repeal of the so-called investment tax credit would be held back until the tax reform bill came along.

Well, it can be put in there, but depending on how long it takes, since this memorandum calls for action sometime on or before October 31, it might have to wait that long. But this is the first of August. Thus, we have August, September, and October—that is 3 months. Under the investment tax credit proposal, as long as that remains in being, we will be pumping roughly $700 million into the industrial bloodstream of the country every 30 days. That is three times seven, which is $2.1 billion of additional purchasing power, because that is disposable income.

Thus, all it does is to aggravate the problem that is before us now.

Is it any wonder that the market should drop nine points by noon today and 10 points the day before yesterday?

No, it is not, because it is a reflection of the uncertainty in the country and, obviously, the uncertainty in the minds of the enterprisers, both here and abroad, as to what in Government we propose to do; because we make the rules, so to speak, under which they live and move and have their being. They have got to have some idea of what the rules are like and what they will be like, not only for a month or 2 months but for a longer period, if they are going to shape their policies in line with those rules giving direction to the farflung and gigantic business enterprises that we call the production and distribution system of the United States of America.

It is that simple, and that is why I say, with some trepidation and some fear, that perhaps America is in a crisis already.

I lived through it in 1929, when bankers were jumping out of 14-story windows. I know it was only a few years thereafter that I became a candidate for Federal office, and then spent 16 years wrestling with the problems that were finally spawned by that horrible economic dislocation that we call the Depression of 1929.

Do we invite it now by our refusal to face up to the problem which is here? Well, we may not be inviting it, but, Mr. President, we are toying with it, and that is a matter of alarm in my book. So I hoped that perhaps there would be a suggestion here.

For myself, I can embrace what was in the memorandum that the distinguished majority leader so graciously sent me at our policy meeting yesterday, but I am one of five in the leadership. I did so. I accepted it. But I cannot speak for others. It is for them to decide, because when the term "minority leadership" was used, that was something more than the minority leader; that was the rest of the leadership, and there are four others who would have to acquaint me and acquaint the Senate with their views.

But at the moment that is neither here nor there. The administration has indicated that all this is not acceptable. So I simply have to abide it as best I can. I make no charges of fiscal irresponsibility. I have to assume that every Member of this body is as interested in the well-being and the durability and the viability of our institutions as the Senator from Illinois. If I did not believe that, I would wonder whether or not my membership here would be of any great value. I have to assume that every one of the other 99 Senators brings the same good faith and the same hope and the same interest to his responsibility that I do.

I saw the document which is in the nature of a speech which was delivered this afternoon in the House of Representatives. I have never quite gotten around to the point where I could use that kind of language, because Senators ought to read it. It is pretty "iffy," a little truculent in evaluation, and it has a powerful clout in it. I did not say it, but I simply remind the Senate that here we are up against a challenge and up against a crisis, and the country looks down upon us and says, "What an amazing spectacle that the world's most deliberative body has reached a fiscal and monetary impasse and cannot move forward or backward." That is an appalling state of affairs.

So I have done with it for the moment. If I were free to do it, I would embrace what my distinguished counterpart, the majority leader, suggested in that memorandum. I would take it on the outside theory that at long last the healing forces would move into the little gaps that were being created and that after some months of experience we would come out reasonably whole.

I am willing to gamble on that, but I cannot speak for others. As I indicated yesterday, I cannot speak for the administration, because that is not my full responsibility for the moment, unless the head of that administration, the President of the United States, warrants me to speak and to express his views. He has done so himself. He has stated that this so-called compromise proposal is not acceptable, and in that respect, 50 percent of the condition precedent in the memorandum of yesterday goes out of the window, and as for the rest of it, I speak for 20 percent of the balance. That is the whole story.

Mr. MANSFIELD. Mr. President, as always, I have listened with intense interest to what the distinguished minority leader has had to say. I honor him for his courtesy, his understanding, and his frankness of what responsibility in the positions that he and I both hold in our respective parties entails.

Mr. President, I do not know any European bankers. I do not know what the effect of their desire to get our gold, small though it is in amount, would have on our economy. But I have an idea that they are not too eager to get it, because if there is any danger of instability there or here, it will be felt where they are, too.

Then, reference has been made to the stock market. It is not what we are doing in the Senate, in my opinion, which is having the effect on the stock market which has been evident over the past several months. Perhaps it is what is being done in the other body in the way of tax reform proposals, because that is where the guts of the market are and that is where the effect of what the House committee is doing is being felt, in my personal opinion.

Like the minority leader, I am not a financier or an economist. I do not doubt the integrity of anybody on that side of the aisle who finds fault with what we are attempting to do on this side. In my opinion, every Senator in this body—all 99, aside from the Senator from Montana—is a Senator of honor, integrity, and understanding. As long as we operate on that basis, I think this institution will survive and this Republic will continue to stand.

This is no time for allusions, illusions, or delusions. This is a time for questioning, on a statesmanlike basis. For all I know, the Senator from Illinois may be right and I may be wrong, but it is a matter of judgment that we have to face up to. It is a responsibiilty which none of us can avoid. But regardless of one's feeling, I certainly find no fault personally with the attitude taken by any individual Senator in this body.

As a matter of fact, I am extremely glad that this administration was able to announce in the last day or so that it was able to show a surplus of $3.2 billion—$2 billion above the previous estimate. I was glad that this administration brought an end to the Cheyenne helicopter contract and the manned orbital laboratory as well. I was glad when President Nixon said he was going to bring about a further $3.5 billion reduction in expenditures. I think he is moving in the right direction.

It is a responsibility on our part to do at least as much along that line—not cutting in the field of expenditures so much, as cutting in the field of budgeted appropriations.

It would be my hope that before we are through with the fiscal year which we are now in, we will be able to reduce the President's budget requests by something on the order of $10 billion. It was done last year; there is no reason why it cannot be done this year. But that is our responsibility, and those of us who are here will be the determiners of that particular problem.

Mr. President, I regret that the effort to arrive at a responsible procedural resolution of the matter of linking the surcharge extension with a more equitable tax policy has been represented in some quarters as an "ultimatum." Far from an ultimatum, it was the best accommodation that could be obtained. The lack of enthusiasm for extension of the surtax, the growing desire to restore some equity to the tax structure, the public statement that this administration was for tax reform in this session of the Congress and its view that the surtax was necessary to curb in-

flation—all would be satisfied by the proposal of extending the surtax until November 30—and, thereafter, beginning on January 1, 1970, at a lower rate until June 30 upon the assurance of tax reform. One wonders which aspect of the proposed accommodation is ingenuous and how the whole can possibly be construed as an ultimatum.

May I say that I was also disturbed to find the somewhat flippant characterization of "pocket veto" applied to the effort to provide a measure of tax reform which would be of primary benefit to the wage earners and salaried employees of the Nation—the group which is now heavily saddled with the onus of the surtax? The suggested compromise is not a veto—pocket or any other variety. Indeed, in this reference the basic constitutional provision of the veto is not fully understood. The veto is reserved to the Executive but only after legislative action—not before action. There is no provision in the Constitution for a premature veto in the Executive—prior to legislative action—especially when there is a will on the part of the leadership on both sides of the aisle to seek an accommodation. Far from a veto, the suggested compromise is an invitation to effective action on both the surtax and tax reform.

What has been done has been done in the open and for all to judge. What has been asked at this point is that tax reform be disposed of in connection with the matter of the surcharge extension. The procedure offered is simply that the surcharge be extended now—today. That is what the administration desires. What is asked in return is [illegible]t 3 months from now an opportunity be assured, at last, for a bona fide consideration of the long-standing public demand for changes in the present tax structure in the direction of greater equity.

I am surprised at the use of the term "ultimatum." Is it an ultimatum to try to assure tax reform when all Members of this body as well as the administration publicly seek tax reform? Moreover, the procedural accommodation of a 5-month extension would go far in the direction of the expectations of the administration with respect to the surtax. If there is an ultimatum here, it is being presented by the Nation's taxpayers who are beginning to insist, in their millions, that the long-awaited reforms in the tax structure come into existence without further delay.

If there has been a veto, it has been imposed by those who refuse to acknowledge that tax inequities cannot be eliminated by words but only by facing up to the procedural realities of the Congress and by digging in for a long siege until these inequities are brought down.

If it is believed sincerely that the surcharge is vital to curb inflation, then I suggest that excuses, name-calling and finger-pointing be forgotten and that the surcharge be enacted for 5 months now—today. If it is believed that there are inequities in our tax structure then I suggest we take the nod from what is transpiring in the other body and join together to do what is necessary in the Senate to assure their correction before this session ends. The way is open. We need only take it.

Mr. SCOTT. Mr. President, I rise in support of the statement made by the distinguished minority leader. He has stated the situation quite correctly. I agree with him, and wish to add merely some additional comments.

The nature of the time limit which we received would seem to me to mean that we either had to act in the way in which it was suggested that we act, or that certain dire consequences would occur. If that causes any unhappiness by reference to it as an ultimatum, we do not need to do that. None of the remarks referred to here have been made—by me, in any event—with the implication that they were of that critical character. What I said, I said within our own party policy committee.

I should like to deal with some of the statements, and with the situation as I see it.

Reference was made to a $3 billion surplus. We can only call it a surplus, because of the change in the bookkeeping methods we use, as against the original, more accurately presented earlier budgets. We have no surplus, because we are including the trust funds; and if we did not include them, we would have a very substantial deficit.

But if we take the bookkeeping surplus for what it is, at about $3 billion, and remember that the phasing out of the surtax would bring us $7.6 billion, then, indeed, by failing to act on the administration bill, we would be incurring a defi[illegible]$4.6 billion.

[illegible] else is going on while the re[illegible] out the surtax is occurring. [illegible]y the way, I do not think it ought to be called a surtax extension.

Mr. COTTON. Mr. President, a point of order. The Senate is not in order, and we cannot hear.

The PRESIDING OFFICER. The Senate will be in order.

Mr. SCOTT. This is not a surtax which this administration imposed. Up until now, it has been a 10-percent surtax, and we have all had to pay it. But this administration proposes, not the indefinite continuance of the surtax, but its orderly phasing out. It proposes a very limited continuance, to the end of the year, the normal time. December 31, as the distinguished minority leader has pointed out. Then we propose to cut it in half, and then we propose to eliminate it. Therefore, we are doing something which has not been done before, and that ought to be credited to our account.

What is going to happen in the fiscal world as a result of the action of the majority steering committee? This is not an imputation of their motives or anything of the sort. We honestly disagree here. But frankly, we ask, what is going to happen to the American economy by virtue of the fact that they are not willing to give the President the fiscal authority which he says he needs, in order to help the economy maintain itself on an even keel?

What happens if we do not accept the administration's proposal for the orderly phasing out of the surtax and the inclusion of a number of tax reforms in the first bill? The second bill is right on the heels of it. It is shortly to go to the floor of the other body, perhaps by way of the Rules Committee. But it is on its way.

I can tell the Senate one thing that is happening already. There has been a loss in values on the stock market this year of $180 billion. And the market is hitting another low each day this week, or virtually so.

What does that mean? That means that the reports are that every day certain securities hit a new low and every day virtually no security hits a new high. That $180 billion loss is reflected in Treasury revenue for this year, because there will be far less taxes received on capital gains, whether long or short term, because of the fact that the capital gains have been wiped out.

I think I know where the responsibility lies, and I must regretfully disagree with the distinguished majority leader on this. I think that the responsibility lies in those who the leader says have to make the rules. We make the rules.

Another thing that is about to happen—and I got this information from the Secretary of the Treasury yesterday—is that if we do not provide for the orderly phasing out of the surtax, the Treasury in the open market will have to pay more money in the form of interest rates for its Treasury borrowings than it is paying today.

Anyone who speaks here about wanting to save the Government money is not saving them money if the Treasury will have to pay more money in the form of interest rates for its borrowings.

Another thing that will happen, the Secretary of the Treasury and various economists in and out of the Government have pointed out that we are going into the month of September when we will be meeting with the world bankers.

It does not matter whether we know the world bankers or not. They know us, and they know what we are doing. These meetings in September are of the highest importance and will be extremely critical to the future of the dollar, because in those meetings there will be discussions that pertain to the alleged overvaluation of the mark, the alleged undervaluation of the franc and the pound. And this action will bring the dollar into those calculations. So, in September, we may—by failing to act here promptly and with the certitude that our economy needs—have made a dangerous contribution to the instability of the dollar.

Another thing needs to be borne in mind, and that is that it has been made as crystal clear as it can be made that the other body, which passed this tax bill we are talking about by a mere five votes, has indicated in the person of its leadership of both political parties, in private to us, and some have done so publicly, that there is not a single chance in the world of the House accepting the formula proposed by the majority steering committee.

That means that members of that party and members of our party are agreed. The other body will not take it. Therefore, why ask us to do a useless

thing? Why argue, however fervently, that we should accept the formula because it is presented to us as the only thing we can get since we are told that if we do not get that, we can let the surtax go.

I would like to ask whom we are hurting by that action, whether we are hurting ourselves or the taxpayers, whether we are not hurting the consumers and the workers, even though we are told, "If you do not do it our way, because we have the votes, we will not do it at all." That is a part of our process of fixing responsibility. Nevertheless, it seems to me that a part of that process ought to envision what the other body will do; and the other body is getting up its second tax relief reform bill.

I have the greatest feeling of certainty that the other body will not accept the formula proposed to us.

It is said that the administration bill is not a reform bill and is not a relief bill. I say that it takes off the tax rolls 5 million taxpayers who are at the poverty level. It benefits dollarwise 8 million other taxpayers.

We are trying to pass on the benefits to the people who need it the most. We are being blocked and prevented from doing it. We are being told with great rationalization why it cannot be done.

I hope that my voice will go beyond these Chambers to these 13 million people who are in uncertainty that it is not my action or the action of the people whose views I share which is depriving these 13 million people of tax relief in the first tax relief bill.

How can the 5 million taxpayers who no longer pay taxes get any more tax reform than that? We can reform the taxes from here to Gehenna, but we will not give any more tax reform to those 5 million taxpayers than to say, "One day you are paying taxes, and the next day you are not." So far as income taxes are concerned, he has all the tax reform he can get. He has it all. The other 8 million taxpayers are standing by and wondering why they do not get tax reform.

I asked the Secretary of the Treasury yesterday if it would be just for me to make this statement. I said, "Would it be just for me to say that the formula of the majority policy committee favors the rich because it eliminates from the administration's bill the repeal of the investment tax credit and hurts the poor because it defers their chances of getting such a tax benefit?"

The Secretary of the Treasury said to me, "Yes, Senator; it would be a just statement."

Therefore, my view is that we must do here what is just, economically. We must do what is right, economically. And we must take whatever risk is involved politically in doing that.

In the long run if we accept the kind of compromise which runs against the grain because we know it is not right, because we know it defers relief long deferred, because we know it prevents us from taking off a tax we did not put on, and because we know it is the wrong thing to do, then it seems to me that we are becoming part of an act which is in itself an error. And if we do that, we are compounding the error.

I repeat that I made no statements about a pocket veto. If the word "ultimatum" offends, I would hope we would be forgiven. But whenever somebody tells me, "You have to act now or get nothing," and the time expires Thursday, I do not mind what one calls it. I only know it puts me over a barrel and forces me to make a decision. One can call it what he wants to, but to me it is a moment when I have to decide where I stand with regard to the taxpayers of the United States. And I have made my decision.

The distinguished minority leader is quite right when he says that this formula—and I carefully call it a formula rather than an ultimatum—is not acceptable to the administration. That was one of the conditions of its acceptance. Therefore, it would not matter what the minority leaders were agreed on.

As the distinguished minority leader knows, I expressed myself in the policy committee. However, he also knows I have pointed out that if it would have helped him to secure an agreement here, I would be in accord with any decision he finally reached.

Had it been possible for the leadership to come together, as well as the administration, from my point of view, there would have been no difficulty and I would have done anything I could have to uphold and strengthen the hands of the distinguished minority leader. When the administration says—and I think quite rightly—that we cannot accept this kind of formula because it endangers the fiscal security of the country, because it delays doing justice to many taxpayers who have waited a long time for it, because it leaves in turmoil the economy of the country, because it increases the price of Government bonds, because we are losing revenue from it through the loss of capital gains revenue, and because all these things are in a state of confusion, then we cannot accept the responsibility for it by acceding to the form of a compromise which we believe does not do economic justice to the American community.

Mr. WILLIAMS of Delaware. Mr. President, although there seems to be an impasse at this time, I am still confident that when the chips are down the Senate will act responsibly. I do not for a moment question the motives or the sincerity of any Member of the Senate on either side of the aisle, yet I cannot conceive of the Senate letting this matter go by so that the American taxpayers will be left in a continuous state of uncertainty: Uncertainty as to whether this surtax tax will or will not be extended and, if so, at what rates and for how long; uncertainty as to whether we will or will not repeal the investment credit and, if so, the effective date of that repeal; and uncertainty as to what exceptions, if any, will be made.

Those points must be considered, and the taxpayers have a right to know the answers. There is no reason in the world why Congress cannot take this action either today or tomorrow.

Mention has been made of the surplus of $3.1 billion that was reported just yesterday. I want to point out to the Senate, as I pointed out last year, that there was no surplus. The unified budget very properly takes into consideration all of the revenues that the U.S. Government collects from any category minus the expenditures, without regard to what they represent. It is the total amount that the Government is taking out of the economy as related to the amount it is pouring back through various agencies and departments, but it does not mean that it is actually a surplus so far as the operation of the Government is concerned.

For example, in arriving at that figure of a surplus this year, $8.4 billion represented the accumulation in the various trust funds during the past 12 months. Part of the accumulation is made up of the social security retirement fund, the railroad retirement fund, the civil service retirement fund, and various other trust funds of which the Government of the United States is only the trustee. Under the law not one dime of that money can be used by the Government, by any Government agency, or by Congress to defray the normal operating costs of the Government.

In addition, it is overlooked that last year we enacted a 10-percent surcharge, effective retroactively to January 1, 1968, but we did not pass that bill until July 1. That meant that the surcharge for 18 months was collected in the 12-month period of fiscal 1969. The surcharge for 15 months on individual taxpayers was collected in the same 12-month period, fiscal 1969.

In addition there was the acceleration of corporate taxes, which last year brought in $700 million of nonrecurring income. The acceleration of the payment of excise taxes brought in an additional $200 million last year, which is nonrecurring income.

When those items are taken into consideration with the trust fund accumulation, which by no line of reasoning can be used for the purpose of reporting a balanced budget, we have a total of $11.3 billion. When $3.1 billion of the so-called surplus is subtracted we find that the Government actually operated last year with a deficit of over $8 billion. Taking the cost of operating our Government as related to its income under the old administrative budget, we would have a deficit of $8.25 billion, or approximately $700 million per month.

In the face of that deficit, even to think that the Senate may neglect to extend the surcharge at this time is indefensible. It would mean pouring into the spending stream an additional $700 million a month, which would further fan the fires of inflation. I just cannot conceive, and I do not believe, that the Members of the Senate will go home to their constituents later this week without voting on this measure and tell them that they gambled with the financial stability of this Government in such a loose manner.

I am confident that, as reasonable men, we can bring this matter to a vote. All we are asking is a chance for every Member of the Senate to vote for whatever proposal he favors, whether it be a 1-month, 3-month, 5-month, or a 1-year extension of the surcharge. But let each Member of the Senate vote as he thinks is in the best interest of his country. Certainly, the Senate has not reached the stage at which any small group of men—

nine men it happens to be—can sit back in a closed, smoke-filled room and come back to the other 91 Members and say: "Gentlemen, this is what we have agreed on. If you will all agree to vote for the amendments we recommend and against those to which we say no we will bring the measure up for consideration."

I do not for one moment think that is the manner in which the Senate is going to operate.

Furthermore, when any vote is taken on the question of extending the surcharge the Senate should at the same time make a decision as to whether it will or will not repeal the investment credit.

Mr. ALLEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. JAVITS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE REVISED PHILADELPHIA PLAN: EQUAL EMPLOYMENT OPPORTUNITY IN THE BUILDING TRADES

Mr. JAVITS. Mr. President, I wish to call to the attention of the Senate the revised Philadelphia plan, which was promulgated on June 27, 1969, by Mr. Arthur Fletcher, Assistant Secretary of Labor. The revised Philadelphia plan is a program requiring building construction contractors to undertake certain obligations to accommodate the problem of an absence of minority workers, workers from minority groups, in the building trades, attributable to longstanding discrimination on the grounds of race and color among those trade unions which they are seeking to overcome.

This is a plan which was developed by the Department of Labor under Secretary Shultz and it is designed to deal with this situation. Both the Department of Labor and the Department of Justice are involved in these arrangements in Philadelphia. If the revised plan succeeds in Philadelphia it will be followed in other cities and it could make an appreciable dent in tne problem of workers from minority groups having opportunities in the building construction field.

I believe the plan is an important step forward in the struggle to eradicate racial discrimination in employment in the construction industry and to insure effective affirmative action by construction contractors doing business with the Federal Government. The goal is true equality of employment opportunity in the industry.

Predictably, the plan has been criticized by some, including a few of my colleagues in the Senate, and a ruling on the plan has been requested from the Comptroller General. I believe that the criticism which has been made of the plan is unjustified. It is premised on a basic misconception of what the plan requires and the legislative history of title VII of the Civil Rights Act of 1964.

I feel, and many others feel, that before the Comptroller General does rule we should make clear what the plan is about and why, in our judgment, it is completely lawful; why his ruling should be favorable and what is to be done if it is not favorable, to wit, the matter should be taken into the courts and dealt with appropriately; but we should not be foreclosed by the ruling.

The basic criticism of the revised Philadelphia plan is that it requires an illegal "quota" system for hiring minority group employees. That is simply not so. All that the plan really does is to translate the abstract requirement of "affirmative action" contained in Executive Order 11246 into concrete terms for seven of the better paid building and construction trades in the Philadelphia area. In the plan itself, these trades are found to have excluded minority group applicants. At the end of 1967, less than one-half of 1 percent of the membership of the unions representing employees in the seven trades were black.

Under the plan, OFCC, taking into consideration a number of factors, determines a range of minority employment which should normally result from a good faith, affirmative action program. A contractor, rather than making a vague promise of taking "affirmative action," must, in his bid, set a goal for himself which falls within this range established by OFCC for the seven trades. If the contractor meets the goal, he will be presumed, absent other evidence, to have complied with the affirmative action requirement of Executive Order 11246. If he does not meet the goal, he is not automatically disqualified or subject to sanctions. He is still given an opportunity to demonstrate that he made good faith efforts to meet the goal. Finally, the express terms of the plan make it clear that in attempting to reach any goal for minority employment no contractor may discriminate against any qualified applicant or employee.

There are thus three critically important features of the revised Philadelphia plan which completely negate the idea that it imposes a quota system: First, there is no absolute requirement that any contractor must hire a certain number of minority group employees; all that is required, essentially, is a promise to use good faith efforts to meet a goal within a range of minority employment established by OFCC to be the normal result of an affirmative action program implemented in good faith. If the goal is not met but the contractor has attempted in good faith to meet it, the plan is satisfied. Second, the ranges of minority employment determined by OFCC to be the normal result of a good faith affirmative action program are not based on mere racial imbalance or gross demographic, statistics. Rather, they include the following four factors: First, the current extent of minority group participation in the trade; second, the availability of minority group persons for employment in such trade; third, the need for training programs in the area and the need to insure demand for those in existing training programs; and fourth, the impact of the program upon the existing labor force. Third, contractors, are not required—indeed they are specifically forbidden—to practice any "reverse discrimination." Thus the plan specifically states:

> The purpose of the contractor's commitment to specific goals is to meet the contractor's affirmative action obligations and is not intended and shall not be used to discriminate against any qualified applicant or employee.

I think it is clear that from a legal, moral, and practical standpoint the revised Philadelphia plan is not subject to the criticism which has been leveled at it. Indeed, it is quite ironic that those who seem to be most critical of this plan are precisely those who have been most critical of the previous ambiguity, conflict, and needless duplication of programs and policies under Executive Order 11246 which the revised Philadelphia plan is designed to correct. For, in addition to being an important forward step in improving the efficacy of the equal opportunity program under the Executive order, the plan, insofar as it establishes specific criteria for judging compliance, will unquestionably prove to be a boon to businessmen and trade unions who have, in the past, justifiably criticized the program under Executive Order 11246 on the ground that they never knew what was really expected of them and that they were subjected to a whole panoply of different standards from different Government agencies with oftentimes conflicting views. The plan should also do much to eliminate the problem of repetitious compliance investigations and reviews which have allegedly proved so burdensome to some members of the business community.

It is noteworthy, in this connection, that the original Philadelphia plan was revised to require the setting of specific goals specifically to meet objections which had been voiced by the Comptroller General on the grounds that the original plan did not set up specific criteria which could be incorporated in bids and that the original plan permitted continued negotiations after low bidder had been selected concerning compliance with Executive Order 11246. In response to those objections, the revised Philadelphia plan not only provides for the establishment of specific goals but also prohibits any negotiations concerning the meeting of those goals after bids have been opened on any project.

The criticism of the plan on legal grounds, insofar as these grounds have been articulated, proceeds from the mistaken premise that all that is or should be required of Government contractors is a policy of passive nondiscrimination in employment. I readily concede that the revived Philadelphia plan requires more than that; what is involved is a very basic distinction between the passive duty not to discriminate and the express duty, under the Executive order, as well as under title VII of the Civil Rights Act—where discrimination has been a pattern or practice in the past—to take "affirmative action" to insure equality of employment opportunity for minority groups.

It is clear from the history of the current Executive order that something more than passive nondiscrimination was necessary and was intended to be added with the "affirmative action" language. In addition, it is clear that a Federal contractor is required to take such affirmative action whether or not there has been a specific finding that it has engaged in unlawful discrimination.

Hence, although it is true the revised Philadelphia plan requires contractors to take action in which race is a consideration, this does not invalidate the plan. Such consideration of race is the heart of the "affirmative action" concept, particularly where, as here, there is a past history of discrimination. This type of affirmative action has, furthermore, frequently been approved—indeed required—by the courts in cases involving various aspects of discrimination.

Thus, some 14 years after *Brown* v. *Board of Education* (347 U.S. 483 (1954)) the judiciary came to recognize that an affirmative duty attaches to take steps to correct a discriminatory system. The Supreme Court spoke again just a month ago in *U.S.* v. *Montgomery County* (289 F. Supp. 647, aff'd 37 LW 4461 (1969)) when it unanimously upheld a district court's order that a school board "must move toward a goal under which in each school the ratio of white to Negro faculty members is substantially the same as it is throughout the system." The Court has also spoken to this issue in *Green* v. *New Kent Co.* (391 U.S. 430 (1968)) dealing with the HEW school guidelines and in *Gaston County, N.C.* v. *U.S.* (37 L.W. 4478 (1969)), *U.S.* v. *Alabama* (80 Sup. Ct. 924), and *U.S.* v. *Louisiana* (380 U.S. 145 (1964)) dealing with voting rights. There have also been significant court of appeals cases dealing with racial discrimination in housing *Norwalk Core* v. *Norwalk Redev. Auth.* (395 F. 2d 920 (1968)), and perhaps most importantly in employment practices *Heat and Frost Insulators* v. *Vogler* (407 F. 2d 1047 (1969)).

Similarly, in the *U.S.* v. *Jefferson County Board of Education*, 372 F. 2d 836 (5th Cir. 1966), the court, in approving HEW school guidelines containing percentages, pointed out that good faith or progress cannot be measured without taking race into account and characterized the use of percentages there as "a general rule of thumb or objective administrative guide for measuring progress in desegregation rather than a firm guideline that must be met." The revised Philadelphia plan uses goals for precisely the same purpose.

Indeed, the courts have gone even further than this in sustaining classification by race where necessary to undo the effects of past discrimination. As the Second Circuit has recently observed in the Norwalk Corp. case, mentioned above:

> What we have said may require classification by race. That is something which the Constitution usually forbids, not because it is inevitably an impermissible classification, but because it is one which usually, to our national shame, has been drawn for the purpose of maintaining racial inequality. Where it is drawn for the purpose of achieving equality it will be allowed and to the extent it is necessary to avoid unequal treatment by race, it will be required.

It has also been contended by opponents of the plan that section 703(j) of the Civil Rights Act of 1964 prohibits the revised Philadelphia plan. The short answer to that contention is that section 703(j) on its face applies only to proceedings under title VII of that act, and hence does not apply to the revised Philadelphia plan, which was issued under Executive Order No. 11246. Moreover, even if the section did apply, it clearly would not prohibit the plan since it merely forbids finding an employer or union in violation of title VII solely because the racial composition of its work force or membership does not mirror the ratio that a given minority group bears to the general population. As I have explained above, the revised Philadelphia plan is an attempt to spell out, in concrete terms, the meaning of affirmative action; it is certainly not predicated solely on demographic considerations or statistics, although it does, of course, take these into account, as is entirely proper. As the courts have said in cases involving possible racial discrimination, "statistics often tell much, and courts listen."

Any discussion of the plan must also take into account the special problems of eradicating racial discrimination in the building and construction industry.

We have long recognized that the history of this industry requires special programs. We have specific provisions relating to it in sections 8(e) and 8(f) of the Taft-Hartley Act, our basic labor law, and the unique aspects of its employment practices are recognized in title VII of the Civil Rights Act itself. We specifically reach hiring halls in section 701(e) and without regard to the limitations as to number of individuals involved. We also reach joint labor management committees controlling apprenticeship and training programs in section 703(d).

With regard to the Executive order program which supplements title VII of the Civil Rights Act, it was necessary to augment Executive Order 10925 with Executive Order 11114 which specifically related to construction. The substance of these previous orders is now embodied in 11246 on which we continue to rely heavily as an essential element of our equal employment opportunity program.

Beyond that, in administration of the Executive order program, special construction compliance staff had to be deployed and programs tailored to the industry's problems have had to be devised. Proportionately greater manpower has been expended for this industry with less yield. Without special approaches, such as the revised Philadelphia plan, administratively manageable with limited staff, and approaches which may be checked and verified for results, the elimination of employment discrimination will not be achieved—and the mission under Executive Order 11246 is more than the prohibition of discrimination.

On the basis of all the factors I have outlined above, both the Labor Department and the Justice Department, the agencies which have the primary responsibility for enforcing the equal employment opportunity policy embodied in Executive Order 11246 and title VII of the Civil Rights Act of 1964; have concluded that the revised Philadelphia plan is the proper way to satisfy the urgent necessity of promoting true equality of employment opportunity in the building and construction industry. I find myself entirely in agreement with their conclusion and I would hope that, given the broad issues of principle involved, and the expertise of the Justice Department and the Labor Department in this area, that the Comptroller General will come to the same conclusion. I believe that in this case it would be entirely proper for the Comptroller General simply to defer to the primary authority and responsibility of the Labor and Justice Departments, especially since the revised plan does not appear to entail any additional cost to the Government and satisfies the Comptroller General's own requirements for bids on Government construction projects.

Mr. President, I ask unanimous consent that the text of the revised Philadelphia plan be printed in the RECORD, and refer to the fact that the Solicitor of the Department of Labor has submitted an extensive memorandum which refers to the legal basis for the plan. The memorandum is extensive and detailed. I do not wish to impose the added cost of including it as part of the RECORD and therefore wish to refer to it as being available for consultation in my office, or in the Departments of Labor or Justice. It can easily be obtained by any Member of the Senate by asking for it.

Thus, I would hope that any Member who wishes to look it over will do that, rather than for me to have it printed in the RECORD.

There being no objection, the revised plan was ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF LABOR,
Washington, D.C., June 27, 1969.

To: Heads of all agencies.

From: Arthur A. Fletcher, Assistant Secretary for Wage and Labor Standards.

Subject: Revised Philadelphia Plan for Compliance with Equal Employment Opportunity Requirements of Executive Order 11246 for Federally-Involved Construction.

1. PURPOSE

The purpose of this Order is to implement the provisions of Executive Order 11246, and the rules and regulations issued pursuant thereto, requiring a program of equal employment opportunity by Federal contractors and subcontractors and Federally-assisted construction contractors and subcontractors.

2. APPLICABILITY

The requirements of this Order shall apply to all Federal and Federally-assisted construction contracts for projects the estimated total cost of which exceeds $500,000, in the Philadelphia area, including Bucks, Chester, Delaware, Montgomery and Philadelphia counties in Pennsylvania.

3. POLICY

In order to promote the full realization of equal employment opportunity on Federally-assisted projects, it is the policy of the Office of Federal Contract Compliance that no contracts or subcontracts shall be awarded for

Federal and Federally-assisted construction in the Philadelphia area on projects whose cost exceeds $500,000 unless the bidder submits an acceptable affirmative action program which shall include specific goals of minority manpower utilization, meeting the standards included in the invitation or other solicitation for bids, in trades utilizing the following classifications of employees:

Iron workers, plumbers, pipefitters; steamfitters; sheetmetal workers; electrical workers; roofers and water proofers; and elevator construction workers.

4. FINDINGS

Enforcement of the nondiscrimination and affirmative action requirements of Executive Order 11246 has posed special problems in the construction trades. Contractors and subcontractors must hire a new employee complement for each construction job and out of necessity or convenience they rely on the construction craft unions as their prime or sole source of their labor. Collective bargaining agreements and/or established custom between construction contractors and subcontractors and unions frequently provide for, or result in, exclusive hiring halls; even where the collective bargaining agreement contains no such hiring hall provisions or the custom is not rigid, as a practical matter, most people working in these classifications are referred to the jobs by the unions. Because of these hiring arrangements, referral by a union is a virtual necessity for obtaining employment in union construction projects, which constitute the bulk of commercial construction.

Because of the exclusionary practices of labor organizations, there traditionally has been only a small number of Negroes employed in these seven trades. These exclusionary practices include: (1) failure to admit Negroes into membership and into apprenticeship programs. At the end of 1967, less than one-half of one percent of the membership of the unions representing employees in these seven trades were Negro, although the population in the Philadelphia area during the past several decades included substantial numbers of Negroes. As of April 1965, the Commission on Human Relations in Philadelphia found that unions in five trades (plumbers, steamfitters, electrical workers, sheet metal workers and roofers) were "discriminatory" in their admission practices. In a report by the Philadelphia Local AFL–CIO Human Relations Committee made public in 1964, virtually no Negro apprentices were found in any of the building trades classes; [1] (2) failure of the unions to refer Negroes for employment, which has resulted in large measure from the priorities in referral granted to union members and to persons who had work experience under union contracts.

On November 30, 1967, the Philadelphia Federal Executive Board put into effect the Philadelphia Pre-Award Plan. The Federal Executive Board found that [2] the problem of compliance with the requirements of Executive Order 11246 was most apparent in Philadelphia in eight construction trades: electrical, sheetmetal, plumbing and pipefitting, steamfitting, roofing and waterproofing, structural iron work, elevator construction and operating engineers; and that local unions representing employees in these trades in the Philadelphia area had few minority group members and that few minority group persons had been accepted in apprenticeship programs. In order to assure equal employment opportunity on Federal and Federally-assisted construction in the Philadelphia area, the plan required that each apparent low bidder, to qualify for a construction contract or subcontract, must submit a written affirmative action program which would have the results of assuring that there will be minority group representation in these trades.

Since the Philadelphia Plan was put into effect, some progress has been made. Several groups of contractors and Local 543 of the International Union of Operating Engineers have developed an area program of affirmative action which has been approved by OFCC in lieu of other compliance procedures, but subject to periodic evaluation. The original Plan was suspended because of an Opinion by the Comptroller General that it violated the principles of competitive bidding.

Equal employment opportunity in these trades in the Philadelphia area is still far from a reality. The unions in these trades still have only about 1.6 percent minority group membership and they continue to engage in practices, including the granting of referral priorities to union members and to persons who have work experience under union contracts, which result in few Negroes being referred for employment. We find, therefore, that special measures are required to provide equal employment oppotunity in these seven trades.

In view of the foregoing, and in order to implement the affirmative action obligations imposed by the equal employment opportunity clause in Executive Order 11246, and in order to assure that the requirements of this Order conform to the principles of competitive bidding, as construed by the Comptroller General of the United States, the Office of Federal Contract Compliance finds that it is necessary that this Order, requiring bidders to commit themselves to specific goals of minority manpower utilization, be issued.

5. ACCEPTABILITY OF AFFIRMATIVE ACTION PROGRAMS

A bidder's affirmative action program will be acceptable if the specific goals set by the bidder meet the definite standards determined in accordance with Section 6 below. Such goals shall be applicable to each of the designated trades to be used in the performance of the contract whether or not the work is to be subcontracted. However, participation in a multi-employer program approved by OFCC shall be acceptable in lieu of a goal for the trade involved in such training program. In no case shall there be any negotiation over the provisions of the specific goals submitted by the bidder after the opening of bids and prior to the award of the contract.

6. SPECIFIC GOALS AND DEFINITE STANDARDS

a. *General.* The OFCC Area Coordinator, in cooperation with the Federal contracting or administering agencies in the Philadelphia area, will determine the definite standards to be included in the invitation for bids or other solicitation used for every Federally-involved construction contract in the Philadelphia area, when the estimated total cost of the construction project exceeds $500,000. Such definite standards shall specify the range of minority manpower utilization expected for each of the designated trades to be used during the performance of the construction contract. To be eligible for the award of the contract, the bidder must, in the affirmative action program submitted with his bid, set specific goals of minority manpower utilization which meet the definite standard included in the invitation or other solicitation for bids unless the bidder participates in an affirmative action program approved by OFCC.

b. *Specific Goals:*

(1) The setting of goals by contractors to provide equal employment opportunity is required by Section 60–1.40 of the Regulations of this Office (41 CFR § 60–1.40). Further, such voluntary organization of businessmen as Plans for Progress have adopted this sound approach to equal opportunity just as they have used goals and targets for guiding their other business decisions. (See the Plans for Progress booklet Affirmative Action Guidelines on page 6.)

(2) The purpose of the contractor's commitment to specific goals is to meet the contractor's affirmative action obligations and is not intended and shall not be used to discriminate against any qualified applicant or employee.

c. *Factors Used in Determining Definite Standards.* A determination of the definite standard of the range of minority manpower utilization shall be made for each better-paid trade to be used in the performance of the contract. In determining the range of minority manpower utilization that should result from an effective affirmative action program, the factors to be considered will include, among others, the following:

(1) The current extent of minorly group participation in the trade.

(2) The availability of minority group persons for employment in such trade.

(3) The need for training programs in the area and/or the need to assure demand for those in or from existing training programs.

(4) The impact of the program upon the existing labor force.

7. INVITATION FOR BIDS OR OTHER SOLICITATIONS FOR BIDS

Each Federal agency shall include, or require the applicant to include, in the invitation for bids, or other solicitation used for a Federally-involved construction contract, when the estimated total cost of the construction project exceeds $500,000, a notice stating that to be eligible for award, each bidder will be required to submit an acceptable affirmative action program consisting of goals as to minority group participation for the designated trades to be used in the performance of the contract—whether or not the work is subcontracted. Such notice shall include the determination of the range of minority group utilization (described in Section 6 above) that should result from an effective affirmative action program based on an evaluation of the factors listed in Section 6c. The form of such notice shall be substantially similar to the one attached as an appendix to this Order. To be acceptable, the affirmative action program must contain goals which are at least within the range described in the above notice. Such goals must be provided for each designated trade to be used in the performance of the contract except that goals are not required with respect to trades covered by an OFCC approved multi-employer program.

8. POST-AWARD COMPLIANCE

a. Each agency shall review contractors' and subcontractors' employment practices during the performance of the contract. If the goals set forth in the affirmative action program are being met, the contractor or subcontractor will be presumed to be in compliance with the requirements of Executive Order 11246, as amended, unless it comes to the agency's attention that such contractor or subcontractor is not providing equal employment opportunity. In the event of failure to meet the goals, the contractor shall be given an opportunity to demonstrate that he made every good faith effort to meet his commitment. In any proceeding in which such good faith performance is in issue, the contractor's entire compliance posture shall be reviewed and evaluated in the process of considering the imposition of sanctions. Where the agency finds that the contractor or subcontractor has failed to comply with the requirements of Executive Order 11246, the implementing regulations and its obligations under its affirmative ac-

[1] Marshall and Briggs, *Negro Participation in Apprenticeship Programs* (Dec. 1966), pg. 91.

[2] These findings were based on a detailed examination of available facts relating to building trades unions, area construction volume and demographic data.

tion program, the agency shall take such action and impose such sanctions as may be appropriate under the Executive Order and the regulations. Such noncompliance by the contractor or subcontractor shall be taken into consideration by Federal agencies in determining whether such contractor or subcontractor can comply with the requirements of Executive Order 11246 and is therefore a "responsible prospective contractor" within the meaning of the Federal procurement regulations.

b. It is no excuse that the union with which the contractor has a collective bargaining agreement failed to refer minority employees. Discrimination in referral for employment, even if pursuant to provisions of a collective bargaining agreement, is prohibited by the National Labor Relations Act and Title VII of the Civil Rights Act of 1964. It is the longstanding uniform policy of OFCC that contractors and subcontractors have a responsibility to provide equal employment opportunity if they want to participate in Federally-involved contracts. To the extent they have delegated the responsibility for some of their employment practices to some other organization or agency which prevents them from meeting their obligations pursuant to Executive Order 11246, as amended, such contractors cannot be considered to be in compliance with Executive Order 11246, as amended, or the implementing rules, regulations and orders.

9. EXEMPTIONS

a. Requests for exemptions from this Order must be made in writing, with justification, to the Director, Office of Federal Contract Compliance, U.S. Department of Labor, Washington, D.C., 20210, and shall be forwarded through and with the endorsement of the agency head.

b. The procedures set forth in the Order shall not apply to any contract when the head of the contracting or administering agency determines that such contract is essential to the national security and that its award without following such procedures is necessary to the national security. Upon making such a determination, the agency head will notify, in writing, the Director of the Office of Federal Contract Compliance within thirty days.

c. Nothing in this Order shall be interpreted to diminish the present contract compliance review and complaint programs.

10. AUTHORITY

This Order is issued pursuant to Executive Order 11246 (30 F.R. 12319, Sept. 28, 1965) Parts II and III; Executive Order 11375 (32 F.R. 14303, Oct. 17, 1967); and 41 CFR Chapter 60.

11. EFFECTIVE DATE

The provisions of this Order will be effective with respect to transactions for which the invitations for bids or other solicitations for bids are sent on or after July 18, 1969.

APPENDIX

(For Inclusion in the Invitation or Other Solicitation for Bids for a Federally-Involved Construction Contract When the Estimated Total Cost of the Construction Project Exceeds $500,000.)

NOTICE OF REQUIREMENT FOR SUBMISSION OF AFFIRMATIVE ACTION PLAN TO ENSURE EQUAL EMPLOYMENT OPPORTUNITY

1. It has been determined that in the performance of this contract an acceptable affirmative action program for the trades specified below will result in minority manpower utilization within the ranges set forth next to each trade: Identification of Trade; Range of Minority Group Employment.

2. The bidder shall submit, in the form specified below, with his bid an affirmative action program setting forth his goals as to minority manpower utilization in the performance of the contract in the trades specified below, whether or not the work is subcontracted.

The bidder submits the following goals of minority manpower utilization to be achieved during the performance of the contract: Identification of Trade; Estimated Total Employment for the Trade on the Contract; Number of Minority Group Employees.

(The bidder shall insert his goal of minority manpower utilization next to the name of each trade listed.)

3. The bidder also submits that whenever he subcontracts a portion of the work in the trade on which his goals of minority manpower utilization are predicated, he will obtain from such subcontractor an appropriate goal that will enable the bidder to achieve his goal for that trade. Failure of the subcontractor to achieve his goal will be treated in the same manner as such failure by the prime contractor prescribed in Section 6 of the Order from the Office of Federal Contract Compliance to the Heads of All Agencies regarding the Revised Philadelphia Plan, dated June 27, 1969.

4. No bidder will be awarded a contract unless his affirmative action program contains goals falling within the range set forth in paragraph 1 above, provided, however, that participation by the bidder in multi-employer program approved by the Office of Federal Contract Compliance will be accepted as satisfying the requirements of this Notice in lieu of submission of goals with respect to the trades covered by such multi-employer program. In the event that such multi-employer program is applicable, the bidder need not set forth goals in paragraph 2 above for the trades covered by the program.

5. For the purpose of this Notice, the term minority means Negro, Oriental, American Indian and Spanish Surnamed American. Spanish Surnamed American includes all persons of Mexican, Puerto Rican, Cuban or Spanish origin or ancestry.

6. The purpose of the contractor's commitment to specific goals as to minority manpower utilization is to meet his affirmative action obligations under the equal opportunity clause of the contract. This commitment is not intended and shall not be used to discriminate against any qualified applicant or employee.

7. Nothing contained in this Notice shall relieve the contractor from compliance with the provisions of Executive Order 11246 and the equal opportunity clause of the contract with respect to matters not covered in this Notice, such as equal opportunity in employment in trades not specified in this Notice.

8. The bidder agrees to keep such records and to file such reports relating to the provisions of this Order as shall be required by the contracting or administering agency.

ORDER OF BUSINESS

Mr. TOWER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. TOWER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE RESOLUTION 228—RESOLUTION RELATING TO GENEVA PROTOCOL OF 1925 BANNING THE FIRST USE OF GAS AND BACTERIOLOGICAL WARFARE

Mr. HARTKE. Mr. President. I submit a resolution for myself, and other Senators, which reads:

Resolved, That it is the sense of the Senate that the President of the United States should resubmit the Geneva Protocol of 1925 banning the first-use of gas and bacteriological warfare to the United States Senate for advice and consent to ratification.

The PRESIDING OFFICER. The resolution will be received and appropriately referred.

The resolution (S. Res. 228) was referred to the Committee on Foreign Relations.

Mr. HARTKE. Mr. President, the Geneva Protocol should be ratified. It was in April of 1915 on the Western front at Ypres, the German army attacked with chlorine gas, a chemical agent inducing coughing, retching, and finally lethal asphyxiation. The French, British, and Americans began using the same horrible weapon and by the end of the war nearly 100,000 men had been killed by gas and over 1 million men were blinded or crippled by gas. The horrors of chemical and biological warfare inspired the drafting of an international agreement at Geneva in 1925. This agreement banning the use of chemical and biological weapons was based on the understanding that chemical and biological warfare had been "justly condemned by the general opinion of the civilized world." Since that time, in spite of a terrible global war, chemical and biological weapons have never been used in struggles between major powers.

The Geneva Protocol is one of the few examples of successful agreement in arms limitation. It is a rare act of sanity. I wish I could say that the United States has participated in this noble venture.

The United States is one of the few large nations in the world which has withheld ratification of the Geneva Protocol. It may surprise some citizens of the United States to learn that this country introduced the protocol at Geneva, endorsed its purposes over the years, voted for a United Nations resolution inviting others to sign, and yet we have never actually ratified the protocol ourselves. In the hope that our negligence can be corrected, I submit today a resolution expressing the sense of the Senate that President Nixon resubmit the Geneva Protocol of 1925 to the U.S. Senate for ratification.

I am extremely honored and pleased to be joined in this resolution by many of my distinguished colleagues. Joining me as cosponsors are: CLAIBORNE PELL of Rhode Island, MIKE GRAVEL of Alaska, STEPHEN YOUNG of Ohio, JENNINGS RANDOLPH of West Virginia, MARLOW COOK of Kentucky, ABRAHAM RIBICOFF of Connecticut, WILLIAM PROXMIRE of Wisconsin, PHILIP HART of Michigan, DANIEL INOUYE of Hawaii, CHARLES PERCY of Illinois, ROBERT PACKWOOD of Oregon, FRED HARRIS of Oklahoma, EDMUND MUSKIE of Maine, WALTER MONDALE of Minnesota, BIRCH BAYH of Indiana, EUGENE MCCARTHY of Minnesota, HARRISON WILLIAMS of New Jersey, JOSEPH TYDINGS of Maryland, HAROLD HUGHES of Iowa, and ALAN CRANSTON of California.

This resolution is similar but not identical to a resolution introduced in the House of Representatives by Congressman RICHARD MCCARTHY of New York. The House resolution now has 96 cosponsors.

By requesting reconsideration of the protocol, I hope to do more than simply correct a past mistake. Chemical and biological warfare, as we know, is a current issue, and this resolution will be considered at a time when public doubts and fears about chemical and biological warfare have promoted a full-scale administrative review of America's CBW policies. In the hope that this policy review will yield a consensus for responsibility and restraint, I ask the Senate to consider the need to formalize our intention never to initiate war with lethal chemicals or disease.

It may seem improbable to us today that the U.S. Senate has never ratified the 1925 protocol. Every other nuclear power is presently a party to the treaty. Except for the United States, every member of the NATO and Warsaw pacts has ratified. Except for tiny Albania, every nation in Europe has ratified. Indeed, except for the United States and Japan, the protocol has been agreed to by every industrial nation in the world, including both Russia and China.

One would assume that the Senate had some good reason to reject such a widely accepted treaty, but a brief look at history indicates just the opposite—our failure to ratify the protocol was circumstantial, somewhat accidental, and certainly premature.

As a matter of record, the protocol was introduced at Geneva by the head of the American delegation, Representative Theodore E. Burton of Ohio, with the full support of President Coolidge and Secretary of State Kellogg. The language of the protocol was patterned after a ban on chemical and biological warfare which had been sponsored by the American delegation at the Washington Conference on Arms Limitation, held 3 years earlier, in 1922. This earlier document had been accepted by the Senate without a dissenting vote, and would have become international law had it not been for French objections to certain restrictions on submarines. When our representatives signed the protocol in Geneva, therefore, they did not anticipate opposition in the Senate, and they certainly did not anticipate the circumstances that would prevent the treaty from ever coming to a vote.

In the year that passed before Senate consideration of the agreement, however, the Army Chemical Warfare Service was able to mobilize determined resistance from veterans groups, the American Chemical Society, and the chemical industries at large. The leader of the opposition, Senator Wadsworth, argued that the treaty would be torn up in time of war, and with the support of his powerful Military Affairs Committee he was able to block ratification. Advocates of the protocol were poorly prepared—perhaps overconfident, they neglected to take the same steps which led to unanimous acceptance of the earlier CBW treaty. They failed to send Senate representatives to Geneva with our negotiators, and they failed to enlist the support of an advisory committee of prominent citizens which had been influential in the earlier decision. The protocol never came to a vote. It languished for 20 years in the Foreign Relations Committee, and was finally sent back to the White House with all unratified treaties which had been submitted prior to 1941.

Since Senate rejection of the protocol in 1926, several developments have occurred fully justifying our reconsideration of that early decision. First, the Senate acted in 1926 before all major nations of the world had signed the protocol. The Geneva protocol came into force on February 8, 1928, without being ratified by several large nations. It was not until 2 months later, when the Soviet Union agreed to the protocol, that the strength of the agreement became apparent. The Soviets signed "with reservations," promising never to initiate chemical or biological war, but preserving the option to retaliate if CBW was used against them first. When Great Britain and France acceded to the protocol along similar lines, the Geneva ban was effectively modified to restrict only the "first-use" of chemical and biological warfare. This more acceptable restriction proved immediately popular, and it has served as the basis for solid international agreement ever since.

Also, the Senate acted on the false assumption that the protocol would be "torn up" in the time of war. If the Senate could have known in 1926 that a second world war would be fought, even larger than the Great War they remembered so well, without the use of chemical or biological weapons, they surely would have joined in a formal ban on such weapons. Furthermore, if the Senate had known in 1926 that an American President, Franklin D. Roosevelt, would one day define our Chemical and Biological Warfare policy with words taken from the 1925 protocol, they might have considered ratification more carefully. In 1943, in the middle of the war, President Roosevelt paraphrased the protocol in his response to rumors of German plans to initiate gas warfare:

> Use of such weapons has been outlawed by the general opinion of civilized mankind. This country has not used them. I state categorically that we shall under no circumstances resort to the use of such weapons unless they are first used by our enemies.

Clearly, the Senate rejection of the protocol was premature. In retrospect, it seems certain that we would have accepted the protocol in 1926 if we had known at the time that so many other nations would sign, or if we had known that our own expressed policy would someday be entirely consistent with the provisions of the protocol.

Mr. President, our neglect of the protocol represents a needless inconsistency. On numerous occasions since the Roosevelt proclamation, we have reaffirmed our official policy of "no first-use." In 1945, when the War Department suggested the use of poison gas in the invasion of Iwo Jima, Adm. Chester Nimitz made the tough decision not to use gas because, as he said:

> The United States should not be the first to violate the Geneva Convention."

Throughout the Korean conflict we jealously guarded this record of restraint in the face of vicious enemy propaganda. More recently, in 1965, Secretary of State Dean Rusk chose to defend our Vietnam weapons policy in terms of its consistency with the Geneva protocol. And 1 year later the United States even cosponsored the operative paragraph in a United Nations resolution calling for strict observance by all states of the principles and objectives of the Geneva protocol, and condemning all action contrary to those objectives. The United States voted for this 1966 resolution along with 100 other nations. In explaining our vote at that time, the American Ambassador said:

> While the United States is not a party to the Protocol, we support the worthy objectives which it seeks to achieve. We have repeatedly endeavored to find adequate means to attain those objectives.

In 1967, the Deputy Secretary of Defense restated our "no first-use" policy in testimony before the Subcommittee on Disarmament of the Committee on Foreign Relations of the Senate. He said:

> It is clearly our policy not to initiate the use of lethal chemicals or lethal biologicals.

In April of this year, 1969, John S. Foster, Jr., the Director of Defense, Research and Engineering, reaffirmed our intention to abide by the spirit of the protocol. Making a specific reference to biological weapons, he said:

> The United States policy and its rationale with regard to biological warfare is generally the same as for chemical. As a matter of policy the United States will not be the first to use biological weapons . . .

Finally, Secretary of Defense Melvin Laird is reported in the New York Times of July 29 as asserting that the United States will never use chemical and biological warfare first.

At this point, it is only natural to wonder why we have never taken the trouble to ratify the protocol, if our policy is truly consistent with its purposes and with its provisions. The passage of time, of course, is probably the biggest reason; any policy or nonpolicy becomes sacrosanct after 43 years.

But the inconsistency of our position is sustained by more than its own inertia—there are those in the Government, particularly in the Pentagon, who have bitterly opposed a "no first-use" policy over the years, and these people are fighting hard to keep the legal door open for their techniques of chemical and biological war. Beneath the surface, our expressed policy of restraint is seriously jeopardized by formal neglect of the Geneva ban. The danger is apparent in the language of the "U.S. Army Field Manual on the Laws of Land Warfare (1956)":

> The United States is not a party to any treaty now in force, that prohibits or restricts the use in warfare of toxic or nontoxic gases . . . or of bacteriolotical warfare. The Geneva Protocol . . . is not binding on this country.

A similar hedge against a policy of restraint is found in official Pentagon statements. When asked to comment on a 1959 congressional resolution calling for limitations on chemical and biological warfare, the Defense Department replied:

> No reason is perceived why biological and chemical weapons should be singled out for this special declaration.

Even more disturbing is the casual attitude of Brig. Gen. J. H. Rothschild, the former head of the Army's CBW program. In response to questions about the purposes of our CBW arsenal, General Rothschild said that chemical weapons should be considered "just another weapon in our arsenal" and he noted that the use of germ warfare would, in his words, "depend upon the situation."

For all of these reasons, I feel that the Senate should request resubmission of the protocol for Senate ratification. Our expressed policy needs the reinforcement of a formal agreement; only then will we be sure that our CBW arsenal is under reliable control.

Objections will be raised, of course. We may be told that ratification of the protocol will restrict the use of tear gases and herbicides, such as those employed in Vietnam at the present time. Admittedly, some international lawyers have tried to include riot control agents and defoliants under the Geneva ban. But official American interpretations do not, and no international consensus exists to effectively challenge our position. I have written elsewhere at length on American military tactics in Southeast Asia, and I can assure my colleagues that I have serious personal reservations about some of the uses we have made of tear gas in Vietnam. But it would make no sense to postpone ratification of the Geneva Protocol until Vietnam is behind us; the present hostilities only make the need for formal restraints more urgent and more compelling. We must not be distracted by unnecessary controversy; Vietnam need not confuse our purposes. The Defense Department contends that it is presently abiding by the terms of the Geneva Protocol, and it will be useful for our purposes to accept that position.

The objection will also be raised that ratification of the Geneva protocol will somehow tie the hands of American delegates at the current arms limitation discussions in Geneva. But just the opposite is the case: our continuing neglect of the Geneva protocol has long been a crippling liability for American diplomats. We are continually embarrassed when Soviet delegates remind us that we are not a party to this widely accepted international agreement. During the Korean conflict, when cold war propaganda was at a premium, American discussion in the United Nations of Soviet CBW policies was quickly cut off by a Soviet reminder that our neglect of the Geneva protocol gave us no room to talk. And as recently as July 10 of this year, a Soviet delegate in Geneva avoided responsible comment on a new treaty proposal by suggesting that the 1925 Geneva agreement should be "strengthened" first, which was a thinly veiled reference to America's reluctance to ratify. Clearly, ratification of the protocol would strengthen America's bargaining position in arms control talks. This conclusion is shared by Prof. George Bunn, the former general counsel for the Arms Control and Disarmament Agency and the former American delegate to the 18 Nation Disarmament Committee at Geneva.

Finally, someone may argue that we should not act while the current policy review is being conducted and while new discussions are under way in Geneva. But what better time to express the sense of the Senate on this important matter than the present, when crucial policy decisions are in the process of being made, when minds are open, and when positions are still flexible. If we wait for others to speak, we will only weaken the import of what we have to say. The Department of Defense continues to speak out on chemical and biological warfare. Why must the Senate remain silent?

In fact, the Senate has a special obligation to express itself on the Geneva Protocol. In recent months chemical and biological warfare has become a source of considerable public alarm. Legitimate questions about the Utah sheep-kill, nerve gas disposal, open-air testing, and stockpiling overseas could lead to ungrounded fears and uncontrolled emotions. Indeed, public fears about chemical and biological warfare may grow to be as serious a problem as CBW itself. For this reason, the purposes of our CBW program must be clarified as soon as possible. What better way to restore publice confidence than to formalize our existing promise never to initiate chemical or biological warfare? And where will we find a better formal agreement than the 1925 Geneva Protocol, a document with wide acceptance, modest purposes, and proven value?

Mr. ALLEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EXTENSION OF THE SURTAX

Mr. MANSFIELD. Mr. President, as a result of conversations and conferences today with the distinguished minority leader, as well as his considerate remarks on the floor, other conferences and conversations with the distinguished senior Senator from Delaware (Mr. WILLIAMS), ranking Republican member of the Finance Committee, and other Senators on both sides of the aisle, on my own initiative I called a meeting of the Democratic Policy Committee, and the chairman of the Finance Committee and the Democrats on that committee were kind enough to accede to my request that they meet with us.

At that time we discussed the pros and cons of the situation which had developed. We were of the opinion that the Senate, as a responsible body, was at an impasse on a most vital question and that time was running out.

When I called the joint committee together, I stated to the members in attendance that, as far as I was concerned, I stood on the original 5-month extension and all the attributes thereto. That agreement was announced on the Senate floor last Thursday or Friday, and that agreement, by and large, still holds.

However, in an attempt to accommodate the Senate and the administration, the members of the joint committee discussed the matter of what could or should be done pro and con. Finally, the two committees unanimously—again, and every action taken by those two committees has been unanimous, I am happy to say—agreed that we ought to give heed to the suggestions made by the distinguished minority leader, and I believe the distinguished senior Senator from Delaware as well, that at least some consideration should be given to a 1 month's extension, from November 30 to December 31, because of the factors which they and others had enumerated as being of some urgency in this matter; the principal factor was the recomputation of the withholding rate from 10 percent to 9.165 percent and the difficulties caused to the business community thereby.

The distinguished chairman of the Finance Committee, who presided over most of the meeting, and other distinguished Senators then came up with suggestions which finally culminated in an agreement by the two committees that the chairman of the Finance Committee and I would meet with the distinguished minority leader, express to him what had happened in the meeting this afternoon, ask his advice and counsel, and see what, if anything, could be done to arrive at a mutually acceptable agreement—mutually acceptable in the sense that it was not necessarily satisfactory to any or all of us.

He informed us that he would be glad to give what consideration he could to our suggestion. We gave him, in outline only, the proposed unanimous-consent agreement which we had considered and agreed to unanimously. He said he wanted to take it up with the Senator from Delaware (Mr. WILLIAMS), the Senator from Colorado (Mr. ALLOTT), the Senator from North Dakota (Mr. YOUNG), the Senator from Maine (Mrs. SMITH), and others in the leadership, and would let us know later what the result was.

On the basis of what I consider to be a hard and fast agreement—and I emphasize hard and fast, and do so on the basis of good faith and mutual trust—it is my intention to ask unanimous consent—and I do this with the approval of the distinguished Senator from Mississippi (Mr. STENNIS), the chairman of the committee handling the pending business—at the appropriate time, to lay aside the pending business and turn to the consideration of Calendar No. 272, H.R. 9951.

It is my understanding that when this is done, the distinguished senior Senator from Delaware (Mr. WILLIAMS) will at that time withdraw his amendment having to do with the question of taxing foundations. I ask the Senator, is that a correct statement?

Mr. WILLIAMS of Delaware. That is correct.

Mr. CURTIS. Mr. President, a parliamentary inquiry.

The ACTING PRESIDENT pro tempore. The Senator will state it.

Mr. CURTIS. Mr. President, it is true that the amendment is the result of the efforts of my beloved friend, the distinguished Senator from Delaware. It was adopted by the Committee on Finance. I am anxious to expedite the procedure outlined here. Will it be possible for the Senator from Delaware to withdraw that amendment, or will it require some further action?

Mr. MANSFIELD. He can withdraw it voluntarily by unanimous consent. He has indicated he would, and I would expect that any other foundation amendment would find its way on the tax reform bill, which we confidently expect will be reported by the Committee on Finance not later than October 31.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. WILLIAMS of Delaware. As indicated in the earlier colloquy, I told the Senator that if we could work out an arrangement we could use this bill as a vehicle to take care of the surcharge and the tax credit, I would be agreeable, but that amendment now being withdrawn will definitely be reoffered as a part of the tax reform package. In order to retain this as a bill dealing with these two subjects alone—namely, the questions of extending the surtax and of repealing the investment credit—I was willing to make that concession and would make the proper request immediately after the bill was called up.

Mr. MANSFIELD. Yes, that was the understanding, and the Senator from Delaware is a man of his word.

The ACTING PRESIDENT pro tempore. Does the Senator from Delaware ask unanimous consent at this time——

Mr. WILLIAMS of Delaware. The bill is not yet before the Senate.

Mr. MANSFIELD. No, it is not before the Senate at this time. I shall ask that it be laid before the Senate later.

To make the RECORD clear, before we lay aside the pending business and lay before the Senate this new proposal, I think it should be stated to the Senate that I am no parliamentary wizard, and there are lots of ways in which I could be cut short in handling such a delicate matter as this. But I am doing so because I have the utmost faith, trust, and confidence in the Members of this body, regardless of their positions on this particular bill.

In other words, what I am trying to say is that everything is on the table. Nothing in the way of subterfuge will be tried. We are trying to arrive, as men and women who have the interest of the Nation at heart and are aware of the present difficulties, at a solution to a most trying and most vexing problem, which confronts the Nation at this time.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. HOLLAND. What would happen to the investment credit matter under the course of action the Senator suggests?

Mr. MANSFIELD. Frankly, I would hope that the amendment on investment credit which I understand is to be offered by the distinguished Senator from Delaware (Mr. WILLIAMS) will be defeated, not that there is not any merit to it, but with the assurance that, at an appropriate time—and the membership would have to trust the majority leader in that respect—I would call up the bill now on the calendar which contains the matter which the Senator has referred to, as well as the continuation of the excise taxes on telephones and automobiles and the exemptions for the lower income groups. It would not be lost in the shuffle, because what we are trying to do now is tend to just the surtax and its extension for 6 months.

Mr. HOLLAND. What bill is it that the Senator proposes to take up? I understood that he was proposing to take up the so-called surtax bill, which includes the investment credit and also the other two matters the Senator has mentioned.

Mr. MANSFIELD. I missed the first part of the Senator's query.

Mr. HOLLAND. I said my understanding was that the Senator intended to take up the bill which covered both the surtax extension and the investment credit cancellation, and the two other matters which the Senator mentioned.

Mr. MANSFIELD. We are not taking up Calendar No. 312, H.R. 12290, but rather Calendar No. 272, H.R. 9951. So the matter of the excise taxes, the matter of the exemptions for the lower-income groups, and the matter of the investment tax credit would remain on the calendar, and the Senate, if it concurred, would have to allow the majority leader, in conjunction with the minority leader, to call those matters up at an appropriate time.

Mr. HOLLAND. As I understand it, then, the investment credit and the matter which would exempt a number of small-income people from the payment of income taxes, and also the matters affecting the extension of excise taxes, will come up positively at a later date?

Mr. MANSFIELD. Yes. May I say that the matter of the exemption for lower income groups does not, under the House-passed bill, go into effect until January 1, 1970, and the matter of the excise taxes on automobiles and telephones does not expire until December 30, 1969. The effective date of the repeal of the investment tax credit will be April 18, 1969; that has been categorically emphasized.

Mr. HOLLAND. I thank the Senator. I think he has made the matter very clear.

Mr. LONG. Mr. President, let me clarify one thing.

My understanding is that after this matter of the extension of the surtax is disposed of, we will, at the earliest convenient date, on some proper vehicle, pass whatever we think is appropriate in the way of the repeal of the investment tax credit. I am not wedded to the precise mechanics; I have some doubt whether the House-passed surtax bill would be the right vehicle. I hope we do not try to agree on that right now.

Mr. MANSFIELD. All right. But let me say to the distinguished chairman of the Committee on Finance that the Senator from Montana is firmly wedded to what he said previously relative to the scheduling of this bill, which passed the House and came out of the Finance Committee; and as far as I am concerned, and I must be honest, it is my intention to stick to those three items, because, as I have said before, this is not a matter of politics, it is a matter of conviction. I want to see these items kept in the bill and called up at the appropriate time, but I want to see tax reform, too. I am sure that every Senator feels as I do. If, in the course of this explanation, any Members on the Democratic side of the Committee on Finance or of the Democratic Policy Committee should find that I am not stating the facts as they are or am misinterpreting them, I hope that they will please stand and correct me, because I want the record to be clear.

Mr. HOLLAND. Mr. President, will the Senator yield for one more question?

Mr. MANSFIELD. I yield.

Mr. HOLLAND. Do I correctly understand that the bill that is proposed to be enacted would cover the extension of the surtax at the rate of 10 percent throughout the rest of this year?

Mr. MANSFIELD. That is correct.

Mr. HOLLAND. Would it deal with the 5-percent extension proposed for the first half of next year?

Mr. MANSFIELD. No; but that is something which is in the future; it remains a part of the House-passed surtax bill.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. WILLIAMS of Delaware. As I understand it, the Senator from Louisiana plans to offer an amendment to extend the surcharge at the rate of 10 percent for the remaining 6 months of this calendar year. As a substitute for his amendment I will offer an amendment to extend the surcharge for a full year, or at a 10-percent rate for the remainder of this year and for the first 6 months of next year at the rate of 5 percent. What the Senate may decide to do will be its own decision. But the extension of the surtax for the full year will be before the Senate tomorrow. Likewise, the amendment to repeal the investment credit, with whatever modifications may be agreed upon, will be offered and voted upon tomorrow as a part of this package.

The repeal of the investment credit is, in my opinion, an important part of this tax bill. I appreciate the position of the Senator from Montana, but I feel that the Senate should decide this question now. I reserve the right to offer amendments dealing with both these points. I shall offer them and ask for a rollcall vote because I feel that both proposals should be agreed upon if we are effectively to cope with this inflation.

Mr. MANSFIELD. I have no doubt about that.

The Senator from Delaware is referring to an amendment he will offer tomorrow, if everything goes according to Hoyle.

Mr. WILLIAMS of Delaware. That is correct.

Mr. MANSFIELD. I am referring to the unanimous-consent agreement and

to the commitments which have been made, which I intend to uphold to the letter.

Mr. LONG. It is my hope that we can dispose of the investment tax credit matter prior to the major tax reform bill. It is a very important item. I think it is a reform which should be considered in and of itself, and I shall be glad to discuss it with the Senator from Delaware at any time. I hope that it will not have to wait until after October 31.

Mr. MANSFIELD. Oh, no; the Committee on Finance will report a tax reform bill before October 31, so I think what the Senator is now suggesting can be worked out. I merely want my position to be made clear. That position will be adhered to, and I think it will fit in with what the Senator from Louisiana has said.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. JAVITS. The Senator said he will present a unanimous-consent request at the appropriate time.

Mr. MANSFIELD. Yes.

Mr. JAVITS. Will that be tonight?

Mr. MANSFIELD. Yes.

Mr. JAVITS. I should like to lock in the reporting of a tax reform bill by October 31 as a part of the reason why I, and perhaps other Senators later, will not object to the unanimous-consent agreement.

Mr. MANSFIELD. Mr. President I appreciate what the Senator has said. However, if there is even one objection, that is it.

Mr. JAVITS. I understand that. We have all agreed on that. We will carry it out. We have to carry it out here within a given frame of reference.

Mr. MANSFIELD. The Senator is correct.

Mr. JAVITS. When an admission is made against interest, it is a lot more binding than one made in general conversation.

I have one other question to ask the Senator. It relates to the investment tax credit. The Democratic Policy Committee refers to the fact that it will have an ex post facto application. In other words, it will refer back to April 18, 1969.

Mr. MANSFIELD. Exactly.

Mr. JAVITS. Again, that had better be made extremely clear in all the give and take which now takes place so that the world may be warned about that date. That is the tradition in the tax business, even if one is not prepared to give warning, that that warning concerns a very important decision for businessmen.

I hope again that when the proper time comes, it will be made very clear by the majority leader, the minority leader, the chairman of the Finance Committee, and the ranking minority member that there is no departure from that respecting the whole economic community.

Mr. MANSFIELD. Mr. President, I have the definite assurance of the chairman of the Finance Committee and the ranking minority member of the Finance Committee and of the majority of the Finance Committee that that will be the case and that that date—April 18, 1969—will be adhered to. So, at least in that area there ought to be some stability in the business community.

Mr. WILLIAMS of Delaware. Mr. President, the Senator will have a chance to offer amendments dealing with either of these two subjects.

Mr. JAVITS. The Senator is correct. If anyone has any alternate plan, he may offer that as a substitute in the proper parliamentary manner to the amendment.

Mr. MANSFIELD. The Senator is correct.

Mr. JAVITS. Of course, a lot of amendments cannot be offered.

Mr. LONG. Mr. President, the point I would like to make clear is that it would be my hope that the Senate tomorrow would not agree to any immediate repeal of the investment tax credit for the reason that the committee has some work to be done on the matter. The Senate might want to look at the matter and understand the House bill and see whether it thinks we are right or whether the House is right.

We would be ready to report on that matter within a week.

Mr. MANSFIELD. No. We have to consider the three together. We have to consider the excises and the low-income groups. And I hope that we can get together. I think that we can if my beloved friend, the Senator from Louisiana, will keep in mind what we agreed to when the two committees met.

Mr. LONG. I thought I understood what we agreed to. It is not in writing, but I will be glad to discuss the matter with the majority leader.

I hope that we can dispose of the investment tax credit without waiting until we have a comprehensive overall tax reform bill.

Mr. MANSFIELD. Mr. President, the Senator mentioned the date of October 31. That looks to me like a reasonable date to arrive at a constructive agreement in that matter.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. STENNIS. Mr. President, so that all may know and also so that it may be on record and the press will know, as I understand the unanimous-consent request—and I will agree to it as I understand it, of course—it will be that the pending business will be temporarily set aside for the disposition of this matter. When this matter is disposed of, then the measure that has been temporarily set aside will become the pending business again.

Mr. MANSFIELD. As some comedian said, "Indubitably."

Mr. STENNIS. Mr. President, we may get to a vote early next week. Does the majority leader contemplate finishing the tax matter tomorrow?

Mr. MANSFIELD. I say to the distinguished Senator from Mississippi, "If it ain't finished by midnight tomorrow, that's it."

Mr. McCLELLAN. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. McCLELLAN. Mr. President, the Senator is not going to call up H.R. 12290. He is going to call up another bill.

Mr. MANSFIELD. The Senator is correct.

The ACTING PRESIDENT pro tempore. Will the Senator suspend until we have order?

The Senator may proceed.

Mr. McCLELLAN. Mr. President, the Senator will call up another bill, and to that bill he will offer an amendment which would simply extend the present income tax surcharge until December 31.

Mr. MANSFIELD. The Senator is correct.

Mr. McCLELLAN. Having done that, we anticipate that a reform tax bill will come from the House.

Mr. MANSFIELD. The Senator is correct.

Mr. McCLELLAN. That will be some time later, of course. I do not know if the majority leader knows when that will be. With respect to those other provisions of H.R. 12290, which involve the continuation of the excise taxes on automobiles and communications services for temporary periods, to terminate the investment credit, to provide a low-income allowance for individuals, and for other purposes. Do I understand that after this surtax bill has been passed, or the amendment which will be offered to the other bill, at some appropriate time the Senator will call up H.R. 12290 to give the Senate an opportunity to consider the other provisions which will not be considered under the unanimous consent agreement at this time?

Mr. MANSFIELD. The Senator is correct.

Mr. McCLELLAN. That means that the Senate will act on three separate tax bills.

Mr. MANSFIELD. The Senator is correct.

Mr. McCLELLAN. When is it proposed that the other two, if we act on this measure and dispose of the surtax as now suggested, will be acted on? What do we mean by "at some appropriate time"? What is within that time contemplation?

Mr. MANSFIELD. I would say somewhere in the vicinity of October 31, not later than that.

Mr. McCLELLAN. In other words, we hope to get to the other provisions of H.R. 12290 not later than October 31.

Mr. MANSFIELD. The Senator is correct, and very likely before then because of the enthusiasm in the Finance Committee for tax reform.

Mr. McCLELLAN. Mr. President, I was trying to ascertain whether the Senator would wait until the tax reform bill comes over and then use it as a vehicle for the other provisions of H.R. 12290.

Mr. MANSFIELD. That is something which would be under consideration, but my initial reaction is that we will consider them both separately.

Mr. McCLELLAN. That is what I wanted to find out. So we can expect to consider three separate tax bills before the adjournment of this session of Congress.

Mr. MANSFIELD. The Senator is correct. All of the provisions of the three separate bills will be considered before

the adjournment of this session of the Congress.

Mr. McCLELLAN. I thank the Senator.

Mr. MANSFIELD. Mr. President, if I may read the agreement contained in the RECORD of Friday, July 25, it is the genesis of the understanding which hopefully will soon be arrived at:

The Democratic Policy Committee and the Democratic members of the Finance Committee have agreed upon the following understanding: (1) Support an extension of the surtax until November 30, 1969.

I would interpolate there and change that date as of now to December 31, 1969.

I continue to read:

This will be accomplished by attaching this temporary extension to a separate House-passed bill. The House-passed surtax extension containing the investment credit repeal, the extension of the excise taxes, and the change of the standard deduction will remain on the Senate Calendar until the tax reform bill is reported by the Senate Finance Committee.

2. The chairman of the Finance Committee and the Democratic members of that committee have given their assurance that the tax reform package will be reported to the full Senate not later than October 31, 1969.

3. The Democratic Policy Committee has endorsed the position of the Finance Committee that the date of the investment tax credit repeal—

I would call this to the attention of the Senator from New York.

will be identical to that date in the House-passed bill (April 18, 1969). The endorsement was at the specific request of the Democratic Finance Committee members to assure all that the investment credit repeal is endorsed and the date is specified as contained in the bill on the Senate Calendar.

Pursuit of this understanding in the Senate is contingent upon its acceptance by the Administration and the Republican leadership which has been pressing in the Finance Committee and on the Senate floor for the extension of the surtax. May I say that many of the Members present today went along with this understanding notwithstanding grave reservations about the usefulness of the continuance of the surtax as an anti-inflationary measure. The approach is offered as an accommodation to the Administration.

And this undercurrent of feeling still exists on this side of the aisle.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. WILLIAMS of Delaware. I think there may be some misunderstanding. I realize that that was the earlier proposal, but it is my understanding that what we are agreeing on today is that we will make H.R. 9951 the pending business. That will be made the pending business, following which I shall ask for the removal of sections 5 and 6, which embrace the foundation amendments.

Mr. MANSFIELD. That is correct.

Mr. WILLIAMS of Delaware. And that would leave it a clean bill, dealing only with the acceleration of the payment of withholding taxes. From that point on, under this agreement, as I understand what has been agreed upon, any amendment dealing with the questions of the extension of the surtax, at what rates, and for what period, will be in order, and also an amendment to repeal the 7-percent investment credit along the lines of the House bill or as modified will likewise be in order under this agreement.

On this bill amendments dealing with those two subjects—that is, the question of the extension of the surcharge, at what rates, and for what period and the question of whether we do or do not repeal the investment credit and, if so, at what date and what exemption there may be—all these would be eligible items to be voted on under this agreement.

Mr. MANSFIELD. Yes. All I was doing was restating the unanimous agreement on this side of the aisle, so that the RECORD would be clear as to the position of the Senator from Montana.

Mr. WILLIAMS of Delaware. I understand that, but some Members on this side just want to be sure that the record is clear and that they will not be precluded from the chance of voting on both these proposals.

Mr. MANSFIELD. No. But that is an understanding that I hope would be given recognition. The only substantive change is the change of date from November 30, 1969, to December 31, 1969.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. CURTIS. This unanimous-consent proposal calls for 1 hour of consideration on each amendment. Is that correct?

Mr. MANSFIELD. Yes.

Mr. CURTIS. Does that apply to an amendment to an amendment?

Mr. MANSFIELD. Yes.

Mr. President, do any of my colleagues have any comment to make as to what I should have said or what I did say that I should not have said?

Mr. LONG. Mr. President, if I might interject one point, I understand what the majority leader has said. I think I made the motion or part of the motion to which we agreed, and it was my hope that we would move to repeal the investment tax credit long before October 31. But I will seek to discuss that matter with the majority leader later.

It is my thought that as soon as the Committee on Finance could recommend what the committee thinks should be done, and as soon as the majority leader could schedule it, we would offer the Senate a chance to vote on the investment tax credit. I hope that will be long before we complete action on what the House is working on.

Mr. MANSFIELD. It could be, but it would not be any later than October 31.

Mr. WILLIAMS of Delaware. It could be that it would be repealed tomorrow, too.

Mr. MANSFIELD. Oh, no. I hope the Senator is not overestimating the appeal of his amendment on this bill. I feel confident of its repeal at a latter date.

COLLECTION OF FEDERAL UNEMPLOYMENT TAX

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the pending business be laid aside temporarily, and that the Senate proceed to the consideration of Calendar No. 272, H.R. 9951.

The ACTING PRESIDENT pro tempore. Is there objection? The Chair hears none and it is so ordered.

The bill will be stated by title.

The BILL CLERK. A bill (H.R. 9951) to provide for the collection of the Federal unemployment tax in quarterly installments during each taxable year; to make status of employer depend on employment during preceding as well as current taxable year; to exclude from the computation of the excess the balance in the employment security administration account as of the close of fiscal years 1970 through 1972; to raise the limitation on the amount authorized to be made available for expenditure out of the employment security administration account by the amounts so excluded; and for other purposes.

The Senate proceeded to consider the bill, which had been reported from the Committee on Finance with amendments.

UNANIMOUS-CONSENT AGREEMENT

Mr. MANSFIELD. Mr. President, I send to the desk a unanimous-consent request and ask for its immediate consideration.

The ACTING PRESIDENT pro tempore. The unanimous-consent request will be stated.

The bill clerk read as follows:

Ordered, That, effective immediately H.R. 9951 be made the pending business and that during its further consideration, debate on any amendment, motion, or appeal, except a motion to lay on the table, shall be limited to one hour, to be equally divided and controlled by the mover of any such amendment or motion and the Chairman of the Committee: *Provided,* That in the event the Chairman is in favor of any such amendment or motion, the time in opposition thereto shall be controlled by the minority leader or some Senator designated by him: *Provided further,* That no amendment that is not germane to the provisions of any amendment dealing exclusively with the extension of the surtax or the repeal of the investment tax credit shall be received.

Ordered further, That on the question of the final passage of the said bill debate shall be limited to two hours, to be equally divided and controlled, respectively, by the majority and minority leaders: *Provided,* That the said leaders, or either of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, motion, or appeal.

The ACTING PRESIDENT pro tempore. Is there objection to the unanimous-consent request?

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. JAVITS. Mr. President, I have discussed this with the Senator from Montana (Mr. MANSFIELD), and we have agreed that we would deal with this question in this colloquy.

I have proposed an amendment which would make it the sense of Congress that on or before the end of this session, we would consider a meaningful tax reform bill. Now, appreciating the good faith involved—to which I thoroughly subscribe—I only point out that the commitment to bring in a tax reform package, as it is called in the Democratic policy committee's resolution, is only a resolution of the Democratic policy committee

and the Democratic part of the Committee on Finance.

I would therefore ask—as this now becomes part of an action which is against the interests of myself, who wishes to present such an amendment—if the majority leader, the chairman of the Committee on Finance, and, very important, the minority leader, and the ranking minority member of the Committee on Finance, would represent to the Senate that it is their purpose—I am using these words very advisedly—to bring up a tax reform package not later than October 31 and to use their best efforts toward that effect.

Mr. LONG. Mr. President, I have committed myself to the Democratic Senators on the policy committee and anyone else who is interested in the matter on this side of the aisle that I would endeavor to see that we would report a tax reform bill not later than October 31 of this year. It is my intention that we would report whatever bill the House sends us, with our amendments. If the Senator likes the House amendments better than the Senate amendments, he can vote for the House amendments. If he does not like either, he may offer his own amendments, as I am sure he will.

Mr. MANSFIELD. The answer of the Senator from Montana is "yes."

Mr. JAVITS. May we hear from the minority leader and the ranking minority member of the Committee on Finance?

Mr. DIRKSEN. Mr. President, I was advised that as of this day they are going to file the tax reform bill in the House. The House Ways and Means Committee has done this ahead of the time schedule. If they file it today, it will be filed before the month of July has ended. If we cannot get tax reform between July and October 31, we evidently will have gone fishing somewhere or have been recreant in our duty. It seems to me that we can get it done long before the 31st of October.

Mr. JAVITS. I call that, I say to the minority leader, a Dirksenian "yes." [Laughter.]

Mr. WILLIAMS of Delaware. Mr. President, as the original author of many of these tax reform proposals, I will do my best to get them to a vote at an early date. I learned long ago not to say what we can or cannot do so far as the Committee on Finance is concerned.

Mr. JAVITS. I thank my colleagues.

The ACTING PRESIDENT pro tempore. The Senator from Montana has propounded a unanimous-consent agreement. Is there objection? The Chair hears none, and it is so ordered.

Mr. MANSFIELD. Mr. President, will the Senator yield briefly?

Mr. WILLIAMS of Delaware. I yield.

Mr. MANSFIELD. Mr. President, for the information of the Senate, and I do not desire to keep Senators here too long because I know that many Senators have engagements, the first motion will be made by the Senator from Delaware to withdraw an amendment.

Mr. WILLIAMS of Delaware. I was going to do that now.

Mr. MANSFIELD. Then, I understand the chairman of the Committee on Finance will lay down his amendment to extend the surtax to December 31, 1969. There will be no voting tonight. We will come in at 11 o'clock tomorrow. There will be two speeches which will take up the hour until 12 o'clock, there will be no morning hour, and then at 12 o'clock noon we will start on the bill.

The ACTING PRESIDENT pro tempore. Does the Senator from Montana wish to make a unanimous consent agreement?

ORDER FOR RECESS TO 11 A.M. TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until 11 a.m. tomorrow.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR THURMOND AND SENATOR AIKEN TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that tomorrow, after the prayer and approval of the journal, the distinguished Senator from South Carolina (Mr. THURMOND) be recognized for a period not to exceed one-half hour; that then the distinguished Senator from Vermont (Mr. AIKEN) be recognized for a period not to exceed one-half hour; that there be no morning hour, and that at the conclusion of the speeches by the Senator from South Carolina and the Senator from Vermont the Senate take up the business at hand.

The PRESIDING OFFICER. Is there objection? The Chair hears no objection, and it is so ordered.

COLLECTION OF FEDERAL UNEMPLOYMENT TAX

The Senate resumed the consideration of the bill (H.R. 9951) to provide for the collection of the Federal unemployment tax in quarterly installments during each taxable year; to make status of employer depend on employment during preceding as well as current taxable year; to exclude from the computation of the excess the balance in the employment security administration account as of the close of fiscal years 1970 through 1972; to raise the limitation on the amount authorized to be made available for expenditure out of the employment security administration account by the amounts so excluded; and for other purposes.

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to withdraw the amendment of H.R. 9951, beginning with line 3, on page 8, and through the remainder of the bill, which strikes out sections 5 and 6.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

AMENDMENT NO. 109

Mr. LONG. Mr. President, I send an amendment to the desk.

The ACTING PRESIDENT pro tempore. The amendment will be stated.

The assistant legislative clerk proceed to read the amendment.

Mr. LONG. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered; and, without objection, the amendment will be printed in the RECORD.

The amendment (No. 109), ordered to be printed in the RECORD, is as follows:

At the end of the bill add the following new sections:

"Sec. 5. Extension of tax surcharge.

"(a) SURCHARGE EXTENSION.—Section 51(a) of the Internal Revenue Code of 1954 (relating to imposition of tax surcharge) is amended—

"(1) by striking out so much of paragraph (1)(A) as follows the table heading "CALENDAR YEAR 1969" and inserting in lieu thereof the following:

"'TABLE 1.—SINGLE PERSON (OTHER THAN HEAD OF HOUSEHOLD) AND MARRIED PERSONS FILING SEPARATE RETURN

"(2) by striking out the table in paragraph (1)(B) and inserting in lieu thereof the following table:

" 'Calendar year	Percent: Estates and trusts	Percent: Corporations
1968	7.5	10.0
1969	10.0	10.0.'

"(3) by striking out 'July 1, 1969' each place it appears in paragraph (2)(A) and inserting in lieu thereof 'January 1, 1970'.

"(b) RECEIPT OF MINIMUM DISTRIBUTIONS.—The last sentence of section 963(b) of such Code (relating to receipt of minimum distributions by domestic corporations) is amended by striking out 'June 30, 1969' and inserting in lieu thereof 'December 31, 1969'.

"(c) EFFECTIVE DATES.—

"(1) IN GENERAL.—The amendments made by subsections (a) and (b) shall apply to taxable years ending after June 30, 1969, and beginning before January 1, 1970.

"(2) DECLARATIONS OF ESTIMATED TAX.—If any taxpayer is required to make a declaration or amended declaration of estimated tax, or to pay any amount or additional amount of estimated tax, by reason of the amendments made by this section, such amount or additional amount shall be paid ratably on or before each of the remaining installment dates for the taxable year beginning with the first installment date on or after the 30th day after the date of enactment of this Act. With respect to any declaration or payment of estimated tax before such first installment date, sections 6015, 6154, 6654, and 6655 of the Internal Revenue Code of 1954 shall be applied without regard to the amendments made by this section. For purposes of this paragraph, the term "installment date" means any date on which, under section 6153 or 6154 of such Code (whichever is applicable), an installment payment of estimated tax is required to be made by the taxpayer.

Sec. 6. Extension of withholding tax.

"(a) Section 3402 of the Internal Revenue Code of 1954 (relating to income tax collected at source) is amended—

"(1) by striking out 'July 31, 1969' in subsection (a)(1) and inserting in lieu thereof 'December 31, 1969';

"(2) by striking out 'August 1, 1969' in subsection (a)(2) and inserting in lieu there of 'January 1, 1970'; and

"(3) by striking out 'August 1, 1969' in subsection (c)(6) and inserting in lieu there of 'January 1, 1970'.

"(b) The amendments made by this section shall apply with respect to wages paid after July 31, 1969, and before January 1, 1970."

Mr. LONG. Mr. President, the amendment is technical and I will not ask for a vote on the amendment tonight.

For the information of the Senate, the amendment would provide for a continuation of the 10-percent surtax until January 1; that is, it would provide for a continuation of the surtax until the end of this year.

All of the tables will be printed in the RECORD. If Senators read the technical language I doubt they would understand it. However, I am sure Senators can study the information in the RECORD and understand it. This would provide for an extension of the existing surtax until the end of this year. That is what the amendment amounts to.

It is my hope that the Senate will agree to this amendment. It is an amendment to a House bill on unemployment insurance. There was no controversy in the committee and as far as I know there is no opposition to the measure. Therefore, it would be my hope that the Senate could agree to the amendment, and that the House would also agree to it. This would solve this Nation's fiscal problems until we can legislate on the other revenue bills which have been discussed here today.

The ACTING PRESIDENT pro tempore. The amendment has been offered and the amendment is the pending business.

Mr. WILLIAMS of Delaware. Mr. President, for the information of the Senate——

The ACTING PRESIDENT pro tempore. Time is limited. Does the Senator yield time?

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent that the time limitation start tomorrow.

Mr. LONG. Mr. President, I ask unanimous consent that the limitation of time under the agreement start tomorrow rather than today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. LONG. Mr. President, I yield to the Senator from Delaware.

Mr. WILLIAMS of Delaware. Mr. President, for the information of the Senate, after the time has run out on this amendment by the Senator from Louisiana, a substitute will be offered which embraces the language of the bill as it passed the House and which would extend the surtax at the rate of 10 percent for the remaining 6 months of this year, and at a 5-percent rate for the first 6 months of calendar year 1970, which would be the language of the House bill.

Mr. President, that proposal will be offered as a substitute for the amendment of the Senator from Louisiana. Later, the Senate will have a chance to vote on an amendment for the repeal of the investment credit, which again will be the same language as now included in H.R. 12290.

The ACTING PRESIDENT pro tempore. What is the pleasure of the Senate?

RECESS UNTIL 11 A.M. TOMORROW

Mr. LONG. Mr. President, if there be no further business to come before the Senate at this time, I move, in accordance with the previous order, that the Senate stand in recess until 11 a.m. tomorrow.

The motion was agreed to; and (at 6 o'clock and 15 minutes p.m.) the Senate took a recess until tomorrow, Thursday, July 31, 1969, at 11 a.m.

CONFIRMATIONS

Executive nominations confirmed by the Senate July 30, 1969:

AMBASSADOR

Kenneth Franzheim II, of Texas, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to New Zealand.

U.S. ARMS CONTROL AND DISARMAMENT AGENCY

The following-named persons to be members of the General Advisory Committee of the U.S. Arms Control and Disarmament Agency:

I. W. Abel, of Pennsylvania.
Harold Brown, of California.
William J. Casey, of New York.
Douglas Dillon, of New Jersey.
William C. Foster, of the District of Columbia.
Kermit Gordon, of the District of Columbia.
James R. Killian, Jr., of Massachusetts.
John J. McCloy, of New York.
Lauris Norstad, of Ohio.
Peter G. Peterson, of Illinois.
J. P. Ruina, of Massachusetts.
Dean Rusk, of the District of Columbia.
William W. Scranton, of Pennsylvania.
Cyrus Roberts Vance, of New York.
John Archibald Wheeler, of New Jersey.

HOUSE OF REPRESENTATIVES—*Wednesday, July 30, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

As we have opportunity let us do good unto all men.—Galatians 6: 10

Almighty God, on this first day of the rest of our lives, we pause in Thy presence uniting our hearts in prayer unto Thee. Fill us with the power of Thy spirit that we may do our duties and carry our responsibilities with patient confidence and persistent courage.

As we seek cooperation among the nations of the world in an effort to bring peace on earth and good will to man may Thy truth be in our minds and Thy love in our hearts. Bless our President in his journey as he works toward this end.

Let us never be weary in well doing, let us always do good to all men, and let us forever seek the best even in the worst times.

In the name of Him who lived the good life we pray. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 59. An act to authorize the Secretary of the Army to adjust the legislative jurisdiction exercised by the United States over lands within the Army National Guard Facility, Ethan Allen, and the U.S. Army Materiel Command Firing Range, Underhill, Vt.

The message also announced that the Senate disagrees to the amendment of the House to the bill (S. 1373) entitled "An act to amend the Federal Aviation Act of 1958, as amended, and for other purposes, requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. MAGNUSON, Mr. CANNON, Mr. HART, Mr. COTTON, and Mr. PROUTY to be the conferees on the part of the Senate.

OKLAHOMA IS PROUD OF BILL LUNN

(Mr. EDMONDSON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. EDMONDSON. Mr. Speaker, last week it was my pleasure to visit with two outstanding young Oklahomans, William D. Lunn, of Muskogee, and Rick J. Joseph, of Sapulpa, who were in Washington as Oklahoma's delegates to Boys' Nation.

Later in the week, I was understandably proud of Bill Lunn, of my hometown, when he won nomination on the Nationalist ticket and was elected vice president of Boys' Nation.

I know all Oklahomans share this pride in Bill; in his fine parents, Mr. and Mrs. Dick Lunn, of Muskogee; and in the American Legion of Oklahoma, which annually selects truly outstanding young men as its representatives at Boys' Nation.

Mr. Speaker, to my mind one of the finest programs in the country is the American Legion's Boys' State and Boys' Nation program, and, of course, the comparable Girls' State and Girls' Nation program. This belief is reaffirmed every time I have an opportunity to visit with the students who are selected to participate in these programs.

Bill Lunn is typical of these young men. He is intelligent, forthright, articulate, and able. And, in view of his successful race at Boys' Nation, he is obviously a first-rate campaigner.

Oklahoma is justifiably proud of Bill Lunn.

CALL OF THE HOUSE

Mr. HALL. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 128]

Adams	Dawson	Leggett
Anderson, Tenn.	Evins, Tenn.	Lipscomb
Ashley	Fish	Lujan
Brooks	Gallagher	Miller, Calif.
Broomfield	Goldwater	Pepper
Cahill	Gray	Pollock
Carey	Halpern	Powell
Celler	Hathaway	Reid, N.Y.
Clark	Jarman	Scheuer
Clay	Jones, Tenn.	Young
Davis, Ga.	Karth	
	Kirwan	

The SPEAKER. On this rollcall 399 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

SOVIET-AMERICAN RELATIONS

(Mr. SYMINGTON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SYMINGTON. Mr. Speaker, on July 10, Foreign Minister Gromyko, in a wide-ranging report on international affairs to the Supreme Soviet, stated:

The Soviet side is ready to study the possibilities of development of Soviet-American relations. For example, why not discuss the question of exchanging authoritative delegations between the U.S.S.R. Supreme Soviet and the U.S. Congress?

My question, Mr. Speaker, is twofold: First, does not the suggestion deserve the courtesy of a response? Second, should not the response be affirmative? The ambivalence of Soviet attitudes in the past weeks has reached almost Pavlovian proportions. On the one hand there has been renewed jamming of U.S. broadcasts, naval maneuvering in the Caribbean, and remorseless suppression of do-

mestic dissent. On the other, we find ample publicity and praise for the lunar landing, a warm reception for Mr. Humphrey, trade feelers, hints of desired cooperation in space, and the Gromyko speech itself. The speech was made after President Nixon's announced intention to visit Rumania, a gateway, some surmise, to the Far East. Having lifted restrictions on travel to Red China, for Congressmen specifically, it would seem appropriate for our Government to give equal time to Mr. Gromyko's interesting proposal.

If we are ever to understand the riddle wrapped up in the enigma, we will have to take a closer look at the package. By the same token Premier Kosygin's Glassboro visit was his first to the United States, not a very good average for the leadership of a great world power that suspects our intentions and doubts our capabilities.

PERSONAL ANNOUNCEMENT

Mr. LOWENSTEIN. Mr. Speaker, on June 27 and July 7, I was detained on official business and unable to be present on the floor. I should like for the RECORD to note that had I been present June 27 and July 7 I would have voted in favor of repealing the freeze on AFDC appropriations and in favor of authorizing the additional funds for construction of the John F. Kennedy Center.

RIGHT TRACK ON ANTIGUN BILLS

(Mr. SIKES asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SIKES. Mr. Speaker, it is heartening to note that the Nixon administration has gone on record in opposition to gun registration and the licensing of gunowners. This is something which will be hailed by law-abiding owners of weapons everywhere. The attitude of the Administration was stated at hearings sponsored by Senator DODD in the Senate Judiciary Committee by spokesmen who stated that there has not been sufficient time to judge the effectiveness of the crime fighting laws enacted last year, and that nationwide registration of weapons would vastly increase costs of administration and the requirement for enforcement manpower.

Most Americans are tired of the subject of gun controls. They realize that the anti-mail-order bill passed last year is already working a hardship on local dealers, particularly in ammunition sales, and that it has had no appreciable effect on the volume of crime. All gun control bills are heralded by their sponsors as measures to curb crime, yet crime continues to increase. The antigun law makes it harder for law-abiding citizens to acquire and own weapons, but it has little effect on the criminal.

In direct contrast to this action, the holdover Commission on Violence appointed by President Johnson more than a year ago has recommended a Federal system of handgun licensing which is designed to bring about the confiscation of more than 90 percent of the handguns in the Nation. The recommendations of the Commission are certain to be ignored. Their activities have been a waste of money and their contributions to crime control have been nil.

THE NIXON SURTAX

(Mr. RARICK asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. RARICK. Mr. Speaker, the bad penny returns.

On our calendar again today is the so-called emergency extension of the surtax withholding collection, due to expire at midnight tomorrow.

Again we will hear of the dire consequences if we should fail to continue to collect—from a small group of our wage earners—a tax which has expired.

Make no mistake. The Johnson surtax is dead. It was very soundly repudiated by the people at the polls last November. It died by its own terms on June 30—a month ago today.

The tax collection was kept alive, even though the tax was dead, when this House passed the Nixon surtax on June 30—by a narrow margin of 210 to 205. It is now hung up, subject to political manipulations, and nearly dead in the other body. If it can be passed there, it can be passed today or tomorrow.

So again, we are asked to extend the collection of a dead tax—one which our constituents have overwhelmingly repudiated. One in which money is taken from the workingman so that he cannot spend it, to curb inflation by removing money from circulation, while the Government wildly dumps the same dollars in the name of progress into an overheated economy.

Mr. Speaker, we have a unique opportunity today to truly represent our constituents by refusing to breathe new life into the dead Nixon surtax—and allowing it to rest in peace. I intend to cast the vote of my district against this measure. I urge our colleagues to join in giving it a sound rejection.

EXTENSION OF SURCHARGE WITHHOLDING TAX RATES FOR 15 DAYS

Mr. COLMER. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 501 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 501

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 13080) to continue for an additional fifteen days the existing rates of income tax withheld at source and all points of order against said bill are hereby waived. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Ways and Means, the bill shall be considered as having been read for amendment. No amendment shall be in order to said bill except amendments offered by direction of the Committee on Ways and Means, and said amendments shall be in order, any rule of the House to the contrary notwithstanding. Amendments offered by direction of the Committee on Ways and Means may be offered to the bill at the conclusion of the general debate, but said amendments shall not be subject to amendment. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. COLMER. Mr. Speaker, I yield the customary 30 minutes to the minority, to the very able and distinguished gentleman from California (Mr. SMITH). Pending that I yield myself such time as I may consume.

Mr. Speaker, it will be recalled that some 2 or 3 weeks ago we passed a resolution which would authorize withholding of the surtax until July 31 pending the enactment or defeat of the surtax bill.

The House passed the surtax bill and it went over to the other body where some extended debate has been going on and some parliamentary maneuvering.

It is now obvious that there is serious doubt that the July 31 date will be adequate. Therefore, Mr. Speaker, the Committee on Ways and Means has seen fit to ask for an addition of 15 days, or to extend that extension until August 15, next. This was done, of course, with the hope that they will get their collective minds, or enough of them over in the other body, together to take some action upon this bill.

Mr. Speaker, as I said on the previous occasion, this is merely a housekeeping matter. Assuming that the tax bill will pass, it would certainly obviate a lot of confusion that would result if the extension were not granted and if the taxes were not withheld. It would be quite a burden upon the administration and upon the taxpayers if it were not extended.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I yield to my friend, the gentleman from Iowa (Mr. GROSS).

Mr. GROSS. I thank my friend from Mississippi for yielding. Do I understand that this applies to the 10-percent surtax and only to the 10-percent surtax?

Mr. COLMER. That is my understanding, I will say to the gentleman from Iowa, and I know that the distinguished gentleman from Arkansas will confirm that that is a fact.

Mr. GROSS. And, in the absence of any legislation on the subject with respect to the 10-percent surtax, or tax reform, or a combination, this would carry over until August 15?

Mr. COLMER. That is correct.

Mr. GROSS. The withholding is what I have reference to, which would mean for the month of August for all practical purposes, is that the withholding would apply to the entire month of August; is that correct?

Mr. MILLS. Mr. Speaker, would the gentleman from Mississippi yield to me?

Mr. COLMER. I yield to the distinguished gentleman from Arkansas.

Mr. MILLS. Under the bill which the rule makes in order the withholding would not be applicable except for the period of time from July 31 through August 15, inclusive. It would not apply to the remainder of the month of August.

Mr. GROSS. Well, what then in the absence of legislation on the part of both Houses of the Congress? What situation are we in from August 15 since the plan for a recess of the Congress becomes effective on August 13 and extends into September?

Mr. MILLS. Mr. Speaker, will the distinguished gentleman from Mississippi yield further to me in order to respond to the gentleman from Iowa?

Mr. COLMER. I yield further to the gentleman from Arkansas.

Mr. MILLS. It is difficult to be factual in response to the question. If nothing more is done, if the bill which we passed in June is not passed by the Senate before we leave and if this 15-day extension should not be subsequently extended, then the withholding itself would drop back to the normal rates, and the 10-percent surcharge, presumably, would be dead.

Mr. GROSS. Would it mean that the withholding would be applicable and would be effective for the first 15 days of August and not for the remainder of the month of August?

Mr. MILLS. That is right; just 15 days.

If the gentleman from Mississippi will yield further, let me take my friend, the gentleman from Iowa (Mr. GROSS), into my confidence. I am not in a position to know what the other body may do. This bill takes us through the remainder of this period of time between now and the announced recess of the House on August 13. The Senate has been saying that they did not want to pass a surcharge bill until the reform bill had moved.

We anticipate—and I am not presuming to take over the position of the majority leader (Mr. ALBERT) in announcing programs—but I have conferred with him informally and we presume that we will have before the Committee on Rules, with the indulgence of the committee, on next Tuesday the request for a rule on the tax reform bill; that we will debate that bill on Wednesday and Thursday of next week, and vote on it some time Thursday afternoon.

Now, that will be the 7th of August. It will, therefore, be transmitted to the Senate a week, or 6 days, at least, before the stated date of the recess on August 13, giving the Senate a chance to consider it and to take what action it wants to take with respect to the surcharge.

Now, if the Senate advises that it cannot act and in its wisdom feels that the surcharge withholding should be continued, they could amend this bill.

Mr. GROSS. Mr. Speaker, if the gentleman will yield further, the majority leader of the other body has said that the other body will be in no hurry to take further action. Now, my question is: if we pass this measure for the 15 days, would the other body take the 15-day request and extend it, say, for 15 days, or for 30 days? Is there any such understanding as that?

Mr. MILLS. If the gentleman from Mississippi will yield further, I have no understanding with anybody in the Senate about what the Senate may do on this, or any other matter, none at all. But I do believe that we have our own individual responsibility in the House to give the Senate time through this measure to further consider what it wants to do.

Mr. SMITH of California. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, it seems to me that we are today in a comparable position to a football team which is 3 points behind, and are going down the field with third down and 2 yards to go. They only have a few minutes left in the game. They should try to make that extra 2 yard, not punt and lose the ball and probably the game. They should try to win.

I think that is what we are trying to do here: to give us a chance to work out the surtax; to give us a chance to bring a tax reform bill before the House next week, and to see if these important matters can be resolved.

Mr. Speaker, I believe the gentleman from Mississippi, the very distinguished chairman of the Committee on Rules, has explained the resolution very adequately, and I concur in his remarks. Between the statement made by the gentleman from Mississippi and the colloquy with the gentleman from Arkansas (Mr. MILLS), I believe that the bill, H.R. 13080, has been adequately explained, and I for one feel that we can now vote for the resolution without any further debate.

So, Mr. Speaker, I reserve the balance of my time, and I urge the adoption of the rule.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. SMITH of California. Yes, I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, I cannot conceive that the Internal Revenue is going to collect taxes for one-half of 1 month. They may do so, but that is hard to believe.

We are here called upon to pass a bill providing for 15 days, which would take us to the middle of August. Again, I cannot help but wonder, if we got into a bind, as to what would happen—perhaps this is inconsequential—but what would happen to the planned recess which has been announced as beginning on August 13?

Mr. SMITH of California. May I say to the gentleman from Iowa simply this: that there are many things that many of us cannot conceive of. We do not have a crystal ball that would show us what may occur on a future day. But this is based on the right thing, and the most responsible thing that the House can do today: to pass H.R. 13080 and send it to the other body, and then take up the tax reform bill and handle these bills before the vacation, and before the 15th of August expiration of the surtax.

That is the way I feel about it personally.

I will be pleased to yield to the gentleman from Arkansas if he desires me to do so.

Mr. MILLS. Mr. Speaker, will the gentleman yield?

Mr. SMITH of California. I yield to the gentleman.

Mr. MILLS. Let me respond to the question of the gentleman from Iowa about this, that is, the question whether it has an effect or not with respect to pay periods for withholding purposes.

Remember that Thursday is the 31st of July, and if a pay period should occur on August 1, then presumably there would be some question in the minds of those who are withholding as to what to withhold. If a pay period should occur a week later, on the 8th of August, there would be no question about that week's pay period being withheld at lower rates or the existing rates. So there could be one on the 1st of August. There could be one on the 8th of August. Then there could be one on the 15th of August that could be affected by this bill.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. SMITH of California. I yield to the gentleman.

Mr. GROSS. Would the gentleman not go on and project—if the Congress recesses on August 13—would the gentleman go on and project, in the absence of any other legislation extending the date, what would be the situation at the end of the month, with Congress still in recess until September 3?

Mr. MILLS. Mr. Speaker, will the gentleman yield?

Mr. SMITH of California. I yield to the gentleman.

Mr. MILLS. As I endeavored to point out earlier, you revert back, at the end of the period, August 15, if there is nothing further done, to the rates that were in existence prior to the surtax.

So any moneys earned by then would not be affected for withholding purposes, insofar as surcharge rates are concerned.

Now then if you would look at the other side of the question, if the surtax itself is not extended beyond its termination date of June 30, then those who have been withheld upon for the month of July and the first half of August, would get a refund of the amount of the surtax that had been withheld against them because the law then will have actually expired on June 30 unless it is extended.

Mr. CLARK. Mr. Speaker, will the gentleman yield?

Mr. SMITH of California. I yield to the gentleman.

Mr. CLARK. All I really know about this tax program is what I read in the papers.

I would like to know from the gentleman from California whether he has any authority to speak for the President, when the President has insisted that we have a 1-year surtax extension instead of a 5-month extension, because this is very important to know when this bill is considered on the floor of the House.

Mr. SMITH of California. I do not know what the gentleman has in mind when he asks me whether I am speaking for the President. I do not want to say anything misleading but, of course, I am not here to speak for the President of the United States, but can speak only for myself, the gentleman from California, and I am speaking in support of the resolution. That is, I think, the only thing I

can do, to try to resolve these important questions and try to resolve these problems that the House, the other body, and the Committee on Ways and Means are facing.

Mr. CLARK. If it is extended for another 15 or 30 days, as the gentleman from Iowa stated, it will go on until September 2 because of our recess or vacation or whatever we call it here in the House. Then, after that, what comes up? Are we going to extend it again and again until we get a 1-year extension or are we finally going to come down to the point where the House is going to approve or disapprove a 5-month extension, as the House really wanted to do in the beginning—and so has the other body.

Mr. SMITH of California. I cannot answer that. I can stand here and prognosticate with the gentleman for the next half hour. But the other body could get this bill and change the cutoff date to November 30, 1969, and send it back and we would have to decide whether we are going to take it or leave it or what we are going to do.

I do not have a crystal ball. All I can say is that as of July 31 this is the best thing and the only thing I think we can do and should do. But I cannot guess and look into the future with you.

Mr. CLARK. Since this is very important—and I think this is a very important issue—to know whether or not to vote "yea" or "nay" on this particular bill today, on this resolution, I think that is why I asked the question.

That is the reason—I think it is very important for the Members to know whether you are coming back later on for a 5-month extension or a 1-year extension.

This, to me, is most important to know whether or not to vote "yea" or "nay" on this.

Mr. SMITH of California. I say to the gentleman, it is important but I am unable to answer that further than what I have already said.

Mr. Speaker, I reserve the balance of my time.

Mr. COLMER. Mr. Speaker, I yield 6 minutes to the gentleman from California (Mr. SISK).

CONGRESSIONAL REORGANIZATION

(Mr. SISK asked and was given permission to speak out of order.)

Mr. SISK. Mr. Speaker, I hope not to use the time allotted to me because I recognize that we need to proceed. I take this time to announce to the House that as of today we secured 1 hour of special order for this coming Monday, August 4, at which time the subcommittee of the Committee on Rules handling the legislative reorganization bill will attempt to lay out for the benefit of the Members the progress that we have made and the status of our work. I recognize that there is concern among many of the Members of the House who are interested in legislative reorganization, in knowing exactly what the committee has been doing, because we have been doing our work in executive session.

So on Monday next we will make a presentation. I hope to be rather brief and then yield for questions or statements from any Member of the House who may desire to participate, and to explain as fully as possible some of the problems with which we are grappling and some of the progress that we have made in trying to get to you as soon as possible, a bill on legislative reorganization.

We invite all Members who are interested to be here and to join in this discussion.

Mr. SMITH of California. Mr. Speaker, will the gentleman yield?

Mr. SISK. I yield to my colleague from California.

Mr. SMITH of California. Mr. Speaker, I would like personally to commend the gentleman from California (Mr. SISK) on the tremendous effort he has been making, the time he has spent, and the orderly procedure that he has been applying to the study of the reorganization bills. All other Members of the subcommittee should also be commended for their active participation. I would hope that all those Members who have been asking questions about this subject over the past several months will be present Monday afternoon and let us have a chance to attempt to answer the questions they may have in their minds.

Mr. SISK. I thank my colleague from California. Let me say that he, too, has contributed a great deal because this is a rather trying and agonizing task.

Mr. ANDERSON of Illinois. Mr. Speaker, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Illinois.

Mr. ANDERSON of Illinois. I would certainly like to join in commending not only the gentleman in the well but my colleague on the committee, the gentleman from California (Mr. SMITH), for the many hours I know they have spent to date in pursuing this very important subject. I would join them in the hope that there would be a good response to their plea for attendance at their special order on Monday so that we can pursue this vitally needed reform in the House and, hopefully, emerge with the greatest consensus, if you want to use that word, that will give us a bill before this session of Congress adjourns.

Mr. SISK. I thank my colleague from Illinois.

Mr. Speaker, in conclusion, the members of the subcommittee who have been working on this subject, in addition to my distinguished colleague from California (Mr. SMITH), are the distinguished gentleman from Missouri (Mr. BOLLING), the distinguished gentleman from Texas (Mr. YOUNG), and the distinguished gentleman from Ohio (Mr. LATTA). We will appreciate it if you will be here Monday and if you do have questions, we will attempt to lay out the progress that has been made.

Mr. COLMER. Mr. Speaker, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Mississippi.

Mr. COLMER. Mr. Speaker, I wish to associate myself with the remarks of the gentlemen from California and the gentleman from Illinois about the work that has been done, and is being done on this reorganization bill in the Rules Committee.

Mr. Speaker, I would also like, in addition to commending the two gentlemen from California, to commend also the other members of the subcommittee Messrs. BOLLING, YOUNG, and LATTA, and at the same time ask for a little patience and consideration of the problems that are involved in this monumental task of reorganization. It is not a question of some Member placing a bill in the hopper down there and saying, "This is what we want." There are 434 other Members who may not agree with that proposal.

I remind those who seem to be impatient about this matter that the other body spent practically 2 years trying to write a bill; and when they had done so, it did not meet with the approval of this body. Therefore, we just ask for a little patience. We are trying to bring about a constructive, but at the same time, an effective and practical bill.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. SISK. I yield to the majority leader.

Mr. ALBERT. Mr. Speaker, I join in the commendations to the gentleman from California and other members of the subcommittee and also in expressing the appreciation of all Members of the House for the expeditious manner in which the chairman of the committee and his members have arranged for this matter to be considered thoroughly by this fine subcommittee.

Mr. SISK. Mr. Speaker, I thank the distinguished majority leader. I also thank the chairman of the Committee on Rules for yielding this time so we might speak on this matter.

Mr. COLMER. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. MILLS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 13080) to continue for an additional 15 days the existing rates of income tax withheld at source.

The SPEAKER. The question is on the motion offered by the gentleman from Arkansas.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 13080, with Mr. MONAGAN in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Arkansas (Mr. MILLS) will be recognized for 30 minutes, and the gentleman from Wisconsin (Mr. BYRNES) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Arkansas (Mr. MILLS).

Mr. MILLS. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, the bill H.R. 13080, as has been previously pointed out, would temporarily extend the present effective surcharge withholding rates for an additional 15 days, from July 31 through August 15.

Mr. Chairman, it will be recalled that earlier, because it was impossible for the Congress to conclude action H.R. 12290 prior to July 1, the Senate passed and the House agreed to an amendment to H.R. 4229 which extended the surcharge withholding rates from June 30 to July 31, 1969.

I think it is very important that we point out that this action did not represent a change in any taxpayer's liability for 1969, but instead merely continued withholding at a rate which included application of the surcharge, and the same is true of the present 15-day extension before the House.

Mr. Chairman, the Senate has not completed its action yet on H.R. 12290, and it appears, from what information I can get, that it will not be able to do so before Thursday night, July 31. If it does not do that, and if we do not take action to continue for this period of time the withholding of the tax so as to include the surcharge, there will be a great deal of confusion, uncertainty, and expense, first to employers, who in the absence of this enactment might be faced with the difficult problem of changing over from one set of withholding rates as of August 1, and then, should Congress subsequently complete action on H.R. 12290, be faced with the necessity of shifting back to the higher rates including the surcharge tax.

The problem is also presented to employees if the withholding tax is not continued, in that their take-home pay checks would be increased, and then, if the Congress completes action on H.R. 12290, the withholding would again increase, and their take-home pay would be decreased.

In this event many employees would be likely to be underwithheld upon; that is, they would be likely to owe additional taxes when they filed the tax returns on April 15, 1970, for the taxable year 1969.

I believe it is far more convenient for them for the withholding to be uniform than to have this gap in the withholding. Certainly it is far more convenient and brings about less confusion for the employer. Also, the administration of the program by the Internal Revenue Service is involved, and would be adversely affected by this lapse.

A question has been raised as to what may ultimately happen. I have no idea what may happen in the other body. I have not been told of any more information that you have received yourselves about what they may finally do.

I do believe, however, there is a responsibility on the part of the House, as well as the other body, to see to it that if finally the surcharge is to be extended for 5 months, for 12 months, or for whatever period of time, we do it in such a manner as to create as little inconvenience and confusion as possible to the employee, to the employer, and to the Internal Revenue Service.

That is all I have to say, Mr. Chairman, about the proposition. It speaks for itself.

Let it be borne in mind, and let me repeat what I said earlier: This 15-day extension does not involve any change in any taxpayer's ultimate liability. That is something with respect to the continuation of the surcharge itself.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. MILLS. I am glad to yield to the gentleman from Iowa.

Mr. GROSS. So far as I am concerned, in my feeble part as a Member of the House of Representatives, I made no issue over the last extension because I lived in hope that in the interim period there would be some evidence on the part of the House that it intended to cut expenditures; that the bills would carry amounts at least equal to or reduced below the expenditures of last year.

The CHAIRMAN. The time of the gentleman from Arkansas has expired.

Mr. MILLS. Mr. Chairman, I yield myself 2 additional minutes.

Mr. GROSS. I find myself in the situation here today whereby to vote for a continuation of the withholding is by indirection a vote for the surtax.

There is a bill pending before the House now—consideration of this bill has interrupted consideration of it—which, when one takes into consideration the forward funding, is $1.3 billion more than the expenditure for last year, and that does not include a single dollar for the pay increases that went into effect on July 1.

I would not be in a tenable situation here today if I voted for a continuation of the withholding of the surtax, with no evidence whatever that the House is genuinely and sincerely interested in halting inflation by the most effective measure; that is, the reduction of expenditures on the part of the Government. I deeply regret that there is all too little interest in that which is of greatest priority—deep cuts in spending rather than continuing higher taxes to produce greater revenues to be brought to Washington and spent.

I thank the gentleman from Arkansas for yielding to me for this brief statement.

Mr. MILLS. Let me make it clear to my friend and to anyone else who may be of the impression he has indicated he is, I do not by any stretch of the imagination interpret a vote for this 15-day withholding as being an endorsement of the surcharge or as having any relationship whatsoever to the vote on the continuation of the surcharge itself. This is done to avoid the confusion which would occur if the surcharge itself should be extended into the future. That is the whole point of it.

I would think all of us would want to go through this period creating as little confusion as possible.

Mr. BYRNES of Wisconsin. Mr. Chairman, I yield myself such time as I may require, and I am going to be very brief.

It has been said and correctly so that this is really a housekeeping matter. The only purpose of extending the period for the current withholding rate is to avoid the possibility of great confusion both with respect to the employers of this country and the employees of this country and, in addition, to avoid problems that could be created as far as the Internal Revenue Service and its administration of the tax law are concerned. All we are doing here if we extend this is to say that we are going to take this action as a precaution against creating undue burdens on all of the employers of this country, big and little, and on all of our taxpayers and those who are charged with the collection of our taxes. As the chairman of the committee has said, it cannot control one way or the other what ultimately happens as far as a continuation of the surtax is concerned. You can beat this extension, you can turn this bill down, and you can revert to the old level of withholding. That does not foreclose the possibility of the extension of the surtax. That does not foreclose its passage eventually by the Senate, on agreement by the House, and being signed by the President. It cannot have any effect except to create confusion in that kind of a situation.

Therefore, I would think, Mr. Chairman, that it is pointless for us under any circumstances to put this kind of a burden thus created on our people, which would accomplish nothing.

Mr. MILLS. Mr. Chairman, I have no further requests for time.

Mr. BYRNES of Wisconsin. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. Under the rule, no amendments are in order except amendments offered by the Committee on Ways and Means. Are there any amendments?

Mr. MILLS. There are no amendments, Mr. Chairman.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. MONAGAN, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 13080) to continue for an additional 15 days the existing rates of income tax withheld at source, pursuant to House Resolution 501, he reported the bill back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken, and the Speaker announced that the ayes appeared to have it.

Mr. MOSS. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 307, nays 105, not voting 20, as follows:

[Roll No. 129]

NOT VOTING—20

Anderson, Tenn.	Edwards, La.	Jones, Tenn.
Broomfield	Evins, Tenn.	Kirwan
Carey	Fish	Lipscomb
Clay	Gallagher	Lujan
Davis, Ga.	Gray	Miller, Calif.
Dawson	Halpern	Powell
	Hogan	Smith, N.Y.

So the bill was passed.

The Clerk announced the following pairs:

Mr. Miller of California with Mr. Broomfield.

Mr. Edwards of Louisiana with Mr. Fish.

Mr. Kirwan with Mr. Halpern.

Mr. Carey with Mr. Hogan.

Mr. Evins of Tennessee with Mr. Lipscomb.

Mr. Gray with Mr. Lujan.

Mr. Jones of Tennessee with Mr. Smith of New York.

Mr. Davis of Georgia with Mr. Anderson of Tennessee.

Mr. Gallagher with Mr. Clay.

Mr. Dawson with Mr. Powell.

Mr. McCARTHY changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

APPOINTMENT OF CONFEREES ON H.R. 10595, GREAT PLAINS CONSERVATION PROGRAM

Mr. POAGE. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 10595) to amend the act of August 7, 1956 (70 Stat. 1115), as amended, providing for a Great Plains conservation program, with Senate amendments thereto, disagree to the Senate amendments, and ask for a conference with the Senate on the disagreeing votes of the two Houses.

The SPEAKER pro tempore (Mr. ALBERT). Is there objection to the request of the gentleman from Texas? The Chair hears none, and, without objection, appoints the following conferees: Messrs. POAGE, STUBBLEFIELD, PURCELL, BELCHER, and TEAGUE of California.

There was no objection.

DEPARTMENTS OF LABOR, AND HEALTH, EDUCATION, AND WELFARE AND RELATED AGENCIES APPROPRIATIONS, 1970

Mr. FLOOD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 13111) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1970, and for other purposes.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 13111, with Mr. HOLIFIELD in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on yesterday afternoon, the Clerk had read down to and including line 24 on page 25 of the bill. There was pending the amendment of the gentleman from New Jersey (Mr. JOELSON), the amendment thereto by the gentleman from Iowa (Mr. SMITH), a substitute for the Joelson amendment by the gentleman from Illinois (Mr. MICHEL), and an amendment to the substitute by the gentleman from New York (Mr. ROBISON).

Mr. PERKINS. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in support of the Joelson amendment.

If I understand the amendment correctly, and I think I do, the amendment adds $629,048,000 above the appropriation of last year for programs affected by the package amendment. The appropriation last year was $2,414,000,000 for these programs. In the Joelson amendment an increase of $629 million is provided, bringing the total to $3,043,307,000 for the program involved.

We should not go along with the Michel amendment. His substitute does nothing more than to bring the level of expenditures—the level of impacted areas legislation expenditures—up to the 1969 figure. That is all the Michel amendment proposes to do.

Mr. Chairman, I do not believe that the Members of this House should be so gullible that it will take one-tenth of a loaf for the Joelson half loaf.

Now, Mr. Chairman, I have personally been interested in the amendment which carries the increases which has been offered by the gentleman from New York (Mr. ROBISON), but I do not think that we should abrogate our responsibility.

The Robison amendment brings the expenditures up to the same level as the expenditures in the Joelson amendment—the same figures—except the Robison amendment leaves it up to the U.S. Commissioner to do your legislating for you. The Robison amendment would afford no assurance of a contribution of a school library, and NDEA equipment, or a guidance and counseling program. They would leave it up to the U.S. Commissioner of the Office of Education to say how much money shall go into the library program.

The same thing is true with reference to the supplemental educational centers. The Robison amendment leaves that up to the Office of Education to do this legislating. The same thing is true with reference to guidance and counseling. I hope this body rejects the Robison amendment and the Michel substitute.

Mr. JOELSON. Mr. Chairman, will the gentleman yield?

Mr. PERKINS. I yield to the distinguished gentleman from New Jersey (Mr. JOELSON).

Mr. JOELSON. Mr. Chairman, I had first been constrained to vote for the Robison amendment because it restores the entire amount of money that I wanted to restore but, having spoken with the Chairman (Mr. PERKINS) and having listened to him today, I see a very real danger, and that is that giving this discretion to the U.S. Commissioner of Education will deprive the library program of adequate funding. I therefore oppose the Robison amendment.

The CHAIRMAN. The time of the gentleman from Kentucky has expired.

(By unanimous consent, Mr. PERKINS was allowed to proceed for 5 additional minutes.)

Mr. PERKINS. Mr. Chairman, the Robison amendment of course endeavors to sweeten up the Michel package. Not many of us want to be against increasing the funds for better educational programs. The increase in funds is of course desirable. The purpose is just a gimmick to try to get votes, but I do not believe we want the Robison amendment unless we want the Office of Education to do all our legislating.

Mr. BRADEMAS. Mr. Chairman, will the gentleman yield?

Mr. PERKINS. I yield to the distinguished gentleman from Indiana.

Mr. BRADEMAS. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I would ask the gentleman from Kentucky if it is not true that the Robison amendment contains no additional funds for vocational education or for higher education?

Mr. PERKINS. That is correct. The Robison amendment only deals with the library title, title II of ESEA, title III of ESEA, and title III of NDEA, the equipment title, and the guidance and counseling title of NDEA, title V.

Mr. EDMONDSON. Mr. Chairman, will the gentleman yield?

Mr. PERKINS. I yield to the gentleman from Oklahoma.

Mr. EDMONDSON. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, the gentleman from Kentucky has been making a very fine speech in attempting to point out some of the differences in the Robison amendment which, while it does represent an improvement over the Michel amendment, falls completely short of what some of us believe is necessary.

Mr. Chairman, I would ask the gentleman from Kentucky if it contains anything in the way of aid to students, for student loans, or student assistance, or anything of that kind?

Mr. PERKINS. It does not. It does not touch any subject matter except the four titles that I mentioned, grouped together, restoring the expenditure to the last year's spending level during the past fiscal year.

Now, Mr. Chairman, the amendment offered by the gentleman from New Jersey (Mr. JOELSON), to my way of thinking, has been carefully worked out. We make a reasonable gesture to do something for the ghetto schoolchildren, and in the poorer rural areas of this country we make available an extra $180 million. When you compare the Michel substitute, how can we go along with it—and I say this as a friend to the impacted program—how can we vote for the middle-class schoolchildren in the area of military installations, where we have considerable wealth, and not support the poor urban child, or those in the rural areas of this country. If we are going to do something about the welfare load, and if we are going to do something about hard-core unemployment, and if we are going to do something about school dropouts, I say to you in all frankness we ought to be here increasing the funds for elementary and secondary education at least a half a billion dollars, so that the States with larger numbers of low-income people and the poorer communities would benefit at least commensurate with what we do for the impacted aid program.

It will be disgraceful on the part of this Congress if we do something for the middle-class child and fail in our responsibility to do something for the child in the greatest need.

Mr. Chairman, I think the Joelson package amendment should be adopted by this Committee.

We do something for vocational education.

I want to run over these figures briefly.

We bring the guidance and counseling figure up to last year's level.

The NDEA title—equipment—up to last year's level of $78 million.

Title II—school libraries—up to last year's level of $50 million.

Vocational education, the increase over fiscal year 1969 is $240 million.

That is in the Joelson package.

In the NDEA student loan program, over the fiscal year 1969, there is an increase of $35,600,000 in the package.

So we certainly are doing something in the areas of greatest need. We have tried to work out priorities, for the areas of greatest need, even overlooking impact, but we are certainly taking into consideration the need for more money for the poor children of this country.

If we are going to have a balanced educational program in this country in the future, I do not think we should go in a one-sided direction because somewhere along the line the house may fall in on some of us. We want a solid, sound and sane educational program and not just what is for you and nothing for me.

Mr. Chairman, 9 million children who are participating in title I programs throughout the Nation have a great stake in what we do here today. This is approximately the level of participation in title I programs in fiscal years 1967, 1968, 1969 and the expectation for 1970. In those schools where children were falling behind in scholastic progress the initiation of title I programs has shown these youngsters to steadily improve, sometimes gaining a full month's learning for every month spent in the classroom.

The evidence before our committee shows that reading tests data from a sampling of States indicate that title I participants are attaining higher levels of achievement based on national testing scores than would have been expected in the absence of title I activities. Moreover, this evidence discloses that the serious dropout rate in title I schools has decreased and more disadvantaged children continued their education beyond high school in 1967 than they did in 1966.

In spite of the progress that we are obviously making in the increased scholastic achievement of disadvantaged children, the evidence clearly discloses the need for the expenditure of more funds per pupil in these programs than present levels of appropriations permit. Where programs have been narrowly confined to smaller numbers of participant students so as to obtain the maximum dollar impact on their scholastic progress greater success has been enjoyed. However, if we are to effectively provide educational opportunities in title I schools, the solution does not lie in eliminating numbers of children from the program in order to increase the progress of a few—I submit that the solution lies in providing more funds to local educational agencies to strengthen the program for the benefit of all the children in the school system who need the special types of programs that title I provides. Presently we are funding title I with less than 40 percent of the authorization.

Mr. Chairman, I believe that for the fiscal year 1970 we should be appropriating the full authorization in excess of $3 billion for title I programs. In surveys conducted by the committee of school superintendents throughout the Nation, the response we received from thousands of school administrators emphasized the hardships imposed by the low funding levels in ESEA, particularly for title I.

The first question in the survey, the most pertinent to our discussion of Federal financial assistance, asked if the Federal Government was doing its share in providing funds for elementary and secondary education. Sixty-five percent of those responding indicated that the Federal Government was not doing its share. In very large school districts, over 80 percent felt the Federal Government was not doing its share. A great majority of those responded that the Federal Government is doing its share, conditioned their response to a full funding situation. Many of the superintendents offered suggestions, over 40 percent of which recommended that support be increased. In districts with enrollments of over 100,000 two-thirds of the responses asked for increased support.

Another question, which specifically dealt with the financial aspects of Federal education programs, asked to what extent the Elementary and Secondary Education Act was underfunded. Nearly 70 percent of the superintendents indi-

cated that this legislation was underfunded and frequently commented that the programs financed by the ESEA are ones on which they rely heavily. In large school districts over 90 percent of the superintendents indicated that the program was underfunded.

Let me share with you just a few of the responses from local school superintendents which I believe illustrate clearly the adverse effects of curtailments and reduced levels of funding.

From Argyle, Iowa:

ESEA is extremely underfunded. Our area has been cut from $45,000 three years ago to $19,000 next year. We have approximately 40% of our students identified as educationally deprived (see enclosed list), yet we have had to eliminate teacher aides, TVR equipment and instruction, summer school, and other items from our educational program, and cut our nurse to ½ time due to title I budget cuts. I believe that someone in Washington should take a look at the small rural areas of our nation and see the problems we have here.

From Cherryvale, Kans.:

In our particular school districts, we will be underfunded in the ESEA by approximately $4,000. Due to the reductions in our entitlement we will have to cut off part of our summer program. In our summer program we work with our remedial students.

From West Grove, Pa.:

Our school is located in a rural area with many low income families—therefore we have many children who are educationally deprived some of whom we are unable to reach because of lack of funds. Each year of the ESEA program, the Title I funds have been reduced, thereby making it necessary to curtail our program.

From Norfolk, Va.:

Although it is difficult to know just what the Federal Government's "share" is in assisting to improve the quality of elementary and secondary schools, the Federal Government has failed to support fully *its own* appraisal and estimate of its obligation. The Congress has passed a volume of highly significant legislation authorizing financial support for schools in recent years, but the actual appropriation of funds seldom matches the authorization. Our first recommendation to strengthen the Federal Government's role in improving elementary and secondary education is to fully fund the authorizing legislation already in existence.

The total allocation to the Norfolk School System for ESEA Titles I, II, III, and Central City Project, after reductions for the current year, amounts to approximately $2.6 million. We estimate that there are in excess of 20,000 children enrolled in this school system in need of the educational services for which ESEA was created. It is clearly evident that the funds available are insufficient to achieve any substantial impact for more than a relatively small number of children. The full funding of ESEA would approximately double the funds available, and approximately double the potential impact of the Act."

From Double Springs, Ala.:

Recent enactments of Congress furnishing support for elementary and secondary education has been *great!!* It has made a tremendous impact on our educational system. ESEA is at least 50% underfunded.

Our need is great—even desperate.

For these reason, Mr. Chairman, it is obvious that the package to add $180,800,000 for fiscal year 1970 for title I of the Elementary and Secondary Education Act is urgently needed to improve the effectiveness of these programs.

Mr. BELL of California. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I rise in opposition to the substitute and in support of the amendment offered by the distinguished gentleman from New Jersey whose proposal would provide what I believe is a reasonable level of funding for essential education programs.

In 1968 the Congress appropriated $4.1 billion for education.

In 1969 we appropriated $400 million less

The January budget proposals would have lopped off another $100 million from the 1969 figure.

The April budget would have cut still another $400 million.

Fortunately, Mr. Chairman, the Appropriations Committee has seen fit at least to halt the decline and I heartily commend that decision.

But if we are no longer to look backward to 1968 as the year when this Congress made its most substantial contribution to education, we must recognize the necessity of supporting the well-thought-out package of amendments proposed by the gentleman from New Jersey (Mr. JOELSON).

Each year, Mr. Chairman, this body has increased the authorizations for these education programs—we have expanded the Congress' promise to the young people of this Nation.

And yet the gap between the promises and the realized appropriations continues to widen.

I suggest that we must narrow that gap now, narrow the gap between authorizations and appropriations, between promise and delivery.

Mr. Chairman, the educational crisis now facing my own city of Los Angeles is only one example of a nationwide phenomenon.

Cities with declining tax bases are being further jeopardized by voters' rejection of critically needed bond issues, and the resulting burden falls most heavily on inner-city youngsters who need the most help.

At this point in the RECORD I would like to include an excerpt from testimony by Los Angeles City School Superintendent Jack Crowther relating to programs for disadvantaged children:

ELEMENTARY AND SECONDARY EDUCATION ACT—TITLE I: COMPENSATORY EDUCATION

The number of children residing within the Los Angeles City School District who are eligible for Compensatory Education programs is shown in Table I. This number has increased by one third, from 94,000 to 121,347 since the beginning of the programs in FY 66.

TABLE I.—CHILDREN ELIGIBLE FOR ESEA, TITLE I PROGRAMS

Fiscal year	Family income less than $2,000 (1960 census)	AFDC excess of $2,000 (annual survey)	Total	Increase	Percent
1966	39,493	54,615	94,108		
1967	39,493	63,070	102,563	8,455	9
1968	39,493	68,000	107,493	4,930	5
1969	39,493	72,091	111,584	4,090	4
1970	39,493	81,954	121,447	9,863	9

The above figures are based on the 1960 Census data for families earning less than $2,000 per year and the updated data for families receiving in excess of $2,000 per year AFDC aid.

The allocation to the District of Title I funds and the date of notification are summarized in Table II. Although increasing in FY 68, the allocations showed a marked decrease for FY 69 and again in FY 70, projected on the basis of the Administration Budget. The difference between the $38,225,805 to which the District would be entitled for FY 70 and the $13,500,000 anticipated is deeply discouraging. The problems of mounting effective programs when the notification of funds to be actually received comes so late in the fiscal year is a story you know well.

TABLE II.—ALLOCATION OF ESEA, TITLE I, FUNDS TO LOS ANGELES SCHOOL DISTRICT

Fiscal year	Entitlement	Appropriated	Date notified
1966	$23,715,216	$15,130,585	April 1966.
1967	27,384,321	14,838,952	Mar. 30, 1967.
1968	29,560,575	16,201,638	Feb. 16, 1968.
1969	32,024,608	15,028,872	Jan. 7, 1969.
1970	38,255,805	[1] 13,500,000	

[1] Estimated entitlement based on forward funding at a 10-percent reduction from current year.

For the past four years, we have been able to assure the effectiveness of the compensatory education programs as budgeting resources have declined by reducing the number of pupils being served, as shown in Table III. This is the only way we have been able to maintain a given level of expenditure for each child. The data shown in Table IV indicate we have even improved on this by increasing the amount spent per child, but only at the expense of serving fewer pupils.

TABLE III. *Number of pupils served in ESEA, title I, program*

1965–66 (approximate)	65,000
1968–69 (approximate)	50,000
1969–70 (approximate)	45,000

TABLE IV.—*Expenditures per pupil participating in ESEA, title I, programs*

1965–66	$233
1968–69	300
1969–70 (required by State guidelines)	300

We have been forced to take programs out of some schools entirely, although the need in those schools has increased. Consequently, the number of schools with compensatory education programs has been decreased as summarized in Table V.

TABLE V.—NUMBER OF SCHOOLS WITH ESEA, TITLE I, PROGRAMS

	Elementary	Junior high	Senior high
1965–66	117	12	12
1968–69	61	12	12
1969–70	[1] 33	[1] 6	[1] 3

[1] Estimated.

The failure of Congress to appropriate funds sufficient to support the compensatory education programs is reflected in Table VI. Here, the amount of money allocated per

pupil is computed in terms of the total number of pupils eligible.

TABLE VI.—*ESEA title I, allocation per eligible child*

1965–66	$160.78
1966–67	144.68
1967–68	150.72
1968–69	134.69
1969–70 (estimate)	111.16

Mr. Chairman, the need for the compensatory education programs made possible through Title I of the Elementary and Secondary Education Act exists. Evidence of the need is shown in every State achievement test administered. Based on the criteria contained in the law, there are over 121,400 young people eligible for these compensatory programs. Of these, we are able to serve only 50,000, but even fewer next year. The Report of the California State Department of Education on Evaluation of ESEA Title Projects of California for 1967–68 is evidence that we are successfully helping young people. Senior high school students averaged more than one year of growth on the Gates-MacGinitie Reading Test. The average growth of students in reading improvement classes was 1.3 years, while basic reading students averaged one year's growth. Greater gains were demonstrated on subsections of the reading test. For example, in one group, students improved by 2.9 years in reading vocabulary, while others showed a growth of 2.5 years in one year's time, where normally only .7 years' growth has been the pattern. In response to questionnaires, 74 percent of the parents noticed improvement in children's study habits, 80 percent said their children's attitude toward school had improved, and 78 percent thought their children learned more than they had during previous years. I urge you to provide the funds authorized to do the job that must and can be done.

Mr. BELL of California. Today, Mr. Chairman, we are all concerned with law and order.

And yet it is the very youngsters we are talking about—the children of the ghetto—who are most likely to become involved with crime, with riots.

Through these programs we have the chance to reach them.

We have the chance to invest the taxpayers' money in a high-return program which not only can reduce crime and welfare costs, but which can increase future tax revenues from those who would otherwise be tomorrow's hard-core unemployed.

These, Mr. Chairman, are investments in America's future, investments which, in my view, we cannot afford not to make.

And yet, under title I compensatory education programs alone, Los Angeles is now serving one-third fewer children than it did 4 years ago.

The per-pupil allocation has dropped while inflation and costs have increased.

Mr. Chairman, reaching the children of poverty before they have dropped out, before they contribute to ever-increasing crime rates and ever-growing welfare rolls is a concept few thoughtful Americans would reject.

Our authorizations for this program and for the others contained in the measure before us reflect this view, but our decisions to put our money where our promises are, always seem to fall far short of the need.

It is with the strongest possible urgency, therefore, that I support the Joelson amendment, and urge that my colleagues do the same.

Mr. FARBSTEIN. Mr. Chairman, will the gentleman yield?

Mr. BELL of California. I yield to the gentleman from New York.

Mr. FARBSTEIN. I want to go on record as favoring the Joelson amendment. I might say in passing that in view of the fact that we find a surplus of $3 billion, certainly we should not hesitate to spend about $900 million of that for education. I can think of no better place to put $1 billion of that surplus.

Mr. BELL of California. I certainly concur with the gentleman.

Mr. FARBSTEIN. Mr. Chairman, I rise to support in the strongest possible terms the package amendment which will be offered to increase by $894 million the funding for education and library programs.

There is something inherently wrong with a society whose government can allocate over $80 billion to defense, give little thought to a $2 billion cost overrun connected with a single airplane, spend $4 billion on a space program in 1 year and then find it virtually impossible to get even $3.4 billion for the education of all its 60 million schoolchildren and the many million more who derive personal enrichment from library programs.

There is something basically inconsistent about an administration which preaches self-help and then grabs away the books and educational programs from those motivated to learn and improve.

To turn about society, to overcome the administration, I led a group of 71 Members of Congress in appealing to Congressman DANIEL FLOOD, chairman of the HEW-Labor Appropriations Subcommittee, to restore the huge cuts in Federal aid to education and libraries recommended by the Nixon administration. In some small way I believe our letter was helpful in stirring the committee to restore some of the Nixon cuts to a tune of $1.3 billion.

But like society and like the administration, the committee's education and library budget recommendation seems totally out of touch with the needs of our cities. Rather than increasing or even maintaining the per capita amount available to disadvantaged children to upgrade their education under title I of the Elementary and Secondary Education Act, the committee chose to reduce the per capita. Rather than increase the volume of books available to schoolchildren who would not otherwise have the opportunity to read books, the committee chose to provide no special funding for title II.

Rather than stimulate programs to make education both more relevant and individualized through vigorous support of the supplemental centers program of title III of ESEA, the committee chose to lump funding for this program with that for three other programs and to provide not even an adequate level of funding for title III for all four programs. And rather than spur the construction of public libraries so that the young and old alike could have the opportunity to enjoy contact with books, the committee chose to provide not one red cent for library construction under title II of the Library Services and Construction Act.

If the funds are not restored, the effect of these cuts on the education and library programs of this country will be devastating. The impact on New York offers a good example. It would mean that programs like the more effective schools program, which provides the culturally deprived youngster with a chance to get ahead through providing additional services, teachers aides, and educationally deprived lower class size will suffer; it would mean that the educationally deprived kid who needed books and library services would be left without them; it would mean that innovative programs of preschool training involving the pupil and parent alike would have to be abandoned; and it would mean that the quality of teacher instruction in critical subject matters would be hurt and the availability of educational equipment would decrease.

It is hard to believe we live in a Western society where belief in progress is paramount. For in terms of educating our young, we are slipping backward. I cannot bring myself to believe that no matter what the results of this vote today the Federal Government will spend less on education this year than last, just as it spent less in fiscal 1969 than it did in fiscal 1968. For heavens sakes, what is wrong with this country? Our epitaph may very well be: Billions for guns—pennies for books.

It is up to the House of Representatives to undue these distorted priorities. I do not as strongly support some of the programs contained in the $894 million package amendment as I do others, but I shall support the package as a whole as the only way of mustering the support necessary to do something to turn this society around.

Mr. HARSHA. Mr. Chairman, will the gentleman yield?

Mr. BELL of California. I yield to the gentleman.

Mr. HARSHA. Mr. Chairman, I support, wholeheartedly, the effort by my distinguished colleague, the gentleman from New Jersey, CHARLES S. JOELSON, to amend H.R. 13111, the Labor-HEW appropriations bill for fiscal year 1970, to provide needed funds for essential education programs.

Specifically, the Joelson amendment, supported by the Emergency Committee for Full Funding of Education Programs, would provide funds to reestablish previous program levels for school libraries, NDEA equipment, and guidance and counseling, and college facilities, as well as necessary funds for Impacted Area Aid Public Law 874, vocational education, title I, II, and III of ESEA, and NDEA student loans.

By virtue of previous congressional action, each of these programs, now established and operative, with students, schools, and systems deeply involved and dependent thereon, is essential to our previously declared efforts to provide the best possible education to the most students in our evermore sophisticated and complex world society. Even as a student, having received the benefits of an edu-

cational loan, finds needs for the continuation of the loan program, so too, does a school or a school system find continuing need for the various programs which, once established, became integral parts of their academic and institutional modus operandi. Educational administrators and teachers throughout the congressional district I represent have advised me of the need for continuing these programs and their significant help in the proper education and counseling of their students.

If, in general, the Federal Government has the responsibility of continuing that which it has set in motion for the common good, it certainly must have particular responsibility in those geographical areas upon which, by other action, the Federal establishment has imposed impacted conditions. Here again we find ourselves involved with a fight to restore funds for Public Law 874 as we have in the past.

Impacted aid is that Federal assistance least tainted by Federal control. Our local school administrations have been able to use this money, without direction from the Federal Government to supplement their already too meager budgets. If this money were not added to the appropriation many school districts would find that they must either close or drastically curtail their programs. I do not choose to be a party to either alternative.

Surely when we can find the funds and genius to walk on the moon we can find the way to adequately fund our educational programs.

This country's most precious resource is its youth. To fail to adequately educate that youth and prepare them for life in this world of ours is tantamount to wasting that precious resource. This we cannot afford to do. In these days of spiraling operation costs, increasing resistance to local property taxation, and community insistence on quality education, to fail to fully fund these programs will, in effect, be sentencing our children to the punishment of inferior or mediocre education—this we cannot afford to do. The welfare of this Nation depends, in final analysis, on the ability of our youth. That ability will, in a large measure, be determined by their education. Let us not falter in the task of providing them the education they need. Let us fulfill our previously declared commitment of providing the best possible education for the most possible students. This Nation's welfare depends upon it.

I urge the adoption of the Joelson amendment.

Mr. PUCINSKI. Mr. Chairman, I move to strike the last word.

The CHAIRMAN. The gentleman from Illinois is recognized.

Mr. PUCINSKI. Mr. Chairman, first I wish to take this opportunity, as chairman of the subcommittee that has jurisdiction over the Elementary and Secondary Education Act and the Impact Act, to congratulate the gentleman from Pennsylvania (Mr. FLOOD), and his subcommittee, for recognizing the need for additional funds for vocational education. They have given us $80 million more and we are most grateful. I am sure the vocational educators all over this country owe the gentleman from Pennsylvania (Mr. FLOOD), and his committee a debt of gratitude.

It is quite apparent from the discussion so far that we will provide additional funds for title B students under the impact aid bill whether we enact the Michel amendment or whether we enact the Joelson amendment, for both now carry these provisions. But I believe every Member should keep in mind that if he votes for the Michel amendment, he will be reducing his own State and district allocation by 78 percent of what it was in 1969. I invite each Member to examine the table I placed in the RECORD on May 26, page 13816, to see how much his district would lose in 1970 under the Michel amendment. Just deduct 22 percent from the 1969 allocation in your district and you will see what your vote for the Michel amendment will cost your school people in impact money.

I would like to tell you something about this category B. I think you ought to know it, and I think it ought to influence your judgment.

There are 55 million children attending elementary and secondary public schools in this country. The bill before us now provides, roughly, $1.5 billion of Federal aid for various programs for those 55 million youngsters, which comes out, roughly, to $30 a youngster. But this same bill provides more than $462 million for only 2.5 million children who benefit from the impact program. This comes out to $150 per student.

Last year we spent $115.5 million on 348,000 A students. These are the students who live on a military installation and attend a public school in the community. The Federal Government, quite properly, pays the full cost of educating those children to the local community, because the parents of these youngsters, living on a military installation, pay no local taxes for education.

But last year we also spent another $347.5 million on 2.2 million B students. These are youngsters who live off the military installation, whose parents pay real estate taxes to the local community and spend their money in the local community, and still, under the B category program, the Federal Government pays one-half the cost of educating these youngsters, simply because they are there by virtue of some Federal activity. That comes out to $150 per student.

Under this program, 28 States get a total of less money for all of their category A students than the single State of Virginia across the river gets for its B students. Virginia got $27 million for B students and $3 additional million for A students in 1969, for a total of $30 million of Federal aid for impacted areas.

The Michel amendment perpetuates this inequity without providing additional help to those districts that do not have impact children.

How can Members go back home and justify this kind of program without taking care of the rest of the educational needs of their communities? I would like Members to look at this list. My colleague from Illinois talked about the fact that 385 Members of Congress represent districts that get aid under the impact program, but 72 of these get less than $100,000 for their respective districts. Some will get only $40,000; some will get $50,000; and some will get $60,000. These Members are being asked to vote a $400 million appropriation for B students in order to bring into their own districts $40,000 or slightly more for a handful of students in their districts.

I invite Members to look at the rest of this list. In the Joelson amendment at least we have some equity in taking care of the B students as well as all other needs of our district. I know you all want to support the impact program. I never have seen anybody want to shoot Santa Claus. But at least in the Joelson amendment we have some opportunity to bring about some equity in this program, because we not only take care of the B student at 90 percent funding, but we also take care of vocational education and student loans, the impact areas, titles II, III, IV, and V, library services and all these other things.

If my colleagues were to vote for the Michel amendment alone, we would be voting to give $200 million of impact money to 10 States in this Union and $147 million to the remaining 40 States. Under the Joelson amendment we will be taking care of more needs; and bringing more equity to the different programs, so we will be voting to take care of the B students and also all students in our congressional districts and in our States.

I would ask Members to ponder the difference between these two propositions. We must look at the equity of it.

We have studied this in my subcommittee. We have held extensive hearings. There is no question that the Joelson amendment addresses itself to the modest beginning of meeting the funding needs of the programs in the authorizing legislation. I ask Members to consider this. If we vote for the Joelson amendment, we are taking care of B students, but also taking care of all other students in this program.

If we vote for the Michel amendment, we will vote for the B students and that is just about all. If Members think they can justify this disproportionate expenditure of $200 million for 10 States and $147 million for the remaining 40 States, that is for their own judgment. But I do not believe such inequity can be justified unless we substantially increase Federal funds for all the other programs included in the Joelson package.

Mr. JOELSON. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from New Jersey.

Mr. JOELSON. Mr. Chairman, I want to make it clear that under my amendment, it is 90 percent for category A and B and under the Michel amendment, it is 100 percent for category A and 59 percent for category B.

Mr. PUCINSKI. Mr. Chairman, as we debate and discuss the merits of the proposed Joelson amendment to H.R. 13111, I wish to emphasize particular items of this legislation which are of special concern to me and in my judgment make the amendment deserving of support.

Earlier this year, during hearings on H.R. 514, to extend the Elementary and Secondary Education Act, our committee learned that more than 44 million of America's public and private school children have benefited directly from title II programs since 1966.

As we know, title II provides allocations to the States for the purchase of school library resources, textbooks, periodicals, films, video tapes, and other printed and published instructional materials.

In a letter which I received in my office today, Rev. Robert Clark, superintendent of schools for the Archdiocese of Chicago School Board, said that:

> Since the enactment of the Elementary and Secondary Education Act in 1965, approximately 350,000 pupils enrolled in Roman Catholic schools in Cook and Lake counties, Illinois, have been the beneficiaries of library resources and supplementary textbooks loaned to them by local public school boards which have received Federal funds for that purpose.

Further, Father Clark says:

> The Title II program also has served to assure parents of all parochial school pupils that federal aid to education, for which they are so heavily taxed, results in some kind of tangible benefit, however meager, for their children.

In his testimony before the House Education and Labor Committee last March, Secretary Finch said:

> Top priority for Title II projects has gone to strengthening education for disadvantaged children in core cities, equalizing minority group education, improving educational opportunities in isolated rural areas, and setting up model programs for early childhood education.

There is no question that this title has improved both the quality and content of educational materials in schools throughout the United States.

This program has proved an effective incentive to States and to private and public elementary schools to enhance and expand their instructional resources.

More than 70,500 public school libraries were expanded in 1967 alone as a direct result of title II.

A singularly effective component of this legislation has been the coordination of efforts betwen private and public school educators. In cooperative programs, many of which have been instituted for the first time, many States have conducted inservice training programs to help librarians, teachers, and administrators to better organize school libraries and instructional materials centers, as well as to improve methods of selecting materials.

The benefits accruing to our national system of education have been marked.

Demonstration programs involving mobile equipment and various instructional resources have been established in more than 30 States. Similar programs are planned or are being developed in other States as well.

Title I funds are allocated on the basis of a formula which includes the total number of children enrolled in public and private elementary and secondary schools in each State. No matching funds are required. Program funds totaled $300 million from 1966 through 1968.

With the proven success of this title, an appropriation of $50 million for fiscal 1970 seems little enough to pledge for continued operation of these much-needed programs.

Much the same praise can be showered on title II of the NDEA as well as title III of ESEA. Both these titles are deserving of the additional funds that would be provided in the Joelson amendment.

TITLE V OF NDEA

During debate and passage of H.R. 514 in April of this year, an amendment was adopted which consolidated these titles; namely, title II and title III of ESEA and title III and title V of NDEA. The amendment gives the Commissioner of Education discretionary authority to provide funds to the States for each of these worthwhile and interrelated programs.

Under the Joelson amendment proposed today, $110,453 million over the recommended appropriation of $200 million is suggested for: First, supplementary educational services; second, library resources; third, guidance and counseling and testing; and fourth, equipment and minor remodeling.

As a six-term veteran of the House Committee on Education and Labor and as chairman of the General Subcommittee on Education, I strongly endorse these additional appropriations for both title II, title III of NDEA, title V–A of NDEA, and title III ESEA.

Title V provides a modest, almost penurious, appropriation—$17 million—for guidance and counseling.

Our school population increases annually in increments of hundreds of thousands of students. Each of these boys and girls has a special need for assistance in developing a career interest that will guarantee him or her an opportunity to do something meaningful in the adult world of work.

In most school guidance programs throughout the Nation at the present time, one of the major blocks to providing adequate guidance is the lack of education and occupational information geared to the specific needs of the States themselves. This has obvious, and often tragic results. We have all read the statistics that show the outmigration of young people from the rural areas of the Nation to the large cities and population centers.

In far too many instances, these unskilled, untrained, unaware young people are driven to jobs that end nowhere, with little or no opportunity for advancement.

With an effective guidance and counseling network operating within each of the 50 States, young people would receive some realistic preparation for the jobs and skills that are in demand in the labor market.

In a statement presented on behalf of the American Personnel and Guidance Association before the Appropriations Committee, Mr. John C. Odgers urged continued and expanded support for title V–A, listing the following reasons for his endorsement:

First. Title V–A would assist youth at all grade levels in career development through self understanding, increased knowledge of educational and vocational opportunities and demands, and improved decisionmaking skills.

Second. Title V–A would provide concerted action on the dropout problem which deprives an estimated 25 percent of our youth of a high school education and the background for initial employment or further training.

Third. Title V–A would encourage the development of placement services to insure every school's ability to assist all of its students to complete an appropriate education program and move into the next step beyond high school—either further education or employment.

Fourth. Title V–A would enhance school-community relationships to secure services—health, welfare, employment, specialty training, information, and so forth—beyond those normally available within the school program.

Fifth. Title V–A would interpret local and area labor market information concerning student needs to administrators and the curriculum developers to assure a curriculum that will meet the needs of the students and the community at large.

Sixth. Title V–A would expand organized course selection programs to help all students make appropriate selection from the increasing number of vocational, special, and academic programs becoming available in the typical secondary education curriculum.

Seventh. Title V–A would provide individual and group experiences which will motivate all students toward the development of sound attitudes toward self, toward education, toward employment, and toward society.

In my own State of Illinois, title V–A funding amounted to $894,406 during fiscal 1969. The estimate for fiscal 1970 is only $622,243 for this title, a substantial and serious cut in service to young people.

To gage the success of this program, I will cite a brief review of appropriate figures.

At the end of the first year of operation of title V–A programs in 1958–59, there were about 13,000 full-time equivalent counselors serving public secondary students.

By the end of school year 1966–67, 43,463 full-time counselors were serving public school chlidren and in elementary and secondary schools, junior colleges, and technical institutes.

It has been estimated that the ideal ratio of guidance counselors to students is 1 to 300. In 1958, this ratio was 1 to 960. By 1967, however, this ratio had been reduced to 1 to 450, still in excess of the recommended ratio, but considerably improved over the enormous burden of 1958.

A large measure of the success of title V–A programs can be attributed to the number of students who are remaining in school longer and who are graduating from high school.

In 1958, before title V–A went into effect, 582 of each 1,000 students were

graduating from high school and 308 of these were entering college.

By 1967, 720 of each 1,000 were graduating from high school and 400 of them were entering college the same year. This amounts to an increase of 23.9 percent in the high school retention rate during the 9 years.

Guidance, counseling, and testing services help parents to recognize potential talent in their children. They help teachers encourage the development of those special talents. And perhaps most important, they give individual students a very real sense of their individuality and special abilities.

VOCATIONAL EDUCATION

It was with high expectations and well-founded optimism that my subcommittee, after 26 days of hearings on the Vocational Education Act Amendments of 1968, recommended this thoroughly revamped legislation to the House. Our colleagues agreed with our own perception of the critical need for greatly expanded vocational education programs, for this legislation was passed without a single dissenting vote by the House and the Senate.

Today we are requesting funding for this legislation, funding that will provide realistic and immediate help to students who are totally ignorant of the world of work and who are doomed to join welfare and unemployment rolls by the tens of thousands if they are not exposed to practical training experiences during their high school years.

The Joelson amendment would also provide $488,716,000 for vocational education. This is an increase of $131,500,000 over amounts approved by the Appropriations Committee.

The additional amount provided in this amendment will implement those portions of the 1968 amendments which call for occupational training programs for the disadvantaged, as well as funds for research that is an absolute necessity if we are to develop new teaching methods and materials and restructure existing vocational education curriculums. It would also provide some funds to start planning in residential skill centers if a further amendment is adopted.

Figures attesting to the need for vocational education speak for themselves. Permit me to cite a few of them:

First. Only one high school student in four is enrolled in a vocational educator program, although five out of six never achieve a full college education. Therefore, almost 60 percent of high school students enter the job market unprepared to hold a productive job.

Second. More than half of vocational students are still being trained in agriculture and home economics, where jobs are either dwindling, nonremunerative, or nonexistent.

Third. Youth unemployment between the ages of 16 and 19 is the highest in the Nation. Approximately 23 percent of white males, 33 percent of nonwhite males, and 49 percent of nonwhite females in this group of young people are unemployed.

According to the Advisory Council on Vocational Education, an organization that was of great assistance to my subcommittee in rewriting this legislation, present vocational programs fall short of fulfilling their two major purposes which are to prepare students for the world of work and to give particular attention to those with special needs.

The recommended appropriation under the Joelsen amendment will give assistance to the States through increased basic grants. The act passed last year required certain percentages of basic grant funds to be set aside to aid the disadvantaged and the handicapped as well as to postsecondary schools. These set-asides went into effect on July 1. Unless we provide funds sufficient to help the States meet their set-aside obligations, the cuts will have to be made in ongoing programs.

Far too many youngsters have been jostled around by the Government. It is time we gave them some assurances that their interests toward career preparation are our interests as well. This is not the time to discourage innovation and experimentation on the part of vocational educators and businessmen and members of the academic community.

Vocational education, particularly through its strenuous advocacy of cooperative work-study programs, can make the difference between a society that merely dumps its underachievers into the maze of welfare and public assistance programs or which gives each student the sincere opportunity to earn a meaningful living in a productive career.

I also support the other provisions of the Joelson amendment, which in my mind would establish a greater degree of equity in distribution of tax dollars for education. The higher education construction amendment as well as increases in funds for the NDEA student loan program and title I of ESEA bring more equity to the entire Federal-aid program.

Mr. JONAS. Mr. Chairman, I move to strike the last three words.

Mr. MICHEL. Mr. Chairman, will the gentleman yield briefly for a correction?

Mr. JONAS. I yield to the gentleman from Illinois.

Mr. MICHEL. Mr. Chairman, the gentleman from New Jersey is altogether incorrect, because in my amendment we struck the provision which would have carved up the funds provided, and as a result category A and category B are treated precisely the same. The gentleman just does not know what is in the amendment.

I also wish to correct the statement about the amendment offered by the gentleman from Illinois, because under the Joelson amendment 90 percent entitlement is provided, and under my amendment 78 percent is provided for A and B.

But the gentleman is incorrect when he says we are only taking care of category A.

Mr. JOELSON. Mr. Chairman, if the gentleman from North Carolina will yield briefly, I have been informed the gentleman from Illinois did indeed put in a correction to his amendment, and the gentleman is correct in his statement.

Mr. MICHEL. Mr. Chairman, I thank the gentleman.

Mr. JONAS. Mr. Chairman, I listened carefully to the debate yesterday and today. If there is one thing that has become crystal clear from the debate, it is that the distinguished gentleman from Kentucky is wrong when he says we ought to decide on this floor what categories of education require the most attention. That decision can best be made by the people who are running the school systems of the country, and not by 435 Members of the House of Representatives.

I commend the Members to the comments made in the well yesterday by the very distinguished chairman of this subcommittee (Mr. FLOOD), when he pointed out that the subcommittee which brings this bill before us today was merely following the direction of the Committee on Education and Labor and the amendment sponsored by the gentlewoman from Oregon (Mrs. GREEN), when this House consolidated several of these programs. I believe that is a desirable result to be accomplished, and the House ought to go along with the subcommittee recommendation.

Mr. PERKINS. Mr. Chairman, will the gentleman yield for a correction?

Mr. JONAS. I yield.

Mr. PERKINS. The amendment of the gentlewoman from Oregon (Mrs. GREEN) left the discretion with the States and not with the Office of Education. That is where the gentleman in the well is wrong.

Mr. JONAS. The gentleman is not even willing to leave it to the States. I believe it ought to be left to the State departments of education, and the gentleman believes it ought to be decided here on the floor of the House.

We have seen in 2 days that we cannot get any unanimity of opinion as to how much money should be in this program and how much money should be in that program. That is because we are not experts on the subject of education and that was recognized by the House in approving the Green amendment and the Committee on Appropriations was simply following suit.

I should like to urge the Members of the Committee of the Whole today—I do it because I do not serve on the subcommittee which conducted the hearings and is handling the bill today—and to recommend that the Members follow the leadership of this subcommittee, the Members of which are all recognized friends of education, are among the most able and sincere Members of this body, and have devoted 4 months of their time to this subject, who have studied it thoroughly, and who have in my opinion brought before the Committee of the Whole today a bill which should be enacted without amendment.

I think the committee bill is a good one and supported it in the committee although it is $155 million above the revised budget. So far as I am concerned I think the committee bill as it came out of the subcommittee—following long and careful study and consideration—approved by the full committee, and now

before the Committee of the Whole, should be approved.

We have heard a lot of talk here today and yesterday about our neglect of the schoolchildren and about how we are not spending enough money on education. I hate to be accused of being opposed to education, as I am being accused in telegrams and letters by people who obviously do not know the facts. Let me remind the Committee of a point which has not been mentioned so far in the debate.

We who bring appropriation bills to the floor have told the Members repeatedly that there is a great deal of difference between appropriations and spending. Let me just state what is in this bill for spending in 1970; not appropriations, but spending. That is what counts, because the Department of Education has on hand unexpended balances right now of previously appropriated moneys amounting to more than a billion dollars. A good part of that was provided last year in advance funding, but if we eliminate that there is on hand in that office for future expenditures $211 million which is not even in this bill and was appropriated in prior years.

Let me tell one other thing about spending. This refers to the outlays by the Office of Education, the actual expenditures last year, which amounted to $3,424,000,000. Get that figure.

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

(On request of Mr. HALEY, and by unanimous consent, Mr. JONAS was allowed to proceed for 3 additional minutes.)

Mr. JONAS. The Office of Education in fiscal year 1969 spent $3,424,000,000.

The outlays projected in the 1970 budget by the Office of Education amount to $3,701,000,000. This committee added $86 million of additional expenditures to the $3.7 billion, making total expenditures authorized by this bill, as it came to you from the committee, of $3,787,000,000 as compared to $3,424,000,000 last year. That means if the bill before you now is enacted, the Office of Education will be provided $363 million more to spend than it actually spent in 1969.

In view of that fact, I ask you in all honesty and in all reason, in view of the fiscal situation that our country is confronted with, why should you not pay more attention to expenditure than appropriation levels. You can approve the committee bill before you today and feel assured that the Office of Education will have $363 million more to spend on education next year than it spent last year. But this is only part of the story. Federal funds for education in the 1970 budget total nearly $10,000,000,000. This is a fivefold increase since 1960—yet the argument has repeatedly been made on the floor today and yesterday that Congress is neglecting education. No wonder the people back home are misled when they read such charges. They deserve to be answered and a complete answer will be found in the speeches made yesterday by the distinguished chairman of the subcommittee (Mr. FLOOD) and by the equally distinguished ranking minority member (Mr. MICHEL).

Remember these figures: $10 billion for education—throughout Government—and $3,787,000,000 spending authority provided in this one bill alone for the Office of Education. This is $363,000,000 more than that Office spent last year.

The CHAIRMAN. The Chair recognizes the gentlewoman from Hawaii (Mrs. MINK).

Mrs. MINK. Mr. Chairman, I rise in support of the Joelson amendment.

The CHAIRMAN. The Chair might state, under the procedures of the House, he is trying to recognize first members of the subcommittee on appropriations handling the bill and second general members of the Committee on Appropriations. It is his intention to go back and forth to each side of the aisle to recognize Members who have been standing and seeking recognition the longest. The gentlewoman from Hawaii sought recognition all yesterday afternoon, and the Chair was unable to recognize her because of the procedures of the House, having to recognize Members on both sides of the aisle who are members of the committee. I wish the Members to know that the Chair will recognize them under the normal procedures.

Mrs. MINK. Mr. Chairman, this House heard various individuals rise and denounce the impact aid program as a "bonanza." As one of the "hosses" who receives about 10 percent of my State education budget from this source, may I say in all sincerity that every dime of these funds is used for the education of children and this I do not regard as a bonanza.

I repeat what I said earlier, 45 million children in America come from these 4,263 school districts that receive impact aid funds. The substitute amendment offered by the gentleman from Illinois (Mr. MICHEL) is far from generous.

If you vote for his amendment, you will, in effect, be voting to reduce your school districts impact funds by 13 percent. The Michel amendment will give your school districts only 77 percent of their entitlement. In fiscal 1969 your school districts received 90 percent entitlement. This is a 13-percent cut.

The fiscal 1970 Public Law 874 requirements are $650 million, of which $154,700,000 are for category "A" children and $456,394,000 are for category "B" children; $32,300,000 are for so-called section 6 "on base" children educated directly by the Federal Government because local school districts have refused impact funds as totally inadequate for a proper educational program.

If Public Law 874 is such a "bonanza" my question is how come 52,400 children attend these federally operated schools?

This Federal section 6 school system is 100-percent federally supported. One hundred percent of cost. If these same children were in a local school district the Federal share would be only 50 percent of average per pupil costs as determined from the budget of 2 years previous. Who is getting the bonanza?

Getting only 50 percent of average costs as existed 2 whole school years previously is absolutely no bargain at all. Hawaii's average per pupil school costs this coming school year are $770. Two school years ago they were $632. Yet under Public Law 874 we receive only ½ of $632 instead of ½ of $770 for this coming school year. This means that we are actually allocated only 41 percent of our current costs per "A" child, even with full funding.

The Michel amendment would cut this payment to only 31 percent of our current costs. I am not at all impressed by this kind of generosity.

It must be voted down or the quality of education of 45 million children in 4,000 school districts will be poorer by $150 million. Impact budgets which were set at 90 percent of entitlement in fiscal 1969 will be reduced under the Michel amendment to 77 percent of entitlement for fiscal 1970.

It is true that only 3 million children are counted in allocating these funds under impact aid; however, since these funds are paid into the general school budget, once allocated, its denial will deprive the entire 45 million schoolchildren who are part of these 4,263 school systems.

Since the very beginning of this program in 1951, Public Law 874 has received full congressional support for 100-percent funding, except for the last fiscal year where the funding was 90 percent of entitlement.

Now this Michel amendment would cut this to 77 percent of entitlement.

In my own State of Hawaii during our school year 1968–69 there were 17,131 students whose parents lived on and worked on Federal property. My latest figures from the Hawaii State government show that there are 57,791 military dependents in my State. These 17,000 children who live on base are covered under category "A" of Public Law 874. While it is true that the Appropriations Committee has provided full funding for these children under Public Law 874, what is not widely know is the fact that this so-called full funding pays for less than 50 percent of the cost of educating these children as I have just explained.

We have justified, over the years, our continuance in this program only because the funds we received from the category "B" children were such that the State cost of educating the "A" children was subsidized by the "B" category funding.

With 100-percent funding for the "A" and "B" children under Public Law 874 Hawaii would receive $11 million, but our total current school costs beginning September 1969 will be $13 million just for the "A" children alone.

With funding cut to $7.8 million the State will have to come up with the $5.2 million deficit just for our 17,000 on-base schoolchildren.

This is my case for funding of the Public Law 874 program as provided in the Joelson amendment. I urge this House to look upon this program as essential to the maintenance of the quality of education for 45 million children in America. We are not discussing only the impact children.

I urge you to vote down the Michel substitute and vote "aye" for the Joelson amendment.

Mr. WRIGHT. Mr. Chairman, will the gentlewoman yield?

Mrs. MINK. I yield to the gentleman from Texas.

Mr. WRIGHT. Mr. Chairman, I rise in support of the Joelson amendment which will go a long way toward overcoming the dangerous neglect of extremely vital educational programs which are threatened by the committee bill.

These programs include the impact aid program, vocational education, the school library program, instructional equipment, construction of badly needed facilities under the Higher Education Act, college student loans, and several others.

It is not merely that I regard education in all its important ramifications as one of the very best public investments we can make. It is also that the committee bill sounds retreat from many of the great educational goals this Nation has so wisely established in the last few years.

The committee bill, to our sadness and our shame, cuts far below our expenditures of last year for program after vital program in the educational field. It completely eliminates some of them.

Surely this is not the time for a drastic reduction in our educational budget. A nation which can land men on the moon and return them to earth, and all of this the product of education, would be penny wise and pound foolish at this vital juncture in history to cut back on its educational goals and reduce its educational effort. Yet that is precisely what the committee bill proposes, and that is what the Joelson amendment would correct.

LOCAL EFFECT

Let me give you one illustration of what the committee bill, if it is not amended upward, could do to the local educational budget in only one locality of the country.

According to my best calculations, the school systems in Tarrant County, Tex., will receive approximately $5 million less for the coming school year if the Joelson amendment is not adopted. Total category B funds under the impact aid program, which the committee bill would eliminate in their entirety, came to some $3,149,803 for these Tarrant County schools in fiscal 1968.

If these funds are reduced as the committee bill proposes, many communities throughout the Nation will suffer this same fate. They will be confronted with one of two alternatives. Either their local educational programs will suffer severely or the already burdensome local taxes on homes and private property will have to be raised very appreciably.

It is my personal observation that the Tarrant County schools are very wisely expending the moneys they receive. These moneys are not wasted. They are well invested in the future of our country. They are necessary if we are truly serious about excellence in education. I am sure that the same situation applies throughout the Nation.

EDUCATION AND OUR SENSE OF VALUES

Against this background, let us briefly appraise our national attitudes and ask ourselves just how well we are measuring up as a nation to this crucial central challenge of our age.

Just where have we placed education in our national standard of values? Just how important have we as a people considered it to be?

Is it as important to the average American as his automobile? Last year, all Americans together spent almost twice as much on the purchase and operation of our automobiles as we did on our public elementary and secondary schools.

Is it as important as recreation? All told, we spent $5 billion more on recreation than we did on education. Does it mean as much to us as cigarettes and highballs? Last year, the American people spent more money on tobacco and alcoholic beverages than we did on the education of our children.

Have we allowed our sense of values to get slightly out of focus when a big league ballplayer can make $100,000 in a season and a teacher in our public schools will make perhaps $8,000?

Is not there something strangely amiss when a television comedian gets more for a single 30-minute performance than our best high school teacher with a doctor's degree can make all year? Should the reward be that much greater for making people laugh than it is for making people think?

EDUCATION AND DEMOCRACY

Education and democracy are inseparably interconnected. They advance hand in hand. When either suffers, the other suffers.

In the absence of public understanding of vital issues, and a public ability to cope with them, democracy could not endure. If this has always been true, it is doubly true today and will be trebly true tomorrow.

Walter Lippmann, in his book, "The Public Philosophy," raises the question as to whether our system, depending as it does upon public support for the shaping of major national policy, will prove adequate to the stresses and strains of rapid change in the space age. As legislators we surely can understand Lippmann's misgivings. While I do not share his gloomy forebodings, I recognize his legitimate concern.

Neither a sensationalist nor a muckraker, that writer views the successful political figures of our time as basically "insecure and intimidated men" whose decisive consideration is "not whether the proposition is good but whether it is popular—not whether it will work well and prove itself, but whether the active-talking constituents like it immediately."

Although I regard this characterization as much too severe, there is in it an element of truth. In a democracy, public policy ultimately must win the approval of public opinion. Events, Lippmann says, move much faster than the public's ability to keep astride.

Thus, in the final analysis, the big public decisions of the future cannot be much better, much wiser, or much more profound than the public at large is prepared to understand and embrace. And here is where education—in its broadest sense—becomes so vital.

Democracy in our time faces an entirely new set of challenges. They are so new and so different from any to which our Nation historically has been accustomed that our entire past experience is of only limited value. Democracy's survival depends upon the public capacity to stay abreast of these challenges. And this depends upon education.

WE NEED BOTH QUALITY AND QUANTITY

The crisis in which we have so suddenly found ourselves has spawned a lot of truth and a lot of utter nonsense as well. Much has been said and written about the need to provide a challenge and an opportunity for the gifted child. Nothing could be more vitally important. The world has need of the gifted. To help gratify the inquisitive hunger of his mind at a pace with which he can cope, and to help him find through intellectual accomplishment the acceptance and prestige of his contemporaries by glorifying excellence, are goals toward which we must rapidly move.

But some in their zeal to help the gifted have carried their thought one dangerous step further. Some months ago a teacher wrote an article for a national magazine under some such title as "Must Everyone Go To College?" His basic thought was that society cannot afford the expense of making higher education available for those with less than average mental endowment.

Were we to accept that philosophy, it would be only an additional step to asking "Must everyone receive a public education?", and from this only one more step backward toward barbarism until we might ask "Must every child be given an opportunity to go to school?"

It is alarming to me to observe that in California, a State long recognized for enlightenment and leadership in the education field, cutbacks now proposed in the financing of higher education could result in the State university system's denying admittance even to some students who graduate in the top 25 percent of their high school graduating classes.

In a democracy education must never be reserved for the limited elite. We may be impatient at times with the slower youngster or with the immature as we strive for excellence in the system, but we can never totally surrender quantity for quality. By such a yardstick, Einstein, Edison, and Albert Schweitzer might have been consigned in their adolescence to the ashheap of human lost causes, for the record reveals that each of these was considered slow as a youth.

In a democracy everyone theoretically can vote—can participate on a fully equal basis with the better endowed intellectually in the formulation of national policy. While we strive to educate the few gifted youngsters to the fullest extent of their capabilities, it would be the greatest folly for a democracy to sacrifice even slightly the attention due the average or even the below average boys and girls.

WE HAVE MADE PROGRESS, BUT NOT ENOUGH

Only the most prejudiced observer would deny there has been much progress in recent years. Taken as a whole, the educational qualifications of teachers have risen steadily; the curriculum is broader; educational materials have improved; physical facilities and equip-

ment are decidedly better; and most students are learning more.

The unparalleled investment in education in the past 50 to 60 years has proved highly profitable for the United States, whether it is reckoned in benefits to individuals or in benefits to national economic growth, cultural enrichment, and military security. Yet these marks of past progress are distinctly modest—yes, even far short—of what must now be accomplished in a much shorter time.

I am speaking here of the impact of the tremendous numbers of new youngsters, born since 1950, and now descending upon our high schools and colleges. A convenient yardstick is available in the fact that fully twice as many American children were born in 1956 as in 1936. High school enrollments expected in September 1969, may reach 15 million compared to 3.8 million in 1959.

THE COST

This, then, is the challenge. We dare not ignore it, and we cannot put it off. It is no exaggeration to say that our survival as a nation and as a way of life can depend upon how adequately we measure up to it.

While it is not by any means solely a problem of money, it cannot be solved without the application of a very great deal of money measured by our previous standards, in a limited time. I am emphatically convinced that money for education is not an expense in the classic sense. It is an investment, a very good investment in the future and one which cannot fail to pay rich dividends. But let us face it frankly: it will cost money.

Look at it as a percentage of the gross national product, and the figures assume slightly less frightening proportions. In 1958, total educational expenditures were roughly 4.5 percent of the gross national product. In spite of the massive infusions of help in the past 8 years, they fell to 3.78 percent last year.

If these figures tell us anything at all, they surely should demonstrate that dollars spent on education do indeed return measurable dividends to the economy. One almost could conclude from the record that the more we spend intelligently on education, the more there is for the Nation to spend on other things.

It is like "casting our bread upon the water." It returns to us multiplied in value. The greater the pace at which our educational expenditures have risen, still greater the pace at which our gross national product rises. The connection is not theoretical, but clear and direct. The one proceeds as a direct result of the other.

It has been demonstrated that the educational benefits of the so-called GI bill of rights have actually paid for themselves and returned a profit—not only to the whole economy, but to the Government itself. The increased earning power generated and set in motion by that program has yielded sufficiently higher incomes that the additional taxes paid to the Government on those higher incomes have more than three times retired the total cost of the effort.

From the record of all employed Americans, the fact emerges that a bachelor's degree from college—on an average—will yield $100,000 more in earnings than its holder could have expected to receive over a lifetime if he had merely graduated from high school. A doctor's degree will add approximately $300,000 to the individual earning expectancy. All of which merely goes to say that the educational dollar is just about the best investment any level of our society can make. It more than pays for itself—to the individual, to the economy, to the Government, and to the Nation.

Moreover, it is absolutely vital to the future of the race.

Mr. JOHNSON of California. Mr. Chairman, will the gentlewoman yield?

Mrs. MINK. I am glad to yield to the gentleman from California.

Mr. JOHNSON of California. Mr. Chairman, I rise today in support of the amendment which I believe will result in the full funding of our educational effort which is so important today.

A few days ago, we watched with an estimated 600 million others throughout the world as man took his first step on the moon. This demonstrated what man can do given the knowledge and the tools with which to work. We have accomplished tremendous things and are making tremendous advances in all lines of endeavor—scientifically, sociologically, technologically, economically and politically—yet there is so much to be done.

We face today, many domestic problems and in the final analysis, the real solution to them is a solid education for all our people—an education which will provide every citizen an equal opportunity to contribute with the full measure of his capacity, to the solution of these problems and the continued growth of our Nation.

Mr. Chairman, as many of you know, I started my career in public service about 30 years ago as a member of the local school board in my hometown of Roseville, Calif. Subsequently, I served in the California State Legislature for approximately 10 years before coming to Congress as a Representative of the Second Congressional District of California. Accordingly, I have had what I believe is a rare opportunity to witness the problems of education at three levels of government—local, State, and Federal.

I am well aware of the contributions which the local taxpayers and local school boards are making in a tremendous effort to educate our young people. The tax burden, however, on the local property owner has reached the saturation point. In my own State of California, the people are contributing substantially toward the education of our young people, but the job is tremendous.

In the school year 1966–67, the average daily attendance exceeded 4,700,000 students and I am quite confident that today it is well in excess of 5 million, in the public elementary and secondary schools alone. The cost of giving these young people basic education in the State of California was $3.8 billion in the 1966–67 school year and I am again quite confident that since that figure was 7.7 percent greater than the cost of school operations in the preceding year, that today's cost is well over $4 billion a year.

Education, or the lack of it, knows no school district, county or State boundaries. It is of national importance. The contributions of an individual with a superior education can affect every citizen of this Nation. If on the other side this individual had been unable to make this contribution due to an inadequate education, every citizen would suffer.

In order to accomplish this goal, we must do our utmost at all levels. This includes, of course, elementary and secondary schools and the colleges and universities. Congress recognized this in creating a variety of programs over the years including the Elementary and Secondary Education Act with its eight titles, all of which are extremely important. Namely, aid to the disadvantaged; school library resources; supplementary centers and services; assistance to State departments of education; educating the handicapped; bilingual education; and dropout prevention. Other equally important programs implemented are the National Defense Education Act, Higher Education Act, federally impacted areas, Education Professions Development Act, Adult Education Act, Vocational Education, Manpower Development and Training Activities, the Office of Economic Opportunity program for Job Corps, Headstart and Follow Through, and the Cooperative Research Act.

An authorized program, as we all know, is of little value without the funds to meet the challenge which we recognized must be met in voting the basic legislation. Therefore, Mr. Chairman, I stand solidly in support of the amendment to provide school funding of these programs. The need for education has never been greater.

Mr. ST GERMAIN. Mr. Chairman, will the gentlewoman yield?

Mrs. MINK. I yield to the gentleman from Rhode Island.

Mr. ST GERMAIN. Mr. Chairman, I rise in support of the Joelson amendment. All of the education programs in this amendment are vital to the growth and future of our educational system.

The crux of our problem, of course, is money—additional funds, larger appropriations, all the words that we are afraid to say aloud these days because of the "pressing need to cut our Federal budget."

Mr. Chairman, I am just as concerned about prudent Federal spending as anyone in this body, but there are two things to consider: The first is the restatement of the fact that the effective education of our youth is of the utmost importance to our Nation and is not the proper place to begin to cut corners. The second point is one which has a tragicomic tone, the fact that our estimated budget of fiscal year 1969 was incorrect to the tune of $2.174 billion. The surplus the Government estimated would be $900 million turned out to be $3.074 billion, the largest since 1957. What did we do, Mr. Chairman? How many corners did we so unnecessarily cut, how many valuable programs did we arbitrarily kill when we did not have to? For the coming year let us learn from past experience.

The administration's recommendation to cut back the aid to federally impacted areas to $187 million is both unwarranted and most unjust to the local commu-

nities which will be affected. How are they supposed to raise the $400 million which will be needed to run their schools? And why should local communities have to tax their citizens to provide for children who are not their responsibility? People are already overtaxed. In most communities further local taxation to make up for these reductions is simply impossible. Do we need to have some of our schools close down to prove the shortsightedness of these reductions? With regard to construction funds for impacted school districts, far more money must be appropriated than the pitiful $15 million suggested. With over a $6 billion surplus predicted for fiscal year 1970, what justification is there for this harsh underfunding?

Adequate appropriations for our library programs are another important concern of mine and the people of my State. I cannot understand the thinking behind these sharp reductions. In an era of an information explosion, library services are increasingly necessary. Anything we do to encourage increased knowledge among our citizens will be returned to our country a thousand times. Recently I saw a statement which noted that the Government is currently spending 25 cents a person on library programs and over $21,000 a person on ammunition to supply the war in Vietnam. If that is so, what has happened to our sense of priorities?

The amendment's restoration of $33 million for the construction of academic facilities under the Higher Education Act is most important to accommodate the additional young people in our colleges due to population growth and need for more education. If we are going to expect sensible behavior from the college generation, then let us set an example here by a sensible order of priorities in spending tax dollars.

I cannot speak too strongly of the importance of increasing funds for direct student loans under the National Defense Education Act. The amendment, which adds about $41 million to the committee's recommendation, is still below the need and below the 1970 authorization, but moves in the right direction. Many students have written to me explaining the problems facing them if they do not get a Federal loan. With the present rise in interest rates, the availability of guaranteed loans has been seriously limited. It is an absolute necessity that we appropriate increased funds or many students will not be able to continue their higher education.

One last point. The $181 million which the amendment adds to H.R. 13111 for title I of the Elementary and Secondary Education Act is most important if the programs under title I are to be really effective for the 9 million children involved.

In conclusion, the need for passing the Joelson package amendment, thereby adding $894.5 million to the appropriations bill, should be obvious. If we are going to be cautious about dipping into the predicted budget surplus, let it be when we consider military expenditures, but we simply cannot afford to hedge on our commitment to education—not if we intend to exercise some responsibility for our country's future.

Mr. KAZEN. Mr. Chairman, will the gentlewoman yield?

Mrs. MINK. I yield to the gentleman from Texas.

Mr. KAZEN. Mr. Chairman, I join my colleagues who have preceded me on the floor to evidence my concern over the lack of Public Law 874 funding for category B students. I represent several school districts whose educational programs would be seriously curtailed if this bill does not provide for at least last year's level of funding. In fact, it would be most difficult for some of my schools to open their doors in September if they are not assured of receiving these funds. These schools are located in areas which have a very poor tax base and cannot raise another dime from their already overburdened taxpayers.

In one district all impact students are category 3–B students and it would stand to lose approximately $280,000. To offset this loss, taxes would need to be raised 80 percent. Already, the taxpayers in that district are paying more than comparable districts in the State of Texas and the additional revenue needed would be impossible to raise. Of that district's 3,300 students, 75 percent are Federally connected and the area is considered a bedroom community because the only industry in the area is an Air Force base. The district's student population has doubled in the past 5 years and the growth can only be attributed to the proximity of the base to the school district.

Another one of my districts last year enrolled 2,600 children. In the coming year they will enroll over 3,200 children, an increase of over 30 percent. At least 400 of these new students are impact students, their parents having moved in because of the district's location relative to the large permanent military installations. These 400 new impact students will require that the district expend an average of $1,666 dollars each for classroom space, a total of about $666,448. These new students will require hiring 15 new teachers at a cost of about $97,500 and the expenditure of some $9,000 for other operational costs for a total requirement of $772,948, to house and educate just the additional impact students moving into the district in the 1969–70 school year. Under this year's current funding guidelines these 400 new impact students will entitle that district to an additional $55,644 for a total Public Law 874 entitlement for the 1969–70 school year of $209,916.

Because of the growth and increasing costs, the local school tax rate was increased 25 percent last year and is being increased another 20 percent this year. If Public Law 874 funds are not forthcoming, this district could not function next year. An additional increase of 60 percent to compensate for Public Law 874 entitlements would be impossible.

Mr. Chairman, the local people and the State government are assuming as much of this financial burden as they can. It is imperative that Public Law 874 funds be provided.

In another one of my districts which is adjacent to two other military installations, 600 new students to the district will be enrolled. This is due almost exclusively to the district's proximity to those bases. That district finds itself with a budget at the present time based on past years experience with Public Law 874 funds and they find after their budget is made, their money is obligated, their teachers employed, their desks bought, and the children ready to come into the schools, that the Congress is going to deprive them of Federal money for these federally connected children. If it were a wealthy district, this would be no problem. However, this district is not even average in wealth. It is below average. They have recently voted $2 million of bonds and raised their taxes 30 percent to build buildings for the children in this district. They have raised their maintenance tax for operation.

This district would be entitled to approximately $420,000 if the program is funded at last year's level. If these funds are taken away from the district, the children, which are composed of many underprivileged, will suffer educationally in a great way.

I could go down the list and talk about many more of the school districts in my congressional district and bring to your attention their dire need for these funds. Suffice it to say that the reasons for having provided Public Law 874 funds in the very beginning are as valid today in those districts as they were at that time and we in the Congress would be doing the schoolchildren a great injustice if we do not provide these funds at this time.

Mr. FISHER. Mr. Chairman, will the gentlewoman yield?

Mrs. MINK. I yield to the gentleman from Texas.

Mr. FISHER. Mr. Chairman, I shall support the pending amendment to more adequately provide funds for schools which face extraordinary hardships because of the impact from unusual Federal activities.

In my judgment, of all the millions—even billions—appropriated as Federal aid to education, none is more justified than that which is provided for these impacted districts. I am speaking of the real, bona fide situations, where the Federal impact is overwhelming. The dollars spent to compensate for this unusual problem go very directly to the benefit of students.

Let me cite an example or two, to illustrate what I mean by the schools that are faced with unavoidable hardship without this source of help.

One school in San Antonio has an enrollment of 2,500, of which over 50 percent are "impact" students. The school tax rate was increased by 25 percent last year, and by 20 percent this year.

In that area, adjacent to large military bases, a tremendous residential building program is now in progress, mostly for single families. Due to current tax structures, a residence is occupied and the local school must house and educate

children for as long as 2 years before actual tax income is realized from the new projects, of which there will, in the next 12 months, be 1,000.

Moreover, the vast majority of mobile homes in the area are owned by service personnel and are tax exempt under the Serviceman's Relief Act.

A local school bond issue, recently approved, amounts to $7 million. One-half of all local taxes collected must go toward this debt retirement.

This district qualifies for some $200,000 in funds under Public Law 874. If impact funds are not provided, the local tax rate would be forced upward by 50 cents, or possibly $1, per $100 valuation.

The rate is already exceedingly high, and a further increase would be next to unbearable.

I could cite other examples. One comes to my mind—the Scherz-Cibolo-Universal City Independent School District, located in the suburbs of San Antonio, adjacent to Randolph Air Force Base, where 75 percent of the district's students are federally connected.

The district tax rate is $1.05, of which 55 cents is designated for maintenance and operation and 50 cents is designated for debt-retirement purposes. In 1964 the district had all of the real property revaluated and placed the property on tax rolls at 90 percent of actual market value. A home valued at $11,000 pays $105 in school taxes.

Without impact funds, in order for the district to maintain the same services, same salaries, the tax rate would have to be increased 80 percent on the district's $35 million valuation. This would be far more than the district's taxpayers could bear.

I have cited two schools which are victims of a financial dilemma directly due to Federal activities. Others could be cited in the same locality. These schools are desperate. They have no control over who or how many people move into the area. They must provide education for every child that knocks on the school door. Their unusual burdens are of Federal origin, and it is the moral duty of the Federal Government to compensate for this federally imposed hardship.

I urge my colleagues to support the pending amendment.

Mr. PATTEN. Mr. Chairman, will the gentlewoman yield?

Mrs. MINK. I yield to the gentleman from New Jersey.

Mr. PATTEN. Mr. Chairman, I rise in support of the Joelson amendment.

Specifically, the focus of my remarks will be directed to title II of the Elementary and Secondary Education Act. This legislation is aimed at remedying some of the deficiencies in the area of school library resources, textbooks and other printed and/or published instructional materials existing in our Nation's schools. In fiscal year 1969 there was appropriated in support of this legislation $50 million out of an authorization of $162.5 million.

For fiscal year 1970, against an authorization of $200 million, the committee has recommended that no specific amount be appropriated in support of title II, but rather that funds for this purpose be included in a general fund that would cover not only title II of ESEA, but title III of ESEA, and titles III-A and V-A of NDEA as well. In fiscal year 1969 there was appropriated in support of all these titles a total of $311.61 million.

The committee recommends that we appropriate in fiscal year 1970 the sum of $200.16 million to support all these titles. Since this is $110.5 million under fiscal year 1969 levels it is clear that title II of ESEA will suffer a severe blow if the committee recommendation is accepted by this body.

All evidence clearly established a continuing need to fund title II ESEA at substantial levels. As of March 1968 there were 36,000 public schools in our Nation that lacked library facilities. Increasing enrollments are placing more and more demands on those school library facilities which already exist.

Texts and other instructional materials, already in short supply in many school districts are bound to become obsolete through extended use if funds are not available for replacement. While the Joelson amendment will not provide funds sufficient to overcome these deficiencies, it does insure—to some extent—that programs under title II will not be allowed to backslide to a point where gains made in the last 5 years will be canceled out. I therefore urge you to vote yes for the Joelson amendment and for the future of American youth.

Mr. COHELAN. Mr. Chairman, I move to strike the requisite number of words.

Mr. EVANS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. COHELAN. I yield to the gentleman from Colorado.

Mr. EVANS of Colorado. Mr. Chairman, during the last fiscal year, 163 of the 174 eligible districts in Colorado organized and conducted title I programs. Of the 163 programs, 28 involved a combination of two or more districts who pooled their resources and operated the programs cooperatively.

Of the $8.5 million expended during the year, nearly 75 percent was expended for instruction, and the remaining 25 percent for medical, dental, and food services, for maintenance, administration, equipment, and minor construction. About 95 percent was expended during the regular term and 5 percent for summer programs.

More than 46,000 pupils were enrolled in title I programs.

Programs were operated that involved children of all age groups from preschool through high school. There were 29,000 elementary schoolchildren—kindergarten to sixth grade—enrolled and more than 17,000 high school pupils were offered programs.

The categories of expenditures were: Compensatory education, 85 percent; handicapped children, migrant children, Indian children, 15 percent.

Approximately three-fifths of the salary cost—totaling approximately $5 million—was for teachers' salaries. Other salaries paid were for teacher aides, librarians, counselors, psychologists, social workers, nurses, doctors, dentists, clerical workers, and administrators.

A total of 1,633 persons were employed to operate the program.

Programs embraced activities in art, business education, cultural enrichment, English reading, English as a second language, English speech, foreign languages, health, physical education, home economics, industrial arts, mathematics, music, natural science, social science, vocational education, and many others.

Inasmuch as all of these programs were provided in addition to the normal offering that would have been provided for these children had title I funds not been used, some comparisons are possible, using control groups, or by comparing with the total group in a school or school system.

DROPOUT RATE

The dropout rate in title I high schools has been reduced 1 percent over 3 years, while the dropout rate in non-title-I high schools has increased 2.2 percent, while the dropout rate in all high schools in Colorado has increased 0.6 percent.

HOLDING POWER

Twelfth grade title I high schools increased one-tenth of 1 percent.

Twelfth grade non-title-I high schools decreased one-half of 1 percent.

Eleventh grade title I high schools increased 1.1 percent.

Eleventh grade non-title-I high schools decreased one-half of 1 percent.

Tenth grade title I high schools increased 1.5 percent. Tenth grade non-title-I high schools increased three-tenths of 1 percent.

Test scores show improvement in reading with more than 10 percent of the title I pupils who were in the lowest quartile at pretest moving out of that quartile as posttest.

Test scores in arithmetic show improvement slightly better even than in reading, while test scores in language arts are slightly below the results in reading.

Greater gains were realized when specialists taught small groups for extended periods in special classrooms.

Disadvantaged children did not get that way only yesterday and a short duration program will not change them for tomorrow.

For these reasons I urge this House to accept the Johnson amendment for in so doing we will be adding $180,800,000 to this important bill.

Mr. BRASCO. Mr. Chairman, will the gentleman yield?

Mr. COHELAN. I yield to the gentleman from New York.

Mr. BRASCO. Mr. Chairman. I rise in support of the Joelson amendment. While I realize that it is unrealistic at present to expect Congress to close the $5 billion gap between authorization and appropriations in view of the economy wave sweeping the country, I am firmly convinced the American people do not want vast cuts in education programs. The people want inflation curbed and taxes reduced, but not at the expense of their children. The Joelson amendment will increase H.R. 13111 by $894.5 million, and all of the increases provided in these programs are absolutely essential. I feel that this Congress has a responsibility to take a substantial part in the solution

of the present financial crises in education.

Although education is a local responsibility, the problems facing the local school systems and the results of a failure to solve these problems are national in scope. Our modern economy is a national and not a local economy. It thrives on the mobility of our population. The citizen New York educates today may well contribute to the resources of Chicago tomorrow. Conversely, the citizen my community fails to educate today may well be a drain on the resources of your community tomorrow. Our national economy must be preserved through a national effort to assure adequate educational opportunities everywhere in the country. Otherwise cities will weary of the effort of overcoming the educational handicaps of its youth, knowing that the resulting well-trained citizens may be drained off to other areas—only to be replaced by persons poorly educated elsewhere.

Education has always been regarded as a necessary ingredient of national stability. To the extent America fails to educate its youth, we will fail to equip people with the tools that are necessary for economic, social and personal satisfaction in the world of today's modern technology. The uneducated child of today becomes the frustrated hostile adult of tomorrow.

So I urge you to consider not just the children of your constituents—but the children of all American families—and enthusiastically support this amendment.

Mr. OLSEN. Mr. Chairman, will the gentleman yield?

Mr. COHELAN. I yield to the gentleman from Montana.

Mr. OLSEN. Mr. Chairman, I rise in support of the amendment which has been offered by the gentleman from New Jersey (Mr. JOELSON).

It seems somewhat incongruous to me that while all mankind is acclaiming this Nation's achievement in space, the administration is seeking drastically to curtail our educational effort. During the Eisenhower administration, the launching of sputnik in 1958 resulted in the enactment of the National Defense Education Act. This was as a direct concern that our educational system was inadequately equipped especially in science and technology, for the challenge of the space age.

Now that we have landed on the moon, are we to abandon our commitment to our schools and colleges? I say no, for the challenge of the future is now far greater than it was in 1958.

The Appropriations Committee has provided an extremely modest increase in education funds beyond that requested by the Nixon administration. It is far too meager an amount to be effective. While we keep our eyes on the moon, let us not fail to reach for the stars.

In 1965 we promised the economically disadvantaged children of this Nation, under title I of the Elementary and Secondary Education Act, that the Congress of the United States would assist the State and local school boards to provide them better educational opportunity. In my State, a large percentage of these children are American Indians. They are economically and culturally deprived because of the decades of neglect of their educational opportunity under the control of the Bureau of Indian Affairs. The vast majority of Indian children in Montana now are in public schools, administered by local boards of education upon which our adult Indian citizens serve with distinction. Unless we provide the public schools with the additional financial resources the Joelson amendment provides, we will again be breaking faith with our Indian citizens. We let them serve on school boards—but deny them the money they need to do the job for their children. Let us not do it to them again.

Increased funding is an investment in the future of America which will repay human and economic dividends of ever-increasing magnitude. Education is a necessity, not merely a nicety. The strength of our Nation, whether measured by the gross national product or by the general enlightenment of the people, rests upon adherence to this proposition.

I urge you to support the Joelson amendment.

INDIAN PROGRAM

The 1968 title I program served 47,562 Indian children in programs conducted by local school districts to meet the most pressing needs of educationally deprived children. Summer programs served 5,922 Indian children.

Indian children participated in a wide range of programs including art, cultural enrichment, reading, English as a second language, health, physical education and recreation, mathematics, music, and vocational programs. Supplementary services, such as clothing, food, guidance and counseling, health, psychological, speech therapy were also provided.

The program participants ranged from prekindergarten through grade 12, the greater proportion being sixth grade and below.

Approximately $6.5 million was spent on behalf of Indian children in public school programs. Many programs were developed especially to meet the individual needs of these children, primarily the teaching of English as a second language, improving attitude toward school through parent participation, and home visitations and specialized programs to improve reading competency.

An average of $133 per child was spent to provide these specialized services.

In addition, over 50,000 Indian children in Bureau of Indian Affairs schools in 16 States participated in the program, of which 1,650 were physically or mentally handicapped. An amount of $9 million was spent for specialized services over and above the regular school program in 1968.

Indian children are among the most educationally deprived of all school-age children. In a population where the dropout rate is 30 percent greater than the national average, the need for special services on behalf of Indian children is of high priority.

Mr. COHELAN. Mr. Chairman, I rise in opposition to the Michel amendment.

Mr. Chairman, we will choose today between the appropriation of scant funds for impact aid and a major package of across-the-board restorations to at least keep Federal aid to education on a par with last year.

Item for item, the Joelson package is superior to the Michel substitute.

In the crucial matter of impact aid, the Joelson amendment provides local schools with 90 percent of the authorized entitlement. The Michel substitute provides only 69 percent of entitlement for 874(b) funding. In short, under the Michel substitute local schools will receive 21 percent less impact aid than they will under the Joelson package.

In addition, the Joelson package provides funding at last year's levels for school libraries, for the purchase of equipment, for the operation of supplementary education centers, for guidance and counseling.

The Joelson package provides desperately needed funds for student loans and higher education construction.

The Joelson package provides well over $100 million for vocational education.

The Joelson package, too, provides $180 million for programs to assist schools in poverty areas.

How can we possibly turn our backs on the need to educate our children?

Today the Soviet Union outspends the United States on public education. When all the funds for education spent in the United States at the local, State, and National levels are added together they still do not total the sums the Soviet Union spends on education.

Mr. WILLIAM D. FORD. Mr. Chairman, will the gentleman yield?

Mr. COHELAN. I yield to the gentleman from Michigan.

Mr. WILLIAM D. FORD. Mr. Chairman, I thank the gentleman for yielding.

In connection with the statement just made by the gentleman from California, I would like to point out that a recent check of the figures indicates that in spite of the seemingly large sums of money that people have been talking about spending at the Federal level; even if the Joelson amendment were adopted the contribution of the Federal Government to education in this country when measured against contributions in State and local taxes paid by the citizens of this country, will represent less than 8 percent of the cost of education in this country. This represents the smallest national commitment to education of any major nation in the world, Communist or non-Communist.

Mr. COHELAN. Mr. Chairman, I thank the gentleman for his contribution, and I emphasize the point.

Mr. Chairman, we are mightily concerned about losing the arms race but we are apparently contented to lose the education race.

We won the moon race, but will we win the education race?

We will not prevail as an independent, free and just society if we are ignorant and uneducated. Education costs money. It is our obligation to provide the necessary funds for education.

I most vigorously urge the adoption of the Joelson package amendment.

Mr. QUIE. Mr. Chairman, I rise in support of the Robison amendment because, when we make our decision between the Michel substitute to the Joelson amendment we will be making our decision between impact aid at last year's figure, or impact aid at $80 million over last year's figure.

The only way we can be certain that those four programs—library resources, equipment of NDEA, supplemental centers of ESEA, and the guidance and counseling program of NDEA—are funded at last year's level would be to support the Robison amendment.

Without the Robison amendment, if the Michel amendment is adopted, we would not be able to increase those figures. I believe it is necessary for us to raise them and the Robison amendment brings the total up to last year's figure.

Let us see what happened last year.

Last year the appropriation for title II of ESEA was just about one-half of the year before.

In 1968, the appropriation for title II ESEA, library resources, was $99,234,000.

ESEA, title III, for 1968 it was $187,000,000. Last year it was cut to $164,000,000.

The NDEA appropriation, title V(a) for 1968 was $24,500,000. In 1969, last year, it was cut to $17,000,000.

The appropriation for NDEA, title III, in 1968 was $78.7 million—last year they left that at the same figure.

So you see last year appropriations were substantially cut by about $80,000,000 for those four titles. If there was any fat in them in 1968, that was cut out in 1969.

I believe that if we are going to keep faith with the educational agencies in this country, we ought to have maintained the appropriation at that level. We can give some flexibility to them with the Robison amendment in order that, even if in 1970 there were some adjustments to be made between these four titles that could be made and that is a wise move.

Any of you who are interested in an increase for vocational education, as I am—and any of you who are interested in increasing the student loan program, the national defense education act student loan program, as I am, will have an opportunity to do it later when those paragraphs come up.

If the Michel substitute with the Robison amendment is adopted and, therefore, preventing the Joelson amendment from being adopted, you can take up those other items at a later time.

If you have any desire to put money where the needs are the greatest, surely that $80,000,000 increase for impact aid is not the place to make it.

There are much greater needs. Priority is surely higher for vocational education, education for the handicapped, which is not a part of the Joelson amendment—and needs in higher education. In fact, even the increased needs for title I of ESEA are much greater than impact aid because at least it is distributed to some of the neediest education agencies of the country or practically all of them.

But I ask you not to put yourself in the position so that you will have to vote for the Joelson amendment because the $80 million increase there is completely unwise.

What is the difference last year in impact aid from 1968? Was there a cut in impact aid in 1969 compared to the year before as there was for ESEA II, ESEA III, and NDEA V–A? No. In 1969 there was a $106 million increase in impact aid. Now you are asked to increase it another $80 million. It is completely unreasonable.

There are other areas of education that have a much higher priority than does impact aid. Surely ESEA II has a priority up at the top. We can fund that in the Robison amendment. After that we can make a decision about what level we want to appropriate for each program.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from Kentucky.

Mr. PERKINS. Mr. Chairman, I compliment my distinguished colleague, the gentleman from Minnesota, for working for increased appropriations. But if I understand the gentleman's philosophy, on the so-called Green amendment that was passed on the floor, the gentleman in the well is advocating that the States have the flexibility so how can you reconcile the committee bill and the Michel substitute where you place that authority and flexibility in the hands of the Office of Education?

Mr. QUIE. I know what the question of the gentleman is. I would say that if we could consolidate in 1970, I would be all for it. But we need to give some opportunity for the States to get geared up for that, but we could give flexibility to the Commissioner now. I do not think that is unreasonable. I think it is wise, and the Commissioner can, with his own authority, give some discretion to the States to make their decision as to how they want the money to be spent for each program by sending in a package plan.

(Mr. RUPPE asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. RUPPE. Mr. Chairman, I rise today to support the amendment to increase funding for Public Law 874. The present bill before the House seeks some $187 million for aid to federally impacted areas. This amount would eliminate payments for children whose parents work on Federal property, but who do not live on Federal property. In many areas of the Nation, my district included, the cutoff of these funds will wreak havoc among school districts already strapped for funds. The reason is simple. Concentrations of Federal land ownership seriously deplete the tax base on which local governments and school districts must sustain themselves. Public Law 874 has proven to be an effective, if artificial remedy for the school financing problem.

Mr. Chairman, I urge my colleagues to restore Public Law 874 funds in H.R. 13111 at least to the fiscal year 1969 level. I feel that no curtailment of the aid to federally impacted areas program should be made until the whole question of taxation and public lands is settled. As you are no doubt aware, the Public Land Law Review Commission has been established to resolve the problem of public land ownership and local tax needs. The Commission is expected to present its findings to Congress in 1971. Until such time as we can effectively act upon the Commission's recommendations and provide an adequate means to help finance local school districts affected by Federal land ownership we simply cannot afford to curtail Public Law 874.

(Mr. McKNEALLY asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. McKNEALLY. Mr. Chairman, I rise in support of the amendment to H.R. 13111, presented by the distinguished gentleman from the State of New Jersey. I, like many other of my colleagues on this side of the aisle, was elected to this venerable House on a platform which called for economy in Government spending. However, I cannot stand by when "economy in Government spending" could very well deliver a devastating blow to the cause of maintaining quality education in our beloved country. If there must be cuts in the budget, why must the thrifty pen strike at funds for vocational training, funds for the construction of college and university facilities, funds for student loans, funds for school libraries, and funds for impacted areas? It seems to me that these actions in the name of economy betray a rather bewildering sense of priorities—especially when one considers that educational costs were not left on the launch pad as inflation blasted off.

Of particular interest to me is the aid to impacted areas. My 27th district was entitled to $1,123,215 during fiscal year 1969, of which $681,930 was designated for "B" category students whose parents work, but do not live, on Federal installations. Because of the large portion of funds for this second category, if nothing at all is appropriated for "B" category students for fiscal year 1970, the schools in my district will suffer a setback from which they could not recover. They cannot ask for higher taxes. It goes without saying, the citizens of this Nation are not terribly fond of the idea of raising their taxes—even when they are necessary to defray the expenses of educational needs. They cannot go to the State of New York, for the gentlemen in Albany have also decided to practice economy in areas where the education of children is concerned.

I refer you to title 20, section 236 of the United States Code, which proclaims the purpose of Public Law 874. It reads:

> In recognition of the responsibility of the United States for the impact which certain Federal activities have on the local educational agencies in the areas in which such activities are carried on, the Congress declares it to be the policy of the United States to provide financial assistance (as set forth in this chapter) for those local educational agencies upon which the United States has placed financial burdens by reason of the fact that—
>
> (1) the revenues available to such agencies from local sources have been reduced as the result of the acquisition of real property by the United States; or
>
> (2) such agencies provide education for children residing on Federal property; or

(3) such agencies provide education for children whose parents are employed on Federal property; or

(4) there has been a sudden and substantial increase in school attendance as the result of Federal activities.

In this declaration of policy, could there possibly be a more explicit delineation of the Federal Government's obligation to these impacted areas? Can one deny that the importance of Federal Government meeting this obligation is substantially greater than it was in 1950 when Public Law 874 was enacted?

The example of Highland Falls, N.Y., it seems to me, is paradigmatic in displaying the necessity of the Federal Government acting in accordance with its responsibility to impacted areas. More than 80 percent of the land area of the town belongs to the U.S. Military Academy at West Point. Consequently, Highland Falls presently receives funds for both "A" and "B" category students. If the funds are not appropriated for both categories for fiscal year 1970, then it is estimated that the true tax rate would have to be raised $9.66 per $1,000 in order to overcome the deficit in the school district's budget. Such a raise is manifestly unacceptable to the taxpayers of Highland Falls, for they recently voted down an increase of $3.35 per $1,000, called for by the school budget.

I am sure that someone would be bound to ask the question—"Why should a citizen in another city pay Highland Falls' school taxes?" The point is, Highland Falls has lost approximately 13 percent of the remaining land to the Palisades Interstate Park Commission, which leaves 7 percent available to the town and school district. Therefore, there is no possibility for the town to attract industry to help with the tax burden.

Mr. Chairman, this is but one example of the many school districts throughout our country that are at the mercy of this distinguished body's determination to fulfill its responsibility to federally affected areas. In the same way that I am opposed to cutting funds for Public Law 874, I am opposed to "economy in Government spending" which would severely impair the ability of our educators to do their duty for our children. It is with relish that I stand in support of the amendment presented by the able gentleman from New Jersey. I could not serve in this venerable House with proper pride if the majority of my colleagues did not rally with us.

(Mr. HOGAN asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. HOGAN. Mr. Chairman, I thank the gentleman from Minnesota for yielding.

Mr. Chairman, I agree with the points made by my distinguished colleague from Hawaii (Mrs. MINK) regarding impacted aid. My only regret is that she seems content to settle for 90 percent of entitlement. I would prefer to hold out for 100 percent because the money is desperately needed. If these funds are eliminated, my district will suffer an educational privation the effects of which will be disastrous.

For fiscal 1969 we received 88 percent of our entitlement but prior to that time, since the program's inception in 1951, we have always received the full entitlement. This assistance is especially needed now as the average cost of education per pupil continues to rise. Even if the full entitlement were given, only 50 percent of the cost is paid for those in the "A" category and 25 percent for those in the "B" category.

I would like to make a special plea in defense of category "B"—the aid given for children of Federal employees who do not live on Government bases. The argument that no impacted aid money should be given for those students whose parents pay real estate taxes to the local jurisdiction begs the question. The Federal facility which employs those parents pays no real estate taxes. On the contrary, these Federal installations occupy land which would usually be occupied by commercial or industrial taxpayers. So that argument is specious. The Joelson amendment calls for 90-percent funding for impacted aid, and although I would prefer to hold out for 100 percent, I recognize the practical aspects of achieving what is acceptable to this body. Therefore, I urge my colleagues to support the Joelson amendment which will demonstrate to the country that we place a high priority on education.

(Mr. GUDE asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. GUDE. Mr. Chairman, I rise in strong support of the Joelson amendments to H.R. 13111, the HEW appropriations for fiscal year 1970. In order that programs and facilities may be maintained and expanded, adequate funding must be provided if our educational institutions are to survive under the economic pressure they continually face. Development and expansion of education programs and facilities are essential to the future of our Nation, and must be a top priority if we are to continue to offer quality education to our youth. We must remember that our young people constitute the most precious resource of our Nation.

The impact aid program, with its no strings attached base, is to me the best Federal education program. In my own congressional district, the application of the Joelson amendments would provide an additional $6 million to Montgomery County schools, thus helping all children. The aid to Howard and Anne Arundel Counties, both of which contain part of my district, is approximately $1 million.

The title I provision is often overlooked but is extremely important in order to continue our efforts in early education for underprivileged children. In Montgomery County, it aids 12 public schools and three private institutions. Adoption of this amendment, would not only benefit participating institutions but would allow for the expansion of the program to more of our needy children who are not presently participating.

Under the title III section, the Joelson amendments would provide the additional funds which are necessary if facilities are to continue to operate providing for the development of special skills. For example, in Montgomery County, there are presently four institutions which focus on children with underdeveloped skills, while, at the other end of the spectrum, there are three Montgomery County schools which offer computer-assisted instruction for highly talented children. If each schoolchild is to be offered the opportunity to develop to his full level of potential, these facilities must have proper funding if they are to continue to operate.

In considering the 1970 HEW appropriations, we must bear in mind the overriding importance which education plays in the future of our Nation and its citizens.

Mr. BROYHILL of Virginia. Mr. Chairman, I rise in support of 100-percent funding of Public Law 874.

Today we are again faced with an appropriation bill which fails to recognize the Federal Government's responsibility to make payment in lieu of taxes to the schools attended by children of military and civilian government personnel.

When Public Law 874 was enacted, the Congress acknowledged that such payment is the Federal Government's responsibility. Yet this appropriation bill is, in effect, rewriting the tax law for over 4,000 school districts in this country by eliminating the payment of an obligation the Congress has acknowledged for 20 years.

The theory of payment for category "B" children, those who live in the school districts and whose parents work on Federal property, is that since real property taxes form the base of educational support in this country, and the Federal Government does business in the districts, its working real estate should bear some of the cost of local government, particularly when the Federal activity creates an undue burden on local resources. Children are one of these burdens; they need education. So the Federal Government became, in a sense, a taxpayer in the school districts to help educate the federally connected children.

It is extremely shortsighted to reduce education aid now provided our school districts under Public Law 874 under the assumption that these school districts will be able to make up for the loss of funds through greater local taxation. In nine cases out of 10 the loss will be made up in September by a reduction in the quality of education. It is the children who will suffer the most. Fewer teachers will be hired; the purchase of books will have to be delayed; classes will have to be combined; sabbatical leave for teachers will have to be canceled; and overall belt-tightening will have to take place.

Here we are on the 30th of July, and all school districts have entered into their contracts with teachers and their programs are set for the fall. Imagine the chaos which will be created if they are suddenly denied these funds. In Fairfax County, the loss will be almost $12 million; in Arlington County it will be $2,300,000; in Alexandria $1.5 million, and in Falls Church $500,000. It will be

virtually impossible for them to make up this loss until next year when the loss will be reflected in an increase in taxes, in an area where property taxes are already among the highest in the Nation. Meanwhile, as I said before, the children will suffer.

The two counties and two cities which I represent spend up to 70 percent of their total budgets on education. The impacted areas program does not come close to defraying the actual additional costs they must shoulder to provide top-quality education to the children of Federal personnel who live and work there.

All of us know that the cost of operating schools has gone up. Local taxes have gone up. Yet this bill virtually eliminates the Federal contribution to these costs in areas like northern Virginia where almost no living accommodations are to be found on Government property, yet thousands of acres are occupied by the Government tax free which would otherwise be assessed real property taxes. This amounts to a declaration by the Congress that the Federal Government will not pay its tax for its land in use in a school district.

Wherever we have a bedroom-type community, such as we have in the Washington suburbs, we do not have the broad tax base to support the demands for capital for construction and other school programs. In order to produce the tax revenues to adequately provide for education, you must have an industrial tax base; a business tax base. Private industry pays that tax but Federal installations do not. Private industry also does not set up PX's as a means for their employees to escape contribution to local sales tax. So, while presence of Federal installations may stimulate the economy in part, it does not do so in the same measure as does private industry.

Finally, there is a matter of good faith involved in the continued funding of this program. The affected school districts rely on the money the program provides to partially defray the burdens placed on them because of large numbers of federally connected children. It is, in fact, a form of aid to military and civilian government personnel and their families. It was designed not to supplant but to augment the educational expenditures of the school districts with large concentrations of Federal employees. The quality of education in these areas must not be allowed to erode by false economy such as is proposed in the elimination of all category "B" children from the program.

Mr. Chairman, I urge the appropriation of all the funds authorized for this program.

Mr. EDMONDSON. Mr. Chairman, I move to strike out the requisite number of words.

The CHAIRMAN. The gentleman from Oklahoma is recognized.

Mr. EDMONDSON. Mr. Chairman, I would like to state, at the outset of my own remarks on this bill, that I think we have had a splendid debate on one of the Nation's major areas of disagreement today, and I want to compliment particularly and commend particularly the very able chairman of the subcommittee, who I think has demonstrated once again that he is one of the great chairmen of this House. I think his statesmanlike recognition of the desire for more debate yesterday was abundant testimony to his ability and his statecraft, and I am certain all Members join in appreciation of that position which was taken by the gentleman from Pennsylvania (Mr. FLOOD) yesterday.

It seems to me, in summing up the situation that prevails at this moment, with all respect to a very able subcommittee and a good basic bill, that was brought to the floor, that there has developed a general agreement in the Committee of the Whole, at least, that there are a number of areas in which we need to increase the amounts allocated to education. At this stage of the game I think we almost have agreement on both sides by most of the participants in the debate that we need to increase the funds for impacted aid, and we need to increase the funds for the Elementary and Secondary Education Act.

As a matter of fact, we have amendments offered on both sides that do these things, although more generously in the Joelson amendment.

The Michel amendment takes one small step for closing the breach that is present in this bill and in the priority needs of education today. The Robison amendment to the Michel substitute takes several additional steps. But if you want to take the nine full steps that cover the full picture and that meet not only the needs in the impacted districts and not only the needs in the poorer districts that are reached by the Elementary and Secondary Education Act, but also meet the needs in the field of higher education and also meet the needs of your students who have been brought into the educational picture today and encourage many of them to go into college in reliance upon authorized programs for loans and assistance, then you must go the full route with the Joelson amendment. I think it has been documented very well here on the floor today and yesterday during the debate that there is only one measure pending before this body that covers all of the nine steps and covers them with some full recognition of the priority needs of education, and that is the amendment offered by the gentleman from New Jersey (Mr. JOELSON) and I hope it will prevail.

Yesterday I put into the RECORD the remarks of some of the education leaders of the State of Oklahoma about the importance of recognizing some of these aspects of the educational needs that are not covered in the Michel-Robison combination.

For example, I put in the RECORD the statement which was made by the director of financial aid at Panhandle State College down in Oklahoma, and he said this:

> You have urged us to seek out the economically handicapped student with talent and to assure him that if he wanted to go to college he could get financial help from his government. We have done so and now that we have him planning to come to college we get a notification from HEW cutting our NDEA allocation 31% from what it was last year. What do we tell the student?

I put into the same RECORD remarks from men in charge of these student loan programs at the University of Oklahoma, at Oklahoma State Tech, and at Oklahoma State University.

They are all facing the same tragic situation. We have encouraged the students, many of them from lower income families, to come to school to try to further their education. We cannot fail to carry out the commitments we put in the authorization to provide the assistance that enables them to follow through with their plans that we ourselves have encouraged.

I say to Members, let us meet the needs in higher education, let us meet the needs in impacted districts, let us meet the needs in the ghetto schools with the full package amendment offered by the gentleman from New Jersey (Mr. JOELSON).

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. EDMONDSON. I yield to my friend, the gentleman from Kentucky (Mr. CARTER).

Mr. CARTER. Mr. Chairman, the distinguished gentleman has made an excellent statement. As he knows, I have always supported aid to education. However, there is a matter that troubles me, and that is adequate funding of this. How does the gentleman propose to accomplish this? Is he willing to bite the bullet and vote for a tax that will fund it?

Mr. EDMONDSON. If the gentleman from Kentucky is offering a tax that will be dedicated specifically to education, I will vote for it in a minute. He will get my vote for it tomorrow.

Mr. CARTER. I certainly hope so, but I notice the gentleman voted "no" on another tax a short while ago.

Mr. ANDERSON of Illinois. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, like many in this committee, I am sure, I found it necessary this morning to go back and review the bidding, and I spent about 2 hours reading the very interesting record we complied on yesterday, to find out precisely where we were in this stage of the proceedings. Believe me, I found the record almost equally as stirring as I did the presentation from the gentleman from Pennsylvania (Mr. FLOOD) yesterday.

But today, unlike many of the men who are taking the well to praise the gentleman from Pennsylvania (Mr. FLOOD) and the gentleman from Illinois (Mr. MICHEL) for their very splendid work which they did in this committee, I am not going to proceed then to recommend to this House that we completely dump the work product of that subcommittee. I found it took almost a small wheelbarrow to carry home the other evening the more than 8,000 pages of testimony that had been compiled by their subcommittee. I happen to know they did their work and they did it well.

I see my friend, the gentleman from Illinois (Mr. YATES) who will recall when

we debated this very appropriation bill last year he offered an amendment, which I supported at that time, to add $135 million to title I, to increase the amount that had been recommended in 1968 by the Appropriations Committee, and we did not prevail.

But I want to suggest that a somewhat different situation obtains in the country today. I feel, as my friend from Kentucky DR. CARTER, suggested a moment ago, that at the very hour when the surtax hangs in the balance on the other side of this Capitol—and we do not know, we literally do not know at this moment whether the $10 billion involved in that measure is going to be available to meet these demands or not—I think we ought to be very careful before we tell the subcommittee of the gentleman from Pennsylvania (Mr. FLOOD) and the gentleman from Illinois (Mr. MICHEL) that we are going to disregard what they have recommended in nine different areas. For the so-called Joelson amendment would add approximately $900 million in a wide range of educational areas.

I am pragmatic, as they are, and recognize that with respect to these impacted aid people, we are going to have to do something about them. Even as one who has some category 3B students in his district, I agree it is not the best way to dispense Federal aid.

I would agree with the amendment of the gentleman from New York (Mr. ROBISON). I think he has made a valuable suggestion in offering an amendment to the amendment offered by the gentleman from Illinois (Mr. MICHEL). But beyond that I simply cannot go, devoted as I am to the cause of education in this country, because of some of the factors that I think as a responsible Member of this body I must entertain regarding the fiscal condition of our country.

If I understood the gentleman from Illinois yesterday, the $180 million, for example, that is requested by the gentleman from New Jersey (Mr. JOELSON), in his amendment, that he would tack onto title I, is not needed. The bill reported by the committee does make available full funding, that is, the same funding we had in 1969, and the committee has added another 5.5 percent—am I not correct?—for the increased cost of education, and the funding provided for will take care of that 250,000 students who would be added to title I rolls because of updating of the AFDC formula. We do not have to be afraid that we are shortchanging the disadvantaged children of this country under title I.

I would suggest that in all prudence, in sound judgment, we ought to adopt the amendment of the gentleman from Illinois (Mr. MICHEL) as I hope it will be amended by the amendment offered by the gentleman from New York (Mr. ROBISON).

Mr. THOMPSON of New Jersey. Mr. Chairman, I move to strike the requisite number of words.

Mr. DANIELS of New Jersey. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON of New Jersey. I yield to my colleague.

Mr. DANIELS of New Jersey. Mr. Chairman, I wish to add my support to the package amendment to H.R. 13111, sponsored by Representative JOELSON.

The amendment provides for adequate funding of our children's educational needs. The bill, as it now reads, does not. It assumes that, although the price of everything else in the country has gone up, education costs have remained the same.

Educational requirements and costs have not remained the same. When the price of labor and steel and brick goes up so does the cost of construction and equipment for schools and libraries.

Because of insufficient tax bases, local school districts across the country, urban and rural, are unable to finance the programs necessary to provide a truly adequate modern education. As a result President Nixon's task force on education has reported a dramatic increase in the Federal Government's responsibility in education. It also reported that the American people expect and demand that "vastly enhanced Federal role." Thus, the task force found that education "has become clearly established as a top concern of the National Government."

I would remind you that a child entering grade school today will live and work a substantial portion of his adult life in the 21st century. It will not be possible for an adult to succeed in the future if we fail to provide the necessary educational resources. We will need engineers to develop our expanding space and industrial development as well as provide the vast array of goods demanded and required by consumers. We will need, and, in fact, need today, more doctors to care for the health needs of an expanding population. We could not have put an American on the moon had we scrimped on education in the past. Nor can we assure ourselves of any success in the future, whatever the enterprise, whether in space or on earth, if we fail to adequately provide educational facilities for today's students. Whatever the occupation, in order to function in tomorrow's world, students cannot get by on reduced educational priorities.

There are people who tell us it is not economically feasible to provide more funds for educational needs. They are wrong. We have won a race to put a man on the moon. And we have come up from behind to do it. This, too, we were told, was an impossible task, one which was supposedly not economically feasible. Yet we found the will and the resources to carry it off. If we are capable of stepping on the moon and circling mars, then we are also surely capable of providing for our less spectacular but no less crucial educational priorities.

The Joelson amendment will provide sufficient funds, consistent with economic priorities, to continue the crucial business of education. Failure to provide these funds will mean that our children will learn a little less than they need to; libraries will not be built and students will read a little less than they need to: there will be fewer loans to college students and fewer scientists, fewer doctors and fewer teachers. Failure to provide the funds will mean the country will be a little less equipped than we need to be. I find that unacceptable and urge that my colleagues support the Joelson amendment.

Mr. THOMPSON of New Jersey. Mr. Chairman, I, too, rise in support of the Joelson amendment.

I am somewhat surprised by some of the rhetoric—actually I am not surprised, except in the sense I would think that the memories of some people would be better.

Do those who fear enlarging, as the Joelson amendment would, and quite properly so, the expenditures for education, make any reference to a $3 billion surplus? Is the surtax to be the end of all reason here?

Yesterday the distinguished minority leader, who is a great friend of mine, and I hope he will remain one, characterized those of us who support the Joelson amendment as being irrational, inconsistent, and irresponsible, and he connected it with the vote on the surtax.

I did not hear him talking about the inconsistency of those who voted against the surtax last year and for it this year.

I did not hear him talk about the irresponsibility of those who have consistently voted against Federal aid to education at every level, and are now its pious advocates, albeit parsimonious ones.

No; I believe that consistency demands support of the Joelson amendment. It is the responsible thing to do. It is not irresponsible in the slightest.

It is all well, as the gentleman from Minnesota said, "Why, let us just take this one thing at a time; take the Michel amendment and pass it, and then we can act on each of the others."

Let me warn you that there is an awful lot more in this legislation than impacted areas. If, indeed, anything were to go it should be this carrot. The other things are more important, even though I consider Public Laws 815 and 874 important.

The fact of the matter is that the opponents of the Joelson amendment would weaken the position of those of us who are consistent advocates of Federal aid to education at every level, because with impact aid out of the way they can chop away at will at the other sections.

I do not say that the gentleman from Minnesota would not support additional money for vocational education. I am sure he would. But I am not sure what he would do in other areas.

Here we have one reasonable, rational package. I might say in passing, I consider it to be a bit too modest, but like the minority leader I am a pragmatist. I am a pragmatist, however, in seeing my interests across the board.

I do not question the motives of the gentleman from Illinois (Mr. MICHEL) or of the gentleman from New York (Mr. ROBISON). I believe they are very sound in their thinking, from their point of view. I just happen not to agree with their point of view, and I believe it is absolutely imperative that the amendments be defeated and that the Joelson amendment be adopted in the interest of rationality, of consistency and of responsibility.

I call your attention to the $33 million appropriations increase requested for

construction of higher education facilities. The amount requested, $33 million, would bring this year's appropriation up to last year's figure. Although the anti-inflation measures undertaken by this administration are appreciated by each of us, we cannot afford to be short-sighted: a farmer may feel hard put to buy grain to feed his geese—but when they lay golden eggs, as indeed education does, he cannot afford not to feed them. I suggest we cannot afford not to appropriate these funds for college construction. Budget cuts in this particular area would be at the cost of cramped quarters in the college classroom, antiquated buildings and equipment, and, in fact, turning away many eager students who would otherwise be contributing to society—the very same society that is now bemoaning the lack of participation by our youth for the betterment of all.

It is not necessary to list the many institutions of higher education which need budget allocations for their facilities. You are just as aware as I that colleges are in dire straits because of inadequate housing, classrooms, and labs. There is no justification whatever for a cut in this budget area. We are not seeking the impossible, we are seeking only the very same amount of money that you and I passed last year. Consider the number of new students applying to our colleges, consider the amount of students now enrolled in our colleges, and then consider the amount of $33 million and how far that money will go toward alleviating the pressures of enrollment. What would happen, my colleagues, if less than last year's appropriation was passed, indeed, if not $1 of last year's appropriation was passed. It is imperative that at least an amount equal to last year's is appropriated. Each of you know it should be half again as much as $33 million, but most certainly, it should be equal.

Mr. Chairman, I support the amendment to restore funds desperately needed in the educational field. As I said in testimony before the Subcommittee on Labor, Health, Education, and Welfare in May:

I come here because I am deeply concerned about the future of education in this country. We all know of the financial crisis of our urban area schools. We know of the increasing demand for higher education—and the strained resources of our colleges. At the very time when our educational needs are greater than ever before the budget you have before you recommends a *decrease* of $500,000,000 in Office of Education appropriations for next year. At a time when primary and secondary enrollments are *increasing* 2 percent per year and when college enrollments are *increasing* 8 percent each year the present budget contemplates *decreasing* Office of Education expenditures by 14 percent next year. This increased enrollment tells only part of the increased need for finances in education since cost of instruction per student also grows markedly each year. At a time when the weak and inflexible tax base of state and local governments are burdened to the breaking point, the budget sent to Congress shifts an increasing burden to state and local governments. All of this is occurring in the context of unprecedented prosperity. Our Gross National Product is higher than it has ever been. I have no doubt that this nation can afford increasing expenditures in education. I think we owe our children the best possible education. This budget does not provide for that kind of education.

I fear that if these cuts are permitted to stand the quality of education provided our students will decrease, the ability of schools and colleges to keep up with changing technological needs will diminish, the creation of new capacity to educate burgeoning enrollments will suffer, and the quality of educational opportunity will be impaired. I also fear that if we short-change our educational needs at this point in history, we will pay for it many times over in the future. I believe deeply that these are not expenses that we can defer. A year of lost opportunity in education can never be regained. A year of substandard instruction can never be corrected. Our neglect now will haunt us in the future.

Mr. Chairman, I note with pleasure that the committee has restored some of the cuts which I mentioned in my testimony such as the $35 million in grants for public libraries under title I of the Library Service and Construction Act; also the restoration of $1 million for acquisition and cataloging by the Library of Congress to a total of $5.5 million even though this is below the present operational level and $1.8 million below the amount requested by President Johnson. I am also pleased that the committee has raised funds for student loans under title II of the National Defense Education Act from the totally inadequate $155 million requested by President Nixon to $181.3 million.

But other cuts that remain in the bill are of disastrous proportions, in my judgment. The dismantling of the Federal impacted aid program to eliminate funds under section 3(b) for children whose parents work, but do not live, on Federal property. This would be an enormous cut of $318,694,000 from $521 million appropriated last year to $202 million in the current bill.

This established Federal program has, through the years, provided much-needed Federal assistance to many local school districts throughout the country. It has been especially useful in providing small- and middle-sized communities with the assistance necessary to provide an educational program for children whose parents worked on Federal property. Where these children comprised a large percentage of the school-age population, and where enrollments were subject to rapid fluctuation, this aid was, and is, indispensable to providing an educational program. In 1970, under present formulas, the State of New Jersey qualifies for $15,350,000 of this aid. Under the budget proposals the school districts in the State will receive $4,200,000. In practical terms this means that many districts in the State are likely to fail completely. And others will have to operate severely curtailed programs in order to stay in operation. Nationally, the budget proposes to reduce this year's appropriation from $505,900,000 to $187,000,000. If these cuts are accepted, and the remaining money is distributed in accordance with administration plans, it will mean that this assistance will be paid on 400,000 students next year. This compares with 2,400,000 this year. If the aid is distributed under the same formula next year as it was this year, it will mean that schools will receive about 25 cents next year for every $1 they receive this year.

I believe that this aid must continue. School districts have come to depend upon it. It means the difference in local schools and no local school in hundreds of school districts. In others it means the difference in providing good and poor instruction. It must be continued.

Funds for the Elementary and Secondary Education Act programs for textbooks, resources, and other education instructional materials, supplementary educational services, guidance, counseling, and testing have been cut from $310 million appropriated for fiscal 1969 to only $200 million in the present bill. Such a destructive reduction in these programs that have proved to be so important in carrying out the purposes of the ESEA Act must not be allowed to stand.

Mr. Chairman, equally destructive are the proposed cuts in the higher education programs. The committee report states that the $785.8 million recommended is an increase of $5 million over the budget request. What it does not spell out is that it is $5 million higher than the woefully inadequate Nixon budget request but actually is $112 million less than the amount requested by President Johnson in January.

Mr. Chairman, this is not the time to cut back on our national educational commitment to our children and young people. These funds must be restored or they will result in irreparable damage in the educational processes. Public funds spent on educational programs are necessary investments in the future of our Nation. We must keep faith with this generation that will play such a vital role in America's future. Let us vote for the amendment to increase the funds so desperately needed for education.

Mr. DELLENBACK. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I fear that in the discussion which has taken place over the last several hours on this floor yesterday and now in the several hours which have transpired already this afternoon we have bandied words and amendments around so thoroughly that some of us really do not understand exactly where we are. May I review that very briefly and then make comment on the specifics.

We have an amendment introduced by the gentleman from New Jersey (Mr. JOELSON) which deals with some nine different sections of appropriations. Then there was an amendment offered by the gentleman from Illinois (Mr. MICHEL) which would be in effect a replacement for the Joelson amendment, and it dealt only with the question of impact aid.

At that stage, if the Michel amendment had succeeded, everything else in the Joelson amendment would have come out and it would have covered just impact aid. Then the gentleman from New York (Mr. ROBISON) made an addition to the Michel amendment which added to impact aid four particular sections of ESEA and NDEA. If the Robison amendment passes, there will be an amendment to Michel, and Michel will then come before us in contradiction or in opposition to the Joelson amendment. At that point we will have a chance to

choose. Do we take this four-piece package plus impact aid and substitute it for what Mr. JOELSON recommended in covering his nine particular points? If that Robison-Michel package is then substituted for Joelson and that substitute passes, we have not foreclosed dealing with the problems of higher education; we have not foreclosed dealing with the matter of vocational education; we will not be precluded from facing those questions one at a time as they come along.

Now, Mr. Chairman, with that picture before you, may I say just a word about the specifics.

So far as impact aid is concerned, no one who votes for the Robison-Michel package need worry about cutting impact aid. The bill which is before you, the basic appropriation bill, deals only with some $202 million for this program. The Michel amendment would add to that an additional $303 million. So it is a major move in the direction of increasing aid to impacted areas. It puts this aid back at the level that it was last year, which, as I repeat, is some 300-plus million dollars over what is in the appropriation bill at the present time. So you do not have to worry about whether you are undercutting impact aid.

Now, so far as the amendment of the gentleman from New York (Mr. ROBISON) is concerned, he is here talking about taking a step in the direction that we took when we in this House passed H.R. 514 some time ago. I have listened to my esteemed chairman make the distinction between State plans and whether we will give up our rights here on the floor and go to the Office of Education and let them make allocations as between these subjects. Ladies and gentlemen, when we passed H.R. 514, and when my colleague from Oregon made the amendment to put together four different sections of ESEA and NDEA, we were taking a significant step away from narrow categorical aid.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. DELLENBACK. Not at this time.

We were dealing here with the situation of putting four categories of educational aid together, which would permit flexibility in moving funds back and forth between four different areas which are essentially similar. The question is at the present time whether we want to leave this type aid in four narrow categories. Do we want somebody to have the choice to move funds back and forth between categories as a preliminary to what is going to happen in 1971 when the choice will be in the States?

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. DELLENBACK. Not at this time.

Under the Robison amendment, in that intervening year of 1970 there will be flexibility. The flexibility will admittedly be in the hands of the Office of Education instead of in the States, but it is a step in the proper direction and there is nothing to preclude the Office of Education from recognizing that, if H.R. 514 becomes law, then next year the choice will be out of its hands completely and the choice in moving funds between these four areas will be in the hands of the States. There is nothing to stop the Office of Education in that intervening year from moving in the direction of listening to the States and moving in this particular direction.

The CHAIRMAN. The time of the gentleman has expired.

(Mr. DELLENBACK asked and was given permission to proceed for 3 additional minutes.)

Mr. DELLENBACK. Now, Mr. Chairman, I yield briefly to the gentleman from Kentucky.

Mr. PERKINS. The distinguished gentleman from Oregon does not want to leave a false impression on the membership of this body, I am sure.

Mr. DELLENBACK. Certainly not.

Mr. PERKINS. It is true that the amendment to H.R. 514 offered by your colleague to put discretion in the hands of the States does not take effect until 1971.

But now there is no assurance that that amendment will become law. H.R. 514 has not even been reported by the Senate committee. No one knows what the other body will do and then there will be the conference. But here we do something diametrically opposed. The committee bill, H.R. 13111, and the Michel amendment, both place discretion in the hands of the Office of Education to allocate funds between the library, the equipment, the counseling, and the title III programs. What assurance do we have that any of these programs will survive?

Mr. DELLENBACK. I thank the gentleman very much.

Mr. Chairman, let me repeat what I have previously said on this particular point and to point out additional problems with which we are involved. These four titles, which have been enacted as separate categorical groupings, are similar.

These areas of aid should not be kept in narrow boxes. They should be placed together and the funds be made available to the four areas together.

Mr. Chairman, we should go along with the Robison amendment by putting these areas together and leave the discretion as to how the funds should be used in the Office of Education.

Mr. Chairman, I urge this body to adopt the Robison amendment as a first step. Second, then adopt the Michel amendment. Third, since the adoption of the Michel amendment will have replaced the proposals offered by the gentleman from New Jersey (Mr. JOELSON), then I would suggest the adoption of the amended Joelson proposal.

From then on go from page 26 of this bill and increase funds for vocational education and make such other increases as we think are important.

Mr. Chairman, let us not get lost in the forest. By following this procedure we will be able to do for education what we should be doing for education.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. DELLENBACK. I yield to the gentleman from Minnesota.

Mr. QUIE. The chairman of the authorizing committee, the gentleman from Kentucky (Mr. PERKINS), indicated that the Office of Education is against the library program and the equipment program as well as the supplemental centers and guidance counseling. They cannot be against all four in my opinion.

Mr. DELLENBACK. The vote and the procedure which I have outlined will have all of these programs continued and will aid the impact areas and thereby we will be acting in a responsible manner.

Mr. BRADEMAS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, yesterday the distinguished chairman of the great Committee on Appropriations told us, to quote him, that the impacted areas program was "indefensible," although he planned nonetheless to support the appropriation. And, yesterday also the distinguished gentleman from Illinois (Mr. MICHEL) said that the impacted areas program represented a "bonanza," which he said he nonetheless planned to support.

I rise now in support of the Joelson amendment. I do so both because I believe it is defensible and that it does not represent a bonanza. Rather, the Joelson amendment contains a much needed increase in funds for a wide spectrum of educational programs in this country, increases that are not provided in the amendment which has been offered by the gentleman from Illinois (Mr. MICHEL) or in the amendment offered by the gentleman from New York (Mr. ROBISON).

You know, Mr. Chairman, I was just looking at some interesting figures, interesting in view of the fact that we have heard a great deal here this week about fiscal responsibility. I notice that the U.S. Treasury pays a net of $1.2 billion in direct subsidies to cotton and wheat farmers in this country. We are only asking in the Joelson amendment for an increase for the education of the people of our country of a little less than $895 million. That figure represents an increase of less than the subsidies which we pay to producers of cotton and wheat. Surely, the education of the young people of our country ought to be worth at least an added investment of similar magnitude.

Mr. Chairman, earlier this year I said on the floor of the House that President Nixon was due congratulations on his having appointed Mr. Finch as Secretary of Health, Education, and Welfare, and on his having appointed Mr. Allen as the Commissioner of Education, because both those men are widely known and respected for their commitment to education.

At the same time, I put in the CONGRESSIONAL RECORD the complete text of then President-Elect Nixon's education task force. I would hope very much that as we reflect upon what we do here today, we pay some attention to the recommendations of Mr. Nixon's education task force, for they move in precisely the direction of the Joelson amendment, and certainly not in the direction of other amendments that have been offered.

Let me recall to your minds a pledge made by Mr. Nixon in the campaign last year. He said—and I am quoting the President:

> When we talk about cutting the expense of Government—either federal, state, or local—the one area we cannot shortchange is education at all levels, seeing to it that young Americans are the best educated in the world; that education is available to all our people, that those who do not have an equal chance at the starting line will achieve equal opportunity. This must be our fundamental objective and our path to the realization of the American dream . . . .

Now, I just want to help the President carry out his campaign pledge.

Mr. Nixon made another campaign pledge last year, I would like to say to the distinguished minority leader, if he were here, to oppose extension of the surtax, but perhaps we can forgive the President for that particular change of position. However, especially since he has been so interested in seeing and hailing, as all of us have been, the results of the efforts of the last several years to place a man on the moon, I would think the President would want all the help he can get in helping put more of our young people in the schools, colleges and universities where they gain the knowledge essential to this and other achievements in our society.

Mr. Chairman, President Nixon has warned us not to shortchange the young people of our country by cutting back on funds for education, but he then recommended a budget that would do just that.

According to estimates, President Nixon's budget request for education programs administered by the Office of Education for fiscal year 1970 are approximately $370 million below President Johnson's recommendation for the same fiscal year.

Moreover, the Nixon budget is some $5 billion below levels authorized by Congress.

Now, Mr. Chairman, the Labor and Health, Education, and Welfare appropriations bill which we are today considering adds some $123 million to President Nixon's request, but it is still a woefully inadequate bill, as I am confident the action of the House of Representatives will make dramatically clear.

In other words, the bill before us today still "shortchanges" American education, something Mr. Nixon said he wanted to avoid.

Mr. Chairman, my own home State of Indiana offers some graphic examples of the way in which President Nixon's education proposals shortchange American young people. The Johnson administration recommended that Indiana receive $1,080,789 for library resources under title II of the Elementary and Secondary Education Act; this year Indiana is to receive nothing at all if the present administration's request is upheld.

The Johnson administration request was $4,181,310 for Indiana under title III of Elementary and Secondary Education Act for supplementary educational centers and services; the Nixon request has cut that budget almost $1.5 million to $2,766,361.

Indiana's impacted area estimate was $2,491,000 under the previous administration; the Nixon request cuts that by over 60 percent to $982,000.

Our college work-study, educational opportunity grant, and NDEA college student loans have been similarly cut; this is particularly interesting in view of the recommendations made by the President's task force. The report said:

> We are agreed that the present Federal program of basic Educational Opportunity Grants . . . is a good program and should continue with increased funding.

Mr. Chairman, let me also cite here that the Nixon education task force said of national defense student loans and college work-study:

> Funds available for National Defense Student Loans and Work-Study are slightly larger than for 1969–70 than they were for 1968–69, but it seems certain that they will fall far short of the need. We know that overall college enrollment will increase; that there will be a more than usual increase from very low income groups. In addition, college costs have risen and there is an increase in the allowance for legislative costs.

Mr. Chairman, the costs in these last programs are particularly tragic since they strike directly at the colleges' ability to provide help for students who need financial aid in order to reach college at all. The colleges in my own district, for example, will be forced to inform large numbers of students that their financial aid will have to be discontinued. The University of Notre Dame was to receive approximately $594,000 for NDEA loans; the estimated allocation is less than half that—$267,000.

Goshen College, in Goshen, will have its allocation for the same program cut from $131,000 to $58,000.

St. Mary's College will have a cutback in its EOG allocation from $40,000 to $30,000.

Similar cuts will have to be made at Purdue, Bethel College, and Grace Theological Seminary.

Mr. Chairman, these cuts curtail in the most cruel way the programs which are now enabling needy youth to attend college. They fly in the face of all of the recommendations of the President's task force, leading educators, and commentators on the educational scene.

Mr. Chairman, for all these reasons, I strongly support the amendment of Mr. Joelson which would increase the appropriation under H.R. 13111 by $894.5 million. His amendment would offer increases in the most essential education programs, including impacted aid, vocational education, ESEA titles I, II, and III, NDEA titles II, III, and IV, and title I of the Higher Education Facilities Act.

Mr. Chairman, I wholeheartedly support this amendment. I am confident, the spirit of most if not all of the members of President Nixon's Education Task Force. To do anything else would shortchange our most vital educational programs and thereby shortchange our Nation's most valuable resource—educated men and women.

Let me just observe, Mr. Chairman, in response to some of the points that have been made about the amendment offered by the gentleman from New York (Mr. ROBISON)—and I appreciate that he wants to increase funds for several programs—but my friend from Oregon (Mr. DELLENBACK) is dead wrong when he tries to tell us that there is not much difference among the several programs that are included in the Robison amendment. For example, there is clearly a great difference in the program for guidance and counseling from the program for school libraries. If you do not believe it, ask any school librarian. Indeed, I want to say that those who support the Michel amendment, which provides no money for libraries, and those who support the Robison amendment, which lumps libraries in with three other programs, and earmarks not 1 cent for them, are driving a knife in the back of every school library in this country. Members should know that when they vote on these amendments.

Mr. Chairman, I think that we ought to seize the opportunity contained in the Joelson amendment as a golden one, and one which will not come again for a long, long time. Let us not "shortchange," to quote Mr. Nixon from his campaign of last year, the education of the young people of our country.

Mr. Chairman, I hope the Robison amendment is defeated, I hope the Michel amendment is defeated, and I hope that we have very strong bipartisan support for the amendment offered by the gentleman from New Jersey (Mr. JOELSON).

Mr. Chairman, I yield back the balance of my time.

Mr. WILLIAM D. FORD. Mr. Chairman, will the gentleman yield?

Mr. BRADEMAS. I yield to the gentleman from Michigan.

Mr. WILLIAM D. FORD. Mr. Chairman, I rise to support the amendment in the nature of a substitute for the Appropriations Committee's proposal offered by the gentleman from New Jersey (Mr. JOELSON). I oppose the amendments being offered to destroy Mr. JOELSON's effort to keep the past promises made by Congress to the American people.

Mr. Chairman, the events of recent weeks, the adventure of Armstrong, Aldrin, and Collins have proved that the old adage, "the sky is the limit" is a false cliche. We can, as a nation, do almost anything we want to—if we want to badly enough. We have opened vistas for the next generation that challenge the imagination—and also challenge us as the custodians of the public purse to properly husband our resources so that the promise of the future can be achieved.

The most essential factor in the formula for the future is the mental capacity of our children and youth. This is an idea which Congress has supported by enacting far-reaching programs for education at all levels. But Congress by enactment of authorizations without accompanying appropriations has been a shameful hoax on the taxpayers of this country, and indeed, the next generation. We cannot, in good conscience, make promises on the one hand and on the other hand shortchange and cut back education by these programs.

Compared to the astronomical costs of the defense program—and I do not mean those costs directly supporting our fighting men which I support—the increase

proposed in the Joelson amendment is modest, indeed.

There is no more important work for the Congress than our duty to insure that future generations have the intellectual capacity to cope with the challenging world of tomorrow that we have erected for them. They cannot meet this challenge without an opportunity to develop their minds, their skills and their spirits to the fullest extent.

The amendment by Mr. JOELSON provides additional funds beyond those proposed by the Appropriations Committee for such programs as vocational education, aid for low-income children, library and textbook materials, guidance and counseling, educational equipment, increased student loan funds, and a substantial increase in impact aid.

The people of my district—educators, school board members, college officials, and most of all, parents—support increased funds for education. These are responsible, intelligent people who are aware of the dangers of inflation which concerns us all. They believe, as I do, that the children and youth of this country cannot be sacrificed on the altar of false economy. Let us use a small portion of the amount we spend in the defense and other hardware budgets to provide for an investment in the most essential factor in the formula for a bright future for our Nation—the minds of our children and youth.

Mr. Chairman, the children and youth of this Nation, as well as their taxpaying parents, were promised meaningful help from the Congress of the United States when we passed the Elementary and Secondary Act of 1965 and its amendments of 1966, 1967, 1968, and again in 1969—just a few weeks ago—each time by an overwhelming vote.

We cannot now renege on those promises by failing to provide adequate funds to implement this and such other laws as the National Defense Education Act, the Higher Education Act, the Vocational Education Act, and the Library Services Act.

The Joelson amendment to H.R. 13111 will come closer to meeting these commitments to the education of our young people than will the bill before us presented by the Appropriations Committee. It is the very least we can honorably do. I urge my colleagues to support the increased funding as proposed in the Joelson amendment, and urge you vote "no" on the Michel amendment which is really intended to defeat the purposes of the carefully constructed and responsible compromise in the allocation of limited educational funds contained in the Joelson amendment.

Mr. REID of New York. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, the issue today before this House I think is relatively simple. I know the hour is late, and I will try to be brief.

Basically, the past administration shockingly cut the funds for education contrary to the leadership of the gentleman from Kentucky (Mr. PERKINS) and other members of the Committee on Education and Labor.

The present administration, with the one exception of title I, has not done much better.

I might say that I would like to compliment the Committee on Appropriations for trying to add some additional funds.

But having said that, Mr. Chairman, the fact is—and I want to mention just a few numbers, very simply—that the present bill has zero funds—zero funds—for direct loans for construction of undergraduate academic facilities. It has only 62 percent of the authorization for NDEA student loans, 38 percent of the authorization for ESEA title I, and 21 percent of the combined authorizations of ESEA titles II and III, and NDEA title III–A, and NDEA title V–A.

I strongly support the entire package proposed in the Joelson amendment, but I would single out a few elements that I think are particularly important.

First, the budget did not request any funds for title II of ESEA, school library programs. I commend the committee for including this as one of four programs which were to share an appropriation of $200,163,000. But to divide $200 million among four deserving programs is bound to result in a scramble for their distribution—especially if the Office of Education does not yet have the administrative machinery for joint administration and allocation of funds. Thus, I strongly urge that the $50 million proposed in the Joelson amendment for school library programs be approved. Title II has meant a great deal to many schools which have been able to augment—and in some cases just start—their libraries to the benefit of all children. For parochial schools, especially, title II has been a source of funding that frees scarce cash for other educational expenses.

Second, the increase in funds for the NDEA student loan program is necessary per se but is even more urgently needed because of the inadequacy of the guaranteed loan program. Banks are reluctant to make loans at the 7-percent rate when a better return is available on other types of investment, and the tight money market makes any loan difficult to get. Thus, many students, especially those in their first year of college, will find that guaranteed loans just are not available and they will have to look for other sources of funding. I am hopeful that the additional NDEA loan funds made available in this amendment will help to meet this need.

Third, the package amendment provides $33 million for construction of undergraduate academic facilities under the Higher Education Facilities Act. As I mentioned, the administration had not requested any funds for this program, relying instead on the interest subsidy program that was established last year in the higher education amendments. Direct loans funds were provided for junior colleges only. The need to continue the building program in 4-year colleges is, to say the least, extremely pressing, especially if increased enrollments are to be accommodated. In addition, the construction credit market is tight, and there is little reason to believe that the interest subsidy program will make it easier to obtain commercial financing for such projects.

Put very simply, our Nation is clearly defaulting in a major and irresponsible way on adequate support for elementary and higher education. We are doing it at a time when there is a shortage of 2 million teachers in the United States; at a time when there are at least 400,000 classrooms which should be built; at a time when a majority of our 2-year colleges lack adequate books and when a number of our 4-year colleges lack the necessary library resources.

Accordingly, I do not believe this Congress will be living up to its responsibilities or come anywhere near living up to its responsibilities unless it unequivocally supports the Joelson amendment without modification.

I think it is essential that it be supported. I think this is a national requirement and a national imperative.

In short, this package amendment seeks to remedy a basic gap in the logic behind the requests for education programs. On the one hand, the call is heard for increased enrollments, for more and better teachers; on the other, we reduce the funds available to provide equipment and services to the new pupils and to train the teachers. Clearly, this is counterproductive; the only way to set the matter straight now is to support the Joelson amendment.

Mr. LOWENSTEIN. Mr. Chairman, will the gentleman yield?

Mr. REID of New York. I yield to the gentleman.

Mr. LOWENSTEIN. I thank the gentleman for yielding.

First of all, I want to express my gratitude—and the gratitude of a very large number of my colleagues on both sides of the aisle—to the invaluable Representative from New York (Mr. REID), for his heroic efforts to make at least the opportunity for a decent education available to all Americans. There is no way to measure his contribution to the overall effort to make America a place where there is in fact liberty and justice for all, because it is a contribution that is made more often away from the spotlight than in it, and because his own courage and energy inspire countless others to behave much better than they would otherwise have considered possible. Much that I want to say today will sound like an echo of what he has been saying, but it is no cause for sadness or reappraisal to find oneself echoing the gentleman from New York (Mr. REID).

Mr. Chairman, I hope we are at last about to begin the endlessly discussed process of what has come to be called reordering the national priorities. I hope we are about to witness a great rising of the majority of the members of both parties against the dangerous notion that this country cannot afford even minimum sums of money to assist education to attain even the standards regarded as minimal in years past. What this country cannot, in fact, afford is to go on neglecting its young people—its future, Mr. Chairman. If we care about that future, Mr. Chairman, we will vote today the additional funds necessary to repair at least to minimum standards.

Educational needs are nondeferrable. You cannot recapture a year of lost schooling, a year without access to library services. Students who cannot get loans and so cannot continue their education will presumably be less productive citizens, less creative, more dubious about the equality of opportunity that is their proclaimed right as Americans, and thus perhaps more dubious about America itself.

Some proclaim "economy" and say that means we cannot do more than the unamended bill proposes. "Economy," "economy"—what crimes are committed in thy hallowed name, O economy.

Now do we really believe that education makes life more worthwhile? Does a good education really help develop the potential of those who enjoy it? If so, what kind of "economy" is it to make life less worthwhile for thousands of people, to decrease the potential for earning—if you want to talk in dollars and cents—of countless thousands of young people, by countless billions of dollars? What is it we are saving when we waste some of the best talent in America by shutting it off from the opportunity to develop at its most critical moment?

Is it in the interest of economy—or of the economy—to spend our great national wealth in such a way that goodness knows how many people will end up in institutions or on welfare instead of doing productive work, living creative lives—and paying substantial taxes? Fie on Benjamin Franklin and his stitch in time. Better by far to take no stitch at all until the fabric of our national well-being unravels.

In fact, we should tell Benjamin Franklin that we cannot afford a stitch, at least not a stitch for our own kids. Billions for weapon overruns—lectures about economy for libraries. Billions to impose unpopular governments in far-off places—penury for our young and disadvantaged, so we can make our own Government as unpopular among millions of its own people.

Are we really going to approve legislation that will allow funds to implement title I of ESEA to be lost in the shuffle, so that the very areas most in need of assistance—the children already disadvantaged, God knows, through no fault of their own—are penalized yet again?

We can do much better than this—much better than we have been doing lately—and we can begin doing it right now. The remarkable diligence and skill with which the gentleman from New Jersey has put together what we celebrate today as the "Joelson package" has given us the opportunity to make what would be the most responsible statement to come from this House in many years.

We are promised that next week we will have an opportunity to make more equitable the way we collect the money we spend, an opportunity to distribute the burden of financing the national needs so all pay their fair share. Today we can begin to make an equally basic change—a change in how we spend what money we do collect. Success today will strengthen our hand for the battle next week, and success then will strengthen our hand for the battles still ahead.

The colossus that is America cannot be turned around by one vote, or in one day, or by one program. But if we are to reverse the lockstep that has already brought us to such wide grief as a nation we must begin somewhere, sometime. There is no place better to begin than here, and no time better than now.

Much more is at stake in the voting on these amendments than the specific sums of money involved. There are, of course, the lives of so many young people. But beyond even these lives, there is the question of what we can and cannot "afford" to do as a nation—the question of national priorities—the question of how we are to expend our resources. And the answer to that question will, of course, affect the well-being of every single American, and for that matter the well-being of much of the world.

I hope the House will want its voice to be heard on this question. I hope it will say "No" to continuing the stampede of waste—of resources, of time, above all of lives—that has driven so great a wedge between the promises of America and her performance. I will be grateful and proud to have the opportunity to be a small part of that voice when it learns its own strength and speaks its own mind. I hope it starts to do that today. The hour is already very late.

Mr. REID of New York. I thank the gentleman for his very real contribution.

Mr. Chairman, I would point out also that the Joelson amendment does include additional funds for title I of ESEA, which is one of the most important titles. But even at that, it would be funded at only 44 percent of the authorization. I hope more Members will be willing to stand up for 100 percent funding, consistent with the judgment of the Committee on Education and Labor.

Mr. Chairman, I think it is time that the Members of the House supported the Committee on Education and Labor in this area.

Mr. O'NEILL of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. REID of New York. I yield to the gentleman.

Mr. O'NEILL of Massachusetts. Mr. Chairman, I congratulate my colleague, the gentleman from New York, and concur in his remarks.

The amendment offered by the gentleman from Illinois (Mr. MICHEL) is a simple amendment—all it does is scuttle the Joelson amendment.

Mr. Chairman, I rise to support the amendment offered by the distinguished gentleman from New Jersey.

This "package" proposal is the very least by which we should increase this appropriations measure. I know many of us would like to see aid to education doubled or tripled at the least, but I am hopeful that this proposal will meet with my colleagues' approval.

The distinguished gentleman has eloquently and clearly explained the need for this increase. There is little more that can be said, but I want to take a few minutes to emphasize the importance of increasing aid to education.

Almost every week I read another article documenting the importance of education, particularly elementary education. Each year we spend billions and billions of dollars on the military. Yet, what greater strength can a nation have than an educated, productive, aware citizenry. The educated person is the greatest asset this Nation has.

Can we afford to ignore the educational needs of this Nation? Can we, as a nation, afford to allow children to grow to adulthood without teaching them skills, without helping them develop to the height of their potential? Can we afford to produce young adults who cannot read, dropouts who do not have enough basic education to even learn a trade? We cannot.

The Nation's strength is in its people—in all its people; by denying the best possible education to our children, we deny the contributions of the next generation.

Where could this money be spent better? I can think of only a few things that compare in importance—those things which a man needs to survive—food and shelter, and those programs, too, Mr. Chairman are not being adequately funded.

Where is this money being spent? In the tragic, destructive morass of Vietnam? On bigger weapons systems that will destroy our enemies and ourselves 10 times over?

The Defense Department estimates that, in 1968, 181,000 North Vietnamese and Vietcong were killed in the war. We spent about $28 billion on the war in Vietnam that year. In a sense, we spent $154,000 on each dead Vietnamese enemy.

In that same year we spent $3.2 billion on elementary and secondary education. There were 45 million pupils enrolled in public elementary and secondary schools. That is $71 a pupil to bring about a more productive life.

Compare that to $154,000 to take a life.

This is senseless, this is tragic.

I have heard much about economy, about priorities. I still do not know the priorities of this administration, for in July of 1969 we have still seen only a handful of programs offered, but I have seen the economy, and it is false economy.

Can we cut back on the education of our children and call it an economic measure? Our population is growing. There are more and more children in school. Programs, worthwhile, successful, productive programs have been begun. Do we now cut funds, end programs?

There are those who say we can fund in the future, when the country is in better economic shape. Will these children benefit later? No.

Other children may learn, but those who are bypassed now are bypassed for life. Unless, of course, we are willing to spend billions more on remedial education, retraining, adult education.

Is it not better to prevent these problems than to have to cure them in the future?

I see economy in the gentleman's amendment. It is a modest amendment that will for the most part bring appropriation levels to that of last year. Five of the nine items will solely do that. Another will provide funds for 90 percent of the authorization which we passed. A

sixth will provide additional funds to meet urgent needs in vocational education. Urgent because the jobs are there, looking for trained people, and there because we have not in the past provided sufficient funds for vocational education.

Another increase will help meet the increased demand for student loans—loans, not grants—because there are more and more students willing to go into debt in order to acquire an education.

The last item will meet the increased program costs and provide funds needed because of prior action by the Congress.

This is a modest measure. I would like to see much more go to education.

As I have said, where better could we spend this money? This is an investment, an investment in the Nation's future. We will need an educated and trained population to take care of the Nation's future needs, to provide the Nation's growth.

I cannot understand reductions in this field. This cannot wait. The students will be returning to school in a little more than a month. Do we ask them to wait for another year? Do we tell them that books will come next year? Do we tell them we cannot counsel them?

The answer to these questions must be "No." Even with this amendment these programs will be badly underfunded. But to do less than this would be criminal, it would be foolish. No purpose is served by limiting education. The funds we fail to provide this year, we will have to provide in the future. Only then it will be tenfold, and it may be too late.

Mr. BELL of California. Mr. Chairman, will the gentleman yield?

Mr. REID of New York. I yield to the gentleman.

Mr. BELL of California. Mr. Chairman, I commend the gentleman from New York (Mr. REID) on his excellent statement and I concur in all that he has said.

Mrs. CHISHOLM. Mr. Chairman, I rise in support of the Joelson amendment.

Mr. Chairman, we have all heard that the youth of this Nation is telling us something. What they really are saying to us—in all their protest and moral exuberance—is quite simple. This system is not worth saving unless it can work; unless it can end injustice, and poverty, and racism, and war; unless it can reform itself to meet the just demands and expectations of the people.

This is what our forefathers believed when they fought a revolution with England. This is what they were fighting for—the English political system was neither responsive nor willing to be responsive to the demands of the colonists. And this is what is happening in this country today. It is the old compact theory of government all over again; the same compact theory we learned when we were in school, enunciated by John Locke's "Second Treatise of Government" and incorporated by Thomas Jefferson in the Declaration of Independence. As Howard Zinn, professor of political science at Boston University, put it in his brilliant book, "Disobedience and Democracy":

> Governments are instituted among men for certain ends; . . . among these are life, liberty, and the pursuit of happiness; . . . whenever a government becomes destructive of those ends, it is the right of the people to alter or abolish it. The government is not synonymous with the people of the nation; it is an artificial device, set up by the citizens for certain purposes. It is endowed with no sacred aura; rather, it needs to be watched, scrutinized, criticized, opposed, changed, and even overthrown and replaced when necessary.

We, Mr. Chairman, are being "watched, scrutinized, criticized and opposed" by the youth of this Nation, and, more important, we had better change, we had better show them that this system can work, or we are likely to be "overthrown and replaced."

All of this may sound to some as just the old standard liberal rhetoric. High flown, philosophical, absolutely unrelated to "real life." But the college students, by their militance, have clearly demonstrated to us that they are deadly serious. They really believe in the political theories that we mouth so freely, and they mean to force us to live by our espoused values.

Today, we in the House are discussing an education and labor bill closely watched by the college students. We know the urgent educational needs of America, or at least we have been told innumerable times about them. But this bill seems to fulfill the Biblical quotation:

> They have eyes to see, but they see not; ears to hear, but they hear not.

In spite of rising enrollments and rising costs, the bill before us is essentially the same that the House passed last year.

Are we really so ignorant that we do not realize what a bill of this sort means? The low appropriation of money and the ominous Whitten amendment together discriminate against the poor student directly, and, especially when this is coupled with the so-called student unrest amendment, the bill oppresses all students. Let us not deceive ourselves, ladies and gentlemen—the students are not going to acquiesce in this regressive legislation. They have watched and scrutinized; they are not criticizing and opposing. Are we going to force them to overthrow and replace?

The Joelson amendment would partially correct this sad state of affairs. While it is insufficient, at least it is a step in the right direction. It would appropriate more funds to critical problems. It would also indicate to students that in spite of tight budgetary pressures, the Congress of the United States gives high priority to the education of young people.

Our own House Internal Security Committee and our brothers in the Senate have been conducting lengthy hearings on the Students for a Democratic Society and other radical collegiate groups.

It is fashionable to speak these days about reordering our national priorities. Wonderful. The question is, are we willing to put our money where our mouth is—literally? This bill implies that we are not.

I appeal to you to join me in voting for the Joelson amendment as an inadequate but hopeful education measure. Let the students know that Congress will respond to the needs of the people. I quote to you again:

> Governments are instituted among men for certain ends; . . . among these are life, liberty, and the pursuit of happiness; . . . whenever a government becomes destructive of those ends, it is the right of the people to alter or abolish it.

Mr. STEIGER of Wisconsin. Mr. Chairman, I rise in support of the Robison amendment.

Mr. ROBISON. Mr. Chairman, will the gentleman yield?

Mr. STEIGER of Wisconsin. I yield to the gentleman from New York.

Mr. ROBISON. Mr. Chairman, I appreciate the gentleman yielding so I can attempt, at least, to get that knife of mine partially out of the back of every school librarian, where my friend JOHN BRADEMAS put it.

As we all know, the Robison amendment that is pending as an amendment to the Michel substitute addresses itself to these four programs: supplementary educational services, ESEA title III; library services, ESEA title II; guiding, counseling, and testing, which is NDEA title V–A; equipment and minor remodeling, which is NDEA title III–A. What it seeks to do, on a consolidated basis, is to increase the moneys to be appropriated for these four purposes $110 million above the committee figure for such four purposes, in order to get back to the 1969 fiscal year level for such purposes.

Let me point out that in the bill the committee's figure was also provided on a consolidated basis, but that figure, again, was $110 million below the 1969 fiscal year levels.

Now, let me see if, in the remaining time I can get from the gentleman, I can marshal some arguments in favor of consolidation.

The major arguments, as I see them, are: first, all four of these programs involve State administration, under State plans approved by the U.S. Commissioner of Education, for the benefit of local schools, with the funds distributed among the States on the basis of formulas reflecting population. Hence, they are very similar.

Second, despite the similarity of these programs, they now require four separate State plans, four separate distribution schemes, four separate applications at both State and local levels; four separate sets of accounting reports, and so forth—all of this adding unnecessarily to administrative cost and to administrative redtape.

Third, when the four similar programs are administered separately, as they now are, and as the gentleman from New Jersey (Mr. JOELSON) and as the gentleman from Kentucky (Mr. PERKINS) would require them to continue to be, this would mean that each State can spend only the allotted funds in the proportions, established nationally or fed-

erally, which might not correspond, and probably would not correspond to what the true State needs might be in these particular areas, but when the programs are consolidated the States can determine their own priorities.

Finally, program consolidation of these important, closely related State grant programs moves in the direction of broader Federal support of education, with fewer strings attached, so there will be more and more State and local authority over the use of funds, which is the direction I think we ought to go.

Mr. STEIGER of Wisconsin. Mr. Chairman, I appreciate the gentleman's contribution.

Mr. Chairman, until I have had a chance to take some time, I will not yield further. I must say I am somewhat disappointed at the opposition of my colleagues on the other side, to the Robison amendment.

Let us make it clear in the RECORD today, so that this will not get lost tomorrow. If we do not adopt the Robison amendment, we will, I suspect, adopt the Michel amendment, and then we will have to go on from page 26. So if the Robison amendment is not adopted, amending the Michel amendment, we have no chance to come back and increase the funding for the four grant programs in the Elementary and Secondary Education Act and the National Defense Education Act.

So I intend to vote for the Robison amendment, because if we do not, tomorrow the librarians and the supplementary education people and the guidance people will have many of the Members of this House to blame. I do not intend to be one of them. I intend to maintain my support of NDEA and the ESEA.

Let us adopt the Robison amendment. Let us not be fooled by the argument that this will give some superpower to the Office of Education. Consolidation means a great deal, but let us not forget if we fail to adopt the Robison amendment, we will not be back over this point in the ball game. We will have to go on from there.

Mr. DON H. CLAUSEN. Mr. Chairman, will the gentleman yield?

Mr. STEIGER of Wisconsin. I yield to the gentleman from California.

Mr. DON H. CLAUSEN. Mr. Chairman, any nation that can put a man on the moon can certainly afford the price of a quality education for every American and any person who does not realize that it was the American educational system that made it possible for one of our astronauts to walk on the moon, has missed a very significant point.

One of the realities of educational planning and budgeting at the school district level, is that once the Congress begins funding a project or program at a determined level, our local school boards depend and rely on that funding once they have their programs underway. This is only logical and practical. As a result, they budget on that basis, and when, as has happened so often, these funds are cut or eliminated, they find it difficult, if not impossible, to compensate for these funds from State or local sources to continue programs already underway.

My point is, that while the Committee on Appropriations has reported out a bill which, in effect and on the surface at least, increases the overall appropriation for education by $123 million over the budget request, there is a lot more involved here than just the matter of quantity alone.

At this point, Mr. Chairman, I want to associate myself with the remarks made yesterday by my friend and colleague, the gentleman from Minnesota (Mr. QUIE), in stressing the vital need to upgrade and enhance the national defense student loan program, and in the area of vocational education. As I see it, it is in these two areas that we, in the Congress, can contribute most to the poor, the underprivileged, and the unskilled in this country.

A third area of major concern to many of us in the Congress concerns the committee's recommendation regarding Public Law 874 funds for federally impacted areas. I represent a district in California that has felt the true impact of the military buildup on the west coast associated with the Vietnam conflict. The steady influx of military families and Federal employees in this area has placed a tremendous burden on the local school boards, particularly in Marin and Napa Counties, and to a lesser extent, in Sonoma County.

Quite frankly, I view the recommendation to cut funds entirely for section 3–B of Public Law 874 as grossly unfair and discriminatory in nature—not only to the school districts that are relying so heavily on these funds, but to those who will have to pay the bill, should this section go unfunded. In this case, the difference would have to be made up by the already overburdened property taxpayers, and by the very people this legislation was intended to help—the service families.

Anyone familiar with the military's on-base housing priority system knows that it is the lowest ranking men, the privates, seamen and airmen, who by and large are at the bottom of the list and must reside offpost until they either rise in rank or until housing becomes available to them. As such, Mr. Chairman, these men are the lowest paid people in the service, and it is they who will certainly suffer the most should section 3B go unfunded.

In all candor, I know it is not the intent of the Congress to make an already difficult situation more difficult for these young married servicemen who have responded to their Nation's call. Nor is it the intent of the Congress to inadvertently place a greater burden at this time on our taxpayers and local school districts that have had absolutely no choice in deciding where military bases are located, or where the influx was going to be placed with regard to the war in Vietnam. This, however, could be the net effect should this unwise, unfair, and shortsighted provision carry.

It is my fervent hope that every Member will weigh this provision of the bill carefully and in light of what we are trying to provide here in the way of a quality education for all Americans.

Therefore, I call on my fellow House Members to uphold the intent of the Congress as expressed nearly 20 years ago, by voting to support full restoration of the desperately needed funds for federally impacted areas.

Mr. McCLORY. Mr. Chairman, will the gentleman yield?

Mr. STEIGER of Wisconsin. I yield to the gentleman from Illinois.

Mr. McCLORY. Mr. Chairman, I commend the gentleman in the well for his statement.

Mr. Chairman, there is no greater obligation on the part of this Congress than to support programs of education for the young people of our Nation.

As in the past, I feel that full funding of the impacted school programs is essential. In the 12th Congressional District of Illinois, impacted school funds assist those school children whose parents reside on the military bases at Fort Sheridan, Great Lakes Naval Training Center, and the Downey Veterans' Hospital, as well as the children of parents who are employed at such Federal installations.

My colleague, the gentlewoman from the State of Hawaii (Mrs. MINK) offered the amendment to increase impacted school aid in the last Congress. It was my expectation that she would offer a similar amendment to the present bill. Unfortunately, the popularity of the full funding of the impacted school program is being used in the Joelson amendment as a vehicle to continue four other categorical grant programs.

Mr. Chairman, my experience with local school administrators convinces me that the multiplicity of categories impedes local school principals in their efforts to develop improved educational opportunities.

Accordingly, the subcommittee's recommendation to lump together four categories has merit. If the overall total of funds—as proposed in the so-called Robison amendment—were to be adopted, this objective could be attained.

In addition, Mr. Chairman, if there could be full funding of impacted school aid, then the Congress would be fulfilling substantially our nationtal responsibility to elementary and secondary education.

One advantage to impacted school aid is that the funds may be expended to meet the greatest and most pressing needs of the local school districts.

There is a similar advantage in the Robison amendment.

However, it is doubtful that a clear-cut expression consistent with my position will be possible with the amendments and substitute amendments which are being considered in today's debate.

Mr. MEEDS. Mr. Chairman, I rise in opposition to the substitute amendment and in support of the amendment offered by the gentleman from New Jersey.

Mr. Chairman, I rise in support of the Joelson amendment. I would like to focus my attention on the provisions pertaining to vocational education. Under the provisions of the amendment, we will add $131,500,000 to the committee bill.

The largest part of the increase is for increasing basic grants to States. I point out that through the set-aside provi-

sions and the Vocational Education Act Amendments of 1968, unless we make these additional amounts available to the State grants, some of the ongoing vocational programs in our States are going to have to be cut back, because there are earmarked funds in this new act of 40 percent.

So it is necessary to increase the amount by $57 million, as the Joelson amendment does, in order to assure that the ongoing programs will be continued.

The 1968 amendments to the Vocational Education Act, I would like to point out to the Members of this House, were passed unanimously by this House and by the other body, and we set up funding under that legislation which amounts to about $766 million for this fiscal year. Here we are, trying to get $488,716,000 by the Joelson amendment—about 63 percent of the funding.

Unless these amendments are adequately funded, the action of this House and the other body last year will be empty acclaim.

Of the 26 million youngsters who will enter the labor force next year, three out of 10 will be high school dropouts. Even those who have graduated from high school will have a difficult time obtaining employment, because they lack salable skills. Today only 14 percent of our high school children are receiving occupational education. This means that over 50 percent of our students who leave school or graduate from high school each year and who do not go to college have had little or no preparation for the world of work.

There is little doubt in our minds, and there was little doubt last year when we so enthusiastically passed the Vocational Education Act Amendments, that without sufficient vocational education, we would face, perhaps, the greatest challenge and crisis in American education we have ever faced. We recognize the need. We have tried and we are tired of asking repeated funding for remedial programs for the unemployed, the disadvantaged, and the undereducated.

For once we could do something conclusive by making funds available for educational programs that will eliminate the need for these steps that are taken after the fact.

We authorized $766,650,000 for fiscal year 1970. Now we are talking about appropriating only $279,216,000. I find this embarrassing. I find this an aspiration gap.

The Congress of the United States has authorized good education legislation. Year after year we have failed to adequately fund them. We have held out the aspiration to the children of America, to the teachers, to the educators, and to our school systems, and then we have dropped them brutally with our failure to appropriate money.

I submit for the poor, for the parents, for the educators, and for the concerned citizens this yo-yo attitude can only generate a crisis of confidence. History suggests that dashed hopes are the seed of turmoil.

The promise of a new day cannot be met with lofty rhetoric and a pallid performance. The domestic budget contributes as much to our national security as does our military budget. A progressive country solving its own problems may do more for peace than a phalanx of antiballistic missiles. Full funding of education and the fulfilling of man's hopes must command a high priority.

The CHAIRMAN. For what purpose does the gentleman from Pennsylvania, a member of the committee, rise?

Mr. FLOOD. Mr. Chairman, I should like to inquire how many more speakers we have.

How many are standing? How many do I see?

One, two, three, four, five, six, seven—the gentleman from Illinois would be eight and I would be nine. And the gentleman from New Jersey (Mr. JOELSON) is still here. That is 10.

Thank you, Mr. Chairman.

Mr. MELCHER. Mr. Chairman, I move to strike the requisite number of words.

Mr. SYMINGTON. Mr. Chairman, will the gentleman yield?

Mr. MELCHER. I yield to the gentleman from Missouri.

Mr. SYMINGTON. Mr. Chairman, I have listened with care to this extensive debate, waiting with open mind to analyze whatever substantive criticisms might be raised against the educational programs sought to be strengthened by the Joelson amendment. I have yet to hear any. The entire argumentation offered to the Joelson amendment has been budgetary in character.

In the other body, a debate has been in progress for some weeks regarding the advisability of deploying a new weapons system at a cost of upward of $10 billion. Opponents of that deployment have adduced arguments touching on the efficacy of the system as well as its cost. Yet, in spite of the agreed overwhelming budgetary consequences of the system and grave doubts and differences as to its efficacy, it may be adopted. Before us, on the other hand, additional educational assistance is questioned on cost alone.

It would be surprising to find ourselves investing a sum in the next generation of weapons which might not work and not one-tenth of that sum in the next generation of Americans who will certainly have to.

Mr. MIKVA. Mr. Chairman, will the gentleman yield?

Mr. MELCHER. I am happy to yield to the gentleman from Illinois.

Mr. MIKVA. Mr. Chairman, I rise in support of the Joelson amendment. There is no arena in which the fate of our country hangs more in the balance than in education. We either will give our children the tools with which to solve the present problems that confound us or civilization as we know it can perish. If there ever has been a price tag on survival, it must be the downpayment on our educational commitment represented by this amendment. I am pleased to vote for the amendment. I wish the consensus of the House would support an even greater appropriation for our future.

Mr. KOCH. Mr. Chairman, will the gentleman yield?

Mr. MELCHER. I yield to the gentleman from New York.

Mr. KOCH. Mr. Chairman, I rise to support the amendment offered by the gentleman from New Jersey (Mr. JOELSON). That amendment increases the appropriations originally proposed by the Appropriations Committee by the additional amount of $894,547,000. It is incredible that the Appropriations Committee at this time in our history would bring in a bill that is almost a billion dollars less than the education appropriations for the past fiscal year, 1969.

In my own State of New York, we are going through an education crisis as I am sure every State in the Union is. We find that the reading scores of our children are poor, that dropouts are on the increase, and that the moneys needed to turn this situation around are simply not available from local resources. In the city of New York, the board of education has stated that it will be compelled to close the schools sometime in mid-term if additional funds are not provided to fund the school year at an even modest level. Our board of education has said that it would rather quit than cut back the existing school programs which are inadequate, and they should not be compelled to do so. The State legislature in my State did not provide the necessary funds and many of us have requested the Governor to call a special session of the legislature in order to deal with this problem. But we are compounding that financial bind if we further reduce the moneys already promised to the States under the authorization bill originally passed by us this year.

If the Joelson amendment is passed, I estimate that the State of New York will receive over and above what the appropriation bill now provides an additional sum of $76,757,000. As large as that sum is it is still meager in relation to the need. But it will be helpful in dealing with a dire need.

It is disheartening for me as a freshman Member of Congress to see how easy it is for the military establishment to maintain and add to its budget and conversely how difficult it is for those who wish to strengthen the minds and bodies of our young people to obtain the necessary funds. To those who, whenever domestic programs are before this Congress, cry out in defense of their savage cuts, "fiscal responsibility," I say it is the height of fiscal and moral irresponsibility to shortchange the education of our youth. I urge the passage of the Joelson amendment and commend my colleague from New Jersey for having undertaken to marshal the forces on both sides of the aisle to override those ruthless cuts which the Appropriations Committee is attempting to impose on Federal aid to education.

Lastly, I want to acknowledge with gratitude the efforts of the Emergency Committee for Full Funding of Education Programs whose members have made herculean efforts to bring home to every Member in this Hall the need for additional funding. If the Joelson amendment is passed as I hope it will be, in large measure it will be as a result of the efforts of these concerned citizens.

Mr. ANDERSON of California. Mr. Chairman, will the gentleman yield?

Mr. MELCHER. I yield to the gentleman from California.

Mr. ANDERSON of California. Mr. Chairman. I rise in support of the Joelson amendment. This amendment would supplement many educational programs which are not adequately funded in H.R. 13111.

The Joelson amendment would provide additional funding for school libraries, student loans, vocational education, equipment and materials, college construction funds, and impact area aid. Each one of these programs is vital to some facet of the educational process. We can teach our children to read, but we cannot show them the magic of books unless our libraries are well stocked and up to date. Books are the key to all human knowledge and achievement. We jeopardize all we have done if we deny our youth the opportunity of a book. A good school library system is central to effective education. As it has been said in the past, "libraries are the banks of our educational system. And they yield rich dividends in knowledge and wisdom. They are the summing up of past achievement and a stimulant to future progress."

Our vocational institutions are insurance in another way. They insure that the needs of a highly technological society will be filled now and in the future. They must be able to meet the changing manpower needs and be able to prepare many of our citizens for a rewarding place in our industry. Furthermore, vocational education today is a vast savings for tomorrow. If we train today, we will not be faced with the need for crash remedial programs in the areas of retraining, unemployment, poverty and other social and correctional services.

Our present society demands a greater and greater number of college-trained people. And yet the cost of higher education is rising greatly. We cannot expect our students to go to college, if we do not provide adequate financial aid. The Joelson amendment increases the funds for student defense loans by 40 million dollars. This money is necessary if college is to be a reality for many of our students. Even this amount would not totally meet the increased demand.

Each of us has heard the expression "penny wise and pound foolish". If we skimp on the education of our children, this is exactly what we would be. The future is on our doorstep asking for help. How can we deny it?

Mr. FLOOD. Mr. Chairman, will the gentleman yield?

Mr. MELCHER. I am happy to yield to the gentleman from Pennsylvania.

Mr. FLOOD. Mr. Chairman, I ask unanimous consent that following the remarks of the gentleman in the well all debate on the amendment and all amendments thereto, including the substitute amendment, be terminated in 35 minutes, reserving 5 minutes for the gentleman from Illinois (Mr. MICHEL) and 5 minutes for the gentleman from Pennsylvania (Mr. FLOOD).

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

Mr. HOWARD. Mr. Chairman, reserving the right to object, when the chairman of the subcommittee took a count only a minute ago he counted 10 Members on their feet. I believe at the present time, with 35 minutes, each Member wishing to speak might get less than 1 minute.

I wonder if the gentleman would revise the time limit upward just a bit.

Mr. FLOOD. I will make it 40 minutes. Will the gentleman settle for 40 minutes?

Mr. HOWARD. Mr. Chairman, I withdraw my reservation.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

The CHAIRMAN. Debate will be limited to 40 minutes, and the names of Members standing will be taken down.

Mr. McCORMACK. Mr. Chairman, I ask unanimous consent that the time taken in connection with the last action not be taken from the time of the gentleman in the well.

The CHAIRMAN. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. FLOOD. Mr. Chairman, a point of inquiry. Is it clear that in my motion I reserved 5 minutes for the gentleman from Illinois (Mr. MICHEL) and 5 minutes for the gentleman from Pennsylvania (Mr. FLOOD); that is, 5 minutes each?

The CHAIRMAN. That is the Chair's understanding. And it is also the understanding of the Chair that under a unanimous-consent request the time of the gentleman from Montana is not to be taken out.

The gentleman from Montana is now recognized.

Mr. MELCHER. Mr. Chairman, the record of debate concerning this bill establishes that the administration budget proposals and the committee action are trying to save Federal funds. However, both shortchange the funding of schools and education programs and libraries. The local taxpayers and the States will have to make up the shortage. Uncle Sam dips heavily into the pocketbooks of all taxpayers, and should pay for his share of education. Part of the $3.1 billion Federal surplus should be invested in these programs to meet the growing costs of education. I support the Joelson amendment with vigor because either we improve the bill by passing this amendment, or our Montana people will be called on to add $5 million to local and State taxes.

Unless the Congress acts to provide full funding for the education bills it has enacted, we will be playing a cruel hoax on the children and youth of this Nation. It is a fallacy to believe that the States and local districts can properly serve these children if the Congress fails them. As a member of the State Legislature of Montana for many years before I was elected to Congress, I am aware that State revenues and local taxes cannot be increased to the degree necessary to make up the difference that inadequate Federal appropriations would require. I am also aware that local property taxes are already above reasonable limits, especially in school districts with the largest percentage of low income families. Clearly inadequate Federal appropriations will result in curtailment of programs for children and young people who most need the special assistance which Federal funds can make possible. While I am concerned that all education programs be fully funded, I am particularly distressed at the disastrous cuts in this bill of the funds for operational expenses of school districts impacted by Federal installations. My district in Montana contains Malmstrom Air Force Base in Great Falls, numerous Minutemen intercontinental ballistic missile sites, and it also contains Fort Peck Dam, an Army Engineers facility in northeastern Montana. The school districts in which these installations are located simply cannot cope with the proposed reduction of approximately 60 percent of their Federal funds. If these impact funds are not restored, the entire State-aid program for all districts in Montana will be distorted, since State funds will be drained into these and other federally impacted districts to the detriment of all school districts in the State. We have in my Eastern District of Montana, five Indian reservations and those schools off the reservations that educate Indian youth receive Federal impact aid.

The need for impact aid is no less now than it was when it was first enacted in the early 1950's. The land occupied by the Federal installations is still off the tax rolls. The federally employed military and civilian personnel and their dependent children are still moving in and out of the communities, creating the same impact that existed in the fifties. The need is as great as ever.

If there are flaws in the impact laws, then these should be corrected by the Congress. But to take such inconsiderate and cruel action as denying all impacted districts up to two-thirds of their entitlement is not the way to achieve reform. It can only achieve chaos.

I also support increased funds for vocational education. This is vitally necessary in a State such as Montana which is large in area with a large future for a growing economy. We have the waterpower, we have the natural resources—and we have the space—to achieve industrial development, which is greatly needed, but we must have skilled manpower to help bring this about. Recent Federal programs for expanding vocational education hold great promise—but provide only broken dreams to our youth if the funds are not forthcoming.

It is extremely hard for me to understand how the Secretary of Agriculture can come before our Agriculture Committee and recommend retraining rural people for "new opportunities"—as he did the other day—and we can be asked at the same time by the administration to reduce vocational education appropriations.

College student loans, work study, and college construction are worthwhile investments and this amendment increases all three.

The distinct possibility exists that unless the House acts today to increase the funds for the combination of titles II and III of ESEA and titles III and VA of NDEA that guidance and counseling services provided by title VA of NDEA will be reduced drastically from the $17,000,000 provided last year. The funding for guidance and counseling is completely in doubt under the committee bill. This is a deplorable situation that must be corrected. Guidance and counseling services must be increased, not decreased as the committee bill and the Nixon budget provide.

There is an old saying in Montana—"Put your money where your mouth is." I believe this Congress must follow this advice by making appropriations for education equal to the authorizations which the laws provide.

We need increasing funds for counseling, for libraries, facilities, for impacted areas—for all the categories of educational assistance which has been provided in the past.

Some things can be postponed a year or 5 years, without any loss except time. But the education of our children cannot be postponed a year, or 5 years, without irreparable loss.

Mr. ALBERT. Mr. Chairman, will the gentleman yield?

Mr. MELCHER. I yield to the majority leader.

Mr. ALBERT. Mr. Chairman, I desire to commend our fine new colleague on the high quality of his statement. I also desire to associate myself with his remarks. He has made a great speech on a most important amendment.

Mr. MELCHER. Thank you.

The CHAIRMAN. The Chair recognizes the gentleman from New Jersey (Mr. HOWARD).

Mr. HOWARD. Mr. Chairman, the entire education community of this Nation is united, along with labor and other civic groups, in urging increased support for the education legislation we have passed in recent years. I congratulate them and support their effort—for it is not for themselves but for the children and young people of this Nation.

I support the amendment proposed by my distinguished colleague from New Jersey (Mr. JOELSON), which will give modest increases above the committee's bill for such programs as impact aid, vocational education, student loans, and aid, to disadvantaged children. The amendment merely restores—merely to the level of 1969 appropriations—funds for library and textbooks, equipment, guidance, and counseling, and innovative programs under title III of ESEA. Even these amounts are far below the authorizations we as a Congress have enacted into law.

I recognize the serious fiscal situation facing the country, and the problem of inflation which haunts us all. I do not believe, however, that inflation will run rampant through the land because we keep faith with the children of our country. We promise them substantial funds for education. We must deliver those funds if we expect them to maintain their faith in representative government.

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania (Mr. MOORHEAD).

Mr. MOORHEAD. Mr. Chairman, I will make my remarks brief and I hope telling. I would hope that this Chamber today takes action that will reaffirm the somewhat flagging commitment of the Congress to educational excellence.

Mr. Chairman, how can we vote to lower the fund levels which we established last year?

How can we create for the American people illusory education programs, for which in 1 year we authorize and appropriate necessary funds and the next year literally disclaim them by refusing to appropriate adequate funds. We have created tremendous gaps by talking big and delivering small.

We have before us a bill that is almost a billion dollars lower than the education appropriation for fiscal 1969.

We can change that. We can see that the American school systems get the funds needed to maintain the necessary educational excellence that our society demands of students.

We have before us the amendment of the gentleman from New Jersey to beef up the education appropriation. Let us support this amendment.

Applying the meat ax to education is not fiscally responsible.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. TUNNEY).

Mr. TUNNEY. Mr. Chairman, I was not planning to speak in this debate originally, but I have, as any other Member of Congress, a system of national priorities, a system of values and I feel it is important that I speak out on these priorities and values at this time.

Mr. Chairman, I just cannot imagine that in this country of ours at this particular time in our history that we are willing to spend $30 billion to keep the Thieu-Ky government in power in Vietnam and only spend approximately $31.9 billion at all levels of government to educate 50 million young Americans.

Now, Mr. Chairman, in my opinion that is the most extraordinary malapportionment of priorities about which I have heard. I cannot see this Congress being unwilling to fund an additional $2.5 billion with which to educate these 50 million young Americans.

The Labor-Health, Education, and Welfare appropriations bill includes $202,167,000 for impacted area school aid. This is identical to the President's budget request for fiscal year 1970, $318,694,000 below the amount appropriated for 1969. It represents 90 percent of the authorization.

This reduction in funds will result in the elimination of Federal assistance under Public Law 874 for category B students—those whose parents work but do not live on Federal property. If we allow this to occur many school districts throughout the Nation and particularly in heavily impacted areas such as California, would be placed in a precarious financial situation.

Public Law 874 has had a long and successful existence and should be continued and even expanded. The program is designed to provide financial assistance for the maintenance and operation of public schools which experience financial burdens due to new or increased Federal activity. The full entitlement required for fiscal year 1970 is $650,500,000 nationally and $100,900,000 for California. The President's budget and the appropriations bill reduce this to $187 million and $25,200,000, respectively.

Public Law 815 provides assistance for construction of urgently needed facilities in school districts which have had substantial new or increased Federal activities. The full entitlement required for fiscal year 1970 is $80 million nationwide and $12 million for California. The President's budget and the appropriations bill reduces this to $12 million nationally and $450,000 for California.

The Federal Government is the Nation's largest landowner and employer. However, the Federal Government's land holdings and activities are not subject to taxation by the local or State governments. The presence of Federal property in a school district reduces the amount of real estate taxes otherwise available for educational purposes. Public Laws 874 and 815 are designed to lighten this burden of education which is imposed upon local school districts.

In California for example the nine counties of Imperial, Riverside, Kern, Los Angeles, Orange, San Bernardino, San Diego, Santa Barbara, and Ventura represent the highest concentration of federally impacted activity in the United States. There are 3,263,021 students enrolled in the school districts of these nine counties. There are 229,755 federally connected pupils in the districts within this area. The 204 school districts in these nine counties have an entitlement of $45,840,253.

Dr. Gordon Harrison, superintendent of the Moreno Valley School District in California has estimated that out of the 204 school districts in the nine counties mentioned earlier, only 20 would remain financially solvent if category B student aid is eliminated. The entitlement of $45,840,253 would be reduced to $12,787,636 if category B funding is eliminated as this appropriations bill and the President's budget propose to do. Other impacted area school districts in California face equally serious consequences if the Congress does not appropriate at least an entitlement equal to that of last year, $505 million. The alternative would be substantial increases in the local property taxes.

There are about 446 California school districts which use Public Law 874 funds, located in 47 of the State's 58 counties with 403,166 students. To replace the loss of Public Law 874 funds would require raising the local tax rate from a minimum of 0.20 in some areas to a maximum of 2.40 in others. Any increase at all is too much.

The taxpayers of California are terribly overburdened. It is clear that the

property tax can no longer be the sole vehicle for financing education. Other sources and methods of financing must be found. The impacted area program has served as an effective supplement for educational financing. Instead of curtailing this concept of school aid, we should be examining ways to expand it. Just last week the House passed legislation which allowed the States to tax national banks. This action represents a recognition by the Congress of the difficulties many States and localities are having in raising sufficient funds.

Clearly the proposed appropriations for impacted area school aid is not in keeping with the needs of education today. Clearly the proposed appropriations would be disastrous to States like California.

Mr. Chairman, education is one of the basic elements in the preparation of our youth and is essential to a continuation of our commitment to build a better future for our country and its people—to foster a better world and a better life for mankind.

Education has long been cited as the key to the solution of our economic and social problems. We must continue to strive for excellence. Not until we can say that each American child has had a good education should we begin to feel that our educational system is living up to the expectations we have for it.

We in Congress must increase the appropriations for education today if we feel that this goal can and should be fulfilled. Our Nation with its increasing complexity cannot bear a decrease in Federal education funds.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. WHITE).

Mr. WHITE. Mr. Chairman, I rise in support of the amendments to bring the financing of our educational programs more nearly up to the levels which this Congress has previously authorized. These are the Joelson and Smith amendments. To fail to do so is to retreat from the program we have so well conceived and executed in the past few years. This has been a nonpartisan program which has wisely made education the point at which our efforts to build a stronger nation have their focus.

We have legislated Project Headstart so underprivileged children might have opportunities to learn. Shall we, then, through cutting back such vital programs as impacted area funds and school library funds deprive these students of the very advantages we have been trying to give them? We have used such programs as the Neighborhood Youth Corps to keep our young people in school. Shall we, then, through cutting back on counseling services and vocational education, halt the very progress we have tried so hard to promote? In Project Upward Bound we have successfully taken young men and women from low income and underprivileged families and motivated them to attend college. Shall we then cancel out these advantages through cutting back our NDEA student loan programs, and our undergraduate construction programs?

Mr. Chairman, I represent a district where the need for these educational programs is especially great. In my home county, El Paso County, military installations occupy 68,032 acres, more than 106 square miles of nontaxable land—land which is a part of the various school districts, and yet which cannot be taxed by them. More than 23,000 students in the two major school districts of El Paso County are from families employed at nontaxable Federal installations. The proposed budget cuts would deprive these districts of approximately $3 million in impacted area funds for fiscal 1970. In smaller districts, the amounts are less, but the impact is equally critical.

These impacted school districts are taxing their residents at or near the legal limit, and future bond requirements will absorb the small remaining leeway. Their only recourse, if deprived of impacted area funds, will be to cut vital programs.

My district contains many young, ambitious Latin American students from low-income families. Our colleges are putting forth every possible effort to provide the higher education facilities these young people need. We must not reduce the effectiveness of their efforts through cutting back on construction and student loan programs. For many of these students, the critical need is vocational education. Our efforts in this direction must be steadily increased and not reduced.

Two days ago, a report from the Budget Bureau gave dramatic proof that many of our economy efforts are bringing gratifying results. We can reduce Government spending. We can find unessential Federal efforts that can be reduced or eliminated—but to make the proposed cuts in educational expenditures is to turn our backs on the genuine progress we have been making. It is inconsistent, wasteful, and uneconomic. I urge support of the amendment that will head us again in the right direction.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. HANNA).

Mr. HANNA. Mr. Chairman, I would like also to comment on this business of consistency that was so eloquently argued by the leader of the opposition yesterday. Mr. FORD asked us to be consistent by voting against educational increases if we did not support the surtax on the administration's terms. As I look back on the record of their consistency of voting for the funds to supply the administration just past, I thought their definition of consistency a year ago was taken out of the philosophy that defines consistency as the backwater of the stunted mind.

He has asked us also to follow his logic in reducing educational funding. I would say that a definition of that kind of logic is it is a system of thinking which allows you to go wrong with confidence.

Mr. Chairman, we have to address ourselves to the strengthening of our Nation. We have voted $80 billion for strengthening the military. We will in this bill provide $10 billion for education. Is it inappropriate for us to commit one-eighth of the amount we so readily provided for military strength to provide for educational strength? The strength of the United States, if you look at it over the years, is in our educational system, and in the educational support that we give our schoolchildren. Let us here today play to the surer and enduring strength of our Nation, and support the Joelson amendment. Lend your vote and your support to strengthening our educational funding.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. RYAN).

Mr. RYAN. Mr. Chairman, I rise in support of the amendment offered by the gentleman from New Jersey (Mr. JOELSON).

Some 5 years ago, when the breakthrough on Federal aid to education finally came, this Congress made a commitment which was reaffirmed in later authorization bills, and yet that commitment has been broken time and again in the appropriation process, as the programs repeatedly have been funded at less than fifty percent of the authorizations. The bill before us, which the Joelson amendment would increase, provides only some 38 percent of the authorization for title I of the Elementary and Secondary Education Act; it provides an average of some 18 percent of the authorization for ESEA title II, libraries, and title III programs.

Mr. Chairman, it is essential that we reorder our priorities in this Congress, and the place for us to start is today on education.

The Joelson amendment, which has the strong support of the numerous educational groups which make up the Emergency Committee for Full Funding of Education Programs, would provide additional funds to reestablish fiscal year 1969 appropriations levels for school libraries, NDEA equipment, guidance, and counseling, and college facilities. In addition it would provide increased funds which are necessary for the impacted area aid program—Public Law 874—vocational education, title I of the Elementary and Secondary Education Act and the NDEA student loan program.

The total increase in appropriations for these vital programs would total approximately $900 million.

Mr. Chairman, the Joelson amendment is necessary because the Committee on Appropriations has simply failed to provide amounts adequate to the educational needs served by the programs I have mentioned. In the school library program alone, evidence presented to both the Appropriations Committee and the Committee on Education and Labor indicated that about $200 million was needed to meet the need which exists for this program. While the increase of $50 million contained in the Joelson amendment falls pitifully short of that figure, the provision of an additional $50 million will at least enable the program to operate on the same level as it did in fiscal year 1969, and will enable many school districts to purchase textbooks and other educational material essential to the educational process.

This year, as in past years, the Committee on Appropriations has recommended appropriations for education which fall far below the authorized levels; for instance, the committee has

recommended only 38.7 percent of the authorization for title I of the Elementary and Secondary Education Act. The Joelson amendment will only fund it at 44.5 percent of the authorization. Yet the budget of the National Aeronautics and Space Administration, which last week achieved its goal of placing men on the moon, has received appropriations only slightly below the amount requested by that agency.

It is especially ironic that the National Defense Education Act should have had its funds slashed in three major areas—student loans, guidance and counseling, and equipment. For it was the Russian launching of the sputnik satellite a little over 10 years ago which fostered both the NDEA program—which was designed to increase the supply of college-educated scientific personnel—and our own space program which has culminated in the lunar landing of Apollo 11.

If funds for vital educational programs continue to fall dismally below authorized levels, how does Congress expect programs like NASA to continue to achieve the progress which they have? More important, how will our educational needs throughout the country be met?

The increased funding provided by the Joelson amendment is the minimum which Congress can accept if Federal educational programs are not to be completely crippled. I urge the adoption of this amendment to appropriate an additional $895 million for the vital programs specified.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. PUCINSKI).

Mr. PUCINSKI. Mr. Chairman, I would like merely to point out to those Members who have found a great deal of comfort in title II, the title that provides books and other services to our private schools—and that is the only title under which they can get help for our parochial schools. That title will be washed in with three other titles if the Robison amendment and the Michel substitute are adopted.

Those of you who have found comfort in bringing some modicum of help to private schools in your district would actually be voting away that help because if the Robison amendment is adopted they would be programed and washed in with several other programs. Under our rules, no further amendments would be offered later in debate in this regard if the Robison amendment is adopted at this time, and no further amendments will be possible later on to restore these $50 million as a separate item under title II, which has brought meaningful help for the first time to millions of youngsters in our private schools.

So, Mr. Chairman, I hope those Members who will be tempted to vote for the Robison amendment and the Michel substitute will keep that in mind.

Also, I hope each of you by now has studied how much your respective districts and States will lose in the impact program if you vote for the Michel amendment. You can help all of the students in your districts, the impact students, the private school students, and all other youngsters in your district by supporting the Joelson amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Indiana (Mr. JACOBS).

Mr. JACOBS. Mr. Chairman, two questions have been asked that I have not heard answered. The first one is, "Where we will get the money if the Joelson amendment is adopted"; and the second is, "Are we going to bite the bullet?"

Mr. Chairman, the Joelson amendment, if it is adopted, will cost just a little more than one-third of the amount that one military contractor is attempting on one contract to overcharge the American public.

I do not think we have to bite the bullet. All we have to do is bite off the excess cost of the bullet, and there will be plenty of money to educate the children of this country.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. TALCOTT).

Mr. TALCOTT. Mr. Chairman, education is one of our most important unmet national needs. We need to emphasize education. It needs help. I want to help. Unfortunately, the present programs for Federal aid to education are unsatisfactory—almost wholly unsatisfactory. Almost everyone involved in education finds fault with some section or some phase of the Federal aid to education. The taxpayer is particularly unhappy. Bond issues for school purposes are failing more and more often. Local taxpayers are refusing to spend or bond themselves for the present education system. Federal income tax revenues must be shared with the States for education purposes. Until this occurs, I will not be satisfied with the Federal aid to education program.

Our Federal Government must reduce its expenditures. Every program may be required to be tightened. Education may be an exception, and we should fund education equally with last year. No cut can be tolerated.

Public Law 874, the Federal aid to federally impacted school districts program has been highly criticized and in some areas abused the intent of the Congress. In my congressional district, impacted funds are appropriately used as the Congress intended. The school districts have been lulled into a sense of security. They quite properly have relied on these funds. All students—not just impacted students—are adversely affected by any diminution of funds. If funds are to be reduced, it would be grossly unfair to cut off these funds suddenly.

The parliamentary situation is confused—as it usually is when we try to amend highly complicated bills on the floor. Four hundred and thirty-five men and women simply cannot make the correct decisions in a few hurried hours of debate.

The addition of almost a billion dollars to this bill is a heavy burden upon the national taxpayer, a major contribution to accelerating inflation, with considerable dissatisfaction among the various pressure groups who are promoting their own special interests in this bill.

It now appears that there will be even more additional amendments. This is not the way to legislate.

The Robison amendment, coupled with the Michel amendment, appears to have the best chance of passing and providing for the educational needs of our youth under the fiscal restraints which we must recognize.

It is easy to take the floor and boldly and grandly urge the expenditure of more and more and more money.

But we also must pay the fiddler now, immediately. Some of us must remember the taxpayer. It seems passing strange to me that some of us who are most interested in education also must be the ones to stand up for the already overburdened taxpayer. I am most surprised that so many of those who are urging the House to exceed by $1 billion the Committee on Appropriations and yet recently voted against the extension of the surtax to help meet the education costs or to extend the spending limitation of $191 billion. Every dollar we add to this bill must be deducted from the allowable spending in some other Federal program.

Too many Members today fail to distinguish between authorization, appropriation, and spending. All three are quite different and should be considered separately.

We simply cannot appropriate every dollar that is authorized. There are programs in excess of $280 billion which are authorized. To appropriate funds in this amount would bankrupt our country in a few months.

Even if we appropriate all the funds requested by every amendment proposed to this bill, the spending could be quite different. The Department of Education has at least $100 million for these very purposes already appropriated to it and not spent. No program will suffer by lack of appropriated funds.

If we are to add a billion dollars to this phase of Federal aid to education, which probably could be spent advantageously, we should do it fairly to all sections of the country and to all children. The Joelson amendment was devised to bring a few large special interests into a compact to try to assure passage. It was concocted in a hurry without adequate thought or consideration of all phases of education. It may have sounded good to the special interest groups at first blush.

I shall vote to increase the committee recommendation by one-half billion. I hope that this will be considered sufficient.

I hope that the Committee on Education and Labor will soon propose a bill for Federal aid to education that will prevent the kind of debate we have seen today.

The CHAIRMAN. The Chair recognizes the gentleman from Missouri (Mr. RANDALL).

Mr. RANDALL. Mr. Chairman, I rise in support of the Joelson amendment to H.R. 13111.

Under the limitation of time I will only be able to point out that the real issue before us is not that of economy

because the appropriation for education contained in this bill is not just another expenditure but is instead an investment. When all is said and done, money spent on education is the very best investment that can be made in the future of America. Nor is the issue here whether any of these funds amounts to a bonanza to local school districts as some have alleged. In every instance they have been authorized by prior legislation.

The true facts are that when we pass an authorization bill and then fail to follow it with an appropriation bill we have created a false image. When we authorize funds for education or anything else unless we intend to appropriate for these programs we have created a false impression and an unreality that is deceitful. Once we pass an authorization bill for a worthwhile program we in effect make a promise. We may choose to thereafter refer to these authorizations as entitlements but the true facts are we have made a sort of commitment. We should never let ourselves emasculate or belittle that commitment by appropriating less than the authorization. To authorize and fail to appropriate is to talk big and act small.

If we fail to appropriate sufficiently for the several entitlements under the education bill authorized and passed in the 90th Congress then no matter how we may try to explain it away or otherwise try to comfort or console the expectant recipients we are reneging on the promise we made and have shattered the image we created.

Mr. ICHORD. Mr. Chairman, will the gentleman yield?

Mr. RANDALL. I yield to the gentleman from Missouri (Mr. ICHORD).

Mr. ICHORD. Mr. Chairman, I rise in support of the Joelson amendment increasing the appropriations for educational purposes approximately $894 million over the amounts provided in H.R. 13111. Of this $894 million increase, $398 million is required to provide 90-percent financing of Public Law 874, popularly known as the impacted area program. I do believe that changes should be made in Public Law 874 in order that the need of the impacted areas is taken into consideration in the distribution of such funds. Some of the wealthiest school districts in the Nation are receiving aid under this program while many of the poorest districts receive nothing. However, I cannot permit the program to fall merely because we have failed to eliminate such wealthy districts who are not deserving of Federal aid from the program.

Throughout all my legislative career, on the State level as well as the Federal level, I have consistently supported increased appropriations for educational purposes. I feel very strongly that there is no area where Government can better spend its fund than in the field of education. I firmly agree with Humboldt who once said:

> What you would have in the State, you must first put into the schools.

No society such as ours, where the governed are also the governing, can afford to cheat on education which primarily deals with our most important resource, our youth.

The problem which we face today is essentially one of selecting priorities. We not only have educational problems which the Joelson amendment seeks to attack by the allocation of additional moneys, but we also have budgetary problems—serious budgetary problems. If we pass the Joelson amendment today we should resolve to recoup the moneys by cutting other programs in order to realize a balanced budget. There are innumerable items in the budget, the most obvious being nearly all the items in the foreign aid program, that should be assigned a priority below the additional moneys requested in this amendment. I support the Joelson amendment but hasten to add the caveat that we must not forget our responsibility to reduce other programs a comparable amount.

The CHAIRMAN. The Chair recognizes the gentleman from Indiana (Mr. BRAY).

Mr. BRAY. Mr. Chairman, there is nothing in the entire field of human endeavor more important than education, and this fact was underscored by H. G. Wells, who wrote in his "Outline of History":

> Human history becomes more and more a race between education and catastrophe.

Education's importance is too great, its expense is too large, its scope is too vast and its potential, for good or for ill, too critical to the survival of a nation and a culture to allow it to be turned over to social planners. Yet, today, more and more, the citizens of the American Republic view with alarm and concern the steady, voracious appetite of a Federal educational bureaucracy that seems to be more interested in sociological experimentation than in education, with our entire educational structure for a blackboard, and pupils and teachers as dots on a graph or figures in an equation.

No endeavor has greater potential community support and enthusiasm behind it, and no endeavor binds a locality together so tightly, as the school. This tradition is one of the best in our history, and as old as the Republic itself. The founders and settlers of our country knew the truth and validity of this and in their wisdom established the principle of local control and responsibility, which principle has contributed significantly to the enduring strength and greatness of our country.

The American people are aware of this and, by and large, so is the U.S. Congress. Unwarranted Federal meddling in education is not unknown to the people nor the Congress, and we are faced with it, again, on a large and rather intemperate scale.

The bill before us, H.R. 13111, providing appropriations for fiscal year 1970 for the Departments of Labor, and Health, Education, and Welfare and related agencies, carries a provision to deal with that very situation. This time it is the issue of agencies of the Federal Government using Federal money as a club to blackjack local school systems. The provision in question absolutely forbids the Federal Government from forcing busing of students, abolishing any school, or requiring any student to attend any school against his parents' choice. A similar provision was passed by the House last year but watered down by the Senate to the point of being totally ineffective. In addition, such restrictions have been written into law before, but have been totally ignored by the Washington educational bureaucracy.

The entire issue revolves around a very unfortunate sequence of events, practically all of which are attributable to some extremely radical proposals originating among the Health, Education, and Welfare bureaucrats back in 1966. Now, Congress had been aware for a couple of years of what might eventually be cooked up in fertile but feverish minds. Equally aware of the potential for great damage to the Nation's educational structure, congressional intent forbidding any such meddling had been made quite clear and plain.

THEORIZING RUN WILD

But there is always someone who does not get the word, and if they do, they choose to ignore it, setting themselves up as being better qualified to dictate to the American public what their educational structure should be. In this instance, "someone" was Harold Howe II, former Federal Education Commissioner, who took office in 1966 and almost at once made it quite clear that he was going to set the rules. A Wall Street Journal story of August 12, 1966, about Howe was headlined as follows: "Integrating Classes—Federal Officials Now Favor End to Tradition of Neighborhood School—New Education Commissioner Calls for Busing, 'Plazas'; Suburbanites Are Alarmed—His Only Weapon: U.S. Cash."

The story begins with these paragraphs:

> "We can't *do* anything; we can only suggest and stimulate local school districts." (Emphasis in original text.)
>
> The mildness of the words belies the intensity of the speaker, a firm foe of school segregation. He is Harold Howe II, the new Federal Education Commissioner, who insists that segregated schooling—by design or by living pattern, by race or by economic or social status—is bad for all concerned: Whites, Negroes, other minorities, poor kids, middle-class kids, rich kids. He will do all he can to help communities break down these barriers.
>
> Mr. Howe can be tough. To educators, he talks a hard antisegregation line: "Gradualism, no matter what we call it, has failed." To Congress, he advocates a tough law. Specifically he espouses the aim of a proposal by Senator TED KENNEDY of Massachusetts to introduce into legislation the concept that not only outright segregation but mere racial imbalance in schooling is bad.
>
> Down with neighborhood schools: About the only weapon now at Mr. Howe's command is money—the use of Federal aid to encourage local school experiments designed to assault segregation and, in the process, to weaken or even destroy the cherished "neighborhood school" tradition. This push is arousing cries of alarm from many schoolboard officials and parents, especially suburbanites.

A few paragraphs further, the Wall Street Journal story goes into more detail, as described by one of Howe's top aides, Mr. Nolan Estes:

> More experiments are needed, says Mr. Estes, so that the new ideas can be subjected to critical, independent analysis—ex-

periments not only with educational plazas but with the supplementary-center ideas and the busing of children beyond neighborhood boundaries that is basic to all the new approaches.

To the Howe strategists, the neighborhood school concept, as most people think of it, is old stuff. They hope parents and local school officials will think in terms of the city as a whole, or of the city and suburb, instead of just a neighborhood. "We're not ruling out the neighborhood school," says Mr. Estes. "We're simply enlarging the neighborhood."

CONGRESS STEPS IN

When the civil rights bill of 1966 was up in the House for debate, an amendment was adopted aimed primarily at Howe's ideas. The Washington, D.C., Star in its lead editorial of August 12, 1966, said:

The thrust of the amendment is in this sentence: "Nothing in this title shall be construed to authorize action by any department or agency to require the assignment of students to public schools to overcome racial imbalance." The purpose of this was made clear enough during the debate. The House believes that Howe, supported by Gardner, has grossly distorted the plain intent of the 1964 Civil Rights Act in order to impose on the country his own notion of what constitutes a desirable racial mix in the public schools. And he proposes to do this by withholding federal funds from any school district which does not conform to integration standards imposed by his agency.

What he (Howe) intends to do, in brief, is to bus school children back and forth to achieve a racial mix satisfactory to himself, and if necessary to abolish the neighborhood schools in the process. This has never been required by the Supreme Court nor intended by Congress.

But Howe and company went right ahead. Then, early in September 1966, it was revealed that a "study group" at HEW had prepared something with the title "Equal Educational Opportunity Act of 1967." Then Secretary of Health, Education, and Welfare Gardner said it was only an "unofficial discussion paper" but did admit that the proposals contained in it were under consideration.

A section of the proposed bill discussed techniques that might be used to achieve compulsory integration in local schools across the country. These would include: "comprehensive, districtwide rezoning of school attendance areas to obtain maximum heterogeneity"; "pairing, grouping or clustering of adjacent Negro and white schools"; "reorganization of the use of schools; changing feeding patterns"; "careful site selection to locate new schools so as to maximize integration of residentially integrated student populations"; "increased busing from overcrowded to underutilized schools."

This was going a little too far. The U.S. Office of Education had prepared for distribution 52,000 pamphlets containing the toughest speeches made by any official on school desegregation, including, among them, busing. They had all been delivered during May and June of 1966 by Howe, and, as a Washington newspaper admitted—

Taken together, the four speeches in the Howe pamphlet indicate support for rezoning and school busing to achieve integration, including exchanges between slums and suburbs.

Distribution of the pamphlets was held up by the Office of Education. The Office's action came within 3 weeks after disclosure of the proposed bill. Reason given was that a Howe quote on the inside cover of the pamphlet was given the wrong title—and an incorrect tagline on the quote said it came from a speech at Bennington College, where it had actually come from a speech given at Columbia.

And then one newspaper revealed that Howe, so strong about busing other people's children, was sending his own son to school—not in Washington, D.C., where the Howe family lived—but to a private school in New England. At the time, enrollment in Washington, D.C., schools was 53 percent white; 47 percent Negro. Enrollment at the private school was eight or nine Negro students among 385 white boys.

The last word on Mr. Howe's plans was said in an interview with the new Secretary of Health, Education, and Welfare, Robert Finch, which appeared in U.S. News & World Report, March 10, 1969:

Mr. Cohen (former Secretary of Health, Education, and Welfare) let Howe make a lot of statements in areas where Howe didn't have real authority—which gave a particular cast to the problem. They took the apparatus that had been assembled from earlier Secretaries of HEW and continued to push, push, push on this.

NIXON ADMINISTRATION STATES OPPOSITION TO BUSING

Secretary Finch had stated quite unequivocally earlier in the interview:

It's totally artificial to insist on busing school children if it may be detrimental to the level of education.

The greatest problem we've got in the elementary and secondary schools in the country is not to get so hung up on these other struggles as to let the quality of education in the public-school system erode and erode and erode.

President Nixon had recognized the problem and had said on two separate occasions, during the 1968 campaign:

I think that busing the child—a child that is two or three grades behind another child and into a strange community . . . I think that you destroy that child. The purpose of a school is to educate. That is what we have to do.

And, at another time, he said:

The purpose is education. I oppose busing because I'm for education. When you pick up children and cart them across town, you don't help their education. You hurt them.

So who is for the busing concept? Parents? Certainly not. My mail and, I dare say, the mail of every Member of the Congress, is overwhelmingly against it. School superintendents? Nation School magazine, May 1968, reported a poll showing 74 percent of the Nation's school superintendents were opposed to busing as a desegregation measure. School boards? The same survey had 88 percent opposed. Teachers? Today's Education, March 1969, carried a National Education Association research division survey showing 78 percent of the teachers were opposed to busing students from one district to another.

THE CHARGES AGAINST INDIANAPOLIS

The Department of Health, Education, and Welfare has recommended "racial balance" action in Indianapolis schools; the city forms a large part of the Sixth Congressional District, which I represent. The Department of Justice has filed suit against the school system, alleging discrimination in the assignment of pupils and teachers.

Now, the Indianapolis School Board has followed a general policy of allowing the neighborhood in which each school is located to determine which students go where. The objective has been to locate schools in areas where all children will not have to walk more than seven-tenths of a mile to school. There is no "racial mix" involved in this; courts have previously held that "racial mix" should not be involved. The Department of Justice a year ago held this policy is discriminatory and causes segregation. If this was true, then it would be in violation of Indiana State law, since desegregation of schools was done by law in Indiana in the 1950's. But no suit was filed under Indiana State law; it is the Federal Government nosing in to decide educational policies.

WHITE AND NEGRO CITIZENS AND PUPILS OPPOSE TRANSFERS

The Indianapolis School Board did take tentative steps to transfer teachers; this was part of Justice's charge. Thirty-eight teachers were to be transferred from Crispus Attucks High School, overwhelmingly Negro. The reaction of the Attucks student body was quick; they walked out in protest. At a school board meeting, Ronald Crenshaw, representing a delegation of Crispus Attucks High School students, raised strong objection to mandatory transfer of these 38 teachers. He said:

We are not against integration of Attucks, however, we are against the idea of drafting 38 of our black teachers in order to give Attucks a better racial balance. . . . Last year, Attucks was literally robbed of 25 black teachers. Now, a year later, Attucks is on the threshold of being robbed again. . . . When one is robbed of something, he usually considers that something valuable. We consider our teachers valuable.

They didn't become dedicated because someone said they ought to. They became dedicated because they understand and realize that a black student has to be better if he's going to succeed. . . . It is this dedication, loyalty and understanding that makes Crispus Attucks or any school a great and thriving institution.

At the same board meeting, an almost identical point was made by Citizens of Indianapolis for Quality Schools. This consists primarily of Northwest High School area parents and teachers. Their statement to the board said they were convinced—

Such mandatory transfer of teachers . . . is injurious to the education of all students . . . and lessens the quality of education.

Criticism of the Attucks transfers was joined by the Indianapolis section of the National Council of Negro Women and the Attucks Teachers and Students Association and the class of 1938, which objected to Attucks being used as a "resource pool" for black teachers.

In face of this, the school board then reduced the number of teachers transferred from 38 to 10, which was well below the minimum demanded by the Justice Department. At the meeting referred to above, not even members of the school board defended the teacher-transfer policy. As a column in the Indianapolis News put it:

It appears that the school board, under duress from the Justice Department, has accepted policies which lack support in the community.

PLAYING WITH FIRE

An Indianapolis Star lead editorial of April 26, 1969, entitled "Nose Under the Tent," cited the Star's longstanding warnings that Federal aid meant Federal control. It concluded with a paragraph grimly ominous:

But the camel of Federal control has its nose under the tent of our school system. Unless resistance to further interference in Indianapolis and Indiana public education is successful now, our schools will be, as Chicago is gradually becoming, the satrapy of the Federal empire in Washington.

"As Chicago is gradually becoming." The Baltimore Sun for Tuesday, July 29, 1969, in a story entitled "Chicago Schools—III: Suit by United States Would Renew Strife," refers to plans to sue the Chicago school system over desegregation, and says this "seems a certain prelude to renewed strife in a tinderbox of racial tension."

Speaking further of community sentiment, the story says:

Among the populace, the same well-organized white neighborhood groups that have resisted any form of integration in the past predictably assailed the federal action . . .

Just as predictable, Negro militants opposed any attempt to bring more white teachers into Negro neighborhoods.

Between these extremes, the response was unenthusiastic. In the Negro neighborhoods, the emphasis in recent years has been on community programs to improve schools and change them into institutions the people feel can help their children.

To achieve this, a lawsuit threatened in Washington against a remote city agency downtown seems simply beside the point.

For myself, I find it highly significant—and I do not see how the point can escape anyone—that the Federal Government's interference in its current fashion seems to be almost universally resented by both races. Why not? Is not this interference, by implication, casting a tacit interference of supposed inferiority on those very persons it is supposed to "help"? Who would not resent it? And why should not the Congress oppose it by every means possible? The Congress, I am certain, does not wish to be a partner, silent or otherwise, to engendering "renewed strife in a tinderbox of racial tension."

THE FEDERAL SCHOOLMASTER

In view of this public sentiment, in view of the great danger inherent in this questionable tampering and meddling, I find it hard to see just where HEW and Justice take their rationale for their actions. I cannot help but wonder if both agencies are afflicted with some sort of curse of absolutism—striving for the absolute goal, postulated on false premises, and in so doing losing sight of the first and most important task concerned with raising a child to maturity: education.

Now, the charge is made against the amendment that it is a red herring, to draw attention away from the overall question of school desegregation itself. The charge is false; the charge itself, indeed, is a red herring, to draw attention away from forces and individuals who are only too ready and willing to go behind the back of the American parent, student, and Congress to use our entire educational structure as one massive sociological experiment blackboard.

Let us not forget that education is not only a big business in terms of number of pupils and physical plant, but also in terms of money.

Public and private schools, total expenditures, ran over $50 billion in 1967–68. The Federal share is a relatively small percentage—6.1 percent, 1966–67—but in nothing else does such a small share have such tremendous influence.

The balance, let no one forget, comes from communities and States, through taxes, in the same fashion all money for public expenditure is raised. The additional 94 percent is raised on a local scale, and what is contributed by the States and localities, as a percentage of direct expenses for all functions, is quite high. Average for the United States, overall, is 40.8 percent; the high for the country is 53.8 percent—Indiana is second, with 53.2 percent—and the low is 26.9 percent. These are the most recent figures, compiled for the 1966–67 period.

And, as everyone is also aware, or should be, it is the taxpaying parents of schoolchildren themselves who are shouldering the major portion of a back-breaking cost. In spite of this, the never-ending flood of schemes emanating from the Federal educational bureaucracy continues to make the load heavier and heavier to bear.

The potential for opportunity—what our educational structure can give our children—is matched only by the potential for temptation to play God on the part of those in authority.

"But," says the bureaucracy, "we are only interested in making schools more democratic."

To this I can only say that autocratic behavior in Washington will do absolutely nothing toward fostering a sense of, or appreciation for, democracy in the schools. Did the students at Crispus Attucks High School, in Indianapolis, see anything "democratic" in sudden, arbitrary transfer of some of their teachers? I doubt it.

EDUCATE, OR ERODE BY SOCIAL EXPERIMENTATION?

Now, we can educate, or, if we allow ourselves to go running off after dubious and questionable concepts that can scarcely be defined, let alone shown to have any validity, we will, as Secretary Finch has said, "erode, and erode, and erode." I believe the parents of American schoolchildren have been quick to sense this process of erosion. In many cases, I have no doubt, the pupils themselves have become aware of it. It has to stop; erosion can progress beyond a certain point where return is quite difficult, if not impossible, and the ultimate consequences are indeed frightful to contemplate.

The late T. S. Eliot, accurately termed "one of our century's most profound cultural critics," saw this growing brutality and mechanistic attitude as the power of the State became greater and greater and steadily ate away at local control or guidance of education. He saw nothing less than breakdown and disintegration of true culture itself. He said:

There . . . is a danger that education—which (has come under) the influence of politics—will take upon itself the reformation and direction of culture, instead of keeping its place as one of the activities through which culture realizes itself. Culture cannot altogether be brought to consciousness; and the culture of which we are wholly conscious is never the whole of culture; the effective culture is that which is directing the activities of those who are manipulating that which they *call* culture. (Italics in original.)

There is no doubt that in our headlong rush to educate everybody, we are lowering the standards, and more and more abandoning the study of those subjects by which the essentials of our culture—of that part of it which is transmissible by education—are transmitted; destroying our ancient edifices to make ready the ground upon which the barbarian nomads of the future will encamp in their mechanized caravans.

So, educate, or erode? We still have a choice.

The CHAIRMAN. The Chair recognizes the gentleman from Florida (Mr. SIKES).

Mr. SIKES. Mr. Chairman, I support the Michel amendment. I would hope the House is giving careful thought to what it is asked to do. If we are going to march up the hill and back down again, we can make ourselves look pretty silly, and that may be what is in process. I know that each of us has constituents in town and that we want to impress them. I know that a vote for a greatly expanded program of Federal aid to education can be justified in many ways, but I know also that placing so much additional money in this bill is an empty gesture. Even if it survives Senate and conference committee action the additional money would not be expended because the Congress cannot require the Executive to spend money that he does not want to spend or feels he should not spend. The specter of inflation and runaway prices which the action now proposed would abet is even more serious than the needs of education. The downward sliding stock market affects your constituents also, even including those who do not own stocks. An exercise in futility in Congress provides no assurance in the marketplaces or to the public. It is difficult to cast an unpopular vote but this is a time when the House had better steel itself and cast an unpopular vote. This Congress already is overdue in demonstrating soundness in Government procedures more than anything else.

The CHAIRMAN. The Chair recognizes the gentleman from Ohio (Mr. BROWN).

Mr. BROWN of Ohio. Mr. Chairman, I cannot approve of the compromise of the gentleman from Illinois (Mr. MICHEL) for only 77 percent for this pro-

gram. I noticed the gentlewoman from Hawaii (Mrs. MINK) is willing to compromise our interest in 100 percent for impacted programs in order to get through some other portions of the program, a few of which I think are much, much less desirable than the impacted programs. Supporting an increase in title I is one that is highly questionable. New York and many major metropolitan centers in the Nation are the principal beneficiaries of title I and it is a real windfall to them. In order to get support for the impacted programs it may be necessary for some of us to support the questionable increase in title I, however.

I am delighted to see that the committee's judgment on trying to differentiate the treatment of "A" and "B" students has not been sustained and we have finally gotten an agreement that there is very little difference in the entitlement for support between "A" and "B" students.

Unfortunately, I find myself in the position where I may have to oppose the committee substitute and support the position that is taken by the gentleman from New Jersey (Mr. JOELSON). While I should prefer 100-percent funding of the entitlement for impacted districts and prefer to make decisions on each other item by line, apparently the closest we can get to full funding for impact areas, because of the parliamentary situation which has developed, is to support the Joelson amendment.

Mr. STAFFORD. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Ohio. I am happy to yield to the gentleman.

Mr. STAFFORD. Mr. Chairman, my remarks on this bill to fund educational programs will be brief, but I hope not empty, for this measure is one of the very most important which we shall consider in this 91st Congress.

I shall give my strongest support to funding the educational programs contained in the bill at the highest possible level. To do otherwise would be to break a commitment I have repeatedly made to the people of my State of Vermont, to say nothing of the commitment which we in the Congress have repeatedly made to the young people of America.

I commend the House Appropriations Committee for restoring as many of the proposed cuts in the area of educational assistance as it felt it could. But this is not enough, and additional funds for student loans, vocational education, library services, and regular school assistance under the Elementary and Secondary Education Act must be forthcoming.

I am fully aware of the need to balance our Federal budget and I do not take lightly the responsibility of voting for funds which go beyond budgeted amounts.

But I also know what program I believe should have No. 1 priority—and that program is the education of all Americans.

I can assure you that I shall support cuts in spending for nonessential military hardware, for unnecessary foreign aid and for unwanted and unwarranted public works projects which will more than make up for the additions which I hope will be allocated for education today.

The responsibility of meeting educational costs is severely straining the resources of our local school districts and our State governments. We must assist them with as large a share of the Federal tax dollar as we can.

If our educational institutions are not maintained at the highest quality level, and if their programs are not made available to the highest quantity level of American young people as possible, then all of the great technological advances we witnessed in that great moon walk 10 short days ago will soon be in vain.

I implore each of you to join in giving your full support to the fullest funding of these educational programs here today.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan (Mr. WILLIAM D. FORD).

Mr. JOELSON. Mr. Chairman, will the gentleman yield?

Mr. WILLIAM D. FORD. I yield to the gentleman.

Mr. JOELSON. Mr. Chairman, I want to express my appreciation to both sides of the aisle and both sides of the issue for the tone of this debate, which has been at a very high level.

I think the debate has been very interesting, but I will say I find that those who agree with my position are much more persuasive.

Very simply, Mr. Chairman, this afternoon we are going to be able to say to the kids of America, "We have faith in your ability and we believe in you and in your potential."

Today also, we have the opportunity to help them achieve that potential. I cannot think that anyone would turn that down.

I urge you, I implore you to support this amendment, not for me—I do not have to run again—but for the fine kids of this great Nation of ours.

The CHAIRMAN. The Chair recognizes the gentleman from New Jersey (Mr. JOELSON).

Mr. BIAGGI. Mr. Chairman, will the gentleman yield?

Mr. JOELSON. I yield to the gentleman.

Mr. BIAGGI. Mr. Chairman, I rise in support of the package of amendments that would add nearly $900 million to vitally needed programs in education. This is definitely one area that cannot withstand compromise because we are dealing with the lives of young people who will guide the destiny of our Nation in the years ahead.

I know that my own State and my own district will derive significant benefits from these amendments. I consider it a privilege, therefore, to contribute my support to a program that will provide much needed assistance in the field of education.

Enactment of these amendments would prevent several school programs from being eliminated at the discretion of the Commissioner of Education. Other programs would be maintained at a level sufficient to be effective and to achieve their goals.

In addition, the amendments contain provisions to increase the appropriations for the federally impacted areas program to $585 million. This program has been of immeasurable assistance to school districts in every State in our Nation and to 375 congressional districts. It has helped to compensate for the burdens imposed upon school districts by Federal activities.

The amendments would also salvage the school library books program, the guidance and counseling program, and the science equipment program. And vocational education training would remain intact and not be reduced.

The higher education undergraduate building program, and the national defense student loan program would be funded at a level which would allow them to continue adequately.

Finally, the amendments would make additional funds available for title I of the Elementary and Secondary Education Act for the disadvantaged—and also assure funding for title II. Possibly no other aid to education program probes deeper into our country than title I. It will mean that so many more Americans will be able to acquire the basic skills which are prerequisites to living in our modern world.

Each of the programs I have mentioned are an integral part of our educational system. We certainly cannot afford to compromise the education of our young people—our leaders of tomorrow. We all understand the urgencies of the economic pressures in our country today, but we have established priorities and responsibilities that must be met—and this is surely one of them.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. LEGGETT).

Mr. LEGGETT. Mr. Chairman, we are today considering a package of amendments to restore the basic and fundamental funds to our education programs. H.R. 13111, as reported by the committee, is sorely deficient in support to ESEA, NDEA, vocational education, and impact aid.

I am well aware that our fiscal situation is strained to the limit at the present time. The Joelson amendment before us to put some of the cuts back in the HEW appropriation bill are necessary to even the basic operation of our school systems.

This is not an inflationary package. All that we are asking for in ESEA and NDEA is an appropriation equal to the 1969 appropriation. In a year when we have seen increasing expenditures in all areas of the economy—and I point to the C–5A and F–111 as an example of Federal escalation—the supporters of education must come as supplicants to the full Congress in order to merely stay even with the past year. We are asking for a zero-percent rise in expenditures—merely the same per capita money that was available last year.

The opponents claim that it is up to the Government to take the lead in combating inflation. I could not agree more. I believe substantial cuts can be made without harming essential domestic pro-

grams. Military appropriations will again approach $80 billion in fiscal 1970. Why should defense appropriations be funded at 100 percent of authorization while libraries are funded at 3 percent, higher education construction is funded at 4 percent, and ESEA title I is funded at 44 percent. Competent analysts in the Pentagon are convinced that $10 billion could be cut in defense without the least bit of harm to our defensive posture. Yet, the percentage of cuts in the military program is ludicrous when compared to other essential services. I say, if we are going to cut the budget, let us take out the big wasteful foreign military items and not desecrate the needed domestic aid packages.

Another point I want to stress is that this package is not a regional aid proposal. For some reason the feeling is that impact provisions in this bill are intended to support certain regions of the country at the expense of others. This is just not accurate.

My calculations indicate that impact aid funds are distributed equitably throughout the country. The Central States get 5.2 percent. The mid-Atlantic States receive 17.5 percent. The Midwest received 7.9 percent. The Northeast receives 9 percent, the Southeast will get 14 percent, the Southwest 16 percent, the Western States 29 percent, and the various territories a total of 1.4 percent.

These figures accurately reflect the distribution of school districts entitled to impact aid funds.

Impact aid consists of a large share of this amendment package. However, it is aid that is absolutely necessary to the basic function of the affected school districts. In my congressional district many of the school systems could not operate without this aid.

In 1950, Congress recognized the obligation of the Federal Government to provide financial assistance for the operation and maintenance of local school districts which are financially burdened when: First, the sources of local revenue are reduced as the result of acquisition of real property by the Federal Government; or second, local school districts must provide education for children who reside on Federal property or whose parents are employed on Federal property, or third, there is sudden or substantial increase in school attendance as a result of these Federal activities. In other words, this legislation was enacted to provide relief for local school districts adversely affected by the Federal Establishment and staffing of large civilian or military installations that resulted in both the withdrawal of said property from the local tax base and a substantial increase in the school aid population.

From its beginning this program has had strong bipartisan support, but every year we must fight for a sufficient authorization to enable the affected school districts to even barely meet their commitments both as to teachers' salaries and essential support services. This impact aid is not for frills, it is not for experimental programs, but is for the basic essential services that the school districts must provide. Under the amendments we are considering today, impact aid will be funded only at 90 percent of the 1969 level. Under the Joelson amendment, the estimated need for impact aid is $655 million. We are asking for $586 million. The Michels amendment, however, only provides for an appropriation of $506 million—far below even the minimum requirement for impact aid.

This is a percentage reduction from last year during a time when most other expenditures have escalated.

Finally, a number of opponents of this amendment package argue that we should defeat categorical aid so as to have available funds for general aid to education.

This is an apples-and-oranges argument that has not proved viable in the past. There is no indication that a cut in categorical aid will release funds for general aid.

We cut $700 million from the MOL program. We cut $400 million from the F–111B program. The Senate cut $348 million from the A–7 program. All of this money is available, but has not been reprogramed.

In other words, a cut in program A does not indicate an increase in program B. I am sure my colleagues will agree that it is unwise to give up categorical aid in the vain hope that general education funds will result.

The CHAIRMAN. The Chair recognizes the gentleman from Missouri (Mr. HALL).

Mr. HALL. Mr. Chairman, I rise in opposition to any amendment which would increase spending over and above the committee's report and the revised budget, and I am one of the often spoken of Representatives who shares impacted aid, some in a rural area for a base closed over 12 years. I think it is time that someone said something about priorities for the taxpayer and for the future of the citizens of America, as well as the future citizens thereof. The question for most serious consideration is ways and means, and a balanced budget if we are not to be a bankrupt nation. What does this avail us, and why have not sources of income been suggested?

The question here is not whether we love our children or not. The question is not whether we believe in education or not. It is the sign of the times that so little thought is given to basic and fundamental laws of finance and equity. I think it is utterly ridiculous to vote for any amendment that would spend $894 million merely because one person's State or district was losing $5 million over their "take" from the taxpayers' pocket, in a post year.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. DERWINSKI).

Mr. DERWINSKI. Mr. Chairman, I wish to compliment the membership on the tone of the debate in the last 2 days. It is one of the finer debates I have listened to in my 11 years here in the House.

However, there has been an obvious inconsistency, which is not surprising but should be noted. One fact that strikes me as demonstrating the inconsistency is to compare the vote we finally will have on these amendments with the vote a few weeks ago to extend the surtax. We will find a number of members who voted against extension of the surtax but are perfectly willing to vote hundreds of millions of dollars above the budget on appropriations. Maybe what we need in this bill is a little more adult education, especially in economics and in logic among the Members.

Mr. Chairman, I recognize and appreciate the fact that the bill before us is substantially higher than the budget and that all of the pending amendments and the substitute will futher increase funds for education. It is obvious that the final result will not be a setback to the funding expected from this departmental budget. However, I must reemphasize the fact that many Members clearly disregard the overall budgetary situation and in effect become all things to all people. That is why I mention the rather obvious pattern of those who vote to increase appropriations and who vote against the taxes needed to pay for the programs they have supported.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. COHELAN).

Mr. COHELAN. Mr. Chairman, I yield to the gentleman from New York.

Mr. SCHEUER. Mr. Chairman, there is not an individual in this House who doubts that we can afford to spend one-tenth of 1 percent of our gross national product for education, who doubts that we can afford less than 1 percent of our Federal budget for education. The question is not whether we can afford to spend it—because this is just a barebones beginning of the job we have to do in education—but how we are going to allocate this modest addition to our Nation's education budget of less than $900 million. Dare we say to the American people today—"We are going to spend several hundred millions more on the education of middle-class kids in middle-class communities, but we are going to continue to let our disadvantaged urban youth fester in undereducation, underjob training, and underemployment."

We must do the education job that the Joelson package contemplates, to preserve peace and sanity in our cities.

Mr. Chairman, H.R. 13111 calls for expenditures of $2.3 billion during fiscal 1970. In view of the size of our gross national product—now approaching $900 billion—the penurious funding of our educational programs is both inexcusable and inexplicable. The Joelson amendment, which would add less than $900 million to our educational programs, would merely bring our commitment for 1970 to the levels we set in 1969.

There are several areas in which we simply cannot afford the Appropriations Committee's frugality.

Title I of ESEA which serves 9 million of our neediest children must be amply funded to reflect the cost of added programs and the pressures of an inflationary economy.

In 1968, we amended the Vocational Education Act to provide expanded opportunities for occupational training, particularly for the disadvantaged. We

need additional funds to fulfill the promises of our new vocational laws.

We need to keep our library programs funded.

We must provide expanded higher education opportunities through the availability of student loans.

In all, we have made considerable strides in the recent past in all aspects of education. It would be tragic and untimely to arrest this progress through inadequate funding.

One last point, Mr. Chairman, I was grateful yesterday to my colleague from Mississippi, the distinguished chairman of the Rules Committee for his thoughtfulness in reciting for our benefit Aesop's fable of the overly greedy dog on the bridge who viewed the reflection of his bone in the stream, and lost the bone in hand—or perhaps—in tooth. To the debate on the Joelson package, more relevant, Mr. Chairman, is Aesop's story of the old farmer who felt he was near death. He was sad to leave his farm and his family. He had often told his three sons how important it was that they should work together to achieve their goals. As he lay on his bed, he asked the oldest to bring him a bundle of sticks.

He had the young man tie the bundle together. "Now," he said. "Break that bundle."

The oldest tried, but he could not do it. The second son tried, and he, too, failed. The third son did no better. The bundle could not be broken.

"Untie it," said the father. "Now see if you can break one of the separate sticks."

The oldest son broke the stick without any effort. The second son took another stick and broke it easily. So did the third son.

"You see now," said the father, with a smile on his face, "why it is important to stop quarreling and stick together. As long as you separate yourselves from each other you will be weak. United, if you view your goals, your aspirations, your hopes, as a common package, you will be so strong that together you will prevail."

Mr. Chairman, we must stick together and support the Joelson package to do the education job that must be done for all of our children.

For, as the greatest story teller of all time—Ben Franklin—told his colleagues in 1776:

> We must all hang together or assuredly we shall all hang separately.

Mr. Chairman, I urge my colleagues to hang together and support the Joelson package.

The CHAIRMAN. The Chair recognizes the gentleman from Iowa (Mr. SMITH).

Mr. SMITH of Iowa. Mr. Chairman, I am not against providing more money for education. But when we do so, we should allocate it so that it meets the Nation's greatest needs. The Joelson amendment simply fails to do that. Nobody can argue that the amendment meets that criteria. In the bill, there is a greater percentage for the disadvantaged than there is in the Joelson amendment and incorporating a higher relative level into the bill for the lower priority items will make it more difficult to direct the Federal support where most needed from here on.

When the pork-barrel boys got around to distributing the pork in the Joelson amendment, those with the least need got hams and the bacon and left the disadvantaged with the salt.

That is what happened in relation to the Joelson amendment. Those programs in greatest need got the crumbs while the other boys walked off with the loaf of bread.

When we allocate another billion dollars for education, which I am for, I say let us allocate the money so as to meet the greatest needs for education instead of on some pork-barrel basis.

The CHAIRMAN. The Chair recognizes the gentleman from Kentucky (Mr. PERKINS).

Mr. PERKINS. Mr. Chairman, I am hopeful that the Joelson amendment will prevail, providing $629,048,000 over last year's appropriation for the program involved. If we fail to approve the Joelson amendment, we will not be doing anything for disadvantaged youngsters, the schoolchildren at the bottom of the barrel in this country, the schoolchildren who deserve top priority.

I must admit I am dissatisfied with this $180 million figure for the disadvantaged schoolchildren, but I know this is the best we can do. I am realistic. If we fail to approve the Joelson amendment, the disadvantaged children will get nothing from this Congress, in my judgment.

Mr. GILBERT. Mr. Chairman, education should be our highest goal, our No. 1 priority. The host of problems that overwhelms our society will yield only before education. The challenges of a land that will, within our lifetime, have a population of 300 million can be met only by educating our young. Yet the committee asks us, at this critical moment, to cut the educational appropriation in the Federal budget.

In a recent questionnaire in which my constituents were asked to enumerate national priorities as they saw them, the overwhelming number of respondents ranked aid to education No. 1. The significance of that response cannot be overlooked: The American people know the importance of education, to themselves as individuals and to our national community. We cannot reject the mandate of the American people to look ahead and not be deterred by momentary economic expediency.

I support the Joelson package amendment to provide adequate funds to reestablish the program levels for education that were cut back in committee. I commend the gentleman from New Jersey for his wise and courageous judgment in offering this amendment. It will add nearly $900 million for libraries, vocational training, student loans, equipment, guidance counseling, higher education construction, impacted areas aid, and other important programs.

In the immediate future, the programs contained in this amendment are designed to reduce hard-core unemployment, mitigate the drop-out problem, increase opportunities for poor and middle-class youths and insure the preparation of skills we need to keep our country going.

But this is also a bill with the future in mind, the future of our society as we know it now—prosperous, civilized, humane, prudent. I urge my colleagues to support this amendment, Mr. Chairman, as a measure of support for our children and the generations that will follow them.

Mr. BROWN of California. Mr. Chairman, at stake here today is an issue deeper than just that of the actual funding levels for Federal education aid; instead, we are facing the prospect of turning back on concepts which Congress gave overwhelming approval in 1965.

We must remember that only 10 years ago there was no such thing as general Federal aid to education. Even though major efforts to initiate such aid dated back to the late 1930's, prevailing attitudes in Congress held that such Federal education aid impinged upon activities which were better and properly left to State control alone, and, as one national political leader commented:

> Unless we are careful even the great and necessary educational processes in our country will become yet another vehicle by which the believers in paternalism, if not outright socialism, will gain still additional power for the central government.

As the issue raged throughout the fifties, slowly the trend began shifting more and more toward an enlarged Federal involvement. And, it was an accumulation of factors which led to these subtle changes, factors such as sputnik and the demands for educational reform and renewal, the baby boom with its surge in school-age children and the resulting unprecedented "classroom shortages" and—both as a factor and as a result—the rapid climb of educational costs and the squeeze put upon available resource bases.

Twice, in both 1961 and 1962, the Kennedy administration almost succeeded in passing Federal aid legislation, but each year, proposed measures lost by the narrowest of margins.

But, the goal was in sight, and in 1963, the door opened with passage of the Higher Education Facilities Act; 2 years later, Congress enacted assistance for elementary and secondary education.

I do not want to belabor this body today with a long, detailed history and analysis of Federal aid to education. Yet, as the distinguished Member from Pennsylvania said yesterday:

> If anybody would have proposed 10 years ago a budget of $3.2 billion for education, they would have had the guy with a white coat from St. Elizabeths standing out in the hall to pick him up.

And, indeed, the change has been that great.

I believe it necessary that all of us realize the critical importance of allocating the highest possible amount of funds for fiscal 1970 education programs. I like to paraphrase President Kennedy when he noted that the continued growth and development of this country depends more on education than on any other single element.

Behind the Nixon administration's attempt to substantially lower these appropriations lies an oblique motive, one that the noted economist Kenneth Boulding pointed out last month at the Congressional Conference on Planning for New Priorities in America when he said that there has been—and continues to be—a direct trade-off between the military and educational sectors.

So, it thus becomes a question of priorities, and I am hard pressed to find any program area with as huge—or as broad—benefits as those that come from the funds budgeted for educational assistance.

I am astonished to hear critics of the Joelson amendment calling it unwarranted overspending. The meat ax has fallen again to chop up vital programs in health, education, and urban affairs, but I have yet to see similar-sized spending reductions proposed for the Military Establishment, for public works, for agricultural subsidies, or for such pet projects as the supersonic transport.

The bipartisan backers of the Joelson amendment continue to emphasize that their objective is primarily to reestablish previous program levels. And, even with adoption of the amendment we would still be putting far too little in many key education programs. In just its balance alone, I point out—as did the distinguished Member from Iowa (Mr. SMITH)—that the Joelson amendment tends to proportionately underfund valuable programs for college facilities, student loans, and interest subsidies.

Failure to pass the Joelson amendment would mean dangerous setbacks for all citizens. Can we really "afford" to cut back on aid to impacted areas, on our school libraries, on educational equipment? Can we "afford" less guidance and counseling, lower construction grants, reduced vocational education?

The price all of us would pay if the Joelson amendment is defeated is far too exorbitant in terms of the future course of this Nation. The entire thrust of Federal aid to education stands today at a crossroads, and the right direction to take is that of the Joelson amendment.

Mr. MADDEN. Mr. Chairman, I support the Joelson amendment to this education bill for the simple reason that it will provide more money and give more American schoolchildren an opportunity to receive a better education than it provides in the original bill. In the impacted areas alone it would restore most of the funds authorized back to 90 percent so we could have an additional $398 million for our American school system. It would also aid vocational education and bring that figure up to $331,500,000. It would also aid title I of the bill so the figure would be up to $180 million. The Joelson amendment also contains a number of other important provisions that would help bring up the standard of American education which is today operating far below the status a rich nation should tolerate for its millions of citizens in the school-age bracket.

I well remember the fight we made in the 83d Congress almost 15 years ago to pass a major education bill but it was defeated by the Republican-southern Democrat coalition by the small margin of only four votes out of about 350 cast. Had it not been for the four-vote margin of defeat millions of American schoolchildren would have taken advantage of an improved and advanced system of education during the intervening time since 1954. Thousands of school dropouts would have been saved and possibly occupying important positions in our Nation and economy, some of whom today may be partaking in riots and disorders and joining the army of discontents and unemployed American youth.

Let us not make the same mistake on this education bill as 15 years ago, much to the regret of millions of younger citizens and to the discredit and deteriorations of our school system. The greatest investment we can make today is to spend money for education and preserve our Nation and free government for future generations.

I understand the Ways and Means Committee tax reform bill will be on the floor of the House next week, and if Members are alert and study the provisions of the new tax reform legislation maybe we can close some of the fabulous and fraudulent loopholes enjoyed by big oil companies, foundations, real estate corporations and so forth, and so forth, and bring many billions of dollars into the Federal Treasury in next year's tax receipts from mammoth corporations who are well able to pay some of their profits into the Federal Government for the progress of our Nation and the education of our present and future generations.

Mr. OBEY. Mr. Chairman, a society will be judged, in the long run, by how sensitively it deals with its poor and underprivileged and how well it educates its young.

This Nation spends billions of dollars a year on armament systems—some of which have not even been proven workable. What kind of value structure do we have when we are willing to appropriate so much money for armaments of questionable value, but are not willing to deal nearly so imaginatively—or generously—with the development of our children's intellects.

We can spend all the money in the world for armaments and for space capsules, but how secure will this Nation be 10 or 20 years from now if we fail to provide an education which develops each child to the fullness of his ability and potential.

And, what are we really talking about today. Even if the amendment now before the House is passed, this would only appropriate funds for higher education at 4.6 percent of the original level authorized. Available funds for student loans would only be at slightly over 80 percent of that originally authorized, and title I money, which is such a necessary part of the budgets for so many school districts, would only be funded at 44 percent of its original authorization.

The Joelson amendment is trying, at least in a small way, to close the gap between congressional promises and congressional action—a gap which has left local educators frustrated and confused and which has left local property taxpayers holding the bag for a very large portion of the cost of our educational system.

How can those who support tax incentives for capital investment for industry rationalize a vote against this amendment, which is really an investment in human beings, in the growth of young peoples' minds, and in the brain power of the future leaders of this country.

Abraham Lincoln said:

> Education is the most important subject which we as a people can be engaged in. That every man may receive at least, a moderate education, and thereby be enabled to read the histories of his own and other countries, by which he may duly appreciate the value of our free institutions, appears to be an object of vital importance.

Mr. Chairman, I believe education is a subject of crucial concern and I do not believe the amendment before this House today sets too high a price for a matter of such importance to this Nation's future.

Mr. STUCKEY. Mr. Chairman, we all know that when the Federal Government has workers in a community and they are working or living on Federal property or both, it is certain that the school district is deprived of local school revenue for its children, and that the children suffer in proportion.

Public Law 874 which provides for the Federal Government to pay its school taxes, just like other property owners pay their taxes, has helped millions of children receive a better education. The formulas in this law provide for the Federal Government to pay its taxes according to the burden imposed on the community.

There has been much talk today about the "B" pupil. A "B" pupil, as we have come to learn, is a child whose parents live off but work on Federal property. The parents of a "B" pupil pay taxes on their home but the plant where the parents work pay no local school taxes. It is easy to see that a severe burden is placed on a school district when it has children whose parents work on property which pays no local school taxes.

Mr. Chairman, it is strange to me that the Federal Government can impose such a burden on a local school board, and then expect that same school board to run a good school on half of the local revenue proportionately of that of other schools who are not affected by Federal impact.

Our children are our most priceless possession and their educational welfare comes first with the parents of this country. Surely the Members of this body cannot still believe that our school officials can run fine schools with one-half of the local school revenue cut off.

Cutting off the money for the so-called B pupil in an impacted school district would do vastly more harm than is generally realized. There are at least 2¼ million students whose parents live on or work on Federal property. If the Federal Government refuses to pay its school taxes on the plant where the parents of these children work these 2¼ million children are not going to be the only ones

to suffer. All of the approximately 20 million children who are in school systems affected by Federal impact will suffer if the Federal Government refuses to pay its school taxes because these school systems can do nothing but lower the level of education.

It is most difficult to believe that anyone could say, "Let us lower the education of 20 million schoolchildren." I hope that is not what we, in effect, do today.

Mr. DENT. Mr. Chairman, the failure of the Appropriation Committee to adequately fund the programs under H.R. 13111 is a serious and costly mistake.

I therefore have joined with many of my colleagues, including a majority of the members of our Committee on Education and Labor, in drafting and supporting the package of amendments presented by the gentleman from New Jersey (Mr. JOELSON).

While I am opposed to all the cuts advocated by the committee, I am particularly disturbed by the callous attitude toward library services and vocational education.

These areas are even more necessary than some of the more touted features of our educational system.

I am sure that in final action by the Congress there will be a wiser decision made and both of these sections will be funded more adequately.

Since there appears to be a misunderstanding on just what the Joelson amendment covers, I present an analysis and explanation of the proposal now before us:

PERTINENT FACTS ON THE JOELSON AMENDMENT TO H.R. 13111

Item No.	Fiscal year 1969 appropriation	Fiscal year 1970 package amendment	Package increase over H.R. 13111
1. Impact aid	$505,900	$585,000	[1] $398,000
2. ESEA title II—School Library	50,000	[2] 50,000	([2])
3. NDEA Title III—Equipment	78,740	[2] 78,740	[3] 110,453
4. NDEA Title V—Guidance and Counsel	17,000	[2] 17,000	([3])
5. ESEA Title III—Supplementary Centers	164,876	[2] 164,876	([3])
6. Vocational education	248,216	488,716	[4] 131,500
7. Higher Education—Construction, 4-year undergraduate	33,000	33,000	[5] 33,000
8. NDEA student loan	193,400	229,000	[6] 40,794
9. Title I, ESEA	1,123,127	1,396,975	[7] 180,800
Total			894,547

[1] To provide sufficient funds for 90 percent of the authorization.
[2] In the amendment, these programs are individually funded. They are not consolidated.
[3] To provide funds equal to the amount appropriated in fiscal year 1969.
[4] To provide additional funds to meet urgent needs in vocational education.
[5] To provide funds equal to the amount appropriated in fiscal year 1969.
[6] To provide necessary funds for increased demand for student loans.
[7] To provide for increases in program costs; and to restore funds for grants to local educational agencies, which grants have been diminished by amendments increasing the total number of participating agencies.

BRIEF EXPLANATION OF INCREASED FUNDING PROPOSALS TO H.R. 13111

Following are brief explanations of the nine specific increases over H.R. 13111 that are included in the proposals for increased funding.

Impact Aid (PL 874): The proposal will provide $585 million, which is $398 million more than provided in H.R. 13111. It represents a funding level for Impact Aid Program of about 90% of the authorizations.

While less than 3 million children are counted in the Impact Aid formula, the impact of Federal funds from this program enriches the educational programs in schools in which there is an enrollment of approximately 45 million. In fiscal year 1969, $505,900,000 was appropriated, approximately 90% of the entitlement of that year.

Vocational Education: The proposal will provide $488,716,000 for the Vocational Education Act of 1963, as amended last year. This represents a $131,500,000 increase over the amounts provided in H.R. 13111. The largest amount of the increase is for the purpose of adding to the amounts available for basic grants to states.

Basic grants to states will be insufficient to carry forward ongoing programs in many states, if additional amounts are not provided for basic grants because of the set-asides written in the law as a result of the 1968 amendments.

The 1968 amendments to the Vocational Education Act were almost unanimously hailed by the Congress last year as being absolutely essential in furnishing occupational training opportunities in the State vocational education systems throughout the Nation. Unless the amendments of 1968 are adequately funded, this was empty acclaim.

The additional amount provided in the proposal will implement those portions of the 1968 amendment which call for occupational training programs for the disadvantaged, as well as providing funds for vocational educational research, so essential in developing new teaching methods and materials and in fashioning training in new occupational fields being developed as a result of our technological advancement.

ESEA Title II, School Library Programs: This proposal provides $50 million for Title II of the Elementary and Secondary Education Act of 1965. An identical amount was provided for this program in fiscal year 1969. This program makes grants to State educational agencies for the purpose of acquiring textbooks, library resources, and other instructional materials for loan to both public and private students and teachers in the elementary and secondary schools throughout the Nation.

Evidence presented to the appropriations committee of the House, as well as to the authorizing committee, indicates that the need in this area is in the magnitude four times that provided in the package. Nevertheless, the provision of $50 million will assure some progress in developing elementary and secondary school libraries and in enabling many school districts to acquire textbooks and new instructional materials essential to the educational process.

NDEA Title III, Equipment: $78,740,000 was appropriated in fiscal year 1969 for this program. This proposal will add to the bill this same amount for fiscal year 1970.

The evidence clearly establishes a continuing need to fund this program. Many schools lack necessary instructional equipment in the fields of science, mathematics, modern foreign languages, and other basic academic courses. Past funds have not been adequate to fulfill all of the need. It would be an injustice to the many school districts who have not participated in this program to now be denied the opportunity to be provided with equipment. Evidence clearly demonstrates that this equipment strengthens learning opportunities in school districts that have been fortunate enough to obtain benefits from the program since its inception in 1958.

NDEA Title V, Guidance and Counseling: This proposal provides $17 million for this program, which is the same amount that was provided in fiscal year 1969. To eliminate or reduce the size of this program is inconsistent with the growing need for the career and academic guidance of elementary and secondary school children throughout the nation.

I am convinced that it is essential to expand on this program immediately. With greater emphasis being placed on occupational and vocational training in the school systems and in view of the emerging new career opportunities, the financial resources of state and local systems are not adequate to meet the increasing demand and need. Hence, a cutback in Federal support at this time would be critically damaging in many school systems throughout the nation.

ESEA Title III, Supplemental Educational Centers: This proposal contains $164,876,000 for fiscal year 1970, the same amount as provided in fiscal year 1969. As a result of the 1967 amendments to the Elementary and Secondary Education Act, Title III is now a state-operated program.

On the basis of the Congressional action in 1967, the resources of state educational agencies have been expanded to administer this program and to develop systematic allocation of funds in the state for programs and projects.

Any reduction in funds at this time will cut back on ongoing programs and the value of the experimentation and demonstration aspects will be lost. To preserve the investment already made in these programs, it is essential to fund them at least at the level established in fiscal year 1969.

Higher Education Act, Construction of Facilities: This proposal contains $33 million for the construction of four-year undergraduate facilities. This is the same amount as appropriated in fiscal year 1969.

There is absolutely no justification for any cutback in grants to institutions of higher education for the construction of undergraduate academic facilities. Funds must be appropriated in view of the continued pressure on such institutions for accommodating increased numbers of students.

NDEA Student Loans: This proposal provides $229 million for the direct student loan program authorized by Title II of the National Defense Education Act. This is $36,600,000 more than appropriated in fiscal year 1969 and $40,794,000 over the amount provided in H.R. 13111.

The rapid rise in interest rates has seriously cut back the availability of guaranteed loans. Unless more funds for direct government loans are made available, there will be no way for students to obtain financing for their higher education expenses. Additional funds in the direct NDEA student loan program are absolutely essential to enable many students to continue their college education and to take care of the expected demands on student assistance for entering freshmen.

Title I, Elementary and Secondary Education Act: This proposal provides for an increase of $180,800,000 over the amount provided in H.R. 13111. Since the enactment of Title I of the Elementary and Secondary Education Act of 1965, a number of new programs have been added to cover the needs of children in state-operated programs. These new programs, by virtue of the 1967 amendments, must be fully funded before local education agencies are provided any funds from the appropriation.

In an under-funding situation, this means that all local educational agencies have not gained the full benefit from increased appropriations. In fact, these program add-ons result in reduced allocations to local educational agencies in fiscal 1969 under fiscal 1968. It is estimated that the program add-ons amounted to approximately $81 million.

In addition, the costs for the operation of Title I programs have risen since its inception, and the slight increases provided for the program have not enabled the program

to be either strengthened or enlarged to meet the total need.

Approximately nine million children now are served by Title I programs. An increase, as proposed in the package, will enable the per pupil expenditure to be increased from approximately $135 to $155, with resulting greater imact on the progress in the children involved in these programs.

Evidence presented to the appropriations committee and the authorizing committee discloses that where programs have concentrated funds on smaller numbers of students, much greater results have been produced. I feel very strongly that, rather than reducing the number of children served by these programs, additional funds should be provided. These additional funds will not only strengthen the quality of instruction for those participating, but enable some expansion of the program to include more needy children who are not now participating. Even with the funds provided by this proposal, the program will be under-funded by as much as 60%.

Mrs. MINK. Mr. Chairman, I rise in support of the Joelson amendment to restore funds for the Elementary and Secondary Education Act, impact aid, NDEA, libraries, and higher education.

The schoolchildren of America need our help this afternoon. Unless we act now to vastly increase our support of education, our children will continue to be deprived of the opportunity for an adequate education.

This is the challenge that faces us today. It is essentially a test of national priorities. Are we to provide adequate support for the basic program of Federal aid for elementary and secondary education? Or are we to allow our promises of 1965, and 1966, and 1967, and 1968 to wither and die?

Our children, and the Nation, are looking to us for a firm commitment. If our answer is "no" to education, then we must accept responsibility for the further deprivation of opportunity for millions of young people, and a declining ability of many of our people to exist in and contribute to an increasingly complex civilization.

The real answer is that we need more education, not less, and we can ill afford the false economy to be derived by shaving a few million dollars from these vital education programs. On a long-range basis, such a cutback or retrenchment can have only adverse effects. Even the increased funding sought this afternoon will not bring the support of education fully to the authorized level, much less what it should be under any realistic appraisal of our national needs.

Let us look at some figures on ESEA funding. The amendment seeks only an additional $180,800,000 over the amount for title I approved by the Appropriations Committee. Title I gives aid for educationally deprived children. Here is where we help the children from low-income families who will fuel the flames in the ghettos tomorrow unless we educate them today—the handicapped, Indian children on the reservation, migrant children, neglected, and delinquent children.

Under title I we seek answers to poverty, delinquency, unemployment, illiteracy, and school dropouts—all part of a vicious circle of despair and neglect that is eating at our society. Education is the vital key to solving these problems. Yet of $2.3 billion authorized for the current fiscal year the administration has seen fit to recommend only $1.2 billion in appropriations. Even if we increase the committee request we will still be $1 billion short of the authorization. How much greater is the actual need?

We also seek an additional $110,453,000 under ESEA and NDEA programs that were "merged" by the administration. These programs are title II of ESEA, providing for books and certain visual aid material; NDEA title III programs for equipment; NDEA V for counseling and guidance; and ESEA title III for supplementary educational services. The authorized amount for all four is $1.1 billion, but astonishingly the administration requested no funds at all for three of the programs and only $116 million for ESEA title III. The authorized amount for that program alone is $566 million. To spare some of the effects of this meat-ax cut the amendment would add $110,453,000 to the committee-approved amount of $200 million.

In view of the administration's attitude toward the three programs from which it proposed to withhold all funds, it seems apparent that little if any support will be given to library resources and other vital educational needs to these areas unless Congress acts to preserve their separate funding. The House bill would provide no categorical grants to the States for these purposes, and States would be free to abandon the programs altogether.

I support the additional funds I have listed as well as the other provisions of the package amendment to which I have earlier addressed my remarks. The Elementary and Secondary Education Act, which has become the cornerstone of Federal aid to elementary and secondary education in this Nation, should be fully funded. Short of that at least this modest amendment providing additional funds must be passed.

Education is our biggest national need, and no other goal should receive higher priority. I urge my colleagues to vote today for education by supporting the package amendment.

Mr. Chairman, the Joelson amendment also provides $40,794,000 in increased funds for the NDEA student loan program during fiscal year 1970.

The program has not been funded anywhere near the needed level in recent years, and the amount approved by the Appropriations Committee is a retrenchment from even the current support. The amendment would add some $40.8 million to the committee request.

The committee allowed $188.2 million for the NDEA loan program, $26.3 million more than the amount requested by the administration but $5.2 million less than was appropriated for the 1969 fiscal year. The committee cut $16 million from the requested budget for educational opportunity grants and $5.3 million from the NDEA fellowship budget, directing that the reductions be applied entirely to funds for first-year students.

This reduction left $159.6 million for educational opportunity grants, $35.1 million more than was provided in fiscal 1996, and $56.1 million for NDEA fellowships, $13.8 million less than in 1969.

As much as I would like economy in Government, I feel that our vital educational programs are not the place to apply the budget ax. Before depriving millions of American students of the opportunity to receive the education they need in our complex society, we should reduce or eliminate waste and extravagance in our defense spending and in the procurement practices throughout Government.

The committee's slash of $16 million from educational opportunity grants will, I suppose, pay for the $15 million repair bill of the submarine allowed to sink in a naval yard. The $5.2 million reduction in the NDEA loan program might, perhaps, pay for another bombing mission in Vietnam. Yet I question whether such military spending should be allowed greater precedence over programs which are basic to our national stability and growth, to wit, the children of America.

Our Education and Labor Committee hearings documented the need for student loan funds. Thousands of young people in every State are ready, willing, and able to achieve college degrees—but they lack the financial ability. A small investment in them will pay infinite rewards to our Nation in the future as they apply the professional talents gained through higher education.

Clearly there is no better investment in democracy and in our Nation's future. Without increasing education and knowledge we cannot survive. We need the best brains of this country and should benefit from them regardless of the accident of the parents' ability to finance an expensive education.

The student loan program accomplishes the objective of increasing our national educational resource from among all segments of the population. Accordingly, I urge my colleagues to give their full support to this very modest but much-needed additional funding, and to vote "yea" for the entire amendment to be offered by Congressman JOELSON.

Mr. FREY. Mr. Chairman, it disturbs me to think that many qualified students will be unable to begin or continue their college education in the fall due to the lack of student grant and loan funds from the Federal Government. While all of us want a substantial reduction in the Federal budget and have so voted on previous occasions, it seems that loan programs such as NDEA, allowing the individual to help himself, are more worthy of retention than others based on pure welfare. Several university and college presidents in Florida have written to me concerning the reduced funding for these programs. One said:

The projected cutback will force us to deny assistance to approximately 700 qualified students in the 1969–70 academic year.

Another said:

Our institution has diligently adhered to requirements and suggestions by the Office of Education to actively recruit and commit financial assistance to students in the early stages of their secondary school career. Money has been promised, hopes have been built and now it appears they cannot be fulfilled.

And Dr. Charles N. Millican, the president of Florida's newest institution of higher learning, Florida Technological University in Orlando, said:

The National Defense Student Loan program has been the major source of college aid for ten years. Many students will be unable to attend college unless these funds are increased. It is tragic to have qualified students turned away from the university because no financial aid is available to them. Now that the government has begun these programs, it seems imperative they be continued in keeping with our national goals and purpose.

I cannot agree more. And those who recommend that the federally insured loans through banks, credit unions, and savings and loan associations be utilized to offset these other forms of aid are not, in my opinion, being very realistic. While I like the approach, it is not working. Not a single financial institution in one of the largest counties in my district is making any new loans under this program at the present time. Only five of the more than 30 financial institutions in this county are even in the program, and many times they make loans only to those students who come from families with financially stable backgrounds.

As one of the 22 Congressmen who spent a week visiting various college and university campuses throughout the Nation, I can tell you from personal contact with administration, faculty, and students that these programs are vital to higher education in America. It is my belief that any student who is qualified to attend college and is ready to devote four years of hard work for a degree, but does not have the necessary finances, should be afforded the opportunity through a government loan. This is not a handout. The loan must be repaid. This is the type of program that is needed in this country where people are given the opportunity to help themselves. I therefore call on my colleagues to support additional NDEA student loan funding.

Mr. ROYBAL. Mr. Chairman, there is no more important work for the Congress than our duty to insure that future generations have the intellectual capacity to cope with the challenging world of tomorrow that we have erected for them. They cannot meet this challenge without an opportunity to develop their minds, their skills, and their spirits to the fullest extent.

The amendment by Congressman JOELSON provides additional funds beyond those proposed by the Appropriations Committee for such programs as vocational education, aid for low income children, library and textbook materials, guidance and counseling, educational equipment, increased student loan funds, and a substantial increase in impact aid.

The people of my 30th Congressional District, educators, school board members, college officials, and, most of all, parents, support increased funds for education.

These are responsible, intelligent people who are aware of the dangers of inflation, which concern us all. They believe, as I do, that the welfare of the children and youth of this country cannot be sacrificed in the name of false economy.

Tax reform will bring additional revenues. Let us use a small portion of this and whatever savings we can make in the defense and other hardware budgets to provide for an investment in the most essential factor in the formula for a bright future for our Nation—the minds of our children and youth.

Specifically, Mr. Chairman, I rise in support of the Joelson amendment and, in particular, NDEA title V, guidance and counseling.

In the fiscal year 1969, this program was given $17 million—a small figure compared to what is needed for an effective program. Is it not inconceivable that in the proposed budget for fiscal year 1970, absolutely no funds were requested for this purpose at all? The amendment only requests that we restore the $17 million to try to meet this need.

This program fulfills one of the most basic needs in education today—that of face-to-face contact with the youth of our Nation. In order to learn, one must be instilled with the desire to learn. If a child is not learning as he should, why is he not? Testing is done to determine a child's learning level; interest is taken in personal problems which might hinder him in his learning process These problems—and many more—our counselors study and correct; and they must be handled personally, not with books or computers.

Guidance and counseling, title V–A of the National Defense Education Act, is in dire need of increased funds. But instead of an increase, what does the committee-reported bill hold for this vital field? Almost elimination. One out of ten counselors in America is paid from title V–A funds. What will happen to them?

More importantly, what will happen to the children whom they help year after year?

The estimated personnel loss in this field is 4,000 from the State Departments of Education as a result of the budget recommendations for fiscal year 1970. A loss of one person in this field is a backward step and a detriment to our educational program and to our children. The loss of 4,000 would be a disaster.

It is entirely out of character for the Congress to ignore the needs of education, but that is what this bill would do. What we are striving for now is not, unfortunately, the improvement necessary for this program, but rather for the mere survival of the existing facilities and personnel. Already this field is one of the most neglected in the majority of the States; so how can we possibly consider reduction or elimination of these funds in the coming year?

In the interest of our children's education and, in turn, the future of our Nation and its continuing growth, I recommend that we vote for the amendment before us today, and bring funding for guidance, counseling, and testing—title V–A of NDEA—back up to last year's level.

Mr. FRASER. Mr. Chairman, I rise to support the Joelson amendment.

The funds contained in this amendment, less than one-half of 1 percent of the 1970 budget, will at least enable us to begin meeting the great unmet need for more effective education programs on all levels.

The committee bill, by itself, and even with the amendments proposed by the gentleman from Illinois (Mr. MICHEL) and the gentleman from New York (Mr. ROBISON) means that funding for the important new education programs in 1970 will not be much higher than last year's level. But increasing costs will result in an actual cutback in programs even if Federal funding stays the same or is increased slightly.

For my State, Minnesota, the Joelson amendment means an additional $8.5 million to our local school districts and an additional $3.5 million to our colleges and universities. Without these necessary extra Federal dollars, I know that educational progress will be stalled in Minnesota next year.

Several days ago I received a telegram urging support for a larger education appropriation from Stuart Rider, chairman of the Minneapolis Board of Education. Because Mr. Rider's statement expresses the need for increased funding so effectively, I am including it with my remarks:

MINNEAPOLIS, MINN., *July 24, 1969.*
Representative DONALD M. FRASER,
Cannon Office Building,
Washington, D.C.:

The Minneapolis Board of Education unanimously recommends your active support of full funding for the pending HEW education appropriations. We further recommend that the individual categorical programs be maintained and not grouped, since such groupings will destroy promising programs. In a time of mounting school crises we feel an urgent need for massive Federal assistance to provide the kind of education program that not only can place men on the moon but can educate men to live peacefully and creatively on our planet.

STUART W. RIDER, Jr.,
Chairman, Minneapolis
Board of Education.

Mr. MATSUNAGA. Mr. Chairman, I rise in support of the amendment offered by the gentlemen from New Jersey (Mr. JOELSON).

In 1965, the Congress responded to the Johnson administration's exhortation to upgrade our educational system with the passage of the Secondary and Elementary Education Act of 1965. This action represented a significant part of a large commitment by the Federal Government to help both the "disadvantaged" and "estranged" in our country. In 1969, both the greatness of man's epic journey to the moon and the malaise of our urban crisis give rise to an even greater challenge to America's educational system. At no time in our Nation's history has the education of our 60 million schoolchildren loomed into such importance as it has today.

In view of these considerations, I believe that the Joelson amendment would give increased meaning to the numerous programs which were previously authorized by the Congress. It is clear that increased funding is vitally necessary if the effectiveness of the numerous programs is going to be continued and expanded. At stake is the educational welfare of 60

million students and millions of others who seek to uplift themselves.

The Joelson amendment would provide sufficient funds for 90 percent of the authorization under Public Law 874—impact aid program. My own State of Hawaii is no exception in being heavily dependent upon the funds from this program.

As one of the focal centers of the Pacific region, Hawaii is the site of a very high concentration of military installations and personnel necessary to man them. Substantial numbers of children of both military and civilian personnel employed at the various military installations attend Hawaii's public schools, nearly all of which are situated off the military bases. Funds from the impact school aid program have been most essential in helping to maintain the high quality of education which is offered to these schoolchildren. The Hawaii State board of education has budgeted for its 1970 needs in reliance of the receipt of impacted school aid funds. Failure to appropriate adequate funds would thus imperil the educational future of these children and represent a callous disregard of their assessed needs.

At a time when the demands on our colleges and universities are increasing almost proportionately with our contemporary knowledge explosion, the Joelson amendement would also provide a small but necessary amount for the construction of 4-year undergraduate academic facilities. If we hope to give meaning to our insistent advice to graduating high school students to pursue higher education then we must provide sufficient appropriations, particularly in view of the continuing financial pressure on our institutions of higher learning, for the accommodation of increased numbers of students. And at the same time, unless more funds are allocated for direct Government loans as authorized by title II of the National Defense Education Act, many of these young aspiring students will have no way of financing their higher education.

In sum, support for the increased funding included in this package amendment would establish not only what is fair and just, but it would also insure today's educational well-being of those upon whose shoulders will some day rest the responsibilities of this great Nation.

Mr. VANIK. Mr. Chairman, I rise in support of the amendment which is being offered today to increase education assistance programs by about $890 million in an effort to meet the educational needs of America as it enters the 1970's.

At a time when increased numbers of students are trying to enter college and are in need of assistance, at a time when interest rates are at the highest levels in our Nation's history, and banks are making almost no loans to families for college assistance—even under the Government's guaranteed loan programs—it is unconscionable for the Federal Government to provide less money for student college assistance in fiscal 1970 than it did in fiscal 1969. College administrators and students currently enrolled in school depend on a continuing level of commitment from the Federal Government; the bill we have before us breaks faith with that commitment.

One of the programs being cut is the National Defense Education Act. This is the act that the Congress enacted to overcome the technological, scientific, and educational gap which had developed between the United States and the Soviet Union. This is the act that gave us the educated and trained manpower to put men on the moon. This is the act which has opened whole new vistas of opportunity to us as a nation. Yet in the same week that the first moon walkers are in quarantine we are being asked to cut the NDEA program which has proven to be such a success.

The effect of these NDEA cuts will be severely felt everywhere. In Cuyahoga County, in which Cleveland is located and which has a population of nearly 2 million, the NDEA student loan allocation for the coming school year to 10 colleges will be $563,443 less than it was in the just completed school year. Case Western Reserve University, for example will receive about $300,000 less than last year. John Carroll University will receive 40 percent of what it received last year. How can students or administrators of these fine institutions possibly make any rational plans with such drastic slashes in the loan fund?

Approval of today's amendments is also vital for the Nation's elementary and secondary schools, both public and private. Title I of the Elementary and Secondary Act will be increased by $180,800,000. This will mean that assistance to school districts with children from low-income families will receive extra and desperately needed funds to provide better quality education. Only with increased funding of this program can the cycle of poor education, poor opportunity, and poverty be broken. The amendment will also provide an additional $131,500,000 for vocational education through the States. If this increase is not approved, many on-going programs in the States will have to be curtailed or stopped. In our increasingly complex and technical society, a trained and skilled work force is a must. If we fail to provide the opportunity for learning skills, unemployment and disillusionment will become a growing and permanent feature of our society.

To fail to provide these needed education funds or even match the funds appropriated last year will be to force the local school districts either to curtail their services or to attempt to provide them through increased local levies. To curtail the services is to curtail our future as a nation. Yet local districts face an impossible task in obtaining adequate increases in levies. The taxpayer's revolt, spurred by the surtax and the awareness of injustice in the Federal tax code, has displayed itself where it hurts the most—in local school bond issues and levies. This year we must not reduce our commitment to American Education or our local school systems will be irreparably damaged.

Mr. PRICE of Illinois. Mr. Chairman, I rise in support of the Joelson amendment. I want the RECORD to show that I feel that the Federal Government has an even larger commitment to education and that the Joelson amendment is a step in the right direction.

If we examine the trend of national commitments to education throughout the world, we note that the United States spends less at all levels of government together than the Soviet Union on education. We also note that the United States ranks low among all nations, non-Communist and Communist, in the amount of tax dollars spent for education in proportion to the total tax dollars collected. As others have said: We have won the moon race, but will we win the education race? We must be prepared to commit the necessary resources to our Nation's future, and our young people must be well-educated to handle the momentous problems of tomorrow.

During the debate that has occurred, there have been several references to the Public Law 874 program as a "bonanza." I am not certain what the implication is with respect to the term being used in this context. If the suggestion is that the impacted aid program is a bargain or an extra and undeserved dividend, I think it would be well for those who have used the term to confer with their local school officials about whether the Federal payments under the program even match the actual maintenance and operation costs incurred with federally connected students. I think their experience will be the same as mine that the Public Law 874 program does not meet these costs. For that reason, Mr. Chairman, it is important that we approve the Joelson amendment so that our school districts will receive at least 90 percent of their entitlement under the program.

As one might expect, throughout the debate there have been references to the budgetary impact of the Joelson amendment. It certainly is true that it provides for an additional $895 million for nine education programs. But that amount does not even match our annual subsidy to the cotton and wheat growers of this Nation. Surely, we can afford to provide commensurate support for our education systems. Also, there is the matter of a $3 billion budget surplus for the recent fiscal year. It would be my hope that we can utilize a portion of the surplus in programs that are investments in our Nation's future. The Joelson amendment represents such an investment.

Mr. Chairman, in closing, I recommend the adoption of the Joelson amendment.

The CHAIRMAN. The Chair now recognizes the gentleman from Illinois (Mr. MICHEL).

(Mr. GOLDWATER (at the request of Mr. MICHEL) was granted permission to extend his remarks at this point in the RECORD.)

Mr. GOLDWATER. Mr. Chairman, the schools of our country are faced with the increasingly difficult tasks of providing an education for our youth and building a foundation for the future of our Nation. They are in a financial squeeze whereby the numbers of children keep rising and the tax base on which they must depend primarily for their

support is constantly shrinking. Some school districts have the additional burden of educating children whose parents either live or work on Federal property or both—thereby depriving the school districts even further of their basic operating revenue.

The federally impacted areas program has been in operation for the last 19 years and has been successful in balancing these inequities by providing funds to school districts which are overburdened because of Federal installations. By far the largest portion of the federally impacted areas program is Public Law 81–874 for school maintenance and operation. Because there are no strings attached to this aid, the program conforms with my belief that the Federal Government must not control our schools. Funds from this act have assisted schools in over 375 congressional districts, and which are attended by over half of our schoolchildren.

The HEW appropriations bill (H.R. 13111) would effectively cripple this program by removing funds for entitlement under category B—those children whose parents either live or work on Federal property. If this cut is allowed, the effects would be devastating. In California alone, the 1970 estimated entitlement is over $100,000,000, but the proposed cuts would reduce this figure to nearly one-fourth of that amount. In the country as a whole, the proposed cut would reduce the program to nearly one-third of its total entitlements.

Two areas will be severely curtailed by this proposal—our big cities, and the communities surrounding our rural military installations. These are the very areas which have been found to be in the most desperate financial situation.

My own district, of course, is keenly concerned with the potential impact of the 3b student cuts, which the administration has proposed. I can, of course, recognize serious inequities which exist in the present program. Unfortunately, efforts to amend Public Law 874 in an attempt to alleviate these problems have failed.

Although I am in favor of such reform, I am nevertheless convinced that the retributive act of completely eliminating funds for 3b students is not the answer to the problem. If and when reform becomes attractive enough to invite action, it would in my judgment call for a gradual reduction of funds, not an across-the-board cut.

The consequences of such a cut are disastrous to the school districts of our country. Los Angeles city schools for instance would face a revenue loss of nearly $4 million. Without adequate time to prepare for such a loss, and with the recent record of school bond defeats, I am convinced that the scope and quality of our youngsters' education would have to be seriously curtailed.

Let us examine another ramification of the problems involved with the appropriation bill as reported by committee. And that, of course, is the economic level of those areas which are affected by the Federal aid to impacted areas.

In my district, there are two principal military establishments, Edwards Air Force Base, and the China Lake Naval Weapons Center. Both are located in desert areas of southern California, and in each case, the base represents the major economic factor of the area. The economic level surrounding military installations is often inadequate because of an inflexible tax base. It is impossible to expect educational opportunities to remain constant when this tax base offers such little room for expansion. One school district which I represent stands to lose upwards of $55,000 if full funding is not granted. This would result in an increase of $2.20 per $1,000 of assessed valuation, if H.R. 13111 is approved intact. To expect depressed areas to bear that kind of increased burden is ridiculous. To expect the children of our Federal employees to attend schools which offer inferior educational resources, simply because the Federal Government is not prepared to meet its share of the burden is disgraceful; and says nothing about our commitment to make a military or Government career as attractive as possible.

Surely, this Congress can find areas in the national budget which will lend themselves to economies, without sacrificing quality education for our children.

In order to restore this vitally needed program to the minimum level which will effectively carry out its purpose, I am strongly in support of this or any amendment, which will provide the necessary moneys for the program. This will allow payments to all the school districts which are faced with the burden of Federal activities and will help us to meet our evergrowing responsibility to the youth of our Nation and, therefore, the future of our country.

Mr. MICHEL. Mr. Chairman, as we close debate on this particular section of the bill, may I quickly sum up. The Joelson amendment and my substitute are both in the second degree, which, for all practical purposes, will lead us into the parliamentary situation where we will have a vote on the Smith amendment to the Joelson amendment first. If that is defeated, then there will be a vote on the Robison amendment to my substitute. Thereafter, we will vote on the Michel substitute to the Joelson amendment. If that carriers, there will be no vote as such on the Joelson amendment.

The Joelson amendment adds $894.5 million to the bill over and above what we have in the bill. The Smith amendment to the Joelson amendment adds $73.1 million, making a total package, if we were to adopt the Smith amendment to the Joelson amendment, of $967.6 million over and above what is in the bill.

If we adopt my amendment alone, we increase the committee bill by $318.9 million. If we add to my substitute the Robison amendment, which involves $110.4 million, we will have a package then in that substitute of $429.3 million.

I know the pressure is on. When I got back to the office last night, there were 35 to 40 telegrams dealing with the action that took place on the floor yesterday.

We know about the talk of full funding. It strikes me that the educators, who ought to be the smartest people in this country, do not know what takes place in the two-step legislative process we have in Congress. They ought to know we have a separate authorizing bill and then we have an appropriating bill. How many of us have heard it said in the authorizing process that, "Oh, the figure is too high, but don't worry about it, the Appropriations Committee will take care of it."

I believe we have to look at a few other items that will show what takes place in this two-step process. In model cities we are funding at 36 percent of authorized entitlement; in water and sewer projects, we are funding at 25 percent of entitlement; in neighborhood facilities, we are funding at 36 percent of entitlement; and in waste treatment grants we are funding at only 21 percent of entitlement.

This is nothing new. It has been going on ever since Congress came into being.

I must say my friends have also been calling me and asking me to bend a little bit. I must also tell you I supported the motion in committee to increase the first part of this section of the bill by $84 million. I am now adding to it $318.9 in my amendment, so I have a figure of $402.9 million above the Nixon budget. If I had heard anybody say 2 weeks ago that I would take such action, I would have said he was crazy. I cannot believe it myself. I awakened this morning at 5 o'clock, and I was distressed about this action of mine. How can I justify it?

First of all, I think we must agree on priorities. The President is making his trip, and we know we want to get this war over with. Second, we know we must curb inflation and get our financial house in order so we can do all the additional things we would like to do on a broader scale. But we are not able to do so now because of the fiscal situation.

We cannot do it simply by raising taxes or the prime interest rate or the rediscount rate. The best thing is to cut Federal expenditures or at least keep them in line with the President's budget.

The Federal Government has to take the lead in setting the tone, and Congress has not done so up to this time. I recall when President Johnson said:

> We have to combat inflation. We have to do all these things. The last thing we want to do is to impose wage and price controls.

President Nixon takes the same position. We do not want to impose wage and price controls.

Let me wind up here with a few simple statistics.

The President in his revised budget cut the adjusted Johnson budget by $4 billion. Now, we have heard some horns tooted around here about the fiscal year 1969 ending up with a $3 billion surplus. Let me remind the Members that $8.4 billion of that surplus comes about by an increase in the trust funds receipts, overexpenditures from those trust funds.

Have we had any legislation on this floor yet to increase social security benefits? At one time they were supposed to be raised 7 percent. It is said now that they should be raised 10 percent. I expect that with the cost of living going up as it is, the increase will be even

more. That increase has to come out of the trust funds.

Before we start to spend the surplus we had better think about where the surplus came from.

I pointed out yesterday that since April 1 uncontrollable spending has risen $2.5 billion, according to the President's statement. If what is going on over in the other body ends up with no extension of the surcharge, we will lose $10 billion of revenue.

So we have to take a stand here in this Congress today. I have gone overboard in proposing amendments here to increase this bill by $400 million. I hope the Members will support the substitute amendment and vote down the Joelson amendment.

The CHAIRMAN. The gentleman from Pennsylvania (Mr. FLOOD) is recognized to close debate on this amendment and all amendments thereto.

Mr. FLOOD. Mr. Chairman, a curtain speech is always as tiresome to the speaker as it is to the audience. I have been on both sides of those footlights, and I know just how you feel and just how I feel.

I want you to know this. I have said this to many of the Members here on the floor, in the hallways and the cloakrooms, and I say it now so you will be sure: I urge the adoption of the Michel substitute amendment.

I said that when the budget came to my committee it was utterly unrealistic. I said it in my opening remarks yesterday, and for the purpose of emphasis I say it now. I am not changing my colors.

Now, my friend from New Jersey and I have lunched together countless times since he has been here gracing these Halls. He will leave in September. He will not have the great privilege—at least I doubt it—of voting for his own amendment on the final passage of the bill. He will be in the ivory tower of the court in the great State of New Jersey. God grant him well.

But with all my friendship and with all my affection and with all my regard, Mr. Chairman, I will not be a party to giving him a going away present of $1 billion.

I was amazed that the amendment got to the floor. Technically it is here, but it violates by its presence the intent and the spirit of the rules of this House for generations, for appropriation bills are considered paragraph by paragraph by paragraph for amendment, points of order or whatever else the rules provide. But it is here.

This package—I have heard about it for weeks. I recall the lines from a play. I will have to leave a bad word out. The crown prince said to his father:

> This package, this baggage, this creature, this hydra-headed monster, this thing which casts a blot upon the escutcheon, sire, of this noble house.

This has been a great 2 days. I did not limit debate until everybody wanted it limited, and believe me there were people who were after me today to limit debate. Oh, no. My grandfather McCarthy would turn over in his grave if I tried to stop people from talking, beginning with his grandson.

Now you have heard the arguments pro and con here. This is not a question of who is for motherhood, who is for children, who is for education. There are $10 billion in the various Federal budgets for educational elements of all kinds in this Government. $10 billion. That is neglecting to educators and the children? Oh, no.

I am amazed at my mail and the fine, dedicated educators I have met who have not the remotest idea, really—they are not fakers, they are good, honest people—of the distinction and the difference between authorizations and appropriations. These fine people have not the remotest idea. They are teaching civics and history and education and are urging participation—and properly so—by their students in government and politics. Authorization, authorization. They forget the privilege constitutionally of this House, Mr. Chairman, that you should stand by appropriations, appropriations.

Oh, I hope their visits to this hallowed Chamber in these 2 days will give them a message for their students. They never before learned it themselves. It is amazing, is it not? It is amazing, but it is true. So, you see, their trip has not been wasted.

Mr. Chairman, on the Joelson amendment I have one gesture—thumbs down.

The CHAIRMAN. The first vote occurs on the amendment offered by the gentleman from Iowa (Mr. SMITH) to the amendment offered by the gentleman from New Jersey (Mr. JOELSON).

The question was taken; and on a division (demanded by Mr. BRADEMAS) there were—ayes 81, noes 152.

Mr. BRADEMAS. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. SMITH of Iowa and Mr. FLOOD.

The Committee again divided, and the tellers reported that there were—ayes 97, noes 206.

So the amendment to the amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. ROBISON) to the substitute amendment offered by the gentleman from Illinois (Mr. MICHEL).

Mr. ROBISON. Mr. Chairman, on that I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. ROBISON and Mr. FLOOD.

The Committee divided, and the tellers reported that there were—ayes 117, noes 188.

So the amendment to the substitute amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. MICHEL) as a substitute for the amendment offered by the gentleman from New Jersey (Mr. JOELSON).

Mr. MICHEL. Mr. Chairman, on that I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. MICHEL and Mr. JOELSON.

The Committee divided, and the tellers reported that there were—ayes 160, noes 197.

So the substitute amendment was rejected.

The CHAIRMAN. The question occurs on the amendment offered by the gentleman from New Jersey (Mr. JOELSON).

Mr. GERALD R. FORD. Mr. Chairman, on that I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. JOELSON and Mr. FLOOD.

The Committee divided, and the tellers reported that there were—ayes 242, noes 106.

So the amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

For an additional amount for grants under title I–A of the Elementary and Secondary Education Act of 1965 for the fiscal year 1970, $205,360,700: *Provided*, That the aggregate amounts otherwise available for grants therefor within States shall not be less than 92 per centum of the amounts allocated from the fiscal year 1968 appropriation to local educational agencies in such States for grants.

AMENDMENT OFFERED BY MR. JOELSON

Mr. JOELSON. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. JOELSON: On page 26, strike out lines 1 through 7.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Jersey (Mr. JOELSON).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

SCHOOL ASSISTANCE IN FEDERALLY AFFECTED AREAS

For carrying out title I of the Act of September 30, 1950, as amended (20 U.S.C., ch. 13), and the Act of September 23, 1950, as amended (20 U.S.C., ch. 19), $202,167,000, of which $187,000,000 shall be for the maintenance and operation of schools as authorized by said title I of the Act of September 30, 1950, as amended, and $15,167,000 which shall remain available until expended, shall be for providing school facilities as authorized by said Act of September 23, 1950: *Provided*, That this appropriaton shall not be available to pay local educational agencies pursuant to the provisions of any other section of said Act of September 30, 1950, until full payment has been made of the amounts to which such agencies are entitled pursuant to sections 3(a) and 6 of Title I of said Act.

AMENDMENT OFFERED BY MR. JOELSON

Mr. JOELSON. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. JOELSON: On page 26, strike out lines 8 through 22.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Jersey (Mr. JOELSON).

The amendment was agreed to.

Mr. STEIGER of Wisconsin. Mr. Chairman, while I did not offer an amendment to the pending bill, I want to strongly indicate my belief that the funding level recommended for the Teacher Corps is inadequate for a program with a good record of accomplishment in an area of vital need.

Although the bill as reported by the committee contains an increase of $837,000 in the appropriations for this pro-

gram from the fiscal year 1969 level, I would hope that the other body would provide the full $31,100,000 requested by the Nixon administration.

The Teacher Corps has won strong local support and the endorsement of the National Education Association and the American Federation of Teachers. Through a unique partnership of Federal funding and program format, the Teacher Corps provides an opportunity for local initiative and local creativity in attacking the problem of attracting and training of teachers specifically for poverty area schools.

The failure to provide the requested appropriations will not significantly alter the size of the Teacher Corps program, as much as it will affect the ability of the Teacher Corps to operate efficiently with the funds that are provided. This is a problem which has plagued the Teacher Corps and more particularly the local school systems and universities that have been involved in making it work. The idea of forward funding has been before us for a good deal of time. Its merits have been argued and reargued. It therefore may not arouse much concern or attention at this time, but that does not make it any less vital to our educational process. It cannot be emphasized too strongly that good programs take time to plan and execute. It takes time to recruit and select good people to carry them out. We deny our local school districts, universities and the Teacher Corps this time, when we cut this appropriation, and we deny ourselves and the children and communities this program serves.

The Teacher Corps has provided communities and universities with the opportunity to test concepts and programs which they, because of lack of money, personnel or organizational structure, could not institute themselves, but which, with Teacher Corps support, they have been able to implement and eventually expand into their regular programs.

And the Teacher Corps has proved an impetus for volunteer efforts. It has provided through its team structure a mechanism which can tap community members' and students' willingness and ability to serve and work for improvements in the quality of education and the school system, within the institutional school framework.

Again, may I state, Mr. Chairman, that I am very disappointed at the recommended level of funding in this bill for this important program. I hope that it can be restored.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

HIGHER EDUCATION

For carrying out titles III and IV (except parts D and F), part E of title V, and section 1207 of the Higher Education Act of 1965 as amended, titles I and III of the Higher Education Facilities Act of 1963, as amended, titles II and IV and of the National Defense Education Act of 1958, as amended (20 U.S.C. 421–429), and section 22 of the Act of June 29, 1935, as amended (7 U.S.C. 329), $785,839,000, of which $159,600,000 shall be for educational opportunity grants under part A of title IV of the Higher Education Act of 1965 and shall remain available through June 30, 1971, $63,900,000 to remain available until expended shall be for loan insurance programs under part B of title IV of that Act, including not to exceed $1,500,000 for computer services in connection with the insured loan program, $154,000,000 shall be for grants for college work-study programs under part C of title IV of that Act (of which amounts reallotted shall remain available through June 30, 1971), including one per centum of such amount to be available, without regard to the provisions in section 442 of that Act, for cooperative education programs that alternate periods of full-time academic study with periods of full-time public or private employment, $43,000,000 shall be for grants for construction of public community colleges and technical institutes under title I of the Higher Education Facilities Act of 1963 which amount shall remain available through June 30, 1971, $11,750,000, to remain available until expended, shall be for annual interest grants under section 306 of that Act, $181,306,000 shall be for Federal capital contributions to student loan funds established in accordance with agreements pursuant to section 204 of the National Defense Education Act of 1958, and $12,120,000 shall be for the purposes of section 22 of the Act of June 29, 1935.

AMENDMENT OFFERED BY MR. JOELSON

Mr. JOELSON. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. JOELSON: Beginning with line 13, on page 27, strike everything down through line 21 on page 28.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Jersey (Mr. JOELSON).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

VOCATIONAL EDUCATION

For carrying out the Vocational Education Act of 1963, as amended (20 U.S.C. 1241–1391) (except section 102(b) and parts C and E of title I), and section 402 of the Elementary and Secondary Education Amendments of 1967, $357,216,000, of which not to exceed $300,336,000 shall be for State vocational education programs under part B of said Vocational Education Act of 1963, including development and administration of State plans and evaluation and dissemination activities authorized under section 102(c) of said Act, and $10,000,000 for part H of said title I, not to exceed $1,680,000 for State advisory councils established pursuant to section 104(b) of said Act, $13,000,000 for exemplary programs under part D of said Act of which fifty per centum shall remain available until expended and fifty per centum shall remain available through June 30, 1971, $15,000,000 for consumer and homemaking education programs under part F of said Act, and $14,000,000 shall be for cooperative vocational education programs under G of said Act.

AMENDMENT OFFERED BY MR. JOELSON

Mr. JOELSON. Mr. Chairman, I offer an amendment. The Clerk read as follows:

Amendment offered by Mr. JOELSON: Beginning with line 22 on page 28, strike everything down through line 17 on page 29.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Jersey (Mr. JOELSON).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

LIBRARIES AND COMMUNITY SERVICES

For carrying out titles I, III, and IV of the Library Services and Construction Act, as amended (20 U.S.C., ch. 16), titles I and II (except section 224) of the Higher Education Act of 1965 (20 U.S.C. 1001–1033, 1041), the Adult Education Act of 1966 (20 U.S.C., ch. 30), and part IV of title III (except section 396) of the Communications Act of 1934 (40 U.S.C. 390–395, 397–399), $126,209,000, of which $35,000,000 shall be for grants for public library services under title I of the Library Services and Construction Act, $2,281,000 shall be for grants for cooperative networks of libraries under title III of such Act, $2,049,000 shall be for grants for State institutional library services under part A of title IV of such Act, $1,334,000 shall be for library services to the physically handicapped under part B of title IV of such Act, $9,500,000 shall be for community service and continuing education programs under title I of the Higher Education Act, $5,500,000 shall be for transfer to the Librarian of Congress for the acquisition and cataloging of library materials under part C of title II of such Act. $50,000,000 shall be for adult education programs under the Adult Education Act of 1966, and $4,000,000, to remain available until expended, shall be for educational broadcasting facilities under part IV of title III (except section 396) of the Communications Act of 1934.

Mr. ANDREWS of North Dakota. Mr. Chairman, I move to strike the last word.

Mr. Chairman, had the Joelson package amendment failed I was prepared to offer an amendment to increase student loans. Every day I receive a number of letters from students and their parents in North Dakota who are desperately looking for help in meeting the rising cost of college education. I think that certainly most of my colleagues will agree that the opportunity for young people of this Nation to attend college should be based on their ability, motivation, and desire, rather than family finances or connections. This, of course, is the reason the Congress established the student loan program in the first place.

Although I understand student mail seeking advice on financial help is reaching near-avalanche proportions in most all congressional offices, the problem is not a new one. The important difference is that we used to be able to refer these people to either their college or university financial aids officer, where they could apply for a direct loan under the national defense student loan program, or they could go to a local lending institution and apply for a loan under the guaranteed student loan program. Under one of these programs, we were reasonably confident the student could get the help he needed.

Today, this is no longer the case.

As the prime interest rate on bank loans has increased to 8½ percent, the 7-percent interest ceiling on guaranteed loans has kept the supply of funds from lending agencies for this purpose far below the demand. It is estimated, as a matter of fact, that one out of three college freshmen who seek a guaranteed loan this year will be turned down.

Because the blame for spiraling interest rates clearly rests with the Federal

Government, the responsibility for correcting the student loan emergency to the greatest extent possible belongs to the Congress.

In the Appropriations Committee, I introduced an amendment to bring the amount available for direct loans to the full amount authorized by the law. While this amendment was defeated in committee, I am glad that the Members of the House had an opportunity to vote on this key section. While the Joelson figure was less than I proposed, it is a step in the right direction.

I am aware the House Special Subcommittee on Education, under the leadership of our colleague from Oregon, Representative EDITH GREEN, has opened hearings on ways to keep the guaranteed loan program from becoming totally ineffective. I believe, however, any serious consideration given to raising the interest ceiling on student loans or otherwise offering additional incentives to lending agencies will cause them to adopt a "wait-and-see" attitude, stopping all student loan activity until congressional action on any of the subcommittee's recommendations can be completed.

August and September, of course, are the peak months for making student loans. Colleges will begin their fall terms within 60 days, and, in the meantime, I understand the Congress will be taking its summer recess. For these reasons, I believe it is essential we act now to make sure adequate loan funds will be available to help as many qualified young people as possible get the education they want and need.

Besides the pressure put on the direct student loan funds by the declining availability of guaranteed loans, additional demands are resulting from the expansion of the equal opportunity grants. While this program makes money available to the very needy students, each grant dollar awarded must be matched by financial help provided by the college or university they attend. This year, it is recommended that $159.9 million be distributed under the EOG program, and it is my understanding, many schools will be using direct student loan money to match these grants.

By adding $47,694,000 to the amount approved by the Appropriations Committee for direct student loans, bringing the total to $229 million, we will be making further education available to more than 100,000 young people who might well otherwise miss out completely on the advantages of higher education. I submit there is no wiser investment our Government can make in this Nation's future.

In conclusion let me point out that this is different from most Government programs in that it provides loans which are paid back with interest. Another factor to consider is the dividend received in the form of increased tax collections resulting from the increased earning power of those who have been able to get a higher education. Thus, while most of us support this amendment for its humanitarian benefits, a strong case can be made for it as an ultimate economic benefit to the U.S. Treasury.

AMENDMENT OFFERED BY MR. PRYOR OF ARKANSAS

Mr. PRYOR of Arkansas. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. PRYOR of Arkansas:

On page 29, line 19, after "titles I," insert "II,".

On page 30, line 3, strike out "$126,209,000," and insert in lieu thereof "$135,394,000".

On page 30, line 5, after "Construction Act," insert "$9,185,000, to remain available through June 30, 1971, shall be for grants for public library construction under title II of such Act,".

Mr. PRYOR of Arkansas. Mr. Chairman, it is with some degree of reservation that I, as a member of the Committee on Appropriations, offer an amendment to this bill—especially in light of the fact that the very distinguished gentleman from Pennsylvania and his splendid subcommittee have labored so long, so well, and so diligently to bring this monumental piece of legislation to the floor today.

But I speak today not in my own behalf but rather in the behalf of the public libraries of America.

The committee bill as presented at this time, notwithstanding the adoption of the Joelson amendment, is absolutely penniless in the area of moneys set aside for the construction of public libraries. The amendment I offer would fund $9,185,000, the exact amount of last year's appropriation, into section II of the Library Services Construction Act.

This amendment, by funding only at the present level, will grant assistance to 93 public library facilities across America in fiscal year 1970. There is a total today of 276 construction projects reported to be waiting when funds ultimately become available. This is a matching fund program which I think has done a great deal for this country. These funds can be used for the construction of new buildings, additions to existing buildings, renovating, alterations, and acquisition of library facilities, and is undisputedly a program which has yielded untold benefits at a minimum cost.

But should we fail to adopt this amendment, I must stress the fact that no funds are in this bill to assist public libraries in the area of construction in fiscal year 1970.

Actually, Mr. Chairman, we are today asking for a relatively small amount to keep a great and meaningful program alive—a program which in 4 years has supported over 1,500 library projects in addition to supporting the theory that State and Federal Governments can, will, and must work together.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. PRYOR of Arkansas. I yield to the distinguished gentleman from Kentucky.

Mr. PERKINS. Mr. Chairman, I support the gentleman's amendment and wish to compliment him on offering the amendment.

The gentleman is exactly right in his statement that there is not one dime in the budget for this purpose.

Mr. Chairman, the amendment should be adopted.

Mr. PRYOR of Arkansas. I thank the distinguished gentleman.

Mr. Chairman, there are some things that Government should and should not do—but one thing we can do is to at least provide the impetus, the inspiration, and basic mechanics to see that all Americans are afforded the opportunity to read—whether in a library within a city, a bookmobile in a remote rural area, or in the quiet of one's own living room.

Mr. Chairman, in America, education must not die with the diploma. It must be a continuing, enriching process wherein the individual is afforded not only the opportunity but also the encouragement to read.

This is a sound amendment. It is an investment and a very splendid and worthwhile program that this congress must not let die.

Mr. FRIEDEL. Mr. Chairman, will the gentleman yield?

Mr. PRYOR of Arkansas. I yield to the distinguished gentleman from Maryland.

Mr. FRIEDEL. Mr. Chairman, I want to join my colleague on his very good amendment to this legislation. This bill, H.R. 13111, does not provide any funds for the construction of libraries and $9 million is certainly a small amount for this purpose.

Mr. Chairman, we have one of the best library systems in the United States in the State of Maryland and I urge that these funds be included in this bill so that much needed libraries can be constructed throughout the country; as well as in my own State of Maryland. The best system in the world is inadequate if the facilities are inadequate.

Mr. FRASER. Mr. Chairman, will the gentleman yield?

Mr. PRYOR of Arkansas. I yield to the gentleman from Minnesota.

Mr. FRASER. Mr. Chairman, I wish to commend the gentleman and say that I strongly support his amendment to restore funds for public library construction.

I was quite distressed by the committee's failure to recommend any funding at all for title II of the Library Services and Construction Act.

Since the enactment of Library Services and Construction Act, title II, I know that my State has benefited greatly from this program. Public library systems in Minnesota have received $2.7 million for construction programs. This amount has been matched by $4.1 million in local funds. Last year, for example, title II funds enabled the Minneapolis Public Library to begin construction of a new branch facility which will serve one-sixth of the city's population.

Our failure to appropriate funds for this program will be a grave setback for public library construction throughout the country. Since the authorization for title II extends through fiscal year 1971, many library systems have developed long-range construction programs with the assumption that some Federal construction money would be available at least for the next few years.

I can see no justification at all for putting the needs of the public libraries

at the bottom of our list of national priorities. But that is exactly what we will be doing if we do not adopt the amendment of the gentleman from Arkansas (Mr. PRYOR).

Mr. HECHLER of West Virginia. Mr. Chairman, will the gentleman yield?

Mr. PRYOR of Arkansas. I yield to the gentleman from West Virginia.

Mr. HECHLER of West Virginia. Mr. Chairman, I commend the gentleman from Arkansas on his amendment. I hope it is adopted by the Committee of the Whole. I feel that it would be very dangerous to cut funds for libraries so deeply. The amendment of the gentleman from Arkansas provides modest support for libraries which is fully justified by the acute needs. This amendment deserves to pass. I trust it will receive great support from the Committee.

Mr. TIERNAN. Mr. Chairman, will the gentleman yield?

Mr. PRYOR of Arkansas. I yield to the gentleman.

Mr. TIERNAN. Mr. Chairman, I am glad to take this opportunity to congratulate my colleague in his very fine presentation.

Mr. Chairman, I support the amendment.

Mr. PRYOR of Arkansas. Mr. Chairman, I appreciate the remarks of my colleagues and thank them very much.

Mr. MAYNE. Mr. Chairman, will the gentleman yield?

Mr. PRYOR of Arkansas. I yield to the gentleman.

Mr. MAYNE. Mr. Chairman, I rise in support of the Pryor amendment allocating $9,185,000 for public library construction. This is a mere fraction of the amount already authorized by this House for this vital program, which has proved its worth and certainly deserves a better fate than to be left out of this year's budget and appropriations altogether. Nine million dollars is certainly a modest sum for new library construction in relation to what this Nation is spending on other programs.

There are considerations of economy to support the budget and committee cuts, of course, and they have generally an undeniable validity. But they entail serious social costs, whatever their money savings. Reading is indispensable to any self-governing society; and libraries are the fountainhead of reading. It is children who will bear the brunt of this saving and in the long run it may be dangerously expensive. It is one of those hidden prices paid for the war which, when added all together over time, can be ruinous to the Nation's security.

Man's ability to develop his talents to full potential and to contribute to the continued progress of society depends upon his opportunity to fulfill his educational needs. In turn, education depends upon information which libraries provide. The rapidly accumulating mass of information available is straining the resources and the ability of libraries everywhere to cope with its organization and dissemination. To throttle libraries in this fashion is to diminish greatly the opportunity for education itself to function effectively. Everyone has a stake in this: the businessman, the technician, the college student, the parents of school children; and all responsible citizens concerned for the future quality of American life.

Let me repeat here an excerpt from the testimony I offered to the appropriations subcommittee last spring when they had these items under consideration.

After citing some critical situations involving communities in northwest Iowa which have been relying in good faith on the assumption that this program would continue to be funded, and which will be unable to proceed with library construction without such funds, I said:

> This has certainly been a program which has proved its merit. It has extended the blessings of literature and of the printed word to people all over this country, and I just want to urge as strongly as I can that sufficient funds be restored to the Library Services and Construction Act so that this work can go forward.

These words apparently fell on deaf ears in the subcommittee, which failed to include any amount for this purpose, but I renew them now. I, therefore, urge my colleagues to vote in favor of this very necessary amendment.

Mr. PRYOR of Arkansas. Mr. Chairman, I thank my colleagues for their remarks in support of the amendment I have offered.

Mr. FLOOD. Mr. Chairman, I rise in opposition to the amendment.

Our friend in the well has not quite given you the picture. The title of this appropriation is "Libraries and community services." This bill is already $18,500,000 over the budget for this appropriation. I want you to know that your committee knows exactly the circumstances. The committee has been taking advice from the experts throughout the Nation who appeared before the committee. In going over this budget we were advised by the experts to place priority at this time on library services. That is what we were advised to do by the people we think know best. They are the experts in this field of library and community services nationwide.

I do not presume to argue that there is no further need for library construction—not for a minute, not remotely. Of course there is. But the needs are not nearly what they were only a few years ago, thanks to you, Mr. Chairman, and this House. Since the enactment in 1965 of the legislation adding construction to the overall library assistance program, these appropriations have supported over 1,500 construction projects. With so much having been done by this House and the Congress to cut down this backlog of need, for 1 year you can stand by, under all the circumstances, without doing any great damage to our public libraries. I suggest that the amendment be defeated.

Mr. SIKES. Mr. Chairman, I move to strike the requisite number of words.

The CHAIRMAN. The gentleman from Florida is recognized.

Mr. SIKES. Mr. Chairman, I am happy to support one of the most worthwhile programs of the Library Services and Construction Act by cosponsoring an amendment to H.R. 13111 which would fund title II, the public library construction title of the Library Services and Construction Act at $9,185,000; the level of last year's appropriation.

The authorization for fiscal year 1970 was $70 million—the budget recommendation was zero—a decrease of $70 million—completely stripping the funds seriously needed for public library construction and for the administration of the individual State plans for construction.

The States have been working diligently to raise the required matching funds for this worthy program in order that they might continue their important work on this needed and challenging job—a job which has been successful and helpful to many persons from every walk of life.

Even with the restoration of money to the fiscal year 1969 level of $9.185 million, this will meet only 2 percent of the need in 1970. In 1969, 6 percent of the need was met.

For the RECORD, I would like to define "public library construction." It not only means the construction of new public library buildings, but also includes the acquisition, expansion, remodeling, and alteration of existing buildings for use as public libraries and the initial equipment of such buildings with the exception of the actual books. Other eligible expenses covered under title II of LSCA include funds for the acquisition of land and the architect's fee.

Florida was allocated $459,680 in fiscal year 1968 under this title and with this money 14 of the construction project proposals were approved—of which, 12 were new buildings, two for remodeling, and one for an addition to the existing building.

Seven of the new buildings were central libraries in the cities of Coral Gables, Lake Park, Madeira Beach, North Park Beach, Pinellas Park, St. Petersburg Beach, and Sebring. New branch library buildings were in Blountstown, Tampa, and West Orange, with the Maryland Avenue Branch in Tampa being constructed in the model cities area. The district library of Merritt Island is obtaining a new central building. In Daytona Beach, the Florida Council for the Blind will have a new building which will permit increased service to the blind and physically handicapped in conjunction with the State library.

The two projects which consisted of remodeling existing central library structures were in Cocoa Beach and Hallendale. The Cocoa Beach building program also included the construction of an addition.

In Florida alone, there were six construction projects which were completed in the fiscal year 1968.

Since the inception of the Library Services and Construction Act, the Florida Library and Historical Commission has awarded some 43 construction grants. Of the 43 grants, 20 have been officially completed, 12 have been completed to the point that they are open for public use, nine and under construction and two have been approved but the construc-

tion is not yet underway. Approximately $8,900,000 will be expended for library construction when all of these are officially complete.

In my own district, for example, I am proud to mention that the first project under title II of the LSCA in the State of Florida was the construction of the Bay County Library in Panama City in October 1964. So far, in my district alone, there have been four projects completed with a total Federal expenditure of $411,786 and the total matching expenditure of $346,000.

This is only a small sampling of the constructive and meritorious work which has been accomplished and some just begun with funds under this vital title II of LSCA. To try to overlook the total good this program has had in all 50 States would be difficult for anyone to do although it is plain to see the severe damage which would be caused by the failure of this amendment.

The 276 construction projects reported to be waiting for construction funding in fiscal year 1970 represent a total of $156 million. Following the average funding pattern by source since the beginning of the program, two-thirds of the total would be available from non-Federal sources, leaving a need for $52 million in Federal funds in fiscal year 1970.

Many of the towns and cities which need these construction funds have already voted on the bond issues for matching funds and some of the bond issues which have already been passed are likely to expire if Federal funds are not appropriated for these projects in fiscal year 1970.

In the amendment we are proposing today we are recommending $9,185,000 the amount of the Federal allocation for fiscal year 1969. It is not enough but it will help to keep this important project going until the fiscal situation improves and we can provide the funds actually needed. It is only 1 percent of the amount the committee has just approved for other educational programs. If the House feels the Nation can afford $900 million above the figure in the bill for education, the membership should by all means approve the amount requested by this amendment for library construction.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. SIKES. I yield to the gentleman from Illinois.

Mr. PUCINSKI. I certainly rise in support of the statement of the gentleman. I am always sympathetic to the pleas made by the chairman of the subcommittee, but I would like to call my colleague's attention to the fact that no program in this country has been more enthusiastically received by the States, and no program has received more matching grants by the States than this program to build these libraries. A nation that ignores its humanities and forgets its libraries cannot survive very long. I think as long as we are moving forward to meet the needs of the country, let us go ahead with this $9 million.

Mr. HANLEY. Mr. Chairman, will the gentleman yield?

Mr. SIKES. I yield to the gentleman from New York.

Mr. HANLEY. Mr. Chairman, I rise in support of the amendment. I am a firm supporter of the Labor-HEW appropriations bill before us today, but I also support the efforts which are being made on the floor this afternoon to substantially increase the funds for fiscal year 1970. Of particular concern to me is the need to increase funds for our libraries across the Nation. I would like to enclose a letter which was recently received in my office from a prominent constituent outlining the tremendous progress which has been made in my congressional district with library services moneys.

ONONDAGA LIBRARY SYSTEM,
Solvay, N.Y., July 16, 1969.

Congressman JAMES M. HANLEY,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. HANLEY: I appreciate the gracious reception that you gave me last Wednesday when I appealed to you to take whatever action is necessary to have the House Labor—HEW Appropriations Subcommittee, and the House Appropriations Committee increase federal aid to public libraries.

The enclosed literature explains the national value of the Library Services and Construction Act of 1966. However, let me briefly list how the federal funds have been utilized during the past two years in Onondaga County.

The Onondaga Library System Board of Trustees requested and were granted money with which to:

1. Purchase a $35,000 Bookmobile with which Syracuse Public Library will bring books, magazines and records to Syracuse's inner-city this summer;

2. Establish an 18 county recruiting and training program to relieve the drastic shortage of librarians;

3. Launch an experiment in Manlius Public Library to prove that each library—no matter how small—should have a special young adult book collection;

4. Enable Syracuse Public Library in 1968 to encourage culturally-disadvantaged children to read;

5. Plan new library building in Syracuse, Jordan, and East Syracuse;

6. Construct a new building for LaFayette Public Library. (Money for Fayetteville, Onondaga Hill and Baldwinsville library building was denied due to a shortage of funds.)

If adequate federal funds are voted in FY 1970, the Board of the Onondaga Library System plans, among other things, to request funds to continue the recruiting project, and the planning and construction of new buildings, as well as bringing new services to Onondaga County. For example, the Onondaga Library System hopes to increase the number of films, records and pictures it can make available to the residents of the county. This is in line with the OLS Board's desire to make all libraries in the county serve as cultural banks for their respective communities, instead of only dispensing the more traditional products of a library—books and magazines.

In view of the fruitful ways in which HEW funds have been, and will be, used in the 34th Congressional District, may I respectfully request that he exert serious effort to have funds for libraries and education increased in the FY 1970 Budget.

If you wish additional discussion or information, please communicate with me.

On behalf of the Onondaga Library System, and the American Library Trustee Association, I thank you for your interest in this matter.

I remain,
Very truly yours,

DANIEL W. CASEY,
Former President, OLS; Director, Library Trustees Foundation of NYS; Chairman, Endowment Committee, ALTA.

My constituency has a great deal at stake in this bill, Mr. Chairman, through a variety of programs, not the least of which is impacted areas funds. I support vigorously, the attempts to restore full funding.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Arkansas (Mr. PRYOR).

The question was taken; and on a division (demanded by Mr. FLOOD) there were—ayes 138, noes 63.

So the amendment was agreed to.

AMENDMENT OFFERED BY MR. MACDONALD OF MASSACHUSETTS

Mr. MACDONALD of Massachusetts. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MACDONALD of Massachusetts: On page 30, line 3, strike out "$126,209,000" and insert in lieu thereof "$130,834,000"; and on page 30, line 17, strike out "$4,000,000" and insert in lieu thereof "$8,625,000".

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts (Mr. MACDONALD) for 5 minutes in support of his amendment.

Mr. FLOOD. Mr. Chairman, I make a point of order against the amendment.

Mr. YATES. Mr. Chairman, the point comes too late.

Mr. FLOOD. Mr. Chairman, I make a point of order against the amendment.

The CHAIRMAN. The gentleman will state the point of order.

Mr. FLOOD. Mr. Chairman, the appropriation has already been amended. I direct the attention of the Chair to page 29 of the bill, to the paragraph entitled "Libraries and Community Services." The figure itself is on page 30.

I submit, Mr. Chairman, in support of my point of order that this has already been amended, and the gentleman's amendment is, therefore, not in order.

Mr. MACDONALD of Massachusetts. Mr. Chairman, could I be recognized?

PARLIAMENTARY INQUIRY

Mr. YATES. Mr. Chairman, a parliamentary inquiry. Is it in order to raise a point of order when the Chairman has recognized the gentleman for 5 minutes?

The CHAIRMAN. The gentleman had not proceeded in debate, although the Chair had recognized him.

Mr. YATES. Mr. Chairman, the Chair had already recognized the gentleman.

Mr. FLOOD. Mr. Chairman, I can still stand up. I was on my feet. The gentleman from Illinois amazes me. I had the courtesy, knowing the timing—and I am no amateur at this business—until my friend the gentleman from Massachusetts had the amendment read. I deliberately waited until that was done. The gentleman is completely incorrect.

Mr. YATES. Mr. Chairman, the fact remains I asked a parliamentary inquiry

as to whether or not the gentleman from Massachusetts, having been recognized, the point of order raised by the gentleman from Pennsylvania is in order. I think that is a perfectly proper inquiry.

The CHAIRMAN. The Chair is not raising a question about the right of the gentleman from Illinois to make a parliamentary inquiry.

The gentleman from Pennsylvania was already on his feet. The gentleman from Massachusetts had not started his remarks, and therefore no debate had intervened between the reading of the amendment, and the Chair upholds the right of the gentleman from Pennsylvania to raise a point of order.

Does the gentleman from Massachusetts desire to be heard on the point of order?

Mr. MACDONALD of Massachusetts. Of course I do, Mr. Chairman. I think the Chair—and I say it in all due respect—has erred twice.

I had been recognized and I had started my remarks about this amendment, which is point No. 1.

Point No. 2: If I understood the chairman of the subcommittee correctly, he raised the point that the amount of money in this section had already been amended. I point out to the gentleman that this amendment changes money that was already in the original bill, and therefore I seek to go forward to be heard on my amendment.

The CHAIRMAN (Mr. HOLIFIELD). The Chair is prepared to rule on the point of order.

The Pryor amendment modified the sum of $126,209,000, to $135,394,000. Therefore, it is not subject to further amendment.

The gentleman seeks to amend that in his amendment, so that part of the gentleman's amendment is not in order, and the Chair sustains the point of order on that part of the gentleman's amendment.

PARLIAMENTARY INQUIRY

Mr. MACDONALD of Massachusetts. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. MACDONALD of Massachusetts. Could I be enlightened as to when a Member who has been recognized and starts to talk has given up his right of recognition?

The CHAIRMAN. A point of order can intervene before debate is conducted on an amendment, particularly when the chairman of the subcommittee is on his feet seeking recognition. There had been no debate on the merits of the amendment.

Mr. MACDONALD of Massachusetts. My last inquiry, Mr. Chairman: Does this preclude my offering this amendment at any later point during debate on this appropriation bill?

The CHAIRMAN. The gentleman cannot offer an amendment to the $126,209,000, because that has already been amended, and though it is not for the Chair to instruct the gentleman as to his rights, however, in response to the question, the gentleman could offer the part of the amendment that dealt with the item on line 17 because it was not changed by prior amendment.

Mr. MACDONALD of Massachusetts. I thank the Chair.

AMENDMENT OFFERED BY MR. THOMPSON OF NEW JERSEY

Mr. THOMPSON of New Jersey. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. THOMPSON of New Jersey: On page 30, line 12, after the word "Act" strike out "$5,500,000" and insert "$7,356,000."

Mr. THOMPSON of New Jersey. Mr. Chairman, I hasten to speak on behalf of my amendment.

The CHAIRMAN. The gentleman is recognized for 5 minutes in support of his amendment.

Mr. THOMPSON of New Jersey. Mr. Chairman, I rise in support of this amendment. It will provide $7,356,000 for title II–C of the Higher Education Act. This provides funds to the Library of Congress to assist libraries in cataloging their collections. The $7,356,000 provided by this amendment represents the amount approved in the budget originally submitted by the Johnson administration.

The need for this particular program is evident. The cost of cataloging is often more than the price of the book or manuscript being cataloged. Before this program was provided by the Higher Education Act of 1965, libraries were wasting untold millions of dollars each year in duplication of effort. Each library individually cataloged each book for its own library.

Libraries competed with each other for scarce, skilled catalogers. The inability of some libraries to afford catalogers and the inability of others to find catalogers meant that many library users did not have access to publications, simply because they were not cataloged.

This program has solved many of these problems. It has made it possible to catalog each book one time and quickly make copies of the card for each book available to any library. The smallest and poorest library in the country now has access to skilled catalogers. Duplication of effort has been eliminated. Readers find that they can get more materials at more libraries and can do this more quickly than before. The program has been a success. It has been particularly appreciated by university libraries who face a particularly difficult task in remaining abreast of new publications. This is why the Association of Research Libraries strongly supports this amendment. Among the many university libraries which have indicated support for full funding of title II–C of the Higher Education Act are the University of Pennsylvania, University of Texas, University of Michigan, University of Florida, Yale University, University of North Carolina, University of Illinois, Florida Atlantic University, Ohio State University, Duke University, University of Washington, Dartmouth College, University of Chicago, Pennsylvania State University, Cornell University, Princeton University, Massachusetts Institute of Technology, University of Nebraska, and the University of Connecticut.

The program has also had another payoff. It has permitted libraries to save money. Illustrative of these savings is the experience of the Pennsylvania State University library which estimates that this program saves them $170,000 per year. The funds saved by libraries exceed many times the cost of providing this service. And the funds saved are often used to acquire new publications. The savings permitted by this program have consequently contributed immeasurably to the ability of libraries to make new acquisitions.

There are two reasons why Congress should provide the money for this program as provided by this amendment.

First, the knowledge explosion is now an established fact. Anyone who has helped his high school children do their homework recognizes this—perhaps with a bit of bitterness. The number of new publications each year exceeds those of the past. More money is needed to keep present services at the present level.

Second, the Library of Congress has acquired a very highly skilled cataloging staff since the start of this program. For the past 3 years the Library has intensified its efforts to recruit and train catalogers and supporting staff. The development of this staff has now reached the point where it could pay huge dividends. A budgetary cutback would force reduction in personnel. The loss of highly specialized personnel would be incalculable. It would be very costly to replace and it would waste the money which has gone into training over the past several years.

For these reasons, I urge my colleagues to support this amendment. This program has provided a worthy service and it has done it well. We should not force libraries to again duplicate their efforts and waste their resources. This amendment will insure the continued effectiveness of this program.

Mr. FLOOD. Mr. Chairman, I rise in opposition to this amendment.

I would like the attention of the Members so that you will know what is going on here. Here this. I want you to know, you who are so strong for the libraries today, and I include myself in that category, I want you to hear this and see what my friend from New Jersey is doing. I direct your attention to page 30 of the bill, line 3. Here is the amount—$135,394,000 for libraries and community services. The gentleman from New Jersey with his amendment does not raise that figure one dime. What does that mean? That means the additional money he wants for this particular part of the program must come out of the hides of the libraries for which you are so strong. It must come out of their hides, because he provides no additional money in total.

Finally, Mr. Chairman, your committee raised the appropriation for this activity $1 million, from $4.5 million to $5.5 million. They had $4.5 million and we gave them another million, making it $5.5 million, which is reasonable under all the circumstances.

Of course, you will defeat this amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Jersey (Mr. THOMPSON).

The amendment was rejected.

AMENDMENT OFFERED BY MR. MACDONALD OF MASSACHUSETTS

Mr. MACDONALD of Massachusetts. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MACDONALD of Massachusetts: On page 30, line 17, strike out "$4,000,000" and insert in lieu thereof "$8,625,000".

Mr. MACDONALD of Massachusetts. Mr. Chairman, this amendment would add $4,625,000 to the fiscal year 1970 appropriation for grants for educational television and radio facilities. It would restore the appropriation for this program to the figure provided by the Department of Health, Education, and Welfare in its original estimates to the Bureau of the Budget.

This is the matching grant program which provides the catalyst for construction of new educational television and radio stations and improvement of the facilities of existing stations. The grants go to public school systems, colleges and universities, and other public and private agencies to enable them to purchase the equipment that they need to produce instructional and public broadcasting programs and to transmit them to the public. The recipients of the grants themselves provide most of the money for the equipment, and they provide all of the money for land, buildings, vehicles, and other items not covered in this program, as well as the funds necessary to operate the stations once they have gotten on the air.

Mr. Chairman, we are all familiar with the practice of appropriating funds for a new program at a relatively low level, for the first 2 or 3 years, until we have had a chance to evaluate its effectiveness, to see whether it is achieving the purpose we had in mind when we enacted the enabling legislation. But this is not an experimental program or a mere demonstration project, contrary to the inference of the small size of the requested appropriation. It has been going on for 7 years now, and it has an outstanding record of achievement. It deserves a better fate than the $4 million appropriation the bill would give it.

During the first 3 years a total of $32 million was obligated in 161 grants to 148 stations in 47 States. To date, the program has helped to fund construction of 102 new ETV stations—more than half of those now operating—and to improve and expand the facilities of 74 already existing stations.

Two years ago, the original authorization ran out, and we voted to extend the program for another 3 years. But the appropriations have lagged far behind the level we authorized in the Public Broadcasting Act of 1967. In that act, we authorized $38 million for 1968 through 1970, but only $4 million has been appropriated. Approval of the amendment that I have offered would raise the total to about $13 million—still only about a third of the original authorization.

Mr. Chairman, I have the honor to serve as chairman of the Subcommittee on Communications and Power, which held hearings recently on a bill to extend this program for another 5 years. Nine of our colleagues in the House of Representatives and Governors of 10 of our States, testified to our committee, of the effectiveness of the educational stations in their communities, and of the importance of this program to their States. I can report that there is widespread recognition that all of the stations, despite their inadequate resources, are doing a good job and many of them are performing a truly outstanding service to America. We learned that the program has been highly effective in generating State and local support once the Federal Government has helped in the critical first phase of capital development; every Federal dollar granted has generated $11 in local funds. But we also learned that there is a real sense of urgency and concern that if this program is starved for funds for another year the hopes and aspirations of the several States for beginning or improving their educational television service may be dealt a serious setback.

There is a backlog of applications on hand at HEW right now for more than $32 million under this program. The applications have come from 43 States, and each one represents a pledge of local matching dollars from State legislatures, from school systems, or from community groups. We will put that money to work—or let it lie waste—in proportion to the appropriation that we make for this program.

Mr. Chairman, I believe this program of aid to educational broadcasting is one of the few bargains we have left in this country. It is an opportunity we cannot afford to miss. The amendment requests a very modest increase—$4.6 million—in the appropriation, and I respectfully urge its approval.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

(On request of Mr. OTTINGER and, by unanimous consent, Mr. MACDONALD of Massachusetts was allowed to proceed for 2 additional minutes.)

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. MACDONALD of Massachusetts. I yield to the gentleman from New York.

Mr. OTTINGER. Mr. Chairman, I would like to congratulate the gentleman on his amendment. It is my privilege to serve on the subcommittee under the gentleman from Massachusetts. We know the merits of public broadcasting. It is a tremendous force for economy in education, for efficiency in education, and for giving quality instruction to youngsters who otherwise might not be able to receive it.

Mr. Chairman, I hope the amendment will be unanimously supported by the members of the committee.

Mr. VAN DEERLIN. Mr. Chairman, will the gentleman yield?

Mr. MACDONALD of Massachusetts. I yield to the gentleman from California.

Mr. VAN DEERLIN. Mr. Speaker, it seems to me to be a most compelling point that the gentleman in the well has made on this amendment and that is the fact that for every dollar we invest in educational television there is generated another $11 in local funds.

This is unquestionably—based upon any kind of cost-benefit ratio that the Army Engineers might apply—the very best bargain we have in this appropriation bill today.

Mr. PICKLE. Mr. Chairman, will the gentleman yield?

Mr. MACDONALD of Massachusetts. I yield to the gentleman from Texas.

Mr. PICKLE. Mr. Chairman, I commend the gentleman from Massachusetts for offering this amendment. The request is reasonable. Public TV is a great media for providing education. It must be made better. If we are to provide better education through this facility, then we will have to provide the funds to allow it a reasonably good opportunity to succeed.

The gentleman's amendment is surely proper, and I congratulate the gentleman.

Mr. FLOOD. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I appeal to the ears of the Members. Now, watch this. Mr. Chairman, I want the Members to know exactly what is being done again. This is a replay of the last amendment.

Now, the libraries that are so dear to your hearts, and mine, here is what happens. Page 30, line 3, the gentleman's amendment, does not raise the $135,394,000 a dime, not a dime. You know what happens? It comes out of the hide of your libraries. Everything he wants must be taken away from your libraries. Do not forget that. That is what he is doing, just so you will know. Remember I told you.

And, in addition, this bill is the exact amount of the budget request, the exact amount for educational broadcasting facilities requested in this budget. It is also the same amount as we appropriated last year on this floor for exactly the same purpose.

Finally let me add this: I know something about this cause. This is a good thing. There is no limit to the horizon of this educational broadcasting program. I can wax eloquent on it, on how good this is, but it is not ready yet. It must creep before it runs. Double the amount of the budget request? And it comes out of the hide of your libraries.

Mr. Chairman, I suggest the same thing as the prior amendment for exactly the same reason.

Mr. MACDONALD of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. FLOOD. I decline to yield at this time.

Mr. SISK. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of this amendment. I recognize, of course, that the gentleman from Pennsylvania, the distinguished chairman of the committee, of course, is laying it on the line here that this money now, because of his point of order a little bit earlier, is going to have to come out of some other program. But I do want to say that there is no program more needed and no program that produces more additional support in the communities than this program on support for these educational television programs.

Mr. Chairman, I want to join particularly with my colleague from California (Mr. VAN DEERLIN), in the statement he made that there is no finer bargain

than this program which was authorized some years ago, but unfortunately it has never been funded to the extent it should have been.

I am not pinning that on any administration, but unfortunately our friends on the Committee on Appropriations apparently have never been sold, or have never seen the benefits that can accrue to properly fund the program on educational TV.

Mr. MACDONALD of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. SISK. I am glad to yield to my colleague, the gentleman from Massachusetts.

Mr. MACDONALD of Massachusetts. I would like to make an inquiry of the chairman of the subcommittee, if I may have his attention, the gentleman from Pennsylvania (Mr. FLOOD). I agree with his point concerning the money contained on line 3, which, in my original amendment, I wanted to have raised. I would like to ask the gentleman if he would agree to a unanimous-consent request that that money be so raised.

Mr. FLOOD. Why, you break my heart, my good friend—of course not.

Mr. MACDONALD of Massachusetts. I know that you want to protect the libraries and so do I.

Mr. FLOOD. The answer is, "No."

Mr. SISK. I will yield to the gentleman from Pennsylvania, if he would like to make a further comment.

I recognize his statement was correct. But I simply wanted to state, I think it is a bit unfortunate that we were denied a provision or raise in amount. But I still say the purpose for which the amendment was intended, by the gentleman from Massachusetts, will stand up along side of any other use of funds in this $120 million—now some $130-odd million. I still believe the amendment should be adopted and permit more flexibility in educational TV.

Mr. FLOOD. Mr. Chairman, will the gentleman yield?

Mr. SISK. I am glad to yield to my good friend, the gentleman from Pennsylvania.

Mr. FLOOD. I do not quarrel with the intention but I am chairman of an appropriation committee and there is a road to a certain place paved with good intentions.

Mr. SISK. Oh, I recognize that, and I have great admiration for my good friend, the gentleman from Pennsylvania. Let me say, I know the gentleman does an excellent job and there is nothing personal in my criticism here. All I am saying is that this is an excellent program and unfortunately it has always been underfunded.

Mr. BURTON of Utah. Mr. Chairman, will the gentleman yield for a question?

Mr. SISK. I yield to the gentleman.

Mr. BURTON of Utah. I would direct a question to the gentleman from Massachusetts. In your view does this amendment indeed take away money from the library fund?

Mr. MACDONALD of Massachusetts. No, I was merely making the point that the chairman of the subcommittee had made.

Mr. BURTON of Utah. The amendment offered by the gentleman has some Members confused and that includes me. I am a great supporter of libraries. But if your amendment is going to take money away from this fund, I think we should know this before we vote on your amendment.

Mr. SISK. The problem here, of course, is that the total amount of money which the gentleman from Massachusetts originally sought to raise is not all for libraries. It is for a number of services. There is no question but that the gentleman from Pennsylvania is correct that even that total has to be taken, this increase in educational TV, but not necessarily from the construction fund of libraries.

I think that should be cleared up.

As to the total of $130 million plus—I do not have the exact figures, but of course that is for a variety of services—construction funds, and so forth, and all these community service programs, and there is no question but that out of that pool of course would have to come the increased amounts for educational TV—but not necessarily from the construction fund for libraries.

This is up to the agencies how they distribute the fund.

Mr. BURTON of Utah. I would like to see educational TV built up much more than it is and for us to do anything to help because we have so much commercialism and criticism of our commercial TV. But if it is going to harm some of these other activities, and this is a point I want to make clear, I cannot support the gentleman's amendment.

Mr. SISK. Of course, the reason why, as I say, my good friend, the gentleman from Pennsylvania was raising his point of order, which I recognize, and here again I think in fairness that we should understand is that we are caught in a trap.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Massachusetts (Mr. MACDONALD).

The question was taken; and on a division (demanded by Mr. MACDONALD of Massachusetts) there were—ayes 54, noes 89.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

EDUCATION FOR THE HANDICAPPED

For carrying out the Act of September 6, 1958, as amended (20 U.S.C. 611–617); and section 302 and title V of the Mental Retardation Facilities and Community Mental Health Centers Construction Act of 1963, as amended (20 U.S.C. 618, 42 U.S.C. 2698, 2698a, 2698b); the Act of September 2, 1958, as amended (42 U.S.C. 2491–2494); title VI of the Elementary and Secondary Education Act of 1965, as amended (20 U.S.C. 871–880); and the Handicapped Children's Early Education Assistance Act of 1968 (20 U.S.C. 621–624), $84,540,000, of which $29,190,000 shall be for grants to States under part A of said title VI of the Elementary and Secondary Education Act.

AMENDMENT OFFERED BY MR. CAREY

Mr. CAREY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. CAREY: On page 31, line 6, strike "$84,540,000" and insert in lieu thereof "$100,000,000".

Mr. CAREY. Mr. Chairman and Members of the Committee, we could call this amendment by many names. It might be called the rubella amendment. About 1965 we had an onset of German measles which vastly increased the population of deaf and blind children, with the result that all the money in the bill could be spent for those children and it would not be too much.

It may surprise some members of the committee to find that our total commitment to handicapped children for education is about $5 per year at the Federal level, at a time we were spending $1,500 per student in higher education, much more in vocational education, as we should, and much more in Operation Headstart, as we should. It is 3 cents per day for the handicapped child, but by reason of the good work of many Members of this House who have taken handicapped children's education to heart, we have nine new programs that have come into being during the life of this appropriation. As a result, we have work done by men like the gentleman from Ohio (Mr. AYRES), who has helped us with the deaf-blind, and the gentleman from California (Mr. BELL), who has helped us with the mentally retarded, the gentleman from Minnesota (Mr. QUIE), who joined me in sponsoring the preschool bill for all handicapped children, and all of those who have joined in passing the authorization legislation to increase the commitment that we have made to the learning disabled. These programs for those who are unable to participate by reason of a handicap in the regular education programs have, in a sense, brought to life and merged—in many, many more programs, so that finally in the last few years we have begun to help those who have not had any kind of assistance before through Federal legislation.

At the same time, almost the same week that he made the commitment that we should go to the moon, President Kennedy said:

The children of this country who have felt the hand of fate must never suffer from neglect.

But there is neglect now, because local school districts, local school boards, and State educational institutions cannot possibly provide the operations, the services, and the teachers needed to do the new things that we are able to do for the deaf-blind, for the blind, for the deaf, the mentally retarded, and the emotionally disturbed. Only we can do this. Only we can do this.

I am heartened to come here this day. I have been away from the Chamber for some time because fate intervened in my life, and I know this better than I ever knew it before, that this day is a joyful day because we stood up, all of us, and said, "We are not going to desert our children. They are growing up. We have only one chance to change their lives, and this is our chance."

And tonight we can do something to change the lives of handicapped children by simply responding to the request made by the administration through Secretary Finch, who requested $100 million for the programs for all the handicapped children. All I seek to do by my amendment is to respond to the request of the Secretary of Health, Education, and Welfare, justified by the programs that we passed in this Congress, to make our commitment quite evident to the handicapped children in this hour.

Mr. WAGGONNER. Mr. Chairman, will the gentleman yield?

Mr. CAREY. I yield to the gentleman from Louisiana.

Mr. WAGGONNER. Mr. Chairman, I thank the gentleman for yielding. I rise in support of the gentleman's amendment to assist the handicapped children in this country.

Surely they do take priority in this matter. Mr. Chairman, I am pleased to have the opportunity to support the amendment offered by the gentleman from New York (Mr. CAREY) to increase the appropriations for programs of the education of handicapped children.

I am pleased to see that this will provide $5 million to title VI–A of the Elementary and Secondary Education Act, because there are few such instances where grant-in-aid to State and local communities can so directly be returned to be used by our State and local communities. The return to our local community and our States can be judged by the consequences; the cost of institutional or residential care is approximately $200,000 per handicapped person. The cost of providing a full elementary and secondary education for the handicapped is approximately $20,000 per child. The Nation's handicapped children have the potential input to our economy of $15 billion if they are provided with the special education and services necessary for them to realize their personal and economic potential.

The State of Louisiana has over 300,000 known children of school age who are handicapped and in need of special programs and services if they are to realize their personal and economic potential; 92 percent of these children are not now receiving these needed services. An estimated 19,000 special education teachers are currently needed in Louisiana alone. While these figures are overwhelming, they do show forward progress.

The funds requested will prevent the loss of gains made in the last decade and will enable programs, at the local and State levels, to continue their orderly development toward meeting the needs of our Nation's handicapped population.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. CAREY. I yield to the gentleman from Minnesota (Mr. QUIE).

Mr. QUIE. Mr. Chairman, I thank the gentleman from New York for offering this amendment. I think it is necessary. I think it is of a high priority.

One does not even have to compare this with the amount we put in by the Joelson amendment, or anything else we have done like reaching the moon. This money is needed. It is money that will be wisely spent because the programs, even research, are so soundly based.

Mr. CAREY. Mr. Chairman, I thank the gentleman from Minnesota for his contribution. He has done much in the committee to help in the authorizing of this legislation.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. CAREY. I yield to the gentleman from Kentucky (Mr. PERKINS).

Mr. PERKINS. Mr. Chairman, I compliment our distinguished friend, the gentleman from New York (Mr. CAREY), for offering this amendment.

This is an amendment to take care of the urgent needs of handicapped children.

It is of a top priority and it should be adopted.

Mr. CAREY. Mr. Chairman, I thank the gentleman from Kentucky for his remarks.

Mr. SCHEUER. Mr. Chairman, will the gentleman yield?

Mr. CAREY. I yield to the gentleman from New York (Mr. SCHEUER).

Mr. SCHEUER. Mr. Chairman, as one who has worked under the leadership of the distinguished gentleman, my colleague from New York (Mr. CAREY), on programs for the disabled and disadvantaged children over many years, I congratulate him for this amendment, and for his unstinting efforts, imagination and leadership over many years on this subject, and I urge support of the amendment.

Mr. FLOOD. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, this committee and House have no quarrel with this program. If this amendment is defeated—as it should be—let me tell Members how much will be in this program: $84,600,000. This is $5 million more than was appropriated for 1969. The proposition now with this amendment is to add $15 million to an $85 million program in addition to the $5 million that the committee has already increased it over last year's level.

I have no quarrel with the purpose and with the intent, and neither does the committee, but under all the circumstances this amendment should be defeated.

Mr. PUCINSKI. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in support of the amendment. My subcommittee has held very extensive hearings on this whole subject of handicapped children. I can think of no more worthy amendment than the amendment now before this body.

There are 55 million children attending public schools in this country and another 8 million children attending private schools. The testimony before our committee shows that four out of every 10 children in this country suffer from some form of handicap. There are 10.5 million children suffering hearing defects, 12.5 million children suffering eyesight defects, and 5.5 million children suffering either emotional problems or learning disabilities. We have approximately 25 million youngsters in this country who urgently need help.

The most expensive kind of education in America is education for the handicapped. All over this country there are parents who have youngsters who unfortunately suffer from some form of handicap, some emotional instability, or some learning defect. These parents have suffered quietly.

All over this country, if we look, we can see what limited facilities are available. No form of our educational process is more sadly neglected than that of providing education for these handicapped youngsters.

I tell the Members, July 30, 1969, can very well be called Emancipation Day for the children of this country. This Congress stood up and recognized the educational needs of American children. Let us not stop now.

I am in sympathy with what the chairman of this subcommittee has said, but I tell Members they will never have a greater opportunity to walk out of this Chamber 10 feet tall than if they vote for this amendment, because if anybody needs help, it is the handicapped children of this country. The parents up until now have suffered quietly, quietly pleading and begging. There is not a Member in this Chamber who has not had a parent come to him and say, "Look, I have a child who is handicapped. Where can I go to get help?"

They talk about $100 million. This is a pittance when one compares the enormity of the need for the youngsters with a handicap in America to that figure.

If we really want to make a contribution toward solving some of the social problems of this Nation, this is the place to do it, here with this amendment. I congratulate my colleague from New York for offering the amendment.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from Texas.

Mr. ECKHARDT. Has the gentleman thought about how much nerve gas $15 million would provide?

Mr. PUCINSKI. I do not know that the question is germane. In fact, I believe this is much too serious a subject for facetious remarks like that.

I am seriously concerned about these handicapped youngsters. There are Members in this Chamber who serve on that committee, who have been listening to the testimony. We have a bill coming in next week to add to this category of children with learning disabilities. There are perfectly normal children who for some unknown reason reverse letters, who read letters upside down. There are youngsters with all sorts of other disabilities, youngsters in no other way identifiable, who are perfectly normal citizens. They need help desperately.

With all due respect for the chairman of the subcommittee, whom I respect highly, I hope the Members will support the amendment offered by the gentleman from New York.

Mr. ECKHARDT. Mr. Chairman, I must admit a degree of facetiousness in

my question to the distinguished Member from Illinois, but I am quite serious in the point I wish to make, which evidently evaded his keen discernment. It is this: Where we are dealing with $15 million to be expended on the humane programs, such as those of education and help to the handicapped, such a figure looms up as an enormous expenditure.

But when we are dealing with a $350 million appropriation for chemical and biological warfare, hidden in various items in the military appropriation, no such economic scruple seems to trouble the Armed Services Committee or the Appropriations Committee.

Chemical and biological warfare includes research on offensive and defensive chemical and bacteriological agents and delivery services, the procurement, manufacturing, stockpiling of these materials and devices, and the maintenance of facilities for greatly increased production should the United States feel pressed to use these devices in time of war. It also includes the present large scale production and use of chemical anticrop and personnel agents in Southeast Asia.

Costs, as admitted by the Pentagon for fiscal 1969 are as follows:

	Millions
Research and development	$90
Procurement	240
Operations and maintenance	20
Total	350

Now, on the other hand, here we have engaged in a program providing facilities and services for the investigation, prevention, and suppression of communicable diseases by the direct development, advancement, and demonstration of knowledge and techniques, through research grants, and through the prevention of the introduction of communicable diseases from foreign countries.

Total expenditures for fiscal year 1969, $41.4 million; total expenditures for fiscal year 1970, $38.7 million break down as follows:

	Millions
Laboratory improvements:	
Fiscal year 1969	$6.0
Fiscal year 1970	6.3
Prevention and control:	
Grants:	
Fiscal year 1969	6.8
Fiscal year 1970	2.9
Direct operations:	
Fiscal year 1969	27.7
Fiscal year 1970	27.6
Program direction and management services:	
Fiscal year 1969	1.9
Fiscal year 1970	1.9

Therefore in 1969 we spent at least $350 million to be in a position to trigger disease and here we have spent $41.4 million to prevent disease, less than one-eighth as much.

Mr. MICHEL. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, my dear friend from New York, the author of this amendment, of course, makes a very good case, as anyone in this House could make. How can one stand here and talk against handicapped children of any kind, or any handicapped person?

As to increasing the amount, why $15 million? Why not $50 million or $100 million?

What do the Members think this subcommittee does all through the year, hearing the testimony of people with impassioned pleas, and rightfully so? We could "shoot the moon" on cancer research, heart research, or whatever. We have to try to do a job here, and it is a tough job. Anyone could out-demagog anyone else in this House by offering amendments to push up everything else.

I say, as the chairman has said, we have provided an increase here over last year of $5,690,000. The main increases are $2,055,000 for the early childhood program, $1.5 million for regional resource centers, and $1 million extra for the deaf and blind centers.

It seems to me we have done a pretty good job. It puts one in a bad position to argue against the gentlemen and to say they ought not have more.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield to my chairman, the gentleman from Texas.

Mr. MAHON. Is it not true that in this bill we have provided for an expenditure of more than $17 billion for the current fiscal year, to try to meet many needs, insofar as reasonably possible under all the circumstances?

I believe it would be well to point out that in addition to this increase for the handicapped we have provided in this bill $33 million for mental retardation, which relates to the welfare of children, and for innumerable other hundreds of millions of dollars which relate directly and indirectly to the welfare of children. There is maternal and child health and welfare, and this bill's provisions contain $284,800,000 in that area.

There are innumerable programs in the bill designed to be helpful to children. This would not exclude the handicapped children, who can be considered and must be considered, along with the $85 million included in the particular paragraph to which the amendment relates. As a matter of fact, I understand that the Department of Health, Education, and Welfare estimates that it now spends over half a billion dollars on mental retardation.

Mr. MICHEL. That is correct.

Mr. CAREY. Mr. Chairman, will my colleague yield?

Mr. MICHEL. I yield to the gentleman from New York.

Mr. CAREY. I do not like to disagree with the statement of the chairman of the committee or of my distinguished colleague from Illinois, but two things must be recognized.

This House, in its good will, has changed the definition, so that we have brought into eligibility for these programs more children than before. Therefore, we are subdividing the original amount which was available. That is why we are reaching more children but have less money to do so per child.

When the chairman speaks of maternal and child health benefits it does nothing for the education of the handicapped. When he speaks of money in the next section for the mentally retarded it is for facilities for physical care and not education.

Mr. Chairman, we have discovered something which is more important than the rocks on the moon. We have discovered that we can actually educate handicapped people to perform and have a full life of employment, to be usable and have utility in our economy.

When we invest in education for the handicapped, as we did for vocational rehabilitation, we are putting Americans back into employable opportunities. That is just what we seek here. It has nothing to do with the section that the chairman cited.

Again I point out to my distinguished colleague from Illinois, when he speaks of $15 million being too much, this is exactly what Secretary Finch said he had to have in order to run his department with the new programs that we gave him. We authorized him to extend help to more people. He announced this and he told the deaf, the dumb, the blind, the mentally retarded, and the emotionally disturbed in a press release, "We are going to do more for you." Now we say that we will do just a little bit less because more children are now eligible than there were before. So you are subdividing the amount unless you increase the appropriation to meet the justified request of the Secretary of Health, Education, and Welfare, Mr. Finch. I stand with Mr. Finch and I make this the "Finch amendment," and I hope the gentleman from Illinois will help me to pass my amendment.

Mr. MICHEL. Mr. Chairman, if I might respond to the gentleman from New York, I do not see anything in our hearing record which discloses that the Secretary was asking for that kind of an increase. We did not get that kind of testimony at all. It may very well be that at some public gathering some place somebody might have gotten carried away about particular needs in the future, but all we have to go on as a committee is what we hear in these 9,000 pages of testimony over several months' period of time.

Mr. CAREY. Will my colleague yield further?

Mr. MICHEL. I yield to the gentleman.

Mr. CAREY. If Secretary Finch said at some public gathering where he was carried away that he is asking for one-half cent per day more for handicapped children, then I will carry him away on my shoulders. This is what he should say in public, in private, and before your subcommittee.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

(Mr. MICHEL asked and was given permission to proceed for 2 additional minutes.)

Mr. MICHEL. I take this extra time only because I would like to have just a little bit of my own time. I felt I should be gracious and give my opponent an opportunity, but I do want to be heard.

As I said, we have done a pretty good job here. The gentleman from New York

makes a point about what we are learning with respect to handicapped children. Let me say in my own home community of Peoria, for example, in the last few years we have constructed what we call an allied agency center where we have $1.5 million of Federal grants which we matched with money that was raised locally. For the first time in the country we have drawn together under one roof cystic fibrosis, palsy, crippled children, mentally retarded, physically handicapped, into eight different agencies which have heretofore been all on their own. For the first time we have our own pilot project specifically aimed at educating and caring for these handicapped children. We have a daily attendance record there of 600. I know what the gentleman is talking about. This is a very serious problem throughout the country. But I am saying again that we have not really gotten the testimony in our hearing record here in which there was a request for more money than we provided, and I hope that the committee will stick by us.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Minnesota.

Mr. QUIE. Is it not true, however, that the amount in this bill is less than the budget requested?

Mr. MICHEL. Yes. As a matter of fact, it is $1.25 million under the budget request. As I said, it is an increase of $5.6 million over the spending level for 1969. The chairman of the committee indicated that.

Mr. FLOOD. Mr. Chairman, will the gentleman yield to me?

Mr. MICHEL. I yield to the gentleman.

Mr. FLOOD. That is so, and that is entirely for research. It had nothing to do with services and it was only the amount of the increase over 1969 for research.

Mr. QUIE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, I just want to say briefly before we vote on this amendment that it is true there was a cut in the appropriation from the budget request. Also I want to state, the gentleman from New York (Mr. CAREY) does not just pick some figure out of the air. He picked the sum that the Department of Health, Education, and Welfare asked the Bureau of the Budget for. HEW felt that they could move ahead with these programs and spend this money wisely.

Mr. Chairman, when it comes to research I have been in touch with the problem of children with handicaps for quite a long time.

I know a decade ago how little was known about training the handicapped with the few teachers that were available. We do not have enough teachers now. We have about 80,000 teachers for the handicapped but we need about 250,000. There are enough teachers in the country who have the knowledge to teach normal children although we do not have enough teachers of the capability that everybody wants. They probably never will. The handicapped do not have enough teachers, highly qualified, partially qualified or even with little ability in the specialties needed to reach the handicapped.

Mr. Chairman, there are two things that are of utmost importance. First is the number of teachers with the skill to help these children learn to lead a more normal way of life. The most satisfying thing one can experience is to see the result of a capable teacher working successfully with a handicapped child. However, we still do not have enough teachers to perform this task. We have started preschool programs for the handicapped and research and demonstration are paying great dividends for the handicapped. Research projects have been a great help for the handicapped, but the benefits are not limited to them. What we learn on the backstroke in programs for the handicapped is of tremendous importance to every child, the children of the constituents of yours and mine.

So, Mr. Chairman, I think this is an important amendment and that it should be adopted.

Mr. BELL of California. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from California.

Mr. BELL of California. Mr. Chairman, I rise in support of the amendment and I wish to compliment the gentleman from Minnesota (Mr. QUIE) for his statement. We have both worked on the committee involving the handicapped. I also recognize the great importance of what the chairman of the subcommittee has said involving increased appropriations. However, I do know that this is one of the most important areas of education that we can support and I compliment my friend, the gentleman from New York (Mr. CAREY), for offering this amendment. I enthusiastically endorse and support it.

Mrs. CHISHOLM. Mr. Chairman, I move to strike the requisite number of words.

Mrs. CHISHOLM. Mr. Chairman, I rise in support of the Carey amendment.

Mr. Chairman, I would just like to say here, ladies and gentlemen, that I am most happy, most happy, that the gentleman from Brooklyn has offered this amendment. This is one of the things that concerned me—to see the complete elimination of title 6(a) from the ESEA program which is directed toward the multihandicapped children of this Nation.

I do not want to speak to you from the standpoint of a politician, but from the standpoint of an educator, who has just emerged from that profession during the last 4 years and have had experience in this field. I was in a position to know what was happening to the multihandicapped children of this Nation and to know many children in the Nation that have multiple handicaps that are still in the homes of their parents in their respective communities. This happens, because there is no place for these children to go. The parents are upset over this fact, because of the public school situation. These parents go to community agencies, but there are no available facilities there to help these children. Many of these children are hidden in closets when friends come to the home, because of the fact that the parents have no place to send these children. They are ashamed and embarrassed, because the children are vegetating day by day. And, indeed, these children have no one to speak out for them except those of us in the U.S. Congress.

Mr. Chairman, I feel that these children have a right to receive some kind of training and help so that that they, too, can enjoy their right to receive some kind of training and help so that they, too, can enjoy their rightful share in this society.

How dare we in this House of Representatives this evening talk about this problem in terms of dollars and cents? We all, of course, realize that our children are the most valuable things we have in this country. It is very disturbing to me that we have to consider this problem in terms of dollars and cents. We must place this problem in the terms of the highest priority.

Mr. Chairman, I speak very emotionally about this because, you see, I have been traveling up and down the communities and have been into the homes of people who have handicapped children before I came here and have listened to the heart-rending cries of the parents of these children of this country who do not know what to do with a handicapped child.

Mr. Chairman, Representative CAREY has introduced a most marvelous amendment here this afternoon. I ask the gentlemen of this House to please support this amendment. The problems of the multihandicapped children deserve the highest priority of any in every category of our educational efforts. These are the children who are blind, deaf, and handicapped. They will be grateful for what we do. Please support this amendment.

Mr. PUCINSKI. Mr. Chairman, will the gentlewoman yield?

Mrs. CHISHOLM. I yield to the gentleman from Illinois.

Mr. PUCINSKI. Mr. Chairman, I thank the gentlewoman for yielding.

Mr. Chairman, I think that it is important to point out that the authorization on this bill is $206 million. My colleague from Illinois talks about how the Committee on Appropriations holds extensive hearings, and as I listened to the distinguished chairman expound on the sanctity of the Appropriations Committee I waited for him to start walking on water.

But my committee also has worked, and we have held extensive hearings, and the appropriation proposed in this bill, even with the $15 million amendment proposed by the gentleman from New York, will not even begin to meet half of the authorization that was recommended on the basis of very extensive studies.

So, Mr. Chairman, I urge the adoption of this amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. CAREY).

The question was taken; and on a division (demanded by Mr. FLOOD) there were—ayes 95, noes 43.

So the amendment was agreed to.

The CHAIRMAN. The Clerk will read. The Clerk read as follows:

EDUCATION IN FOREIGN LANGUAGES AND WORLD AFFAIRS

For carrying out title VI of the National Defense Education Act, and section 102(b)(6) of the Mutual Educational and Cultural Exchange Act of 1961, $18,000,000.

Mr. GROSS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I will only take a minute, but I would like to ask the distinguished chairman of the subcommittee about the $18,000,000 expenditure for education in foreign languages and world affairs.

Now what is being done through a program to educate people in world affairs? Is this more of a handout for foreign aid—the foreign handout business?

Mr. FLOOD. I can understand my friend's inquiry. This is an exercise in semantics. Perhaps we should have changed the title.

This "world affairs" comes about mainly because the budget contained funds for the International Education Act in this paragraph and the committee turned down that part of the request as we have turned it down 3 years in a row.

Mr. GROSS. Then there is no "world affairs" in this except by way of semantics in the language; is that correct?

Mr. FLOOD. There are the Fulbright-Hayes training grants and foreign language centers and fellowships under the National Defense Education Act. That is about it, because we allowed nothing for the International Education Act.

Mr. GROSS. I thank the gentleman.

The CHAIRMAN. The Clerk will read. The Clerk read as follows:

MENTAL RETARDATION

To carry out, except as otherwise provided for, sections 301 and 303 of the Public Health Service Act, as amended, relating to the prevention, treatment, and amelioration of mental retardation, parts C and D of the Mental Retardation Facilities Construction Act (42 U.S.C. 2261, et seq.), and section 4(a)(1) of the Vocational Rehabilitation Act, as amended, $33,629,000, of which $8,031,000 shall be for grants for facilities pursuant to part C of the Mental Retardation Facilities Construction Act, to remain available until June 30, 1971: *Provided*, That there may be transferred to this appropriation from the appropriation for "Mental health" an amount not to exceed the sum of the allotment adjustment made by the Secretary pursuant to section 202(c) of the Community Mental Health Centers Act.

AMENDMENT OFFERED BY MR. DANIELS OF NEW JERSEY

Mr. DANIELS of New Jersey. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DANIELS of New Jersey: On page 36, line 16, strike "$33,629,000," and insert in lieu thereof, "$37,000,000."

On page 36, line 16, strike "$8,031,000," and insert in lieu thereof, "$12,031,000."

Mr. DANIELS of New Jersey. Mr. Chairman, my amendment would increase the appropriation for the prevention, treatment, and amelioration of mental retardation from $33,629,000, to $37,000,000, of which $12,031,000 shall be for grants for facilities pursuant to part C of the Mental Retardation Facilities Construction Act. Specifically, this will be an increase of $4 million for the construction of facilities. This modest sum would restore the original $12 million appropriation. The $8 million requested by the administration and recommended in this H.R. 13111 can only be viewed as an abrogation of a commitment by the Congress to the States and voluntary agencies which undertook in good faith to implement the program which Congress proposed to them so enthusiastically in 1963 and again in 1967.

As of December 1968, some 242 construction projects had been approved for Federal assistance. The Federal share is $48 million against a non-Federal share of nearly $100 million. When completed, the buildings will house services which will reach an estimated 63,000 retarded children and adults—less than 5 percent of the estimated number of those who are believed to need such specialized services. As a result of treatment, many of these people could live productive lives; they can add to the country's productivity rather than be a liability. To cut these funds is false economy.

Estimates submitted by the responsible State agencies indicate that the current need for construction is in excess of $200 million, and that, if Federal funds were to be made available, applications for $100 million in Federal aid would immediately be forthcoming. Only 2 years ago we recognized the magnitude of this need by enthusiastically passing extending legislation with a 1970 authorization of $50 million.

As my colleagues in this House know, the authorizing legislation requires allotment to the States with a minimum of $100,000 to each. If we permit the appropriation to fall below the already inadequate level of $12 million, we produce a distribution which discriminates very unfairly against the more populous States. The allotments from an $8 million appropriation for 1970 would result in a reduction of 40 percent for the larger States.

On a per capita basis, at the $8 million level the largest States will receive only one-fifth as much as the smallest States.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. DANIELS of New Jersey. I am pleased to yield to the chairman of the Committee on Education and Labor, the distinguished gentleman from Kentucky.

Mr. PERKINS. Mr. Chairman, I would hate to think that an amendment of this type would be voted down by the membership of this body this afternoon, especially after we have made the commitments to the States for such an important matter as mental retardation and that the facilities will not be constructed—even some of the facilities that have already been started, and that there should be a cutback here.

Mr. Chairman, we should not renege on that commitment. We should fulfill our obligations. The Department has made an estimate of what it will take to carry out these commitments. The gentleman is offering an amendment to carry out the budget request. I am most hopeful that this amendment will be approved because we cannot afford to turn our backs in this area of mental retardation at this stage of the game after we have made this commitment to the States.

Mr. DANIELS of New Jersey. I thank the gentleman. I would like to point out that in 1964 and again in 1968, the people of New Jersey voted bond issues for construction—one purpose of which was to provide matching funds to carry out the intent of the Federal legislation which we offered the States as an inducement to move more rapidly in the direction of developing community facilities.

Voluntary agencies pledged their assistance also. At no small expense a State plan was developed which, at the authorized level of Federal aid could, by 1972, provide every county in our State with a center for the day care and training of the most severely and profoundly retarded and multiple handicapped youngsters of school age. Activity centers for adults too handicapped to benefit from vocational rehabilitation would have followed. It is an orderly, planned program.

Much time, effort, and money was spent on its development. The people and the legislature supported it and voted their share of the funds. It is embarrassing to me to have to tell them that we are proposing to give them $195,000 where they might have looked for $1½ million that adequate funding could bring them. Moreover, I have been informed that other States are also in danger of being left high and dry.

Mr. SANDMAN. Mr. Chairman, I rise in support of the amendment.

The CHAIRMAN. The gentleman from New Jersey is recognized.

Mr. SANDMAN. I think the only appropriate way to ask for an increase of any kind in an appropriation such as the one we are dealing with today is to show what has been appropriated is inadequate, rather than trying to pull the "hearts and flowers" bit. In this connection, my colleague from New Jersey has outlined what we have done in our State in connection with the day centers. The people of our State have approved $5 million for this project, a project which has an overall cost of $7 million. It will put one county day center in each of the 21 counties of the State. If this cutback is permitted, the entire program is set back. It not only is set back, it falls, because instead of getting the amount which was committed to the State, equal to 40 percent, the State's amount receivable under this appropriation would be less than 16 percent. I urge the adoption of the amendment.

Mr. FLOOD. Mr. Chairman, I rise in opposition to the amendment.

The CHAIRMAN. The gentleman from Pennsylvania is recognized.

Mr. FLOOD. Mr. Chairman, I would like to tell you why I am opposed to the amendment, which provides an increase in the amount of the bill for the construction of Community Service facilities. The amendment increases the bill by $4 million. The Johnson budget was $8,031,000, the Nixon administration agreed with the Johnson administration,

and this committee agreed with both, and properly so. I will show you why. I repeat for purposes of emphasis that the amount in the bill is exactly the amount in both of those budgets. That has value and merit for your consideration—plus this, and this is of great significance: the amount of this bill is already more than $2 million, over $2 million, above the 1969 appropriation on this very item. Almost without exception the construction program in the HEW budget, as far as construction is concerned, has been cut below 1969, some of them have been cut out entirely.

This is consistent with the guidelines generally followed by the Congress, and the guidelines set down by both administrations, and the guidelines set down by the committees handling this bill.

I submit, Mr. Chairman, with all due respect for my sister State of New Jersey—where, since I wore diapers, we have gone to the shore from the coalfields of Pennsylvania—we stand by this budget. We have no quarrel with the purpose, but it has already fared much better than most construction programs.

I submit, Mr. Chairman, faced with those circumstances—the defeat of this amendment.

Mr. PERKINS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I think we all understood the amendment offered by the gentleman from New Jersey. It is not that the cut was $4 million: the action of the Appropriations Committee was $4 million below the expenditure, the appropriation of fiscal year 1969. I think if the gentleman from Pennsylvania will reexamine his figures, he will find the gentleman from New Jersey is absolutely correct.

In an area where a commitment has been made on mental retardation to the various States of this Union and the Department of Health, Education, and Welfare, saying they need this extra money, it just does not make a great deal of sense to vote down an amendment of this type, when we need the facilities all over the Nation for the mentally retarded.

Mr. Chairman, I am certainly hopeful the House will adopt this amendment.

Mr. SMITH of Iowa. Mr. Chairman, I move to strike the requisite number of words.

Mr. FLOOD. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from Pennsylvania.

Mr. FLOOD. Mr. Chairman, I want to reassert very flatly what I just reported to the Members. I do not know what juggling of funds between fiscal years has been done in their bookkeeping.

I have in my hand—and did Members ever hear that expression before, "I hold in my hand" and so on, on the radio and television? I hold in my hand the appropriation figures, and I reported to Members exactly the 1969 and 1970 appropriation figures.

Mr. HOWARD. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise along with my colleagues from New Jersey to point out a national problem. This national problem is that of the mentally retarded and what we, as a Congress, should do to help in this area. We can understand approaching the problem as the Appropriations Committee has. We understand they have not all the money in the world. They have to decide what they can spend and in what certain places. As the gentleman from Illinois said, certainly he is in favor of helping the handicapped, but he cannot raise it another $50 or $100 or $200 million.

But, Mr. Chairman, the unconscionable thing about this is we are not requesting an increase. We are requesting restoration of a cut. It was $12 million for the past 2 years, and if the previous administration had requested a cut, and the present administration requested a cut, I believe we, as a Congress, would not be able to face our people at home if we went along with it.

Mr. Chairman, we may have a question of priorities in this Nation, but certainly help for the mentally retarded should not be put in the category of a priority. It is a duty and a moral obligation this Nation has to take care of its mentally retarded.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. HOWARD. I yield to the gentleman from Kentucky (Mr. PERKINS).

Mr. PERKINS. Mr. Chairman, I would like to suggest to the distinguished gentleman from Pennsylvania that the way to get out of this matter is to take the figures of the various State departments to see how much their cutback is in every State of the Union.

I say to the gentleman that he will find a difference of $4 million between the amount in this appropriation bill and the amount that was appropriated last year, and the States have already been notified of this cutback. That is the statement we stand on.

Mr. BELL of California. Mr. Chairman, will the gentleman yield?

Mr. HOWARD. I yield to the gentleman from California.

Mr. BELL of California. I should also like to suggest to the gentleman from Pennsylvania that perhaps as a result of this night's work he will realize perhaps too low a priority has been assigned to something of great national interest; that is, our educational needs in this Nation. That is where the big bulk of the trouble is. Perhaps we should establish a higher priority for the educational needs in this country and a lesser priority for other things.

Mr. HOWARD. I thank the gentleman.

Mr. Chairman, if this money has been cut from expenditures in other years, that money has gone someplace else. Many of us wonder where the money goes which is taken from the mentally retarded.

We hear about the administration sitting down and setting goals and priorities. Someone would sit back and say, "What is the first priority?" Of course, the first priority is bullets and bombs. Then the question is asked, "Where are we going to take the money from?" And someone else might say, "We can take $4 million from the mentally retarded. They probably will not know."

Let us not have this happen in this House in this bill, because people would say things about the present administration and the present Congress if this should happen today. I know they would be saying things, because I would be saying them myself.

I wholeheartedly support the amendment of my colleague from New Jersey, and I certainly hope we will restore the cut from previous years for the mentally retarded.

Mr. Chairman, I rise to support the amendment proposed by my distinguished colleague from New Jersey (Mr. DANIELS) to maintain the level of appropriations for construction of facilities for the mentally retarded at the level of the last 2 years, namely $12 million.

Mine is one of the many congressional districts which has not yet felt the beneficial impact of the Mental Retardation Facilities Construction Act of 1963.

The people of Monmouth and Ocean Counties are vitally interested in providing locally for the retarded. Our public schools have greatly expanded their programs and two recently opened sheltered workshops have provided a vehicle for vocational rehabilitation services. But there are other unmet needs—for nursery school programs for toddlers, day training for the most severely handicapped of school age who are not acceptable in school, and independent living activities for retarded adults not attending the workshops.

Those latter services are offered in my district through the voluntary efforts of the Monmouth and Ocean Units of the New Jersey Association for Retarded Children. Such laudable efforts deserve a better setting than the famous House on Hudson in Red Bank—an antiquated frame building, a former residence, a make-do facility.

This picture is, I know, not unique to Monmouth County. Inadequate, even hazardous facilities, are found in every State.

I want—as I am sure so many of my fellow Members want—to see in every part of the country as well as in my own, modern, well-designed facilities worthy of the programs they house and worthy of the dignity we should accord even the least—the most handicapped—of our fellow citizens.

In all fairness, we who have supported this legislation and the earlier appropriations should see that it continues to be supported at a level which is at least worth the time and effort which the Federal Government, the State governments and the eligible agencies must spend to administer it.

I wholeheartedly support this amendment and urge my colleagues to similarly support any and all efforts to assist our handicapped Americans.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Jersey (Mr. DANIELS).

The question was taken; and on a division (demanded by Mr. PERKINS) there were—ayes 62, noes 52.

So the amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

JUVENILE DELINQUENCY PREVENTION AND CONTROL

For carrying out the Juvenile Delinquency Prevention and Control Act of 1968, $5,000,000: *Provided*, That none of the funds contained herein shall be used to make

grants, under Title I of said Act, in excess of the following: (1) $12,500 each to the Virgin Islands, Guam, American Samoa, and the Trust Territory of the Pacific Islands, (2) $50,000 to each of the 50 States, the District of Columbia, and the Commonwealth of Puerto Rico.

AMENDMENT OFFERED BY MR. PEPPER

Mr. PEPPER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. PEPPER: On page 37, line 18, strike out "$50,000,000" and insert "$15,000,000."

Mr. PEPPER. Mr. Chairman, this amendment is to increase from $5 million to the budget request of $15 million, on page 37, line 18, the amount for carrying out the Juvenile Delinquency Prevention and Control Act of 1968.

The committee report on page 36 states that apparently the reason why the distinguished committee did not approve the budget request for so vital an item as the Juvenile Delinquency Prevention and Control Act was because at the time of the committee hearings on the budget request planning grants had not been made.

Well, now, this afternoon I talked on the telephone to Mr. Sussman, head of the Juvenile Delinquency Prevention and Control Division. He tells me now, under title I, 37 grants have been made to 37 States totaling $1.5 million. Also under title I, prevention grants have been made in 17 instances for $400,000, and under title I, for rehabilitation, 10 grants have been made totaling $300,000 to States or State agencies.

Under title II, for training, 49 grants have been made for $1.7 million. Under title III, for technical assistance to State and local authorities and private agencies, there have been nine special grants, for a total of $228,000, which consumes the $5 million provided in the bill less the $650,000 which was diverted to the Violence and Crime Commission.

I asked Mr. Sussman whether they needed the total $15 million provided by the budget. He said it is for assistance to the schools, to YMCA's, YWCA's, boys clubs, police boys clubs, mental health institutions, and parole and probation authorities to try to deal with this very vital question of how to diminish and prevent juvenile crime.

Mr. PERKINS. Mr. Chairman, will the gentleman yield to me?

Mr. PEPPER. I am glad to yield to the gentleman.

Mr. PERKINS. I certainly want to rise in support of the gentleman's amendment and compliment the distinguished gentleman from Florida for offering his amendment. If his amendment does anything at all in this area of juvenile delinquency prevention, we should certainly appropriate the modest amount he is asking for, increasing this expenditure by $10 million.

Mr. PEPPER. I thank the able chairman of the Committee on Education and Labor.

As chairman of the Crime Control Committee of this House which was set up recently, I say that we have had hearings where we discovered that juvenile crime makes up about half or more of the total crime problem in this country. If we can stop this juvenile before he or she becomes a hardened criminal, we not only save a boy or girl but also the potential victim of their violence.

I hope the distinguished chairman of the committee will accede to this amendment and help a little bit at least to save boys and girls from crime.

Mr. MEEDS. Mr. Chairman, will the gentleman yield?

Mr. PEPPER. I am glad to yield to the gentleman.

Mr. MEEDS. I wish to join in the remarks of the gentleman in the well and commend him for bringing this deficiency to the attention of the House.

Mr. PEPPER. I thank the gentleman.

Mr. BRADEMAS. Mr. Chairman, will the gentleman yield to me?

Mr. PEPPER. I am glad to yield to the gentleman from Indiana.

Mr. BRADEMAS. Mr. Chairman, I would also like to commend the gentleman on his amendment. As one of the sponsors back in 1961 of the original Juvenile Delinquency Act, I have a particular interest in this legislation and hope his amendment to provide adequate funds will be adopted.

Mr. PEPPER. I thank the gentleman.

I now yield to the able gentleman from California, one of my fellow members of the Crime Committee (Mr. WALDIE).

Mr. WALDIE. Mr. Chairman, I, too, wish to commend the chairman of our Select Committee on Crime and Violence and compliment him for bringing this matter to the attention of the committee members at this afternoon's hearings. I do not recall any dissent from the view which he has expressed so ably in the well.

Mr. PEPPER. I thank the gentleman.

I now yield to the gentleman from New York (Mr. REID).

Mr. REID of New York. Mr. Chairman, I want to commend the gentleman in the well for his amendment and say that I, too, will support him and hope others will, also.

Mr. PEPPER. I hope the amendment in conformity with the budget request will be adopted.

Mr. FLOOD. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in opposition to the amendment. And, let me read to the members of the committee from the hearings. I refer to part 6, page 387, under the center head "Planning Grants." I had the witness, Dr. Garrett, and the colloquy reads as follows:

Mr. FLOOD. The main part of your program, title I, $2,650,000. That is for the current fiscal year?

Dr. GARRETT. Yes, sir.

Mr. FLOOD. Over 2 million dollars for planning. How is your planning doing?

Dr. GARRETT. First of all, we have not made any grants yet. Those grants will be made in the last month of the fiscal year. We do know from the States that planning is going on because of the fact that, under the Omnibus Crime Bill, there is provision made for including juvenile delinquency planning there. In view of our rather close relationship with the law-enforcement group, we have access to what is going on there and we have given the States the option under title I that, if their planning is adequate, they can come in for action programs under this.

Mr. FLOOD. Have any states or other jurisdictions completed their so-called comprehensive plans that you are aware of?

Dr. GARRETT. So far as we know, no comprehensive plans have yet been submitted to the LEAA.

Mr. Chairman, imagine the situation in which this amendment places your committee. Even if they have made the planning grants now, this Committee, this House, Mr. Chairman, has little idea, except the information which comes within the jurisdiction of a special committee as of this afternoon, what in the world they are going to do with this money. With reference to planning, based upon the testimony before your committee from Dr. Garrett, Mr. Chairman, there is nothing at all. That is why we passed it by.

We say let them do their planning and let them come back to this committee next year and tell us what the programs are.

Mr. Chairman, this amendment is an arrow shot into the air for $10 million above what has been recommended. Let them come back next year like everyone else does and we will hear them. If they are right, we will be the first to support them, but not under this hit and miss method. This is not the way even to run a railroad—$10 million.

Mr. Chairman, I submit that the amendment should be defeated.

Mr. MICHEL. Mr. Chairman, will the gentleman yield?

Mr. FLOOD. I yield to the gentleman from Illinois.

Mr. MICHEL. The chairman will remember that the former Secretary of the Department of Health, Education, and Welfare, Wilbur Cohen, in his testimony before our committee had two items in which he suggested reductions from the budget. One of them was the $25 million for experimental schools. He said that they only needed $2.5 million. And with reference to juvenile delinquency he said he would cut that $10 million, because they do not know for sure what they want to do, and we ought to be doing more planning before we jump in with both feet.

That is the testimony of the former Secretary of the Department of Health, Education, and Welfare before our subcommittee.

Mr. PUCINSKI. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to remind this House, while I suspect that the distinguished gentleman from Pennsylvania is very busy on his own committee, he would have you believe that no one knows anything about this program. I would recommend that he, first of all, read the debate on the floor of this House on the 1968 Juvenile Delinquency Act which was approved unanimously. There was not a single dissenting vote, and I say to you that everyone of you Members voted for this bill and you voted for $50 million authorization in the first year. You did it because we held extensive hearings in my committee and there was overwhelm-

ing testimony as to the urgent need for this legislation.

It is no accident, Mr. Chairman, that more than 50 percent of the arrests in this country are arrests of young people under the age of 21. The highest rate of crimes committed in America are in the age group of 15 to 17.

The highest number of arrests in this country for all offenses are among those under 21; 30 percent of all those arrested in America are under 21; 20 percent of those arrested are under 18. And the highest rate of increase in crime in this country among young people is not in the poor communities, nor in the ghettos. The highest incidence and the highest increase in juvenile crime in America is in the middle-income, white suburban communities of America.

The report says they did not give us any more money because there were no plans. This committee has not given this act a chance to get off the ground. They underappropriated last year, and now they want to do the same thing this year.

We have testimony, volumes of testimony, before my committee on exciting projects all over America by communities who want to finally do something with this problem of juvenile crime.

I know of no greater waste of human resources in this country than the youngster who is led into crime, and becomes a criminal for the rest of his life.

So I say to the distinguished chairman of the Crime Committee in this House that he is asking you for $10 million—and every one of you Members have voted not for $5 million, not for $10 million, every one of you are on record as authorizing $50 million to make some significant start against this problem of juvenile crime in America.

Now, we are asking you for $10 million more. I hope you are going to support the amendment offered by the gentleman from Florida. I hope you give us this money so that this situation can finally get going on this problem of dealing with America's No. 1 problem.

There is not a Member in this Chamber, a man or woman, who will not agree with me that the most important single problem in America today is the alarming rate and the alarming increase of crime among young people.

Mr. Chairman, I hope the amendment will be adopted.

Mr. SCHEUER. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Mr. Chairman, I would like to remind our colleagues on the committee of the comment made by our colleague from California earlier in the debate today that if we really mean business about controlling crime, and eliminating violent crime in our streets, if we really care, then we will do something about educating our American youngsters. It would seem to me, Mr. Chairman, that the first place to start is in the specialized programs where we are aiming a high-powered rifle, and not a shotgun, at these youngsters who have had an early brush with criminal activities.

The highest rate of criminal activities in this country is among the 16-year-olds, and the next highest among criminal activities are from the 15-year-olds. Only last Friday the gentleman from Indiana (Mr. BRADEMAS) and his subcommittee, held hearings in New York, and we heard for hours the desperate and tragic stories of young kids 10, 11, and 12 years old who were involved in drug addiction. And I am talking about mainline drug addiction. I am talking about barbiturates, amphetamines, and heroin. I am not talking about marihuana.

The $10 million that we are talking about that is in dispute today is $10 million that will not be shot into the air, it will be shot directly to the heart of the matter. It is not enough for action programs. It is barely enough for the very planning and the very organizing that our distinguished colleague from Pennsylvania told us was so necessary.

The Office of Law Enforcement Assistance in the Justice Department, and the National Institute for Crime Control and Law Enforcement in the Justice Department could snap up this $10 million and use it in the next 6 months just to create programs to help juveniles who have taken on a horrifying life of drug addiction. This is just the bare beginning of the plan that we desperately need to keep the young people out of a life of crime. No investment of our resources could be as worthwhile and effective as this desperately needed investment in planning and educational programs to keep our young people out of a life of crime.

Mr. Chairman, I yield back the balance of my time.

Mr. SMITH of Iowa. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I was a member of the subcommittee that developed the first juvenile delinquency bill. That was about 8 years ago. I wonder if anybody can stand and tell me what has been accomplished under this program.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman.

Mr. PUCINSKI. Yes.

Mr. SMITH of Iowa. What has been accomplished?

Mr. PUCINSKI. A great deal has been accomplished. I was a member of that committee. I remember the first bill—the first bill that the late President Kennedy brought to this House was a juvenile delinquency bill. We passed it and allocated $10 million for research.

Out of that research we have gotten a great deal of information. There are programs all over this country.

When the distinguished Chairman says that no one has plans, I invite him to look at the reports of the research that has gone on for 4 years.

The States are now ready to move ahead with positive programs as the result of the very bill that the gentleman helped to put together.

Mr. SMITH of Iowa. They were supposed to make a report in 3 years but they never even made a report.

I would like to do something for juvenile delinquency, but I want to see some plans. We have $5 million here in this bill for that and if they can come up with some reasonable plans, we can give them $10 million more or whatever is needed.

Mr. PUCINSKI. The reports are available and I will be very happy to show the reports to the gentleman.

Mr. SMITH of Iowa. The reports were supposed to be on demonstration projects.

Mr. PUCINSKI. That is right.

Mr. SMITH of Iowa. They were supposed to award contracts for local projects and then report whether or not they worked.

Mr. PUCINSKI. That is correct.

Mr. SMITH of Iowa. Which they actually failed to do. They took the money and regardless of the requirements of the law, they spent the money where they wanted to and developed other programs that had nothing to do with juvenile delinquency.

Mr. PUCINSKI. The gentleman is in error. The reports are available. The reports have been evaluated on the very point that we are making here and these States are now ready to move ahead. We have gone through the planning stages and gone through the developing projects and research projects, and our bill, the 1968 bill, bars this kind of further research and we want action now. That is why we want this money.

Mr. SMITH of Iowa. A while ago some of you said it was for planning and now you say it is not for planning but for grants.

Mr. PUCINSKI. No, I never said it was for planning; no, sir. Check the record. I never said it was for planning.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Florida (Mr. PEPPER).

The question was taken; and on a division (demanded by Mr. PEPPER), there were—ayes 52, noes 94.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

COOPERATIVE RESEARCH OR DEMONSTRATION PROJECT

For grants, contracts, and jointly financed cooperative arrangements for research or demonstration projects under section 1110 of the Social Security Act, as amended (42 U.S.C. 1310), $11,500,000.

AMENDMENT OFFERED BY MR. KYL

Mr. KYL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. KYL: On page 38, after line 11, add the following language: "Provided, that no funds appropriated by this act shall be used to conduct experiments, pilot operations or programs involving guaranteed annual wage."

(Mr. KYL asked and was given permission to revise and extend his remarks.)

Mr. KYL. Mr. Chairman, I want first to read two lines from page 37 of the committee report:

The committee approved this proposal with some hesitation—

Speaking of cooperative research and demonstration projects. The second quotation is as follows:

Secretary Finch has made it clear and has emphasized the point that this is not a proposal for a guaranteed annual income.

All this amendment does is to seek to relieve the worry which the committee had and to seek to assist the Secretary in carrying out the purpose for which he asked for this money. In the interest of time, I would be happy to yield to the Chairman of the subcommittee, the gentleman from Pennsylvania, if he desires to speak for or against the amendment.

Mr. FLOOD. Mr. Chairman, under the circumstances which are declared, I will yield to my distinguished friend, the gentleman from Illinois.

Mr. MICHEL. I am happy to respond. As I understand the gentleman's amendment, he would merely insert in the bill what the sense of the House would be, and the Secretary, in response to our inquiries, said exactly what the gentleman provides in his amendment. I see no reason why we ought not to accept it and then make everybody happy, although we cannot go that far. But we are going to conduct some kind of demonstration, or whatever it may be.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. KYL. I yield to the gentleman from Minnesota.

Mr. QUIE. Does your amendment say "guaranteed annual wage"? This language is "guaranteed annual income." Do you look upon a guaranteed annual wage as synonymous with guaranteed annual income?

Mr. KYL. They are interchangeable, I would say to the gentleman.

Mr. BURTON of California. Mr. Chairman, I move to strike the requisite number of words.

The CHAIRMAN. The gentleman from California is recognized.

Mr. BURTON of California. I do not think there is any question confronting the country that is a more difficult one, no matter what one's political philosophy, than how we as a country might best deal with the problem of either the nonworking poor or the working poor or the "incapable-to-work" poor. I think it is somewhat ill-advised in light of the statements in the press, where on August 8 the administration is scheduled to come up with its program in this area. I would think if I were on your side of the aisle for that reason, or for those of us on our side of the aisle that really cannot say that we know how this Congress should best proceed in this area, I think we are needlessly hobbling the administration in an area where we need a good deal more information than we have.

Also it is perfectly obvious that any proposal they come up with is going to have to receive the approval of this House and the Senate. But it is at best politically myopic to in any way fetter the administration at this time on a matter of this very grave importance and, as I stated earlier, a matter that few thoughtful people in the field can possibly believe they have the only answer to. This one Member does not have an idea of how he might best proceed. I would like the administration to proceed unfettered, and let us evaluate what they have got, and let us not be so absurd as to tie their hands when we need the information even more perhaps than the administration does so we can best evaluate what, if anything, we want to do with reference to their proposals.

I would hope we would reject the amendment.

Mr. SCHERLE. Mr. Chairman, I rise in support of the amendment.

The CHAIRMAN. The gentleman from Iowa is recognized.

Mr. SCHERLE. Mr. Chairman and Members of the House, the amendment offered by my colleague (Mr. KYL) is very much in order if for no other reason than to protect HEW from itself. If the message contained in the report is correct, then I think the Congress, this House, has nothing to fear. It is nothing more than a reiteration of what has been said before. I believe it would be very much in order for the House to accept the amendment.

Second, if I may proceed, as a member of the Education and Labor Committee, as a member of the Committee on Poverty, I must report that the OEO to date has spent $13 million on evaluations, reports, and surveys—and most of them are doing nothing more than gathering dust.

We are in a process now, I will say as a member of this committee, of making many changes in the OEO program. We are shifting Headstart. We are establishing many centers. We have shut down Job Corps centers. This administration will, in the near future, send up to this House a message on a new comprehensive manpower training progam.

Mr. Chairman, I think this amendment is in order and should be adopted by this House. I certainly urge its adoption.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield for a question?

Mr. SCHERLE. I yield to the gentleman from Illinois.

Mr. PUCINSKI. Mr. Chairman, it is my understanding that President Nixon is to make an announcement on August 8 as to what form or what plan he is going to recommend to deal with this problem of family supplemental allowances or a guaranteed annual income or whatever revisions will be proposed in the welfare program.

I wonder if, perhaps, the distinguished minority leader would care to comment on whether or not this amendment may tie the President's hands. I do not see that this amendment is necessary, and I would hate to see the President not be able to move or to be embarrassed in some way in making an overhaul of the welfare program.

Mr. SCHERLE. Mr. Chairman, if I may answer my colleague from Illinois, first of all, if this administration recommends a 2-year continuation, I am totally and unequivocally opposed.

Second, if the administration is for $2 billion, I am opposed totally and unequivocally also.

Furthermore, even if the President does send up a message, this Congress will act as far as it deems advisable and not necessarily in support of the recommendations from downtown.

I have been a little disappointed myself.

Mr. Chairman, I urge adoption of the amendment of my colleague, the gentleman from Iowa.

Mr. RYAN. Mr. Chairman, it is rather appalling that an amendment would be proposed seriously to prohibit the expenditure of funds for the purpose of conducting experiments, pilot operations or programs related to the question of income maintenance. It is known that there is a debate within the Nixon administration itself on this question. I am somewhat amazed that members of the President's own party would want to prevent his administration from undertaking pilot projects in an area where there is deep public concern.

The idea of a guaranteed annual income or a negative income tax has been advocated by economists of both conservative and liberal orientation. The Secretary of Health, Education, and Welfare has promised that a report on the administration's position will be soon forthcoming. I would think that those who so readily decry public assistance welfare programs and their acknowledged failures would want to encourage the Secretary of Health, Education, and Welfare at the very least to investigate the advantages and disadvantages of some kind of income-maintenance program. In order to gather data of any value, it will be necessary to conduct test programs and analyze and evaluate the results.

As the author of the first guaranteed-annual-income legislation to be introduced in the Congress (H. R. 586), I am very much concerned that pilot programs be carried on and that the Congress recognize the need for a new approach to the question of providing income for those 30 million Americans living in poverty.

I note that the language of the Kyl amendment refers to a guaranteed annual wage. Of course, there is a difference between the concept of a guaranteed annual wage—long a goal of the labor movement—and a guaranteed annual income. It seems clear, however, from the debate that the gentleman is referring to a guaranteed annual income.

It would be blind folly for the House to prohibit the use of funds for a study of income maintenance. The need to study not only this approach but also other approaches to the problems facing welfare recipients in our major urban centers should be obvious to all but the most myopic. I urge the defeat of the Kyl amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa (Mr. KYL).

The question was taken; and on a division (demanded by Mr. KYL), there were—ayes 89, noes 50.

Mr. ROSENTHAL. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chair appointed as tellers Mr. KYL and Mr. BURTON of California.

The committee again divided, and the tellers reported that there were—ayes 115, noes 77.

So the amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

PAYMENT FOR SPECIAL BENEFITS FOR THE AGED

For payment to the Federal Old-Age and Survivors Insurance Trust Fund, as authorized by section 228(g) of the Social Security Act, $364,151,000.

AMENDMENT OFFERED BY MR. ROSENTHAL

Mr. ROSENTHAL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ROSENTHAL: On page 41, after line 4, insert the following:

"CONSUMER CREDIT TRAINING

"For carrying out consumer credit training under the Federal Credit Union Act of 1968, $300,000."

Mr. ROSENTHAL. Mr. Chairman, I am slightly embarrassed that the amount I am seeking to restore in this bill is such a small sum of $300,000, but maybe we can make a valid case for it. At any rate, I kind of think so.

Mr. Chairman, this amendment would restore to the Bureau of Federal Credit Unions $300,000 for administering Project Moneywise, a valuable consumer program which has helped 250,000 poor people to better manage and conserve their money.

A number of leading consumer spokesmen have recently made the point that while Congress has been eminently successful in enacting important new consumer laws, it has ofttimes failed to appropriate sufficient money to properly administer those laws. Unless $300,000 is restored to the appropriations bill for the Bureau of Federal Credit Unions, an important operational low-income consumer program, called Project Moneywise, will come to an untimely end and Congress will again stand accused of having failed to adequately fund needed consumer programs.

Judging by the statement on page 38 of the Appropriations Committee report, the request for $300,000 for consumer credit training had the support of the committee in principle, but was disapproved on the grounds that "many other agencies are carrying out" such training.

This is not correct. The Bureau of Federal Credit Unions is the sole Federal agency equipped to carry on this work. Through the Bureau's Project Moneywise, it has done so for 3½ years. It is important to note that this budget request was supported in both the Johnson and Nixon fiscal 1970 budget submissions and the funds authorized in the Federal Credit Union Act of 1968.

Accordingly, the request for $300,000, deleted by the Appropriations Committee, represents the only Federal involvement in credit union training. What is unique and vital about Project Moneywise is that it not only trains people in the operation of credit unions and stresses the importance of low-cost credit, it encourages and leads to the actual establishment of credit unions for the poor. In its brief existence, Project Moneywise has contributed to the organization of 242 of the 670 credit unions serving the poor, with assets of over $30 million.

This money is poor people's capital—funds they have slowly accumulated through regular savings at credit unions. The training afforded by Project Moneywise helps credit union leaders to improve their operations, to intensify their thrift promotion and counseling programs and results in the formation of new credit unions to meet the needs of poor people who are not now being served.

There is really very little point in deploring the existence of the loan shark, the credit merchant, or the unavailability of low-cost credit, without offering the poor an alternative source of credit. Project Moneywise accomplishes this by providing a way of life centered on the credit union and enables the poor to shape their own economic destinies.

This is another example of a program, Mr. Chairman, that has been successful. If we terminate it now based upon some whim or caprice, we would be deluding people who have raised $30 million in capital savings. One of the most important things is the individual homeowner and it is important that his wife learn how to use their own funds and savings. That is exactly what this program does.

This, as I said earlier, was recommended by the Johnson budget, by the 1970 Nixon budget, but the committee took it out by saying that other Federal agencies perform these services. The fact of the matter is that if one takes the time to read these hearings they will find there is no other agency that would accomplish this purpose. This is a useful thing.

Mr. Chairman, very frankly, I would hope that the Committee would see the wisdom of this amendment and perhaps agree to it.

Mr. FLOOD. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in opposition to the amendment. However, it is difficult for me to speak against the amendment in view of the eloquence of my friend, the gentleman from New York, but these are the facts. We went into this, Mr. Chairman, at great length. I have many of these units in the coalfields especially and you can imagine the situation which existed during the distressed economic era of the past 5 years. We have many of them. They have been a great asset. I have been very close to it. I examined the problem very carefully.

This committee, under no circumstances is opposed to programs aimed at better credit and money management. We all need it, not just Tom, Dick, and Harry, but Sally, Irene, and Mary. This request was denied for a very good reason. Everyone wants to get into this act.

For instance, in many of your hometowns you have the antipoverty program, the Office of Economic Opportunity. They have a program they call comprehensive consumer action. Wonderful. They say, "they are designed to mobilize members of a community around a credit union or other source of local credit for the purpose of attacking common economic problems." How do you like that? That is the same thing, but dressed in a different way.

Then the public assistance program includes, and I quote, "Services to families to improve money management." We were told by a lady for whom we have the highest regard, Miss Mary Switzer, the Administrator of the Social and Rehabilitation Service, that this is one of their important programs.

Do you follow me?

Also in HEW, there is the adult basic education program, which goes into this very same field.

Then over in the Department of Agriculture, the Extension Service makes a big thing of helping rural people with their family budgets and money management.

I do not think we have to worry about any gap areas if this program of the Federal Credit Unions is not funded. I think our worry should rather be that we have duplication among these other programs.

I trust that the amendment will be defeated.

The CHAIRMAN pro tempore (Mr. BOLLING). The question is on the amendment offered by the gentleman from New York (Mr. ROSENTHAL).

The amendment was rejected.

The CHAIRMAN pro tempore. The Clerk will read.

The Clerk read as follows:

HOWARD UNIVERSITY

SALARIES AND EXPENSES

For the partial support of Howard University, including repairs to buildings and grounds, $20,445,000.

Mr. GROSS. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I take this time to ask some member of the subcommittee a question or two concerning this appropriation.

As I read the language, it provides for the partial support of Howard University, including repairs to buildings and grounds.

Does this mean that money is being appropriated by the Federal Government to repair the buildings that were gutted by fires set by arsonists not too many months ago at this college?

Mr. FLOOD. Mr. Chairman, if the gentleman will yield, there is no doubt about it. This money is appropriated for Howard University.

Mr. GROSS. And the money will be——

Mr. FLOOD. Later on we can have an amendment to discuss the whys and the wherefores as to what should or should not be done. But the gentleman is asking a rhetorical question, which he rarely does?

Mr. GROSS. I am asking what?

Mr. FLOOD. I do know, of course, that the gentleman is asking a rhetorical question for the first time in his career—and it has been an illustrious one. The gentleman knows the answer is "Yes."

Mr. GROSS. No, I do not know that the answer is "Yes," because I know of no reason why the Federal taxpayers should be made——

Mr. FLOOD. Does the gentleman want an answer, or does the gentleman want to tell me?

Mr. GROSS. I suggest there may be a different answer; something that is more palatable and logical.

Mr. FLOOD. Is this a question or an explanation?

The CHAIRMAN pro tempore. The gentlemen will proceed in order.

The gentleman from Iowa is recognized.

Mr. GROSS. Which gentleman is proceeding out of order, if I may address a parliamentary inquiry?

The CHAIRMAN pro tempore. The gentleman from Iowa is recognized.

Mr. GROSS. Thank you, Mr. Chairman, I know of no reason why the taxpayers of the United States should be called upon to repair or to rebuild structures on the Howard University campus in Washington, D.C., that have been deliberately gutted by fire.

I know of no reason why funds are to be expended from this appropriation or a previous appropriation by the Federal taxpayers of the Nation to pay $30,000 to idemnify the Washington, D.C., Fire Department for the loss of a fire truck which was deliberately set afire and destroyed while attempting to put out the recent fires on the campus of Howard University—fires that were deliberately set by rioting Negro students.

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I am glad to yield to the gentleman.

Mr. SMITH of Iowa. I would say that my understanding might be a little different from what the record would indicate at this time. We had these hearings a week before the riots. The justifications for the expenditure of this money could not have included the repair of these buildings.

I would assume that before they could be repaired, there would have to be a new appropriation and new justifications. That would be my understanding of the situation.

But I do know that it was a week before the riots because some of us asked the president if he did not think that there was going to be a riot in view of the fact that they had three buildings that had been occupied and they failed to dismiss even one student. He said, "Oh, no, I do not think that our failure to dismiss a student is going to cause us to have a riot or to encourage a riot." But that is what happened.

Mr. GROSS. That was only 1 week after the president at Howard University said that everything was serene and tranquil at the university; is that not correct?

Mr. SMITH of Iowa. Yes; that is true.

Mr. GROSS. Yes; and I do not want to see Federal taxpayers of Iowa and elsewhere being taken for the purpose of repairing and constructing buildings which had been deliberately destroyed by fire—or to indemnify the Washington, D.C., Fire Department for the loss of a fire truck that was destroyed while it was on a mission to put out those fires.

Mr. SMITH of Iowa. My understanding is, and I think the record reflects this, my understanding is that there has been no justification for these expenditures in this budget. That is my understanding.

Mr. GROSS. I thank the gentleman for his response.

Mr. MICHEL. I would note further that on page 954 of volume 6, we have detailed here $146,000 for special rehabilitation and renovation of three elevators in the young women's dormitory and some replacement of furniture—but that has nothing to do, as the gentleman has suggested, with the riots.

Incidentally, most of the increase $2,214,000 for Howard University over the expenditures of last year is for the increase of faculty salaries to bring them in line with other schools and for some new teaching positions.

So the gentleman's fears can be allayed to that extent. But I certainly expect that probably in next year's budget there might very well be some request here to repair the damage that was done, as suggested by the gentleman.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

SEC. 208. None of the funds contained in this title may be used for any expenses, whatsoever, incident to making allotments to States for the current fiscal year, under section 2 of the Vocational Rehabilitation Act, on a basis in excess of a total of $500,000,000.

POINT OF ORDER

Mr. PERKINS. Mr. Chairman, I make a point of order against section 208.

Mr. Chairman, the authorizing legislation in 1967 provided that the figure on line 2, page 50, should be $600,000,000 instead of $500,000,000.

So this affects the allotments in the various States of the Union and it is outright legislation on an appropriation bill, the effect of which is to reduce the entitlements of the States.

Therefore, Mr. Chairman, I make the point of order that it is legislation on an appropriation bill.

The CHAIRMAN. Does the gentleman from Pennsylvania desire to be heard on the point of order?

Mr. FLOOD. Yes, I do, Mr. Chairman. This is not a new attack. This language is completely negative. I do not know how you can be so absolutely negative. This is completely negative language. It is clearly and distinctly a limitation and nothing more. It is a limitation upon the use of these funds in the bill.

In addition to that fact, Mr. Chairman, it also qualifies under what you and I well know as the famous "Holman rule." The language of that rule covers the retrenchment of expenditure, and the language in the bill clearly retrenches expenditure. That is my position, Mr. Chairman. I suggest that the point of order be overruled.

Mr. PERKINS. Mr. Chairman, this is no limitation. It is an outright change and affects the Department.

The CHAIRMAN. The Chair would like to inquire of the gentleman from Pennsylvania as to his statement about the Holman rule. The gentleman cited the Holman rule to substantiate his argument. To what part of the provisions of the Holman rule does the gentleman refer?

Mr. FLOOD. There is that section of the Holman rule which states very clearly that it deals with the retrenchment of expenditures. The words are from the rule itself, a retrenchment of expenditure. I am sure the Chair is aware of that.

The CHAIRMAN. If the Chair understands the Holman rule, the Holman rule, in the provision referring to retrenchment, relates to a specific retrenchment. The Chair is not aware, of course, of the expenses that are involved in the handling of this particular $500 million appropriation.

Mr. FLOOD. I might suggest further that this will be $600 million without this provision. It will be $600 million, and that certainly is a retrenchment in expenditure as provided in the rule.

Mr. PERKINS. $600 million is the allotment base provided in the original act of 1967, and they just arbitrarily changed the figure from $600 million to $500 million.

The CHAIRMAN. The Chair would say the original allotment of $600 million does not restrict the committee from reducing it to $500 million, as I understand.

Mr. O'HARA. Mr. Chairman, may I be heard on the point of order?

The CHAIRMAN. The gentleman from Michigan may proceed.

Mr. O'HARA. The language of section 208 states as follows:

SEC. 208. None of the funds contained in this title may be used for any expenses, whatsoever, incident to making allotments to States for the current fiscal year, under section 2 of the Vocational Rehabilitation Act, on a basis in excess of a total of $500,000,000.

There is no showing, certainly, on the face of the section that it would cost any more or any less to make allotments on the basis of $500 million or on the basis of $600 million, and certainly there is no showing of saving necessarily on the face of the section.

The CHAIRMAN (Mr. HOLIFIELD). The Chair is prepared to rule. The Chair has listened to the arguments both for and against the point of order. The Chair cannot find any reason for ruling that this is other than a negative limitation, and the Chair so rules; that this language is a limitation on the expenditures contained in this act, and therefore overrules the point of order.

Mr. FLOOD. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose, and the Speaker having resumed the chair, Mr. HOLIFIELD, Chairman of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 13111) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1970, and for other purposes, had come to no resolution thereon.

THE GREAT AIR RACE

(Mr. ADDABBO asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ADDABBO. Mr. Speaker, on May 14, 1969, four FAA air controllers received the Empire State Building award for the "Most meritorious and original effort" in the Great Air Race of 1969.

The four men—Nick Kleiner, John Staut, Jim Ean, and Jim Scorse—acting as individuals, entered the race from the Empire State Building to the Post Office Tower in London to illustrate the plight of the average American air traveler.

Nick Kleiner left Manhattan at 5:30 p.m. on May 4 and he arrived at the Post Office Tower in London 10 hours, 55 minutes, and 21 seconds later. The return trip took Kleiner 11 hours and 49 minutes and while he recorded the slowest time in the race he earned the "original effort" award.

Traveling by subway, bus, taxi, London tubes, and Carey bus, Kleiner demonstrated the frustrating experience the average tourist must combat in getting from our cities to and from our airfields. His total roundtrip times were, 9 hours, 18 minutes on the ground and 13 hours and 27 minutes in the air.

Nick Kleiner's ingenuity was rewarded at the May 14 awards banquet in London where he received a $2,400 prize on behalf of his team and the congratulations of Prince Philip and Prince Michael.

Mr. Speaker, this story highlights the need for imagination and new initiatives to update our Nation's airport systems. In New York we face a crisis because a fourth and fifth jetport which should have been constructed have not even been planned. Air congestion in New York produces delays across the United States and the average tourist must set aside hours to reach the airport from our inner cities.

There is no simple answer to this problem but certainly the first step must be a more progressive and determined effort by the FAA to exert leadership in this field. The people who hold administrative positions in the FAA must stop catering to the airlines and begin representing the people.

Perhaps the FAA should study the details of the great air race and recognize the contribution made by four FAA employees to public awareness of a frustrating problem.

I congratulate Nick Kleiner and his teammates for a job well done and I advise the FAA to pay closer attention to the average air traveler and his plight.

PRESIDENT NIXON'S STATEMENT ON CHEMICAL AND BIOLOGICAL WARFARE STUDY

(Mr. McCARTHY asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. McCARTHY. Mr. Speaker, on July 3, 1969, the 18-Nation Disarmament Committee met in Geneva, Switzerland. The Committee met to consider concrete proposals for arms control. High on the Committee's list of topics to consider was the question of arms on the seabeds and chemical and biological warfare.

President Nixon sent a message to the Committee from Key Biscayne, Fla., expressing some of his thoughts on the topics under consideration. He also announced that the United States and Russia would begin the strategic arms limitation talks at the end of July.

I was pleased to read in the press that day that President Nixon had commented on the chemical and biological warfare study prepared by the Secretary General of the United Nations, U Thant. President Nixon, said that he welcomed the study because it will draw the attention of all mankind to an area of common concern. He went on to say:

The specter of chemical and biological warfare arouses horror and revulsion throughout the world.

This statement expresses traditional attitude of the American public on these forms of warfare and is very much in keeping with statements of Presidents Coolidge, Harding, Hoover, Roosevelt, and Eisenhower.

I was perplexed, however, when I asked the White House Press Office to send me a copy of the statement on July 16, 1969, to find that the sentence, "The specter of chemical and biological warfare arouses horror and revulsion throughout the world", had been crossed out in black ink. I wondered who had changed President Nixon's original statement, if in fact it had been changed. I understand that the change had been made at the urging of the Department of Defense.

When a reporter from the Buffalo Courier-Express asked the White House Press Office about the change in the statement, he was told that the text released from Key Biscayne was just a draft and that the version being released by the Press Office was the correct statement.

To clarify this matter, I contacted Mr. Bryce Harlow, Assistant to the President for Congressional Relations. I was most pleased to learn from him yesterday that President Nixon's original statement has not been changed. This information resolves the confusion surrounding this matter. I am including in the RECORD at this point the text of President Nixon's message to the 18-Nation Disarmament Committee:

THE PRESIDENT'S MESSAGE TO THE 18-NATION DISARMAMENT COMMITTEE

I have followed closely the activities of the spring session of the Disarmament Committee, and Ambassador Smith has reported to me on the prospects for progress in the near future.

As the conference resumes its work after a recess of 6 weeks, I would like to address the following thoughts to the members of the Committee:

First, the ground has been prepared for concrete arms control negotiations. In addition to the valuable suggestions by many members of the Committee, draft agreements have been submitted by the United States and by the Soviet Union to prevent an arms race on the seabeds. Although differences exist, it should not prove beyond our ability to find common ground so that a realistic agreement may be achieved that enhances the security of all countries.

The framing of an international agreement to apply to more than 100 million square miles of the earth's surface lying under the oceans is a high challenge to our vision and statesmanship. I ask the participants in this Committee to join with us in elaborating a measure that is both practical and significant. With good will on all sides and a fair measure of hard work, we may achieve agreement in the course of this session. With each passing day our seabed becomes more important for the security and well-being of all nations. Our goal should be to present a sound seabed arms control measure to the 24th General Assembly of the United Nations.

Second, the Secretary General of the United Nations has just issued his study on the effects of chemical and biological warfare. Experts from many countries have contributed to this important work. I am pleased that an expert from the United States, Dr. Ivan Bennett, has also played a role in the study. We welcome the Secretary General's study, since it will draw the attention of all mankind to an area of common concern. The specter of chemical and biological warfare arouses horror and revulsion throughout the world.

The delegation of the United States is prepared to examine carefully, together with other delegations, any approaches that offer the prospect of reliable arms control in this field.

Third, in my letter to Ambassador Smith on March 18 at the opening of the first session of this Committee, I reaffirmed United States support for the conclusion of a comprehensive test ban adequately verified; I stated my conviction that efforts must be made toward greater understanding of the verification issue. I am pleased that, during your first session, serious exploration of verification problems took place. The United States delegation will be prepared to continue to participate in efforts towards greater understanding of this key issue. It is only by means of careful study, with due regard for all of the relevant technical and political considerations, that progress can be made.

Fourth, I recently announced that the United States hopes to be able to commence talks with the Soviet Union on strategic arms limitations around July 31 or shortly thereafter. When these talks begin, which I hope and trust will be soon, they will of necessity be bilateral negotiations between the United States and the Soviet Union. The United States Government is, however, deeply conscious of its responsibilities to its allies and to the community of nations.

While these talks progress, it is particularly important that multilateral negotiations continue in this Committee in an atmosphere of determination and promise. Arms control is without dispute a subject of direct concern to all nations, large and small. The wisdom, the advice, and the informed concern of many nations are needed in a continuing body such as this to ensure that no opportunities are missed to achieve genuine progress.

This Committee clearly is the world's preeminent multilateral disarmament forum. Its record of accomplishment, which needs no recital here, is greater than that of any other disarmament committee in history. I trust that your Committee will continue its efforts with all of the combined skill and dedication which its members have demonstrated in the past.

The negotiation of sound arms control and disarmament, like all work contributing to peace, must be an integrated and comprehensive effort. Progress in the tasks of your Committee will be a contribution to a world of peaceful international cooperation, a world where fear and conflict are supplanted by the honest give-and-take of negotiation aimed at meeting the legitimate aspirations of all.

The United States will work in every way to bring us closer to such a world.

NIXON MAPS SOUTHEAST ASIA ROLE

(Mr. BERRY asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. BERRY. Mr. Speaker, I have asked for this time to insert in the RECORD the column of David Lawrence in the Washington Evening Star's July 29 edition.

I particularly call attention to the statement Mr. Lawrence makes in the latter part of the article in which he is

talking about peace in Vietnam and says this:

If everybody were to keep his mouth shut, North Vietnam would be much worried and would be begging at the peace table for an end to the war. The weakness of the position of the United States is that it has announced an intention of getting out of Vietnam, and many prominent members of Congress have been demanding an even more speedy withdrawal than has been contemplated."

The entire article is as follows:

NIXON MAPS SOUTHEAST ASIA ROLE

(By David Lawrence)

Most Americans are not very familiar with the problems of Southeast Asia, and when the President of the United States decided to visit the heads of governments in the region, it wasn't apparent on the surface just what was his basic purpose.

Nixon felt that there was a pressing need, or he would not have gone on such a trip so early in his administration when he is confronted with many other problems. The Nixon journey is the result of a carefully laid plan that can have long-range effects on American foreign policy.

Nixon wants to make it clear, of course, that withdrawal of American forces from Vietnam doesn't mean abandonment of protective measures for the smaller nations of the area. He reiterates that the United States will live up to its commitments, but intimates that the nations cannot expect American troops to do the whole job.

The President took occasion in Indonesia to speak of American aid as something that should be based on policies "mutually helpful to us both." At present, $120 million of economic assistance is given annually to that country, which has 110 million people and certainly needs outside help.

Nixon predicted that Indonesia's natural resources and private enterprise are heading for significant development in the next five years. But he also pointed out that he doesn't want to expand any U.S. defense commitments in Asia.

The same concept was applied by the President when he arrived in Bangkok. He said the United States would honor its obligation to defend Thailand against possible Communist aggression or subversion. There are 47,000 American troops in Thailand manning six air bases which are useful in fighting the war in Vietnam as well as the "secret war" in Laos, which has been overrun in part by 70,000 North Vietnamese supporting the Communist faction in that country.

Nixon, in one of his speeches, emphasized that the United States is bound by the Southeast Asia Treaty and that Americans and Thais have been willing to fight in Vietnam to protect the rights of free people. He said he stands firmly with Thailand against those who would threaten it from inside or outside its borders.

But the main point of Nixon's approach was outlined in Bangkok when he declared:

"Our determination to honor our commitments is fully consistent with our convictions that the nations of Asia can and must increasingly shoulder the responsibility for achieving peace and progress in the area."

The President believes that future economic development must be accomplished on a regional and co-operative basis. The United States is willing to offer a considerable amount of help, but only after being satisfied that Asian leaders will take the initiative and rectify some of the problems and procedures—such as domestic corruption and misuse of aid money and materiel—which have heretofore impaired the value of American assistance.

One of the reasons for the visit to Southeast Asia at this time is to confer with American ambassadors in the area and get their suggestions about a formula for future American co-operation, especially on the economic side.

All this means that, while the United States wants to assist Southeast Asia, it is not going to do the job alone and expects a substantial effort, both military and economic, to be made by the countries themselves.

On the whole, the value of the President's trip cannot be measured at this time, because North Vietnam is still obstinately refusing to make any concessions at the Paris peace negotiations. Unfortunately, there have been too many voices expressing dissent inside America against the Nixon policies. If everybody were to keep his mouth shut, North Vietnam would be much worried and would be begging at the peace table for an end to the war. The weakness of the position of the United States is that it has announced an intention of getting out of Vietnam, and many prominent members of Congress have been demanding an even more speedy withdrawal than has been contemplated.

Open diplomacy is worthwhile where treaties and new policies are being formed and no war is going on. But there should never be a public disclosure of military operations or plans, because this sometimes has the effect of telling the enemy that the other side is cringing and so eager to withdraw that it will pay almost any price for peace.

CRISIS IN OUR NATION'S EDUCATIONAL PROGRAMS

(Mr. FULTON of Tennessee asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FULTON of Tennessee. Mr. Speaker, there are no bargain basement price tags on education, and I am deeply disturbed at the recommendations by the administration which could create a crisis in our Nation's educational programs.

Acceptance by the Members of the House of the Department of Health, Education, and Welfare appropriations bill would result in a 66-percent cut in Federal aid to libraries and a 25-percent cut in the budget of the Office of Education.

We simply cannot afford such ill-advised action in the false name of economy.

The administration recommends the elimination of moneys for the elementary and secondary school libraries program. These are the funds which provide for the purchase of books for children in public and private schools.

It also calls for a 50-percent cut of funds for grants for public libraries under provisions of the Library Services and Construction Act, and a 33-percent reduction for programs under the supplemental services section of the Elementary and Secondary Education Act.

There must be something basically hypocritical about a policy which preaches self-help and then takes away the books and educational programs which allow those who want to, to better themselves.

Will such fund reductions actually play a role in reducing our Federal budget?

Hardly. By reducing library allocations from fiscal 1968's level of $135,000,000 to $46,000,000, the proposed cuts would trim the Federal budget by one-twentieth of 1 percent.

The proposal is as futile in saving money as it is destructive to our educational system.

It is my hope that my fellow Members of the House will approve the amendment proposed by our colleague, Representative CHARLES S. JOELSON of New Jersey. This package amendment would add nearly $900 million to the committee bill for education programs.

Failure to grant passage of this important amendment could destroy a major portion of our educational progress.

Equally as important as the restoration of these funds is the defeat of a provision in section 407 of H.R. 13111. This is the provision which would cut off all Federal aid to an institution of higher education if it does not certify to the Secretary of Health, Education, and Welfare that it is in compliance with the requirements of this section.

We are all deeply troubled with the unrest, and in some cases, the outright anarchy that has existed on some of our campuses. But action by the Congress which would punish the innocent and guilty alike, as section 407 would do, would only compound the problem and serve to the advantage of the campus revolutionaries.

It is my feeling that the responsibility for the maintenance of order on the campus lies with the academic community, and at the State and local level. We must not place the Federal Government in the role of enforcer of rules and regulations on every campus in our Nation.

Academic freedom is a curbstone of our educational system. Passage of section 407 could set a dangerous precedent for the complete control by the Federal Government of our institutions of higher education and an end to academic freedom as we now know it.

TRANSPORTATION IN THE DISTRICT OF COLUMBIA

(Mr. GUDE asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. GUDE. Mr. Speaker, since coming to the Congress, I have been deeply involved in many matters affecting the government of the District of Columbia. At present transportation is by far the most pressing regional issue.

I have long worked for freeways in the belief that all segments of the District of Columbia community will truly benefit from the prompt implementation of the long-planned highway system, no less than from rapid rail transit.

A professional public opinion survey released today reveals for the first time that the majority of Washington, D.C., residents support the concept of the completed freeway system. The survey was conducted by Oliver Quayle & Co. of New York, a nationally known opinion research organization.

I call attention to this poll because it offers further evidence to discredit those noisy zealots who have obstructed transportation progress in the Nation's Capital and who are not truly representative of the majority sentiment.

This survey outcome is especially striking following as it does the years of

demagoguery and misrepresentation on the part of freeway opponents who have sought to falsely portray the transportation issue in terms of suburbs versus city, or black versus white.

Those in the District of Columbia government who wish to move ahead, genuinely represent the people. Those outside the government who have blocked every effort to implement the freeway system, have contributed absolutely nothing to all the considerable efforts of responsible citizens and community leaders to build a rapid rail transit system here.

May the responsible authorities take note of this survey and be reminded where the people really stand on this most significant issue. Beyond that, all that needs to be done is to comply with the law, the Federal Aid Highway Act of 1968.

A great deal has been alleged recently to the effect that any agreement by the City Council to proceed with freeways would represent capitulation to blackmail. The case is precisely the reverse. We in Congress are urging the city to comply with the law, as opposed to surrendering to intimidation by nonrepresentative and irresponsible forces.

I have long felt that antifreeway extremists who would readily sacrifice the vitally needed transit system in their opposition to roads, care little for the city or its transportation needs. And I am convinced that they are less concerned about freeways or their merits than as an easily demagogued, phony issue that provides a rallying point in the militant competition for political power.

Today's survey again confirms my judgment that they do not represent a majority. And the Congress must continue to insist that the Council be aware of this. Mr. Speaker, I wish to submit the following statement of the Joint Committee on Transportation for Metropolitan Washington, and their synopsis of the survey by Oliver Quayle & Co., for the benefit of my colleagues:

STATEMENT OF THE JOINT COMMITTEE ON TRANSPORTATION FOR METROPOLITAN WASHINGTON, JULY 30, 1969

(Metropolitan Washington Board of Trade; District of Columbia Board of Realtors; National Capital Downtown Committee, Inc.; Federal City Council; Metropolitan Washington Savings and Loan League; District of Columbia Bankers Association)

Before discussing the contents of the citizen attitude survey, I'll take just a moment to provide some of the background of our involvement in transportation matters in the Nation's Capital.

The Federal City Council's Transportation Committee began its studies some 15 years ago at about the time that the half-million-dollar mass transportation survey was initiated. Our own studies convinced us that no single mode of transportation could by itself meet the demands of the city and the region.

We have since been unswerving in our advocacy of a balanced system of transportation incorporating rapid rail transit, a modern freeway network, efficient bus service, and a program of planned parking.

During the early 1960's, it became apparent that the business community needed to speak with a single collective voice on behalf of rapid rail transit which was then in the early stages of planning and development. The Joint Committee on Transportation was formed composed of the Metropolitan Washington Board of Trade, District of Columbia Board of Realtors, National Capital Downtown Committee, Inc. (Downtown Progress) and the Federal City Council. The Committee was later expanded to include the Metropolitan Washington Savings and Loan League and the D.C. Bankers Association.

The Joint Committee likewise adopted a position in favor of balanced transportation.

One of the recent efforts of the Joint Committee came last year in anticipation of bond referenda for the Metro system.

We retained the services of Oliver Quayle and Company of New York to test the attitudes of voters in the suburban jurisdictions. Mr. Quayle is generally credited with being one of the nation's most accurate opinion pollsters. His surveys are based on most sophisticated statistical techniques. He predicted that the Metro bond referenda would pass by a margin of better than 70 percent. You will recall that the final tally was 71.4 percent.

Early this year, as the District government began to wrestle with the Congressional directive on freeways, a hue and cry was raised to the effect that nobody in the District wanted additional freeways. The source for this claim was a question asked in the Democratic primary of May, 1968. What very few people know is that the question asked on that Democratic primary ballot was:

"Shall the Democratic Party support legislation providing that before a new highway in the District of Columbia can be authorized, it must be approved in a referendum conducted in the District?"

The vote was 93,524 in favor, and 4,986 opposed. We all believe in the importance of referenda. What disturbs us is that the vote has since been characterized as a disapproval of the idea of building any freeways. This simply is not true. Considering the wording of the question, I am surprised that the vote was not 100 percent.

When this misinterpretation began to be accepted as fact, the Joint Committee on Transportation felt it was time to get a professional evaluation of actual citizen attitudes towards freeways in the District. Naturally, we turned to the Quayle firm—a company of proven competence—to conduct the required analysis.

When we asked Mr. Quayle to conduct an opinion survey, we did so for our own guidance. At that time, we had no thought of releasing the results of his work to the public.

Events of recent weeks have led us to believe that this information should be made public.

The survey showed the following to be true:

A majority of District residents want more freeways.

More Negro than white residents feel that freeways are needed.

There is less opposition to freeways in the District of Columbia among Negroes than exists among whites.

More residents of the District prefer the 1968 Highway Act to the 1968 D. C. City Council-National Capital Planning Commission plan.

More Negroes than whites in the District need the freeways to commute to their jobs in the city.

Rather than characterize the survey, we would prefer to present it to you in its entirety so that you can exercise your own objective judgment on the statistical results.

In closing, let me point out again that every study that has been made has pointed up the importance of rapid transit to the economic and social well-being of this community.

As we see it, the District government now has in its hands the fate of the Metro system. The District can either comply with the 1968 Highway Act and clear the way for construction of the Metro system, or refuse to comply and continue to hold up progress in meeting the transportation needs of the area. Clearly, the latter choice is contrary to the wishes of the majority of the citizens of the District of Columbia.

Virtually every reputable study of the last decade stresses the need for additional freeways in the District. The Quayle poll indicates that a majority of D. C. citizens favor additional freeways. We think the time is long past due when the city should get on with the job of providing the balanced transportation system that the city and the region require for sound growth.

A SURVEY OF PUBLIC OPINION IN WASHINGTON, D.C., REGARDING NEW FREEWAYS

(A synopsis prepared by the Joint Committee on Transportation for Metropolitan Washington)

SURVEY METHODOLOGY

Personal interviews were conducted with adult residents of Washington D.C. in their homes in February, 1969. A modified area probability sample was drawn. The cluster size was kept small so as to maximize the number of points sampled. The sample was drawn with attention to even geographical distribution, age and sex of respondents, based on census tract information. Of the total number of completed interviews, 77% were conducted with Negroes in order as accurately as possible to reflect the racial mix of the District's population.

Findings (with undecided out):

1. Rating given Washington's present system of roads, streets, highway, and parkways:

[In percent]

Excellent or pretty good	42
Fair or poor	58

2. Rating given Washington's downtown parking facilities:

Excellent or pretty good	11
Fair or poor	89

3. Automobile ownership: 61% of respondents owned one or more automobiles.

4. Automobile use:

a. 61% of respondents owning cars use them to get to work in Washington. Of these, 55% of White respondents and 66% of Negro respondents use their automobiles to get to work in Washington.

b. 19% of respondents owning cars use them for shopping and errands in Washington. Of these 29% of White respondents and 14% of Negro respondent use their automobiles for this purpose.

5. Method of transportation most often used by respondent or head of household to get to work (regardless of car ownership).

Household car	42
Car pool	6
Bus (or buses)	23
Walk, taxi, etc	29

NOTE.—Cars, including car pools, are most used for commuting to work by residents in the two economic extremes of the community: the more affluent Northwest and the least affluent Southeast. Buses are used by one resident in four in all sections except the Northwest. A majority of those using buses are dissatisfied with the service provided.

6. Most needed transportation improvement:

By transportation system (all respondents):

New rapid rail transit system	52
More freeways	25
More downtown parking facilities	23

By transportation system (white and Negro):

New rapid rail system:

White	64
Negro	48

More freeways:

White	21
Negro	26

Downtown parking:

White	15
Negro	26

NOTE.—The overwhelming demand for the Metro system comes from both blacks and whites, but more blacks than whites feel parking and freeways are most important and fewer give top priority to Metro.

7. Knowledge of plans for additional freeways:

a. Better than 3 out of 5 residents have heard or read something about freeway plans or proposals. Knowledge is extremely high among whites. A large minority of Negroes however, say that they are not sure or that they have heard or read nothing about new freeways.

b. When asked *what* they had heard about new freeways, most respondents made neutral comments. Unfavorable reactions, however, came more from Whites than from Negroes.

c. Opinion has not polarized on this question. The survey showed, however, that knowledge tends to make people more unfavorable than favorable toward new freeways, and that this tendency is stronger among knowledgeable whites than among knowledgeable blacks.

8. Rating of idea of building new freeways in city:

Excellent or pretty good idea:

White	44
Negro	56

Fair or poor idea:

White	56
Negro	44

NOTE.—Negroes are more inclined to favor the idea of new freeways than Whites.

9. Major advantages of building new freeways:

Would provide faster transportation:

White	19
Negro	21

Would relieve congestion on local streets:

White	14
Negro	13

Will help get to work faster:

White	7
Negro	13

10. Major disadvantages of building new freeways:

Will displace too many people, destroy homes:

White	38
Negro	49

Will cause more congestion:

White	12
Negro	4

Will take away city's charm:

White	12
Negro	1

NOTE.—Negro residents are a great deal more inclined to feel that they will personally benefit from the construction of new freeways, and the one reason forcing many to feel otherwise is the problem of displacement and relocation.

11. Attitudes toward two specific freeway proposals:

NCPC-District of Columbia City Council Plan (Dec. 1968):

Approved:

White	62
Negro	54

Disapprove:

White	38
Negro	46

1968 Highway Act Plan (Public Law 90–495):

Approve:

White	57
Negro	59

Disapprove:

White	43
Negro	41

Choice between building new freeways as proposed in one of the plans mentioned above and building no new freeways:

New freeways:

White	54
Negro	60

No new freeways:

White	46
Negro	40

NOTE.—Respondents were shown map of each and the approximate locations of their homes on each map were pointed out.

12. Preference between two specific freeway proposals, assuming that one would be implemented:

NCPC-District of Columbia City Council plan (Dec. 1968):

White	35
Negro	34

1968 Highway Act Plan (Public Law 90–495):

White	65
Negro	66

NOTE.—The analysis showed that the 1968 highway Act Plan derives most of its support from middle income white-collar working people, both black and white who live in the *Northeastern* and *Northwestern* parts of the city. By the same token, major support for the more restricted plan comes from older, retired or business and professional people who are either rather affluent or poverty-stricken, and who tend to live in the *Southwestern* area of the District.

The major conclusions to be drawn from the survey results are the following:

1. Washington, D.C. residents are neither highly critical nor greatly disturbed over their transportation problems. Yet, they are anything but satisfied with the present situation. They want improvements, mainly to enable them to get to and from work faster and easier.

2. Although the community is split between two large segments on the freeway question, more residents favor than oppose the building of new freeways.

3. If freeways are built most would want an expanded network which would provide direct access to suburban highways.

4. Neither this nor the entire freeway question is a racial issue. Although there is a definite feeling by Negroes that they, more than Whites, would be forced out of their homes by freeways, Negroes want new freeways more than Whites.

5. Residents most strongly in favor of new freeways tend to be middle class working people (White and Negro) in white- and blue-collar families and are also inclined to be men more than women.

6. Residents who most strongly oppose new freeways tend to come from either the upper or the lower segments of the city's population. They are also the older, retired people who either do not go to work or who are professionals, small business owners, or top level businessmen.

7. The most telling arguments for new freeways are that they will provide faster and easier transportation to and from work both in the city and to the suburbs, faster, better bus transportation, and will relieve congestion on local streets. The opening up of new job opportunities to Negroes in the suburbs is also rather important to black residents.

8. The one overwhelming reason for opposing new freeways is that they will throw people out of their homes, and that these victims will be unable to find adequate and decent replacement housing.

9. On the whole, residents realize that the new Metro system cannot replace the need for new freeways.

10. The more a resident now knows about proposed plans for new freeway construction, the more likely he or she is to oppose them, but after all arguments have been aired, new freeways are still more popular than no new freeways.

11. Although residents are highly dissatisfied with downtown parking facilities, as yet the argument that new freeways will only aggravate this situation is not a major motivating factor behind opposition to freeway construction.

12. The arguments that freeways will either help or destroy the city's economy are not particularly persuasive.

PROJECT MONEYWISE

(Mr. ANNUNZIO asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. ANNUNZIO. Mr. Speaker, there is an unfortunate omission in the Health, Education, and Welfare portion of the appropriations before us which would eliminate a credit union training program, Project Moneywise. Federal credit unions are serving poor people in many cities across the country, including Chicago. Project Moneywise is a training program devised by the Bureau of Federal Credit Unions to help these credit unions do a thorough job of serving their members.

There are about 450 Federal credit unions serving poor people in the cities, and they are serving over 120,000 poor people. These credit union members themselves have amassed close to $20,000,000 in savings. It is significant to note that not one single cent of Federal funds has gone into this dollar figure. The poor themselves have saved this money, in many cases it is the first savings they have ever accumulated.

Project Moneywise was organized by the Bureau of Federal Credit Unions on a pilot basis under an interagency funding agreement with OEO. Both agencies saw a need for the training of credit union people in order to make their credit unions more effective. Due to the fact that the Bureau's operations are self-supporting, with expenses for its chartering, examination, and supervision programs offset by income from fees assessed on Federal credit unions, it was necessary for the Bureau to seek outside funding for the program. The evidence of over 3 years of work with the program resulted in a decision by the executive branch and the Congress to transfer the funding from OEO to the Bureau so that the program could be operated directly by the Bureau as an adjunct to its self-supporting activities.

Chicago is one of the cities that badly needs credit union training. It has several Federal credit unions serving the poor, perhaps the best known is Pilsen Neighbors Federal Credit Union, but there are others. These credit unions have a continuous need for this training, and they will not get it unless the $300,000 request

is restored to the Health, Education, and Welfare budget.

I think the issue will become much clearer in the future, with the enactment of H.R. 2, which the House so overwhelmingly approved on Monday. This bill would establish the Bureau of Federal Credit Unions as an independent agency, and would clarify its programs for the benefit of the Congress. The agency would no longer be buried within the Department of Health, Education, and Welfare, where its very specific and productive programs can all too easily be equated with welfare or education programs which are totally dissimilar.

NINTH ANNUAL PUBLIC OPINION POLL OF THE 17TH DISTRICT OF OHIO

The SPEAKER. Under a previous order of the House, the gentleman from Ohio (Mr. ASHBROOK), is recognized for 15 minutes.

Mr. ASHBROOK. Mr. Speaker, this year I delayed distribution of my ninth annual questionnaire to give the people of the 17th Congressional District more time to view the programs and policies of our new President and his efforts on their behalf. This delay has, I believe, proved fruitful. Response to the poll was excellent and the sincere concern of many persons was again expressed by the hundreds of personal notes, letters, and marginal memos.

As in the past, I continued my policy of sending the questionnaire to voters of all political persuasions: Republicans, Democrats, and Independents. The questionnaire went to all parts of the 17th district, not only the full counties but those of which I represent only a few townships.

Several points are quickly noticed: First, there is a great desire for control of lawlessness in the Nation whether the lawlessness is on the campus or in the streets. Answers to a question on whether Federal funds should be denied to disruptive college students brought a "yes" response from 92 percent. A question of imposing a mandatory prison sentence on persons convicted of using firearms in the commission of a felony elicited a 92.4-percent response.

On the question of Vietnam there appears to be a major shift of opinion. Last year's poll indicated that within the 17th district 18 percent favored withdrawal of American forces on a unilateral basis. This year, 42.9 percent marked this same response; 51.6 percent stood in favor of either continuing with present military strategies and tactics or sharply intensifying them. From comments included with returned questionnaires and my many discussions with persons and groups at home it seems that more than even the people are simply fed up with the attrition tactics of the past few years. They are for the most part not against our efforts to help preserve the self-determination of South Vietnam, but they are against spending American lives in a winless effort. The poll tends to bear this out.

With a fervor almost equal to that with which Americans support their men on the battlefield, Americans oppose the actions of deserters and draft dodgers.

The responses to a question on granting amnesty to deserters, draft dodgers, and those who were imprisoned rather than serve proved interesting in the negative response. Of the three options, 68.3 percent of the people did not choose any of them. About 6 percent approved amnesty for those who fled the country to avoid the draft, 22 percent favored granting amnesty to those imprisoned for their objections, and only 3.8 percent for the deserter from the Armed Forces. Thus, the remaining persons, nearly 70 percent, either do not have an opinion or oppose amnesty to any person who shirks his Nation's military service.

In the 17th Congressional District a clear majority of the people favor proceeding with the modified anti-ballistic-missile system proposed by President Nixon. The figures are 54 percent for deployment, 31.4 percent against, and 14.6 percent with no opinion.

Mr. Speaker, I am very pleased with this year's questionnaire. I believe it was written in an eminently fair manner, distributed inclusively, tabulated precisely, and that it covered a broad range of domestic and foreign policy questions. Some of those included, in addition to topics I have mentioned are: the military draft, Post Office Department, voting age, cigarette advertising, the National Labor Relations Board, taxes, and electoral reform. I, therefore, believe it is a representation of opinion in the district which I serve.

In contrast to other years I have this year added a new phase to the questionnaire procedure. After distributing the poll, but prior to final tabulation and publication of results, I answered the questionnaire myself. I think it only fair that having asked my constituents to respond I should give them the benefit of my view on the same questions. My answers were, of course, made fully available to all news media in the district. In many areas the people and I fully agree; on some we disagree, but on all the issues we have gone on public record with our stand. In addition, I include my responses following the tabulated answers. They are in the same form distributed to the press.

To my knowledge this is the most comprehensive annual opinion poll taken of this area of Ohio and an excellent supplement to other efforts which I make to seek out the thoughts of the people. I include the poll and the tabulations of responses in the CONGRESSIONAL RECORD at this point:

[In percent]

	Yes	No	No opinion
1. If the Paris peace talks are abandoned or reach a hopeless stalemate would you then favor:			
(a) Continuation of our present military strategies and tactics?	9.8		
(b) Unilateral withdrawal of U.S. troops	42.9		
(c) Sharp intensification of the total war effort	41.8		
(d) No opinion	5.5		
2. President Nixon has asked the Defense Department to develop detailed plans for evenutally ending the draft. The first step will be to make major revisions to correct inequities. Which of the following proposals do you favor? Check 1.			
(a) Substitute for the present system of priorities and deferments a lottery or system of "random selections"	34.6		
(b) Permit fulfillment of military obligation through alternate national service such as Peace Corps, VISTA, etc	24.1		
(c) Work toward outright abolition of draft	28.8		
(d) No opinion	12.5		
3. In which of the following ways would you prefer to have your vote for President and Vice President counted? Check 1.			
(a) Proportional plan—under which the electoral vote in each State would be distributed in proportion to the popular vote in each State	7.6		
(b) District plan—under which electors would be chosen by districts in the same manner as Representatives and Senators	6.4		
(c) Direct plan—under which electoral college would be abolished and the President and Vice President would be elected directly	73.9		
(d) No change—favor present system with electoral college apportioned primarily according to population of State	9.3		
(e) No opinion			2.8
4. Do you believe that cigarette advertising should be banned from radio and television programs?	62.1	34.0	3.9
5. Do you approve of the federally proposed welfare regulation which would eliminate investigations of most welfare applicants in favor of a declaration of need?	14.0	81.3	4.7
6. Do you believe the National Labor Relations Board (NLRB) should be replaced by a system of labor courts?	33.4	40.2	26.4
7. Viewing the economy as it stands today, would you favor renewal of the 10 percent income surtax when it expires on June 30?	20.4	68.5	11.1
8. Experts predict that the world population will double before the year 2000 and there is widespread expectation of famine on an unprecedented scale in many parts of the world. Do you believe these predictions warrant intensification of the Federal Government's present limited role in population control efforts?	61.1	26.3	12.6
9. At the conclusion of the Vietnam conflict, would you favor granting amnesty to any of the following: Those who—			
(a) Fled the country to avoid the draft?	5.9		
(b) Were imprisoned because of objections to the war and refusal to serve?	22.0		
(c) Deserted while a member of the armed services	3.8		
(d) No opinion	68.3		
10. Do you favor proceeding with the modified (ABM) antiballistic missile plan proposed by President Nixon?	54	31.4	14.6
11. On the issue of gun control what should the Federal Government do? Check 1.			
(a) Require Federal registration of all firearms	29.9		
(b) Continue ban on interstate shipment of handguns but do not enact additional Federal restrictions on firearms	37.1		
(c) Remove Federal restrictions enacted last year	26.0		
(d) No opinion	7		
12. Should the Federal Government impose mandatory prison sentences on persons convicted of using firearms in the commission of a felony (much like the mandatory 3-day jail sentence for drunken driving conviction in Ohio)	92.4	3.3	4.3
13. Should Federal aid be denied college students who engage in disorderly demonstrations which disrupt the administration of our colleges?	92.1	3.4	4.5
14. Do you support the proposal to convert the Post Office into a Government-owned corporation to operate on a self-supporting basis?	63.7	23.3	13.0
15. Do you favor a constitutional amendment to lower the voting age:			
(a) to 18?	21.1		
(b) to 19?	36.5		
(c) No opinion	42.4		

YOUR CONGRESSMAN ANSWERS HIS QUESTIONNAIRE

(By John M. Ashbrook)

Each year for nine years I have asked the people of the 17th District to answer a public opinion poll. The results are a great help in gauging the tenor of political opinion, forecasting the importance of issues and judging the concerns of the people.

The Ninth Annual Legislative Questionnaire is now being tabulated and I will soon announce the results. However, I think it only fair that, since I have asked your opinions, I should in return make my views known to you. Your right to know where I stand is certainly as important as my desire and need to know your position. Here are my opinions and a brief reason:

1. (c) If the Paris peace talks are abandoned or reach a hopeless stalemate, I would sharply intensify the war effort without major troop commitment. We have a legitimate reason for halting this advance of Communism. Unilateral withdrawal would signal our unwillingness to challenge the Soviet Union's aggressive plans for world domination. We should allow the South Vietnamese to take the war to the North just as the North now mortars Saigon and strategic areas in the South. We could bomb the Red River Dike System, blockade Haiphong and interdict supplies with minimum troop commitment.

2. (b) Draft laws should be reformed with a view to allowing alternate national service such as the Peace Corps or VISTA as a means of fulfilling military obligation.

3. (b) I prefer the District Plan for election reform. It is workable, it could be enacted through constitutional amendment adopted by the requisite number of states (some plans could not) and it continues the checks and balances wisely incorporated in our Constitution.

4. (yes) Cigarette advertising, in my view, should be banned from radio and TV programs. If granted by mandate of Congress, the Federal Communications Commission could exercise such power. The evidence indicates that the public welfare is directly threatened and therefore Congress, through the FCC, could and should act.

5. (no) Interpretations of needs vary. In some states, those who earn as much as $12,000 are considered "needy" and can get housing assistance.

6. (yes) The National Labor Relations Board should be replaced by a labor court, or at the least a new system of adjudicating conflicts. The NLRB is presently a political body handing down legal decisions, often prepared and promulgated by second or third level officials. This is unjust to both labor and business, and their record is extremely poor.

7. (no) I emphatically oppose extension of the surtax or additional taxes. The same end can be achieved through reduced spending by the government.

8. (yes) Yes, population control is needed but it must come from individual conscience and education, not government order. The government can supply information and help those who desire such assistance. Welfare mothers with 10 or 12 children they can't support are the best indication of need for this assistance.

9. I rarely say "never" but I would not consider this at any time under circumstances in "a" and "c." Those in "b" category might deserve different consideration.

10. After a long period of study I believe that we should deploy an ABM system. I am convinced that it is necessary and I support the Safeguard program. It is defensive, not offensive. Doubts should be resolved on the side of our future security.

11. (c) I would remove many federal gun restrictions, primarily those directed at the private owner, the collector, and the sportsman. I not only oppose additional restrictions but have introduced legislation in this Congress to lift restrictions on long guns and ammunition.

12. (yes) Mandatory prison sentences for convicted felons who use firearms when committing a crime should be approved. This is a responsible and effective approach to the firearms problems.

13. (yes) We have no obligation to underwrite through federal programs those who violate the law and consciously riot and disrupt.

14. (no) Any needed changes can be made if there is the will to do so. We cannot evade our responsibility by simply giving the problem to someone else. Congress should retain jurisdiction over postal rates, personnel, and operation.

15. (a) I have long believed that the voting age should be lowered to 18, and I first introduced legislation to this effect as a member of the Ohio General Assembly in 1957. Responsible, enlightened, and concerned youth of today are well qualified to vote. The Hippies are a small minority. I would support a compromise amendment for 19 year old voting.

FOREIGN INFORMATION ACT

The SPEAKER. Under a previous order of the House, the gentleman from Alabama (Mr. EDWARDS) is recognized for 15 minutes.

Mr. EDWARDS of Alabama. Mr. Speaker, some of the finest unsung heroes of our country today are those serving overseas for the U.S. Information Agency.

Many of USIA's foreign service officers are exceedingly able, dedicated men who are making considerable sacrifice in the service of their country—sacrifice for themselves and their families. Many of them are assigned to remote outposts in subtropical villages where living and working conditions are very difficult and often dangerous. Most of them are experts in communication between people and that is the reason they are there, making an effort to interpret the United States and its policies to people in support of this country's objectives.

The most effective of these people are not only articulate but, equally as important, they are good listeners. They are men who have faith in their own country, and who demonstrate their faith quietly, modestly, convincingly.

Our Government is fortunate to have these people. But I am disturbed when I hear that many of their colleagues formerly in the USIA foreign service have resigned to take other positions.

It is my understanding that over the years USIA has continually suffered from low morale and turnover in the lower and middle levels of foreign service people. This surely must have a negative impact on effectiveness of the Agency.

Looking into it further I learn that USIA's objectives have been in search of clear definition almost since the beginning in 1953. And its methods have been unsure. This has been an Agency with an identity problem.

It has suffered from too frequent change of top leadership. It has not been given the attention it deserves either from the White House or from Congress.

It probably is fair to say that neither the Government nor the country as a whole has yet come to fully acknowledge the importance of Government information programs overseas to our overall national security.

And partly for this reason the Agency has drifted for too many years. If my information is right they are doing there today just about the same things they were doing 10 and 15 years ago.

The same assumptions have prevailed regardless of changes in Presidential administration. The same people, basically, are making the same judgments and operating the same way they did in 1953 and 1963.

I submit, Mr. Speaker, that this is not good enough. This is one of the most sensitive operations this Government directs. It must be vigorous, innovative, and it must be capable of change when change is the interest of U.S. foreign policy operations.

The need for thorough reexamination of USIA programs is a difficult thing to dramatize. Yet it is a concept that is becoming ever more recognized.

In December 1967, the Republican Coordinating Committee recommended it in its report, "The American Image Abroad."

A year later the House Foreign Affairs Subcommittee on International Organizations and Movements held hearings and produced an excellent report urging this kind of basic review.

The U.S. Advisory Commission on Information, headed by Dr. Frank Stanton of CBS, has issued very persuasive reports both this year and last year strongly urging this action.

A communication specialist, Arthur E. Meyerhoff, has written a book on the subject called "The Strategy of Persuasion."

Several newspapers have given editorial support to the idea.

There now exists an Emergency Committee for a Reappraisal of U.S. Overseas Information Policies and Programs. The chairman is Mr. Edward L. Bernays of Cambridge, Mass.

Mr. Bernays has conducted a survey of leading U.S. foreign correspondents overseas, and of the correspondents of other countries serving in this country, and has found that 73 percent of them believe a thorough reappraisal is required.

To achieve this objective I have introduced H.R. 12726, with eight distinguished cosponsors. They are the Honorable JOHN A. ANDERSON, of Illinois, ROBERT TAFT, JR., of Ohio, J. GLENN BEALL, JR., of Maryland, DANIEL BUTTON, of New York, HOWARD POLLOCK, of Alaska, DANTE FASCELL, of Florida, GEORGE ANDREWS, of Alabama, and SAMUEL N. FRIEDEL, of Maryland.

This bill seeks to implement the plan of the U.S. Advisory Commission: The establishment of a committee for the purpose of organizing a thorough and searching reexamination of U.S. Government information programs overseas.

What are some of the questions which should be considered in this kind of reappraisal? There are very many questions, some dealing with basic organizational structure, others with objectives, others with methods, and others with policies.

Following are just a few of the questions which illustrate what we mean when we refer to a searching reexamination.

First, What, exactly, should USIA be expected to accomplish? What are its built-in limitations and what are the opportunities open to it?

Second. What about the information activities of other Government agencies abroad? Is there enough coordination?

Third. Should considerations of public information overseas be made a greater part of U.S. foreign policy decisionmaking? If so, how do we achieve it?

Fourth. Should educational and cultural exchange programs be transferred from the State Department to USIA?

Fifth. Or should USIA be transferred to State and merged there with existing educational and cultural programs?

Sixth. Should greater use be made of non-Government communication resources both in this country and abroad? Should the techniques of advertising be exploited to a greater extent?

Seventh. Should USIA/Washington have greater direction of programs in individual areas and countries? Or should the field officers operate more independently of Washington?

Eighth. Is USIA trying to work with too many programs? Is it scattering its shot where it should be concentrating on fewer methods?

Ninth. Does USIA rely unnecessarily on citing quantity of radio broadcasts, magazine articles, et cetera, for establishing evidence of effectiveness? Or should greater attention be given to quality?

Tenth. How, exactly, should the agency seek to justify itself? Do the Congress and the agency alike have unrealistic hangups about USIA's justification?

Eleventh. Does the function of overseas information have adequate recognition at the State Department and the National Security Council?

Twelfth. Should the major thrust of USIA programs be directed at the elite of foreign countries, or at the mass of their populations?

Thirteenth. Should we be operating information programs in friendly and highly developed countries such as Canada, as well as elsewhere?

Fourteenth. Should much greater attention be given to exchange of persons?

Fifteenth. Is the agency's research adequate to the needs?

Sixteenth. Is the appropriate function of USIA that of a trumpet reporting on events in a straight manner? Or should it be openly and unashamedly more propagandistic in nature?

Seventeenth. What about USIA's personnel? Is there a morale problem? Is training adequate? Are selection procedures effective? Is turnover too high?

Eighteenth. Should the Congress and the public have more information about how USIA guides its foreign service officers in dealing with sensitive domestic problems in their activity abroad?

Nineteenth. Is there adequate sense of innovation in agency leadership? Or do the old assumptions of years ago still determine the day-to-day activities?

Twentieth. How can the need for public understanding and support of USIA's function be reconciled with the innate problem of any Government agency directing information to its own citizens?

These are 20 questions which seem important to me. I am sure there are 20 others, or 200 others, which also cry out for solution in the overall determination of overseas information programs.

I invite support for this legislation as a means of serving the interest of our national security.

TENTH ANNIVERSARY OF THE CAPTIVE NATIONS WEEK RESOLUTION

The SPEAKER. Under a previous order of the House, the gentleman from Pennsylvania (Mr. FLOOD) is recognized for 15 minutes.

Mr. FLOOD. Mr. Speaker, whether our people wish to recognize it or not, the primary problem in the world conflict is the reality of the captive nations. If there were no captive nations, we would not be in Vietnam; we would not be debating the essentially secondary issues of the ABM, MIRV, and a score of others. This is no oversimplification; it is a basic formula of thought and insight that too many of us, in the whirlpool of our daily preoccupations, never seem to contemplate. Just think of it—no captive nations and thus the absence of Soviet Russian imperio-colonialism—what becomes of the relevancy of these issues?

It is because of the primacy of the captive nations issue that our people, as well as free world allies, commemorated this July the 10th anniversary of the captive nations week resolution, which Congress passed in July 1959. These Americans and others will never allow us to forget the primary problem while our energies and time are being absorbed by secondary and tertiary issues. In time and with certitude, they are confident that our policies and actions will, alas, conform with the necessity of this primary issue.

As in previous years, it is my privilege to indicate by continuous example the success of this 10th anniversary. Continuing with what was shown by example in the July 16, 1969, issue of the CONGRESSIONAL RECORD, I commend these following select examples to the reading of our Members:

First. Proclamations of the Week by Gov. Keith H. Miller, of Alaska, Gov. Don Samuelson, of Idaho, Gov. Louie B. Nunn, of Kentucky, Mayor Walter E. Washington, of the District of Columbia, Mayor Richard J. Daley, of Chicago, President Sidney Leviss of the Borough of Queens, the city of New York, Mayor Malcolm E. Ellis, of the city of Schenectady in New York State, Mayor A. L. Rasmussen, of Tacoma, Wash., and Mayor August P. Petrillo, of Mount Vernon, N.Y.; second a message of the week by Dr. Phan Huy Quat, chairman of the World Anti-Communist League, as published in the July 11 Freedom Center News in Korea; third a report in the June 1–15 issue of the Ukrainian Bulletin; fourth a news account in the July 20 Free China Weekly; fifth a report in the July 18 issue of the Evening Star of Washington, D.C.; sixth a news item in the July 7 edition of the Tempe Daily News in Arizona; seventh a commentary in the July 23 issue of the Buffalo Evening News; eighth another commentary in the July 20 edition of the Sunday Star of Washington, D.C.; and ninth a typical program of the week in the County of Erie in New York State:

CAPTIVE NATIONS WEEK PROCLAMATION

Whereas, the imperialistic policies of Russian Communists have led, through direct and indirect aggression, to the subjugation and enslavement of the peoples of Poland, Hungary, Lithuania, Ukraine, Czecho-Slovakia, Latvia, Estonia, White Ruthenia, Rumania, East Germany, Bulgaria, Mainland China, Armenia, Azerbaijan, Georgia, North Korea, Albania, Idel-Ural, Serbia, Croatia, Slovenia, Tibet, Cossackia, Turkestan, North Vietnam, Cuba, and others; and

Whereas, the desire for liberty and independence by the overwhelming majority of peoples in these conquered nations constitutes a powerful deterrent to any ambitions of Communist leaders to initiate a major war; and

Whereas, the freedom-loving peoples of the captive nations look to the United States as the citadel of human freedom and to the people of the United States as leaders in bringing about their freedom and independence; and

Whereas, the Congress of the United States by unanimous vote passed Public Law 86–90 establishing the third week in July each year as Captive Nations Week and inviting the people of the United States to observe such week with appropriate prayers, ceremonies and activities; expressing their sympathy with and support for the just aspirations of captive people for freedom and independence:

Now, therefore, I, Keith H. Miller, Governor of the State of Alaska, do hereby proclaim the period July 13 through July 19, 1969 as Captive Nations Week in Alaska, and call upon all Alaskans to join with others in observing this week by offering prayers and rededicating their efforts for the peaceful liberation of oppressed and subjugated peoples all over the world.

In witness whereof, I have hereunto set my hand and caused the Seal of the State of Alaska to be affixed this second day of July in the year of our Lord nineteen hundred and sixty-nine.

KEITH H. MILLER,
Governor.

Attest:

ROBERT W. WARD,
Secretary of State.

PROCLAMATION, EXECUTIVE DEPARTMENT, STATE OF IDAHO

Whereas the imperialistic policies of Russian Communists have led, through direct and indirect aggression, to the subjugation and enslavement of the peoples of Poland, Hungary, Lithuania, Ukraine, Czecho-Slovakia, Latvia, Estonia, White Ruthenia, Rumania, East Germany, Bulgaria, Mainland China, Armenia, Azerbaijan, Georgia, North Korea, Albania, Idel-Ural, Serbia, Croatia, Slovenia, Tibet, Cossackia, Turkestan, North Vietnam, Cuba, and others; and

Whereas the desire for liberty and independence by the overwhelming majority of peoples in these conquered nations constitutes a powerful deterrent to any ambitions of Communist leaders to initiate a major war; and

Whereas the freedom-loving peoples of the captive nations look to the United States as the citadel of human freedom and to the people of the United States as leaders in bringing about their freedom and independence; and

Whereas the Congress of the United States by unanimous vote passed Public Law 86–90 establishing the third week in July each year as Captive Nations Week and inviting the people of the United States to observe such week with appropriate prayers, ceremonies

and activities; expressing their sympathy with and support for the just aspirations of captive peoples for freedom and indpendence:

Now, therefore, I, Don Samuelson, Governor of the State of Idaho, do hereby proclaim that the week commencing July 13, 1969, be observed as Captive Nations Week in the State of Idaho, and call upon the citizens of this State to join with others in observing this week by offering prayers and dedicating their efforts for the peaceful liberation of oppressed and subjugated peoples all over the world.

In witness whereof, I have hereunto set my hand and caused to be affixed the Great Seal of the State of Idaho, at Boise, the Capitol, the first day of July, in the year of our Lord, Nineteen Hundred and Sixty-nine and of the Independence of the United States the One Hundred and Ninety-third.

By the Governor:

DON SAMUELSON,
Governor of the State of Idaho.

———— ————,
Secretary of State.

PROCLAMATION BY THE GOVERNOR, COMMONWEALTH OF KENTUCKY

Whereas, Many nations of the world have been deprived of the freedom we know as United States citizens, having been forced by imperialistic powers to accept subjugation and enslavement as a way of life; and

Whereas, The freedom-loving peoples of these captive nations look to the United States as the citadel of human freedom and to the people of the United States as leaders in bringing about their freedom and independence; and

Whereas, In July, 1959, the Congress of the United States by unanimous vote established the third week in July as Captive Nations Week and on July 16th of this year a Presidential Proclamation will precede addresses in Congress as a highlight of the 10th anniversary of the passing of the Captive Nations Week Resolution;

Now, therefore, I, Louie B. Nunn, Governor of the Commonwealth of Kentucky, do hereby proclaim July 13–19, 1969, as Captive Nations Week in Kentucky, and call upon the citizens of Kentucky to join with others in observing this week by offering prayers and dedicating their efforts for the peaceful liberation of oppressed people all over the world.

Done at the Capitol in the city of Frankfort this 9th day of July in the year of Our Lord one thousand nine hundred sixty-nine and of the Commonwealth of Kentucky the one hundred seventy-eighth.

LOUIE B. NUNN, *Governor.*
ELMER BEGLEY, *Secretary of State.*

PROCLAMATION BY THE COMMISSIONER OF THE DISTRICT OF COLUMBIA

Whereas, by a joint resolution approved July 17, 1959, the Congress authorized and requested the President of the United States of America to issue a proclamation designating the third week in July as "Captive Nations Week," and to issue a similar proclamation each year until such time as freedom and independence shall have been achieved for all captive nations of the world; and

Whereas, there is a strong belief that the observance of "Captive Nations Week" throughout our country and our community will serve the cause of America and the entire free world; that the keeping alive of the spirit of liberation is the free world's most effective instrument; and

Whereas, it is deemed appropriate and proper for the people of our community to extend to the peoples of the captive nations our support and sympathy for their just aspirations for freedom and national independence:

Now, therefore, I, the Commissioner of the District of Columbia, do hereby proclaim the week of July 13–19, 1969, as "Captive Nations Week," and invite the people of the Nation's Capital to participate in the observance of this period by offering prayers in their churches and synagogues for the peaceful liberation of the peoples throughout the world who are denied their fundamental human rights.

WALTER E. WASHINGTON,
Commissioner of the District of Columbia.

PROCLAMATION, OFFICE OF THE MAYOR, CITY OF CHICAGO

Whereas, the imperialistic policies of Russian Communists have led, through direct and indirect aggression, to the subjugation and enslavement of the peoples of Poland, Hungary, Lithuania, Ukraine, Czecho-Slovakia, Latvia, Estonia, White Ruthenia, Rumania, East Germany, Bulgaria, Mainland China, Armenia, Azerbaijan, Georgia, North Korea, Albania, Idel-Urai, Serbia, Croatia, Slovenia, Tibet, Cossackia, Turkestan, Slovakia, North Vietnam, Cuba, and others; and

Whereas, the Congress of the United States by unanimous vote passed Public Law 36–90 establishing the third week in July each year as Captive Nations Week and inviting the people of the United States to observe such week with appropriate prayers, ceremonies and activities expressing their sympathy with and support for the just aspirations of captive peoples for freedom and independence; and

Whereas, the City of Chicago is linked to these captive nations through the bonds of family, since numbered among the people of Chicago are hundreds of thousands of our citizens who through nativity or ancestry treasure the heritage which endowed them with the culture and industry which are theirs; and

Whereas, these nations have been made captive by the imperialistic, aggressive and heartless policies of communism; and

Whereas, the peoples of these communist-dominated nations have been deprived of their national independence and their individual liberties; and

Whereas, it is appropriate and proper to demonstrate to the peoples of the captive nations the support of the people of the City of Chicago for their just aspirations for freedom and national independence; and

Whereas, the people of Chicago, as do all the people of the United States, want for the peoples of the world the same freedom and justice which is theirs:

Now, therefore, I, Richard J. Daley, Mayor of the City of Chicago, do hereby designate the week beginning July 13, 1969 as Captive Nations Week.

I urge the people of Chicago to join in the programs arranged for observance of the occasion, and I urge all of our churches, our educational institutions and all media of communication to observe the plight of the communist-dominated nations and to join in support of the just aspirations of the people of the captive nations.

I especially encourage everyone to concretely demonstrate his or her interest in the people imprisoned in the captive nations by their attendance at or participation in the parade to be held on State Street on Saturday afternoon, July 19 at 12:00 p.m.

Dated this 26th day of June, A.D., 1969.

SIDNEY LEVISS, PRESIDENT, BOROUGH OF QUEENS, THE CITY OF NEW YORK, PROCLAMATION

Whereas, all peoples throughout the world seek a life that affords each his personal freedom and the pursuit of happiness, and

Whereas, this freedom is not given to all, and today we find that many nations are captives of greater powers who overwhelmed them in the guise of friendship, and

Whereas, the week of July 13, 1969 is Captive Nations Week in accordance with a ten year proclamation of the President of the United States of America and Public Law 86–90, and

Whereas, the following nations today exist in captivity; Albania, Armenia, Azerbaijan, Bulgaria, Byelorussia, China, Cossackia, Croatia, Cuba, Czech., Estonia, Georgia, East Germany, Hungary, Idel Ural, North Korea, Latvia, Lithuania, Mongolia, North Caucasus, Poland, Romania, Serbia, Slovakia, Slovenia, Tibet, Turkestan, Ukraine and North Viet Nam,

Now, therefore, I, Sidney Leviss, President of the Borough of Queens, The City of New York, proclaim the week of July 13, 1969, Captive Nations Week in Queens, and urge all our residents to recollect that freedom has a high price in terms of eternal vigilance against its undermining.

Done at Borough Hall, Kew Gardens, in The City of New York, on this tenth day of July, in the year of Our Lord, one thousand nine hundred and sixty-nine.

SIDNEY LEVISS,
President, Borough of Queens.

PROCLAMATION, CITY OF SCHENECTADY, N.Y.

Whereas, the imperialistic policies of Russian Communists have led, through direct and indirect aggression, to the subjugation and enslavement of the peoples of Poland, Hungary, Lithuania, Ukraine, Czecho-Slovakia, Latvia, Estonia, White Ruthenia, Rumania, East Germany, Bulgaria, Mainland China, Armenia, Azerbaijan, Georgia, North Korea, Albania, Idel-Ural, Serbia, Croatia, Slovenia, Tibet, Cossackia, Turkestan, North Vietnam, Cuba, and others; and

Whereas, the desire for liberty and independence by the overwhelming majority of peoples in these conquered nations constitutes a powerful deterrent to any ambitions of Communist leaders to initiate a major war and the freedom-loving peoples of the captive nations look to the United States as the citadel of human freedom and to the people of the United States as leaders in bringing about their freedom and independence; and

Whereas, the Congress of the United States by unanimous vote passed Public Law 86–90 establishing the third week in July each year as Captive Nations Week:

Now, therefore, I, Malcolm E. Ellis, the Mayor of the City of Schenectady, New York, do hereby proclaim the week of July 13th through July 19th, 1969, as "Captive Nations Week" in the City of Schenectady, and call upon our citizens to join with others in observing this week by offering prayers and dedicating their efforts for the peaceful liberation of oppressed and subjugated peoples all over the world.

MALCOLM E. ELLIS,
Mayor.

PROCLAMATION, CITY OF TACOMA, WASH.

Whereas, the imperialistic policies of Russian Communists have led, through direct and indirect aggression, to the subjugation and enslavement of the peoples of Poland, Hungary, Lithuania, Ukraine, Czechoslovakia, Latvia, Estonia, White Ruthenia, Rumania, East Germany, Bulgaria, Mainland China, Armenia, Azerbaijan, Georgia, North Korea, Albania, Idel-Ural, Serbia, Croatia, Slovenia, Tibet, Cossackia, Turkestan, North Vietnam, Cuba, and others; and

Whereas, the desire for liberty and independence by the overwhelming majority of peoples in these conquered nations constitutes a powerful deterrent to any ambitions of Communist leaders to initiate a major war; and

Whereas, the freedom-loving peoples of the captive nations look to the United States as the citadel of human freedom and to the people of the United States as leaders in

bringing about their freedom and independence; and

Whereas, the Congress of the United States by unanimous vote passed Public Law 86–90 establishing the third week in July each year as Captive Nations Week and inviting the people of the United States to observe such week with appropriate prayers, ceremonies and activities; expressing their sympathy with the support for the just aspirations of captive peoples for freedom and independence

Now, therefore, I, A. L. Rasmussen, Mayor of the City of Tacoma, Washington, do hereby proclaim that the week commencing July 13, 1969, be observed as Captive Nations Week in Tacoma, and call upon the citizens of this City to join with others in observing this week.

A. L. RASMUSSEN,
Mayor.

PROCLAMATION, CITY OF MOUNT VERNON, N.Y.

Whereas, the imperialistic policies of Russian Communists have led, through direct and indirect aggression, to the subjugation and enslavement of the peoples of Poland, Hungary, Lithuania, Ukraine, Czecho-Slovakia, Latvia, Estonia, White Ruthenia, Rumania, East Germany, Bulgaria, Mainland China, Armenia, Azerbaijan, Georgia, North Korea, Albania, Idel-Ural, Serbia, Croatia, Slovenia, Tibet, Cossackia, Turkestan, North Vietnam, Cuba, and others; and

Whereas, the desire for liberty and independence by the overwhelming majority of peoples in these conquered nations constitutes a powerful deterrent to any ambitions of Communist leaders to initiate a major war; and

Whereas, the freedom-loving peoples of the captive nations look to the United States as the citadel of human freedom and to the people of the United States as leaders in bringing about their freedom and independence; and

Whereas, the Congress of the United States by unanimous vote passed Public Law 86–90 establishing the third week in July each year as Captive Nations Week and inviting the people of the United States to observe such week with appropriate prayers, ceremonies and activities; expressing their sympathy with and support for the just aspiration of captive peoples for freedom and independence;

Now, therefore, I, August P. Petrillo, Mayor of the City of Mount Vernon, New York, do hereby proclaim that the week commencing July 13, 1969 be observed as *Captive Nations Week* in the City of Mount Vernon, New York, and call upon the citizens of Mount Vernon to join with others in observing this week by offering prayers and dedicating their efforts for the peaceful liberation of oppressed and subjugated peoples all over the world.

AUGUST P. PETRILLO,
Mayor.

[From the Korean Freedom Center News, July 11, 1969]

MESSAGE ON THE CAPTIVE NATIONS WEEK

The following is the message delivered on July 1, 1969, by Dr. Phan Huy Quat, World Anti-Communist League Council Chairman, on the Captive Nations Week—Ed.

I wish to extend my warm greetings to all WACL regional organizations and member-units on the tenth anniversary of the "Captive Nations Week" movement. In my capacity as WACL Council Chairman, I sincerely laud your efforts in sponsoring commemorative anti-slavery activities this year in compliance with the resolutions adopted at the 2nd General Conference in Saigon last December.

As millions of enslaved peoples behind the iron curtain, in spite of odds and adversity, are waging an heroic struggle against their ruthless Communist oppressors, the commemoration of the "Captive Nations Week" by WACL members is the most fitting act of freedom-loving peoples in support of their cause and will certainly serve to enhance their morale in their fight to regain national independence and sovereignty.

I do hope that our combined message, through various channels and media, will be conveyed to the captive nations as a display of free world determination to smash the Communist empire and to render all-out support to the liberation of all nations now under Sino-Soviet rule. I wish all WACL members every success in the observance of the Captive Nations Week.

[From the Ukrainian Bulletin, July 1–15, 1969]

PREPARING FOR 10TH ANNIVERSARY OF CAPTIVE NATIONS WEEK

WASHINGTON, D.C.—May 26.—The following memorandum, prepared by Dr. Lev E. Dobriansky, chairman of the National Captive Nations Committee (NCNC), has been sent to various organizations and groups in preparation for the 10th observance of the "Captive Nations Week" this July:

In two months we will be observing the 10th Anniversary of the Captive Nations Week Resolution. As in previous years, NCNC is coordinating the Week observance and, on this special occasion, urges each of our 37 organized committees to prepare and act on the following plans:

1. The Week falls in the period of July 13–19, 1969 and is highlighted as "The 10th Anniversary of the Captive Nations Week Resolution," and calls for maximum use of all available media to focus attention on the captive nations.

2. A quick response to inquiries on the background of the Week can be furnished by providing copies of NCNC's chairman's book *The Vulnerable Russians,* which is now in its second printing and can be acquired by writing to the Georgetown University Book Store, White Gravenor, Georgetown University, Washington, D.C. 20007.

3. The "10th" can also be impressively featured by ordering "10th Anniversary Captive Nations Medals" in silver and bronze from Mr. Viktors Viksnins (312–588–2085) of the Captive Nations Friends Committee, 4146 N. Elston Ave., Chicago, Ill. 60618. These would make wonderful presentations for persons to be honored in your area. NCNC has ordered a quantity to honor Congressmen and Senators at the Washington Banquet.

4. Most important for our cause and the fundamental importance of the captive nations to U.S. security is the 10th Anniversary Banquet planned by NCNC for Wednesday, July 16, 1969 at the University Club, 1135—16th St., N.W., Wash., D.C., at 6 p.m. (reception), 7 p.m. (dinner). To show full solidarity of our effort, your committee is requested to order at least a table of 8 at $12.50 a person. Individual captive nations groups will order their tables according to nationality background. Dr. Ku Cheng-kang of China and Mr. George Meany, AFL–CIO President, will be honored on this momentous occasion. Because of limited seating at 200, orders will be honored on a first-come-first-serve basis, *with a deadline of June* 30, 1969 and submitted with check payable to the National Captive Nations Committee to our financial secretary, Mr. Walter Pretka, 797 Princeton Place, Rockville, Md. 20850. This is a high point of this year's observance, and we depend on your enthusiastic cooperation for our mutual success.

5. *The themes we propose are:* "The 10th: Let's Not Forget the Captive Nations"; "Only An Honorable Peace With Self-Determination by South Vietnam"; "A New, Realistic Policy Toward Russia and the USSR"; "Let's Launch Now on This 10th a Drive for America's 200th Anniversary of the Spirit of Independence in 1976."

6. Enclosed is our brochure for publicized use in your area and in preparation for a Captive Nations Conference in Washington this September, about which we would appreciate your views at the forthcoming July Banquet.

[From the Free China Weekly, July 20, 1969]

FREE WORLD URGED TO HELP ASIAN ANTI-RED COUNTRIES

A Chinese civic leader has issued a strong appeal to all people in the free world to support Asian countries in checking Communist expansion.

Ku Cheng-kang, a member of the National Assembly and honorary president of the World Anti-Communist League, made the appeal on July 12 before his departure for the United States.

Ku, who is also head of the China chapter of the Asian Peoples' Anti-Communist League, went to the United States for a three-week visit at the invitation of the U.S. Captive Nations Committee.

He said that the "Captive Nations" movement was launched by the United States ten years ago to emancipate the enslaved people behind the Iron Curtain. This movement should coordinate with the Freedom Day movement initiated by the Republic of China 15 years ago and unite the forces of East and West for the cause of liberty.

"I hope my visit to the United States will help achieve that purpose," Ku said.

"During my tour of the United States, I will convey to the American people the strong aspiration of the Asian people for freedom and their determination to strive for the wellbeing of mankind."

He emphasized that people in the Western world should give firm support to the nations in Asia to enable them to safeguard their independence and freedom and world peace and security as a whole.

Ku was accompanied by U.S. congressman Edward J. Derwinski, who had come to Taipei on July 8 particularly to take part in a rally held on July 10 to observe Captive Nations Week.

Derwinski said that he was deeply impressed by the unwavering struggle of the Chinese people to liberate their compatriots now under the yoke of Communist tyranny on the China mainland.

Addressing a rally marking Captive Nations Week in Phoenix City, Arizona, on July 15, Ku described the Chinese Communist regime in Peiping as aggressive and vulnerable.

Ku said that to shatter the Iron Curtain and eliminate the threat of a nuclear war, the free world must have the courage to support the liberation struggle of the people on the Chinese mainland and seek the realization of a new world order.

He said peoples behind the Iron Curtain are longing for liberation. "We in our generation consider their liberation our unavoidable responsibility," he said.

Communist tyranny will not perish by itself, he told the rally. The present divisions and chaos within the Communist bloc are not accidental. They are the results of an awareness in the free world of Communist aggression, the rising of national spirit, progress in democratic government and promotion of a social well-being that has stopped Communist external expansion, he added.

Ku went on to say that the most important task in the present struggle for freedom is to actively support the people behind the Iron Curtain in their struggle against tyranny.

He pointed out that the Communist rulers, facing the crisis of an internal revolution, will resort to all possible means to strike and suppress the anti-tyranny revolutionary forces. The tragedies of Hungary and Czechoslovakia and Mao's "cultural revolution" represent Communist struggles and counter-attacks against the forces of freedom.

The tough anti-Communist leader emphasized that we should establish an international anti-Communist front and an urgently needed regional security system, and fight to the end for the freedom of mankind.

He quoted Abraham Lincoln—"If my brothers are still slaves, I am not a freeman"—in an appeal to the free world to help the captive peoples.

[From the Washington (D.C.) Evening Star, July 18, 1969]

CHINA'S KU BUSY THERE—BUSY HERE

The tight schedule of the working trip to the United States of Ku Cheng-kang precluded his wife's coming along. He has been too busy for leisurely sightseeing or partying.

The reception at the Chinese embassy last night was an exception, however. Ku, member of the Presidium, National Assembly, Republic of China, and chairman of the Political Committee, Asian Parliamentarians Union, met members of the Chinese community here, as well as other guests at the party given by Ambassador and Mrs. Chow.

The honor guest goes today to Chicago. Wednesday night he was presented with an award at the dinner given him by the American Committee of Captive Nations Assembly at the University Club and was honored yesterday at a luncheon on Capitol Hill given by Rep. Edward Derwinski, R-Ill., where he met members of the House subcommittee on the Far East. The congressman attended last night's reception.

An adviser to President Chiang Kai-shek, Ku is one of the busiest men in free China. He is one of the founders of the Asian Peoples' Anti-Communist League, inaugurated in Korea in 1954. He has since been president of the China Chapter.

Another cause which occupies much of Ku's time is the job of providing relief to Chinese compatriots suffering on the mainland, as well as the millions who have escaped to free areas. The Free China Relief Association, established in Taipei in 1950, has provided relief to millions.—J.P.

EMPHASIS ON YOUTH AT CAPTIVE NATIONS RALLY

A tribute to America's "silent majority" of young people is in the offing when the Arizona branch of the Captive Nations Committee stages its 11th annual rally at Grady Gammage Memorial auditorium on the Arizona State University campus, Tuesday, July 15.

The 8 p.m. program, open to the public, will be a Valley highlight of national Captive Nations Week, July 13–19, a week initiated by resolution of the U.S. Congress in 1959 as a time for observances to remind the world of the plight of the people in captive nations of the Red Empire. It also symbolizes, for billions of captive peoples, the dedication of America to their freedom and independence.

The accent will be on youth at the Tuesday rally with participants for the evening to include Ron Patty and his new group, That Certain Sound; the Impact '69 singers; the internationally acclaimed Mia Dancers; Scottsdale Boys' Band and Valley Eagle Scouts who will be presenting the flags of the captive nations.

Featured speaker for the evening will be Dr. Ku Cheng-kang, deputy foreign minister of Nationalist China.

Patriotic and religious songs will be presented by That Certain Sound and Impact '69. The Mia Dancers, who have been seen on the Ed Sullivan television show as well as in appearances throughout the world, will present their colorful folk dances for the program. Scottsdale Boys' Band will provide the instrumental music.

Said the spokesman for the Captive Nations Committee, "With the riots and turmoil caused by many college students today, we lose sight of how the majority of our young people really feel about this great land of ours. On July 15, we will have a chance to witness the true spirit of today's youth ... as these youth groups join in expressing their love and faith in this country of ours as we remember those peoples who have lost their basic freedoms and human rights—the one billion captive peoples of the captive nations behind the Iron, Bamboo and Sugar Curtains.

Admission for the rally will be $1 for adults, children and students admitted free.

[From the Buffalo (N.Y.) Evening News]

IS RUMANIA CAPTIVE?

Last week was Captive Nations Week, duly proclaimed as such by President Nixon in observing a tradition of more than a dozen years. Instigated by Congress, the presidential proclamation deplores the fact that certain nations are under the domination of outside governments.

On August 2 and 3, President Nixon will be visiting Romania on his round-the-world tour. When someone inquired whether President Nixon will be visiting a "captive nation," White House Press Secretary Ronald Ziegler curtly replied: "The proclamation speaks for itself."

Romania was not mentioned in the proclamation, although it is usually considered one of Russia's satellite countries.

[From the Washington (D.C.) Sunday Star, July 20, 1969]

A PROCLAMATION WITHOUT TRUMPETS

When President Nixon issued his proclamation for Captive Nations Week there was little public or press reaction.

But when Nixon signed the proclamation Monday he certainly recalled another one issued back in 1959. That one, from the late President Dwight D. Eisenhower, assailed the Soviet government for "imperialistic and aggressive" policies—and came at a time when then-Vice President Nixon was in Moscow.

The then-Soviet Premier Nikita S. Khrushchev stirred a controversy when he told Nixon, "This resolution stinks."

Since then, the yearly proclamations have been studied for possible indication of changing U.S. policies toward the Communist world. As the years have gone by, the proclamations have been milder in tone.

Nixon, who has talked of replacing the era of confrontation with one of negotiation, purposely appears to have soft-pedaled the whole affair. In a key passage, he urged Americans "to renew their devotion to the high ideals on which our nation was founded and has prospered and to sustain with understanding and sympathy the just aspirations of the peoples of all nations for independence and human freedom."

COUNTY OF ERIE OFFICIALLY SALUTES CAPTIVE NATIONS WEEK, JULY 20–27, 1969

PROGRAM OF EVENTS

Message of the county executive

Whereas, Public Law 86–90 was enacted 10 years ago. This law establishes Captive Nations Week, and in so doing, our representatives themselves also established that we, Americans, do not bow to despotism whether it comes from the Court of St. James or the Kremlin or Peking; and

Whereas, Today Communism has erected a cruel carrier of barbed wire, minefields, manhunters, bloodhounds and machine guns. It has re-established colonialism behind an Iron Curtain, where civilized nations labor under the boot of tyranny. The same ruthless armed oppression has been used against the open resistance in Budapest or the peaceful attempt for changes in Prague.

This political oppression and economic exploitation of the Captive Nations is committed in the name of a political system which has been proven to be obsolete and reactionary. Communism attempts to stabilize its system through the bloodshed and misery of others. Fomenting small wars throughout the world is an oft-used strategy; and

Whereas, The peoples of the Captive Nations look to us for sympathy, encouragement and help. We have witnessed that bridges cannot be built to these countries. The puppet governments of Moscow insists that any contact with the West and Freedom be denied their people; and

Whereas, We should ensure that these puppet governments receive no economic help from the West. To this end, we should avoid buying any products of these countries because the hard currency so acquired by these governments is used to subvert our own freedom. We must keep in mind that these goods we buy were denied our enslaved brothers.

Now, Therefore, I, B. John Tutuska, County Executive of the County of Erie, Do hereby proclaim the week of July 20–27, 1969, as "Captive Nations Week" and urge the citizens of Erie County to support and observe this week with appropriate ceremonies and activities.

In Witness Whereof, I have hereunto set my hand and caused the Seal of the County of Erie to be affixed this 2nd day of July, 1969.

B. JOHN TUTUSKA,
County Executive.

Highlights of events

Sunday, July 20

A.M. Religious Observances and Prayers in the Churches of Erie County.

2:30 P.M. Civic Opening of Captive Nations Week Program in front of the Buffalo and Erie County Public Library in Lafayette Square.

1. Presentation of Colors—Arthur F. Kilichowski, New York State Commander, Army and Navy Union of America.

2. National Anthem—The Misses Marika Zahariev and Pam Merz.

3. Invocation—Rev. Paul Kantor, Pastor, Hungarian Reformed Church of the West Side.

4. Placing of wreaths at the Memorial to the Captive Nations.

5. Welcome by Mr. Albert J. Weinert, Chairman, Erie County Civic Committee to Observe Captive Nations Week.

6. Introduction of Master of Ceremonies, Walter V. Chopyk, by Mr. Albert J. Weinert, Chairman E.C.C.C. to Observe C.N.W.

7. Proclamation: Hon. B. John Tutuska, Erie County Executive and Honorary Chairman E.C.C.C. to Observe C.N.W.

8. Speaker: Mr. Michael J Kogutek, Department of New York State Commander, American Legion; President, Chamber of Commerce, Lackawanna, N.Y.

9. Benediction: Rev. Paul Kantor, Pastor, Hungarian Reformed Church of the West Side.

10. "Youth Salute the Captive Nations"—Library Aud.

Wednesday, July 23

12:30 P.M. Civic Luncheon sponsored by the Kiwanis Club of Buffalo, President Harry W. Halbersleben presiding, and the ECCTO-CNW in the Buffalo Athletic Club in Niagara Square.

Speaker: Dr. Lev E. Dobriansky, National Chairman and Founder of Captive Nations Week, Washington, D.C.

Topic: "Education for Freedom Through Contrast."

Tickets: $2.80 (includes gratuities).

Reservations: Call 634–1166.

A special art exhibit will be held in the Buffalo and Erie County Library, Lafayette Square from July 22–August 4, 1969. Paintings and other materials depicting the plight of the captive nations, completed by recent refugees from the Iron Curtain countries.

All events are open to the public. No admission charge will be made except for the Civic Luncheon on Wednesday, July 23, at the Buffalo Athletic Club.

Erie County Citizens Committee To Observe Captive Nations Week

Honorary Chairman: Hon. B. John Tutuska, Erie County Executive.

Chairman: Albert J. Weinert, United Anti-Communist Committee of WNY.

Public Relations Director: Walter V. Chopyk, United Anti-Communist Committee of WNY.

Secretary: Mrs. Marjorie Lovejoy, United Anti-Communist Committee of WNY.

Treasurer: Clement Sakas, Lithuanian Club of Buffalo.

Resolutions: Dr. Lazlo B. Szimonisz, Hungarian Freedom Fighters Ass'n.

Youth Concert: Vladymyr Kowalyk, Ukrainian American Youth Ass'n.

Color Guard: Arthur F. Kilichowski, New York State Commander, Army and Navy Union.

Captive Nations Flags: Zef Priszka, Albanian Societies.

Arrangements: William J. Tracy, Veterans of Foreign Wars.

Members of the Committee

Dr. John Juhasz: Actio Hungarica.

Dr. Michael Saikewicz: Ukrainian Congress Committee of America.

Rev. Paul Kantor: American Hungarians of the Niagara Frontier.

Dr. Voldemar Kirss: Estonian Committee.

Francis M. Kindl: Veterans of Foreign Wars.

Tacho D. Kuntscheff: Bulgarian Club of Buffalo.

Eugene V. Massucci: Army and Navy Union of America.

Wasyl Sharvan: Anti-Bolshevik Bloc of Nations.

George M. Wong: Chinese Golden Dragon Society.

A. O'Neil Kline: Kiwanis Club of Buffalo.

Dr. Stephen Gredel: Croatian Delegation.

Ting Fong Wong: Chinese Golden Dragon Society.

Romas Masiolonis: Lithuanian Club of Buffalo.

Vidis E. Malejs: Latvian Society.

Charles Quagliana: United Anti-Communist Committee of WNY.

DAY OF BREAD RESOLUTION

(Mr. PURCELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PURCELL. Mr. Speaker, I am introducing, for appropriate reference, a joint resolution which would establish a "Day of Bread" in the United States, along with a "Harvest Festival Week."

One of my goals, as chairman of the Livestock and Grains Subcommittee of the House Committee on Agriculture, has been to encourage a closer working relationship among producers, processors, food manufacturers, and retailers. To the extent that this relationship breaks down I believe they fail to serve the best interests of themselves, their stockholders, and the consuming public.

Therefore, I was delighted that the National Association of Wheat Growers, the Millers' National Federation, and the American Bakers' Association have given wholehearted endorsement to plans for a "Day of Bread." These organizations and others have already made provision for administration, coordination, and funding of the program.

Mr. Speaker, wheat is perhaps man's oldest cultivated crop; more wheat is produced than any other commodity; and it provides a staple food in some 43 countries having a population of nearly a billion people. Bread has served mankind well and will continue to do so as long as there is a need for nutritious, low-cost food products. I firmly believe it deserves the recognition I seek for it in this joint resolution—both as bread itself and as a symbol of all foods.

Mr. Speaker, I would like to add at the conclusion of my remarks an editorial which appeared in the Southwestern Miller, a highly respected and widely read trade paper. I agree with the comment that the plans for the "Day of Bread" are wonderfully innovative and appropriately bold and ambitious in scope.

The editorial follows:

SUPERB "DAY OF BREAD"

The decision made by major segments of the breadstuffs industry to join in sponsoring a "Day of Bread" in the United States this October 29 hold enormous promise as a promotion program for the industry. The program plans are wonderfully innovative and appropriately bold and ambitious in scope. Of its many exciting elements, perhaps the most unique is the hope that the observance of a "Day of Bread" will become worldwide, as an event that would cross national barriers in celebration of the contributions of wheat-based foods to the world. The appropriateness of such dimensions for the program is indicated by the fact that bread provides more nourishment for the world than any other food, serving as a staple in the diets of 43 countries with an aggregate population of almost a billion people.

As delineated by H. Howard Lampman, executive director of the Wheat Flour Institute, the many facets of the program center on the observance of the "Day of Bread" by simultaneous luncheons held throughout the United States, and dinners in Europe. Congress will be asked to adopt a resolution proclaiming a "Harvest Week," of which the "Day of Bread" would be an outstanding event. Beyond the simultaneous luncheons and dinners for top government officials, the program will include such elements as an annual awards program for print and broadcast media to recognize the best coverage in each medium of some phase of wheat production, flour milling and baking. Many additional imaginative details are under discussion for incorporation into the program—regular schedule of press releases, communications to church leaders and contacts with chief editorial writers.

The program is drawn from the observance of a Day of Bread in West Germany, an event started in 1953 and gaining in success as a promotion device in the intervening fifteen years. The West German innovators worked closely with Mr. Lampman in aiming for an international observance. Contacts are planned with milling and baking and wheat producer interests throughout the Western hemisphere and in Europe and Africa to stimulate their participation.

It is perhaps no more than a coincidence that the announcement of the "Day of Bread" plans came in the same week as the news that the Wheat and Wheat Foods Foundation at last has been formally structured and is moving toward seeking enabling federal legislation to provide financing. The objectives for the "Day of Bread" and for the Foundation are identical insofar as the promotional aspect is concerned. In fact, the detailed Foundation program prepared several years ago includes just such an observance as one of the approaches that could be sponsored by the new organization. Even the participants in the Foundation and the backers of "Day of Bread" are the same—wheat producers, millers and end-product manufacturers.

Once the Foundation becomes a viable organization with adequate financing, the "Day of Bread" could be simply incorporated as one of its on-going activities along with its general commitment to research, educational and promotion on behalf of wheat foods. What is needed is administration, coordination and funding for the "Day of Bread" program as if the Foundation were already in existence. Too great a reliance on voluntary activities and independent committees in the 50 states where an observance is hoped for, with neither central direction nor specified budgeting, would threaten the success of the observance. The idea of the "Day of Bread" is too valuable to leave to the change of a hoped-for "Happening." Now that the sponsoring organizations have expressed their endorsement, the program directors must be given the support necessary to carry forward on a superb promotion idea.

LEAD POISONING OF UNDER-PRIVILEGED CHILDREN

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. PODELL. Mr. Speaker, America and those supposedly leading this Nation are much taken these days with glamor, scandal, and mortality. Commendable goals to center significant activity upon, I am sure. Yet while they are busy attacking gains in the areas of human rights we have made in the past, perhaps they will take a moment to contemplate the fate of a growing number of children in our society, especially in the slum areas of our large cities. Many are dying of lead poisoning.

They are mainly small children who eat bits of paint and plaster that peel from walls and ceilings of dilapidated housing—of which the major metropolitan areas have a plethora. Often they eat these pieces of debris because they are simply available.

This constantly worsening situation was ignored until recently. The New York Scientists Committee for Public Information and the New York Citizen's Committee to End Lead Poisoning, among others, publicized the extent of this affliction, and the damage it could and was producing in small children. Much credit is due to my distinguished colleague from New York, Mr. WILLIAM F. RYAN, who has done pioneering work in the Congress in this area.

I am therefore pleased to join him in sponsorship of three measures aimed at making a total attack upon this horrible problem. H.R. 9191 would establish an HEW fund for local grants which would allow identification and treatment of victims.

H.R. 9192 is aimed at the problem itself—peeling interior lead-based paint in substandard housing. Under this measure, HUD could make local grants for detection of such paint, requiring

owners and landlords to remove it from interior surfaces.

H.R. 11699 would require local jurisdictions to submit for HUD approval effective plans for removing this menace before receiving Federal funds for housing rehabilitation or code enforcement.

Mr. Speaker, I believe the evil has been identified, blocked out and condemned. There is really no argument that can be mustered against these excellent measures, which, if enacted and enforced, would effectively counter and stamp out this malady. We know our duty to our own citizens. Yet it must be asked, in all seriousness, whether we shall act. Cost would not be severe; $21 million would cover complete programs for the first 3 years. We burn up that much in ammunition daily in Vietnam. We throw away that much in waste in our Military Establishment every few days, as overwhelming evidence has shown. We spend that much on subsidizing foreign dictators every month.

I fear, however, that this hope and these measures may go the route of the rat control measure of not so distant memory on this floor. These are the children in our Nation. And they are voiceless. And helpless. Who will extend a hand in compassion to them? How many votes do they have?

Mr. Speaker, this country is busily engaged in placing every major priority last, and every minor one first. Will we ignore these pleas as well? Time will tell. Conscience will remind. Justice will be demanded. The piper will call for his price for this dance, too. We shall all pay it.

A CORPORATION INVESTIGATES THE CONGRESS

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. PODELL. Mr. Speaker, for the second time in recent years a corporation has sought to carry out an investigation into the personal affairs of a private citizen involved with legislation affecting that industry. In this case, Gilbert S. McInerny, vice president and general counsel of the American Home Products Corp. of New York, confirmed that his corporation had ordered an investigation of a staff member of the U.S. Senate Finance Committee.

The bill involved would provide for financial assistance for drug purchases made under the Government's medicare and medicaid programs. It would promote low-cost drugs under their generic names at expense of chemically identical, higher-priced drugs sold under their trade names. This is a measure directly aimed at aiding our elderly on the skyrocketing cost of drugs, and I have sponsored exactly identical legislation in the House. It affects close to 20 million older Americans.

American Home Products is the 89th largest industrial corporation in the Nation. Its net income was 10.3 percent on 1968 sales of $1.8 billion. Prescription drugs account for 35 percent of its business. Patent medicines make up 17 percent more. Its prescription drug subsidiaries are Wyeth Laboratories, Ayerst, Fort Dodge, and Ives Laboratories. Its patent medicine divisions are Whitehall Laboratories and the O. M. Franklin Serum Co.

Mr. Speaker, the case involving Ralph Nader and General Motors was serious enough, showing how boldly a major corporation would act, disregarding civil liberties and personal privacy where an individual is concerned. This case is far worse. A major corporation dared to hire private investigators to enter the Senate itself and seek personal data on a staff member engaged in working on and drafting legislation. A congressional investigation is certainly in order.

This same measure has been submitted to this House. What was attempted upon the other body certainly can be expected here. I believe a precedent must be set and a law passed which would make it utterly prohibitive for any enterprise affected by pending legislation to contemplate and carry through such an outrage. The Congress must be sacrosanct as far as such investigations are concerned, and the time to establish this principle is immediately.

What is to prevent such an organization from perpetrating upon a Congressman or a Senator what it sought to perpetrate upon Mr. Nader and Mr. Constantine of the Senate Finance Committee staff? What they have tried once, they will attempt again. We can expect such occurrences again and again.

Mr. Speaker, I am offering a bill today in the hope that this House will recognize the necessity of serving notice upon any future offenders who are tempted to follow a similar path. The legislation introduced will establish severe penalties upon those perpetrating these acts and will serve notice upon those contemplating same.

FARM INCOME

(Mr. POAGE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. POAGE. Mr. Speaker, for years I have stressed the need for reciprocal understanding between rural and urban Congressmen regarding legislation, and to the fact that it is in the long-range interest of residents of cities that they support measures to increase farmer income.

I have urged that they encourage their Congressmen to vote for bills to increase farm income and thus assure adequate food supplies at reasonable prices.

It was most refreshing, Mr. Speaker, to find that an urban district Congressman, the Honorable DAN ROSTENKOWSKI, of Chicago, has expressed similar views in an article published in "Agri-industry News" published by the Corn Refiners Association.

With a hope that all my colleagues, especially those representing city districts, will read Mr. ROSTENKOWSKI'S statement, I insert it in the CONGRESSIONAL RECORD:

THE FARMER'S FUTURE—A GROWING CONCERN FOR CITY CONGRESSMEN

(By Representative DAN ROSTENKOWSKI)

(Editor's Note: Congressman Rostenkowski, an influential member of the Ways and Means Committee, and member of the Democratic leadership, represents a district in Chicago.)

Just 15 years ago, 165 members of the House of Representatives came from districts with 20 percent or more rural population. Today only 49 come from such districts.

In 21 states, not one district has as much as 15 percent farm population. In fact, in my home state of Illinois, the nation's leader in agricultural exports, only two of our 24 congressional districts have more than 15 percent farm population, and none has more than 25 percent.

Numerically, rural power in the House is rapidly declining. In part, this reflects simmering problems of too little income, too few jobs and ever-shrinking opportunity. Containing and curing these problems is a matter for increasing concern on the part of urban congressmen. For one reason, the deterioration of rural areas causes more congestion and further intensification of the problems besetting our great cities.

Actually, the traditional conflict and competition for funds and power between urban and rural congressmen has become a wasteful drain of energy and resources.

Today, urban and rural problems are closely related. Yet, they too seldom are treated as such, and the time has come for representatives on both sides to bend a little.

Urban congressmen need a better understanding of agricultural production adjustment programs. There should be wider appreciation for the fact that Americans eat better, and at less cost in relation to income, than any other people. In addition, urban representatives must recognize that rising food prices do not reflect a substantial rise in profits for farmers. The farmer is still getting only about three cents of the price of a loaf of bread.

In response to the American farmer's truly remarkable production record, urban congressmen must be willing to help develop and enact programs that not only insure an adequate and stable food supply, but also insure fair income for those farmers who do not now make enough.

Congressmen from predominantly rural areas must reciprocate by supporting programs that may primarily benefit urban Americans, and other programs, such as those that provide food assistance, that benefit people throughout the country.

They must recognize that with seven Americans in ten now living in the cities, there is an urgent and justifiable demand for cleaner air, clearer water and a reduction in congestion.

These objectives—like fair prices for farmers, and improved opportunity in rural America—are in the national interest, and as such cut across the now fading boundaries that have so seriously factionalized Congress in the past.

LOCATE FEDERAL BUILDINGS IN RICHMOND, CALIF.

(Mr. WALDIE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WALDIE. Mr. Speaker, the present office space situation of the Social Security Administration payment center in San Francisco is serious enough to warrant immediate consideration of consolidating the present four offices into one.

I am in complete agreement with the General Services Administration as to the physical needs of the consolidated office, and believe that a site within the Richmond Redevelopment Agency's downtown project, or a similarly situated location, would be ideally suited for the

payment center location. Situated on the bay area rapid transit route and having office space large enough to accommodate the center, the Richmond site would be convenient for presently employed workers, and would provide an excellent source of skilled and efficient workers to supplement the work force.

I should like to insert in the RECORD an editorial carried in the Independent, Richmond, Calif., on July 12, 1969, setting forth most eloquently the need for the establishment of the Social Security Administration payment office in Richmond, Calif.

"PURPLE HEART" CITY DESERVES GOVERNMENT BUILDING

The Federal Government has an opportunity today to atone for some of the injuries inflicted on the City of Richmond, injuries which earned the city the title of "The Purple Heart" city. It earned that "heart" because the Federal government dumped more than 90,000 workers here during World War II to work in the shipyards, and then left Richmond with a serious problem when the shipyard work was abruptly cancelled as the war ended.

But Richmond fought back. It built a new city hall complex. It brought in new industry. It expanded the city's boundaries. It made the police and fire departments two of the best in the nation. And it spent literally millions of dollars in services for the people.

Today Richmond, or the downtown area of the city, is being rebuilt and redevelopment has taken over block after block of land, planning for the time when new buildings to house new businesses or offices, can be constructed.

Today Richmond is one of several sites being considered by the General Services Administration for construction of a huge Social Security Administration Office for the Bay Area.

Today Richmond's site for the proposed building is one that meets the requirements of the Federal government. The area for the building, between Macdonald and Bissell avenues, and Eleventh and Fourteenth streets, meets the criterion that it be near the Rapid Transit facilities; that it provide ample parking area for 2,000 people who would be employed in the building, and that it be near services and business. The price that the Redevelopment Agency, owners of the property, is placing on the property is well within the requirements of the Federal agency, and on the whole cheaper than the other sites, particularly those in El Cerrito and Berkeley.

The requirement that private capital build the building and lease it back to the Federal government, is met with the offers of three reputable firms to do the work.

Construction of this GSA building in Richmond would be a shot in the arm for the Redevelopment program, and would go a long way toward overcoming some of the injustices which the Federal government inflicted on Richmond.

Both Congressman Jerome Waldie in Washington and Assemblyman John T. Knox in Sacramento are backing Richmond's bid for the project. They have friends in Washington to whom they can turn. But on the merits of its case, and of its record in aiding the war effort, Richmond should be selected for the building.

GUILLOTINING THE EDUCATION BUDGET

(Mr. WALDIE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WALDIE. Mr. Speaker, Claude M. Ury, one of my constituents, has called to my attention an article by Sylvia Porter that effectively points out the deficiencies of the proposed national education budget.

I include the text of this article:

YOUR MONEY: BACKWARD STEP IN EDUCATION

(By Sylvia Porter)

This coming Thursday, July 24, the House Subcommittee on Appropriations will complete a bill to provide cash for the national education budget during the 12 months ending July, 1970. In the form prepared by the Nixon Administration, this bill would startingly downgrade education to a very low place on our list of national priorities. It would erase several education advances achieved under the administrations of Eisenhower, Kennedy and Johnson. Specifically, in its Nixon Administration form, this bill would:

Slash the total U.S. Office of Education budget from $4.1 billion in fiscal '68 to $3.2 billion in fiscal '70, an incredible reduction of 25 per cent at a time when more and better education is a must;

Reduce to zero funds for school library materials under the Elementary and Secondary Education Act of 1965;

Reduce to zero matching funds for materials and equipment for elementary and secondary schools under the National Defense Education Act of 1958;

Reduce to zero funds for guidance and counseling services, also under the Defense Education Act passed during Mr. Eisenhower's administration;

Cut in half funds for college library materials under the Higher Education Act of 1965;

Cut in half matching funds for public library programs and materials under the Library Services and Construction Act of 1956, another Eisenhower education law.

In summary, it would eliminate entirely three education-library programs and emasculate another two and shrink to less than 1½ per cent of our Federal budget the total we spend for education-libraries.

The fact that this is a very real threat and may well happen is just starting to penetrate education circles; until now, U.S. educators couldn't bring themselves to believe that the Nixon Administration deliberately would adopt such policies of retreat on education in an era of explosive social unrest.

They are fighting back. A National Citizens Committee to Save Education and Library Funds (SELF) under the chairmanship of the world-respected Dr. Detlev W. Bronk, president emeritus of the Rockefeller University, is publicizing the crisis.

On July 9, 150 trustees of libraries from 33 States marched on Washington to obtain pledges of votes for restoration of the funds from 100 lawmakers.

A fight on the House floor seems a certainty.

No one denies the need for curbing Federal spending now. This is imperative to dampen inflationary psychology and control the price-wage spiral. But what is swelling the Federal budget are such items as military spending in general, the Vietnam war in particular, skyrocketing interest on the national debt. As one comparison, Texas Democratic Senator Yarborough cites the fact that we are spending $21,666 per American for ammunition to fight the Vietnam war—against 25 cents per American for libraries and teaching materials. As another, while our national education budget is threatened with mutilation to the $3 billion-a-year range, interest going to owners of the U.S. debt is soaring above an annual $17 billion.

These cutbacks would wipe out libraries in areas where the need is greatest; for instance, many bookmobiles would disappear in regions of New Mexico where the Indians and Spanish-American migrants live. Countless hundreds of thousands of children would be injured permanently; the key cause of failure in school is inability to read.

In the words of New York Republican Senator Javits, "Guillotining the education budget is not responsible fiscal belt tightening." Or even more to the point, as Yarborough asks in obvious disgust:

"What kind of priorities do we have in this country?"

THE URGENT PROBLEMS OF CBW AND THE PUBLIC'S DEBT TO CONGRESSMAN McCARTHY AND MR. SEYMOUR HERSCH

(Mr. LOWENSTEIN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. LOWENSTEIN. Mr. Speaker, during the past several months, the efforts of two valiant individuals, Congressman RICHARD MCCARTHY of Buffalo and Mr. Seymour Hersch of Washington, have brought the nightmare problems of chemical and biological warfare increasingly to the attention of the public. Our enormous debt to Congressman MCCARTHY and Mr. Hersch becomes more evident with every new disclosure of the dangers this Nation faces as a result of present CBW policies.

In March 1968, what was ultimately described by the Army as a "malfunction" during open-air testing of the lethal nerve gas VX at Utah's Dugway Proving Ground resulted in the death of more than 6,400 sheep. Only a providential change in wind conditions, followed by a heavy rain, prevented a major disaster to travelers on nearby U.S. Highway 40—remarkable luck to say the least, considering that a lethal dose of VX is one milligram, or approximately one-fiftieth of a drop.

For 14 months the Army denied that it had anything to do with what happened to the sheep. Maybe it even believed its own denials, for it appears not to have been daunted in the least by what almost happened to everyone in the neighborhood, and what did in fact happen to the sheep. In fact, it was afte. Dugway that the Army prepared to transport by rail some 20,000 tons of the deadly nerve gas GB, as well as other lethal and nea:-lethal agents, from Rocky Mountain Arsenal in Colorado to Earle, N.J. Thanks largely to the efforts of Congressman MCCARTHY, enough public opposition to this strange procedure was generated to force reconsideration and a search for alternative methods of disposal.

Meanwhile, other perturbing facts about the CBW operation have been coming to our attention. We have learned that a well for the disposal of poisonous wastes was drilled 2½ miles deep into the Rocky Mountain Arsenal. In the 5 years that followed, some 1,500 earthquakes shook an area that before that time had not had a quake since 1882. One effect of a major quake might of course be to turn loose the massive supplies of nerve gas stored at the arsenal. Is there a connection between the well and the quakes? The Army thinks not. The people living nearby are not so sure.

Next Congressman MCCARTHY reported evidence that we are testing many biolog-

ical agents on Eniwetok atoll in the Marshall Islands. Perhaps the tests are considered too dangerous to be conducted nearer home. It also develops that we have been shipping nerve gas to West Germany in small amounts for years, apparently without worrying about the 1954 West European protocol, which stipulates that West Germany can only receive NATO-approved CBW materials, and which prohibits the manufacture or stockpiling of these weapons.

One of the more unsettling disclosures is the news that certain chemicals, including nerve gas, have been tested extensively in open air at the Edgewood Arsenal in Maryland and at Fort McClellan in Alabama. After the Dugway disaster, which killed thousands of sheep more than 47 miles from the presumed test area, the testing of these agents at a location only 12 miles from Baltimore seems difficult to understand.

A few years ago there seemed slight signs of hope in this generally bleak picture. Edgewood Arsenal and Fort McClellan agreed to stop open-air tests of nerve gas pending a scientific study. President Nixon ordered a full-scale review of the CBW program, and stated that "the specter of chemical and biological warfare arouses horror and revulsion around the world." Seventy-six of us in this House joined in a resolution urging President Nixon to resubmit the Geneva Protocol of 1925 to Congress—a protocol that calls for the no-first-use of "asphyxiating, poisonous or other gases, and of bacteriological methods of warfare," and that could represent the first meaningful step toward effective control and disarmament in this complex and urgent field of weaponry.

Now these signs of hope fade in the glare of more recent events. As a result of what the Pentagon calls a "mishap," 24 Americans were injured by the lethal nerve gas GB, which, it turns out, was being stored at Okinawa. One wonders now if only "mishaps" and "malfunctions" will bring word to the American people about what gases are stored where, and for what purposes. One wonders also if we really best guard ourselves against hypothetical Russian attacks by subjecting ourselves to an endless series of Dugways and Okinawas.

Has the Army decreed that "malfunctions" and "mishaps" will be no more, and that when they occur against regulations, winds will only blow in providential directions? Are we to go on imperiling everyone in Baltimore, Denver, and heaven knows where else on the theory that they will not mind perishing if something goes wrong just so it is not the Russians who are to blame? Is there no urgency to seeking international agreements to control weapons that are in some ways more dangerous even than thermo-nuclear bombs? Are we mad?

So our special admiration and gratitude go to Congressman McCarthy and Mr. Hersch, whose remarkable book, "Biological and Chemical Warfare: America's Hidden Arsenal" deserves the attention of thoughtful Americans.

I include at this point in the Record an editorial from the New York Times:

THE LUNACY OF GERM WARFARE

Dean Swift himself could not do justice to a world which over the centuries and with great skill has eliminated disease one by one for the sake of humanity, and then systematically bred the germs of those diseases as a possible weapon of war. Yet all the major countries, even those that have the nuclear power to wipe out the earth's population several times over, persist in the solemn lunacy of stockpiling lethal bacteria and poisonous gases in the name of national defense.

Fortunately a few rays of good sense have been penetrating this Kafka-like realm, and it is at least possible that the world may be spared further hazardous progress along a particularly gruesome road. Among the hopeful signs, the first in recent weeks was the vigorous campaign against the chemical and biological warfare program of the Defense Department by Representative Richard D. McCarthy of Buffalo. It was Mr. McCarthy who induced a rare briefing of Congressmen on the subject by hitherto reticent officers of the Pentagon. And it was the same Congressman who almost singlehandedly prevented the crosscountry shipment of several hundred freight cars filled with obsolete but deadly gas bombs the Army irresponsibly planned to dump in the Atlantic.

Entering into the questioning spirit, the Senate Armed Services Committee has just voted to cut out of the defense budget all funds for researching offensive measures in the field of chemical-biological warfare. President Nixon himself has shown a marked interest in moves to reduce this whole category of armaments. He has ordered a full-scale review of the program and pledged to the opening session of the Geneva Disarmament Conference that the United States would seek "reliable arms control" for this potential type of warfare, which "arouses horror and revulsion throughout the world."

Perhaps even more significant, the United Nations has just issued a report that should be required reading for responsible government officials around the globe. It documents not only the frightful dangers of chemical and biological warfare but the folly of their contemplated use as well as their total unpredictability, their possible destruction of the environment even where they do not immediately wipe out a whole population, including those who initiate their use; and the easy and frightening proliferation of such weapons among nations that cannot afford nuclear armaments.

In transmitting the work of the fourteen distinguished scientists who drew up the U.N. report, Secretary General U Thant has appealed to all states to accept the Geneva Protocol of 1925, renouncing the use of chemical and biological agents—a declaration ratified by sixty nations but not by the United States—and to eliminate such agents as quickly as possible from their arsenals.

If these steps are taken, such is the irony of the situation, the world would breathe more easily at having to ward off only the threat of nuclear destruction.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. Broomfield (at the request of Mr. Gerald R. Ford), for the balance of week, on account of death of personal aide.

Mr. Gray (at the request of Mr. Albert), for today, on account of attendance at a funeral.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. Sisk, for 1 hour, on Monday, August 4, 1969, to revise and extend his remarks and include extraneous matter.

Mr. Ashbrook, for 15 minutes, today, to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. Whalen), to address the House and to revise and extend their remarks and include extraneous matter:)

Mr. Bray, for 10 minutes, today.

Mr. Edwards of Alabama, for 15 minutes, today.

Mr. Biester, for 1 hour, on Monday, August 4.

(The following Members (at the request of Mr. Mikva), to revise and extend their remarks and include extraneous matter:)

Mr. Flood, for 15 minutes, today.

Mr. Tunney, for 30 minutes, on July 31.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. Broyhill of Virginia prior to vote on the Joelson amendment.

Mr. Gross to revise and extend his remarks during colloquy on the bill H.R. 13080.

Mr. Hanley and to include extraneous matter during remarks in the Committee on the Whole.

Mr. Eckhardt to revise and extend remarks and include extraneous matter immediately after statement of Mr. Pucinski on Carey amendment.

Mr. Cohelan to include extraneous matter and tables immediately following his remarks in Committee of the Whole.

Mr. Bell of California to include extraneous matter with remarks he made in Committee of the Whole.

Mr. Steiger of Wisconsin to extend his remarks during consideration of Teacher Corps paragraph on page 27 of H.R. 13111.

(The following Members (at the request of Mr. Whalen), to include extraneous matter:)

Mr. Pettis.
Mrs. Heckler of Massachusetts.
Mr. Esch.
Mr. Watson.
Mr. Wyman in two instances.
Mr. Wyatt.
Mr. Eshleman.
Mr. Kleppe.
Mr. Foreman in two instances.
Mr. Miller of Ohio.
Mr. Hastings.
Mr. Keith.
Mr. Shriver in two instances.
Mr. McClure.
Mr. Ashbrook.
Mr. Derwinski.
Mr. Wold.
Mr. Dickinson.
Mr. Frelinghuysen.

Mr. SCHWENGEL.
Mr. FREY.
Mr. SCOTT.
Mr. BUSH.
Mr. SNYDER in two instances.
Mr. CHAMBERLAIN in two instances.
(The following Members (at the request of Mr. MIKVA) and to include extraneous matter:)
Mr. LONG of Maryland in three instances.
Mr. RODINO in three instances.
Mr. MONTGOMERY in two instances.
Mr. HANNA.
Mr. CHARLES H. WILSON in two instances.
Mr. STUCKEY in two instances.
Mr. MCCARTHY in three instances.
Mr. DINGELL in three instances.
Mr. RARICK in three instances.
Mr. PICKLE in three instances.
Mr. HATHAWAY.
Mr. DE LA GARZA in three instances.
Mr. ANDERSON of California.
Mr. ROYBAL in six instances.
Mr. HAMILTON.
Mr. LOWENSTEIN in three instances.
Mr. PURCELL.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 59. An act to authorize the Secretary of the Army to adjust the legislative jurisdiction exercised by the United States over lands within the Army National Guard Facility, Ethan Allen, and the United States Army Materiel Command Firing Range, Underhill, Vermont; to the Committee on Armed Services.

ADJOURNMENT

Mr. MIKVA. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 7 o'clock and 41 minutes p.m.) the House adjourned until tomorrow, Thursday, July 31, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1003. A letter from the Director, Selective Service System, trasmitting the third semiannual report of the Selective Service System, pursuant to the provisions of section 10(g) of the Military Selective Service Act of 1967; to the Committee on Armed Services.

1004. A letter from the Comptroller General of the United States, transmitting a report on the need for improvement in the receipt and storage of military supplies and equipment, Department of Defense; to the Committee on Government Operations.

1005. A letter from the Acting Archivist of the United States, transmitting a report on records proposed for disposal under the law; to the Committee on House Administration.

1006. A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to provide additional revenues for the highway trust fund, and for other purposes; to the Committee on Ways and Means.

1007. A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to provide for the imposition of waterway user charges, and for other purposes; to the Committee on Ways and Means.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. WILSON of California: Committee on Post Office and Civil Service. H.R. 12884. A bill to amend title 13, United States Code, to assure confidentiality of information furnished in response to questionnaires, inquiries, and other requests of the Bureau of the Census, and for other purposes (Rept. No. 91–407). Referred to the Committee of the Whole House on the State of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. FEIGHAN: Committee on the Judiciary. S. 85. An act for the relief of Dr. Jagir Singh Randhawa (Rept. No. 91–401). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 348. An act for the relief of Chenghuai Li (Rept. No. 91–402). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 564. An act for the relief of Mrs. Irene G. Queja (Rept. No. 91–403). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. Senate Concurrent Resolution 33. Concurrent resolution favoring the suspension of deportation of certain aliens; with amendment (Rept. No. 91–404). Referred to the Committee of the Whole House.

Mr. RODINO: Committee on the Judiciary. H.R. 1695. A bill for the relief of Alfredo Caprara (Rept. No. 91–405). Referred to the Committee of the Whole House.

Mr. EILBERG: Committee on the Judiciary. H.R. 2817. A bill for the relief of Delilah Aurora Gamatero, with amendment (Rept. No. 91–406). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. CORMAN:

H.R. 13188. A bill to amend section 1331(c) of title 10, United States Code, to authorize the granting of retired pay to persons otherwise qualified who were Reserves before August 16, 1945, and who served on active duty during the so-called Berlin crisis; to the Committee on Armed Services.

By Mr. DE LA GARZA:

H.R. 13189. A bill to provide that certain aircraft may travel between the United States and Canada and between the United States and Mexico without requiring the owners or operators thereof to reimburse the United States for extra compensation paid customs officers and employees and immigration officers and employees; to the Committee on Ways and Means.

By Mr. ERLENBORN:

H.R. 13190. A bill to authorize appropriations to be used for the elimination of certain rail-highway grade crossings in the State of Illinois; to the Committee on Public Works.

By Mr. FINDLEY:

H.R. 13191. A bill to authorize appropriations to be used for the elimination of certain rail-highway grade crossings in the State of Illinos; to the Committee on Public Works.

By Mr. FULTON of Pennsylvania:

H.R. 13192. A bill to amend the Internal Revenue Code of 1954 to encourage higher education, and particularly the private funding thereof, by authorizing a deduction from gross income of reasonable amounts contributed to a qualified higher education fund established by the taxpayer for the purpose of funding the higher education of his dependents; to the Committee on Ways and Means.

By Mr. GOODLING (for himself and Mr. MILLER of Ohio) (by request):

H.R. 13193. A bill to amend the Agricultural Adjustment Act of 1933, as amended, and reenacted and amended by the Agricultural Marketing Agreement Act of 1937, as amended, to provide for payment by handler assessments of the administrative costs of the Department of Agriculture; to the Committee on Agriculture.

By Mrs. GREEN of Oregon (for herself and Mr. QUIE):

H.R. 13194. A bill to amend the Higher Education Act of 1965 to authorize Federal incentive payments to lenders with respect to insured student loans when necessary, in the light of economic conditions, in order to assure that students will have reasonable access to such loans for financing their education; to the Committee on Education and Labor.

By Mr. HASTINGS (for himself, Mr. ADAMS, Mr. ADDABBO, Mr. BEALL of Maryland, Mr. BRAY, Mr. BRINKLEY, Mr. BROYHILL of North Carolina, Mr. BURKE of Florida, Mr. CLARK, Mr. CUNNINGHAM, Mr. DENT, Mr. GRIFFIN, Mr. KING, Mr. MOORHEAD, Mr. POWELL, Mr. QUILLEN, Mr. WEICKER, Mr. WYMAN, Mr. BIESTER, Mr. DERWINSKI, Mr. KUYKENDALL, Mr. LUKENS, Mr. MCDADE, Mr. MCMILLAN, and Mr. MARSH):

H.R. 13195. A bill to amend title 10 of the United States Code to require that U.S. flags be presented to parents of deceased servicemen; to the Committee on Armed Services.

By Mr. HASTINGS (for himself, Mr. SIKES, Mr. WILLIAMS, Mr. ZWACH, Mr. MCCLURE, Mr. ANDERSON of Illinois, Mr. BURTON of California, Mr. CLEVELAND, Mr. FISH, Mr. HALPERN, Mr. HAYS, Mr. POLLOCK, Mr. RYAN, Mr. SAYLOR, Mr. SEBELIUS, Mr. WOLD, Mr. WYLIE, Mr. FULTON of Pennsylvania, Mr. FRIEDEL, Mr. PETTIS, Mr. GIBBONS, Mr. BROWN of California, Mr. ROGERS of Florida, Mr. RUPPE, and Mr. CARTER):

H.R. 13196. A bill to amend title 10 of the United States Code to require that U.S. flags be presented to parents of deceased servicemen; to the Committee on Armed Services.

By Mr. HASTINGS (for himself, Mr. CORMAN, Mr. WHITEHURST, Mr. TAFT, Mr. GAYDOS, Mr. HOWARD, Mr. FREY, Mr. FLOWERS, Mr. BUCHANAN, and Mr. TIERNAN):

H.R. 13197. A bill to amend title 10 of the United States Code to require that U.S. flags be presented to parents of deceased servicemen; to the Committee on Armed Services.

By Mr. KOCH (for himself, Mr. BROWN of California, Mr. LEGGETT, Mr. MAILLIARD, Mr. MESKILL, Mr. MILLER of California, Mrs. MINK, Mr. PHILBIN, Mr. ROONEY of Pennsylvania, Mr. SANDMAN, and Mr. WILLIAMS):

H.R. 13198. A bill to establish an urban mass transportation trust fund, and for other purposes; to the Committee on Banking and Currency.

By Mr. KYROS:

H.R. 13199. A bill to implement the Federal employee pay comparability system, to establish a Federal Employee Salary Commission and a Board of Arbitration, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. LOWENSTEIN (for himself and Mr. ADDABBO):

H.R. 13200. A bill to prohibit commercial flights over land areas of the United States until the problem of sonic boom has been solved and its effects controlled; to the Committee on Interstate and Foreign Commerce.

By Mr. MOLLOHAN:

H.R. 13201. A bill to amend title II of the Social Security Act to increase the amount of outside earnings permitted each year without any deductions from benefits thereunder; to the Committee on Ways and Means.

By Mr. MOSHER:

H.R. 13202. A bill to amend the act of August 13, 1946, relating to Federal participation in the cost of protecting the shores of the United States, its territories, and possessions, to include privately owned property; to the Committee on Public Works.

By Mr. PHILBIN:
